Government thinks of recalling its entire military force from the peninsula. The protection of the Legation and Consulates has to be provided for, and it is further very evident that until the Korean police and soldiery can be organized and trained sufficiently to be safely entrusted with the preservation of public peace and good order, a certain degree of responsibility devolves upon Japan. What provision she may deem it necessary to make for these purposes, we are not in a position to assert. But we are in a position to deny most explicitly and emphatically the persistent allegation made by a local English journal that Japan has had to choose between withdrawing her troops from Korea and fighting, and that she has announced her intention of withdrawing. No such alternative has presented itself, and no such announcement has been made. Whatever withdrawal of troops takes place, will be merely part of a military programme depending primarily upon the rendition of Japan's Manchurian acquisitions. It is most mischievous to submit to the public such gross misrepresentations as are published by the *Japan Gazette* with regard to the relations between this empire and Russia. Russia has not played the blustering, hectoring rôle thus attributed to her. That has never been the character of her diplomacy in Japan. From the beginning until the present time she has never raised any official question about the presence of Japan's forces in the peninsular Kingdom. Whether her silence in the past warrants any inference as to her conduct in the future, we do not pretend to judge. It would be manifestly opposed to her interests that Korea would become a part of Japanese territory. If she sees reason to apprehend such a contingency, doubtless she will take steps to avert it. Meanwhile, we may remind those to whom the presence of an exceptionally large Russian squadron in these waters has suggested so many chimeras, that very obvious considerations,—considerations of which Japan's military occupation of Korea constituted only a corollary—may have influenced the Great Northern Power. In the first place, her interests being chiefly concerned in the success of the Three Powers' intervention, it was natural that she prominently should provide the means of enforcing it. In the second, there was no special reason to anticipate that a proposal so unpleasant as that formulated by the Triple Alliance would be quietly accepted by Japan, or, if accepted, would be readily put into practice. In the third place, the proposal was couched in somewhat vague terms and elicited a correspondingly vague reply. It invited Japan to evacuate Liaotung, and she, though agreeing, did not pledge herself as to time, or promise to place the islands of the Yellow Sea in the same category as its coasts. It was not unnatural that Russia should contrive an object lesson

to suggest the consequences of rejecting, or partially evading, an issue presenting so many elements of uncertainty and grounds of mistrust. Thus there is no difficulty in accounting for the marked efforts made by her to assemble a powerful fleet in these waters; she need not be suspected of any arbitrary or masterful designs because she took care to be prepared for evidently possible eventualities.

GOLD.

THE unexpectedly large output of gold from South Africa is triumphantly noted by monometallists. The Rand area of mining operations is already turning out nine millions' sterling worth of the precious metal, and enthusiastic forecasts are widely circulated that, in the course of the next few years, the figure will rise to twenty millions. This prospect has produced feverish excitement in the market for capital. Investors from all parts of the world are hastening to purchase South-African mining shares, so that a boom surpassing even the great railway mania of the forties has set in. Australia, too, promises to add vast stores to the world's stock of the precious metal. On the whole, the recently impending danger of a gold famine seems to be averted. It is a curious and suggestive example of humanity's innate capacity for adapting itself to its circumstances. Had mining processes made no progress during the past twenty-five years, the earth would now be yielding so small a stock of the precious metals that their uses in manufacture must already have been greatly restricted in favour of the more imperative demand for coinage purposes. But chemistry and mechanics have developed such admirable appliances and methods that the so-called "refuse" thrown aside by miners of former generations is now profitably worked, and shafts driven three thousand feet deep in search of the yellow metal become paying investments. Thus the unwilling earth is compelled to yield a growing supply of its treasures in proportion as the wants of man grow. The most confirmed pessimist should find some element of comfort in this reflection. As for monometallists, their satisfaction is not more pleasant to the bimetallicists than to themselves. Advocates of silver rehabilitation are not selfish jockeys of a hobby. Their plea that the white metal should be allowed to discharge the function designated for it by nature and indicated by the needs of commerce and exchange, is based on profound conviction that such a course is essential to the prosperity of the human race. Hence they, too, equally with the monometallists, welcome any incident tending to relieve the suffering entailed by the unnatural exclusion of silver from its chief use. They may, indeed, doubt whether a palliative like the sudden increase of gold

production makes really for the world's advantage, or whether it would not be better that society should descend to greater depths of pain in order that financiers might be forced to turn to the only permanent corrective. But for the rest, everything tending to lessen the evils of an arbitrarily restricted supply of the media of exchange must be counted a blessing. One point, however, the bimetallicists may justly note. It is that, if monometallists really saw no danger in the recently glaring disproportion between the scanty supply of gold and the heavy and constantly increasing duties imposed upon it, their exultation in the presence of an increased output is difficult to explain. Were they secretly haunted by the very dread that they ridiculed their opponents for acknowledging? These things apart, however, there can be no question that events have taken a turn unfavourable to the advocates of silver rehabilitation. Not merely this great increase in the production of gold, but also the returning glow of commercial and industrial prosperity tend to thrust the silver issue out of sight. Unfortunately the great financial problem of our era defies any scrutiny that everyday individuals are prepared to bring to its solution. Even those that have studied it most keenly recognise how multifarious and complicated are the factors involved, and how easily the result is affected by the varying values that independent investigators assign to each factor. Only the pressure of a trouble that he can not explain will induce the ordinary business man to meddle with issues so bewildering, and since that pressure is temporarily removed by an increased production of gold and a revival of commercial prosperity, the din of the silver battle will probably grow perceptibly fainter in the near future. We shall not see a finished fight, but only a temporary truce, for the contest has elements of vitality that can not be destroyed. But the object lessons that interested the masses in this great problem have, for the moment, lost their force.

THE SOURCE OF NATIONAL EXISTENCE IN THE EAST AND WEST.

DR. KATO HIROYUKI delivered at the Philosophical Institute a short time ago a lecture entitled, "An Inquiry into the ultimate sources of national existence in the East and the West." This lecture has since appeared in the pages of the Proceedings of the Oriental Philosophical Society. It is characterised by greater prolixity and repetition than are usually found in the literary productions of this veteran politician and scholar, and the theory propounded seems to us to lack the logical and philosophic foundation supporting so many of the opinions championed by Dr. KATO. But of this we will place our readers in a position to judge by furnishing a concise statement of the lectur-

er's arguments. Stripped of all superfluous adjuncts, they may be thus reproduced.

Comparison is the root of all knowledge. It is only when sciences have reached the stage in which all their chief theories are based on exhaustive comparison that they can be deemed thoroughly trustworthy. Politics in the East and the West are two very different things. But hitherto, owing to the fact that Eastern national life is very imperfectly understood in the West, little progress has been made in the study of those ultimate sources of national life and existence to which both in the East and West nations owe their survival—their freedom from the disintegration that so many great empires in the world's history have undergone. Here lies a field of research that the Japanese student of Western learning is specially fitted to explore. The subject is new and I can pretend to do no more than open it up for the fuller investigation of others.

When speaking of Oriental countries, I wish it to be understood that I refer chiefly to China, though in many cases what is true of China is equally applicable to other Eastern States. By Western nations I mean European nations. When asked upon what in China does the existence of the State depend, I reply upon the idea that the SOVEREIGN is a man of perfect virtue and that all his dealings with his subjects are characterised by the most impartial display of benevolence. This was the idea that CONFUCIUS, MENCIUS, and other great sages of antiquity spent their lives in impressing upon the mind of the nation; the idea on which all their modern admirers and followers have never ceased to dwell. The EMPEROR regards his subjects as his children, whom parental affection prompts him to treat with kindness, and Chinese subjects submit themselves to the will of the SOVEREIGN with the feeling that they are not only acting as filial children ought to act, but that they are giving the allegiance due to exalted virtue.

Turning to Europe we find a very different state of things. There the most sacred of all feelings is the love of individual liberty. The conviction that whatever the form of government, the rights of the people will be respected is the mainstay of European nations. The love of liberty, so prominent in the West, characterised the ancient Greeks and Romans, but it is only in recent times that it has become a dominant sentiment, and its cultivation and development have been recognised to be a safeguard against national dismemberment.

Thus we see that in the East and the West two widely different feelings exist. The Oriental is ready to sacrifice everything for the reigning monarch, on the supposition that he is the embodiment of virtue. The Occidental respects his government and his country's laws because

he regards them as the bulwark of individual liberty. In China there are no preachers of individual liberty. In Europe there are no proclaimers of IMPERIAL virtue. To the first of these assertions some would doubtless reply, did not CONFUCIUS and MENCIUS both protest against the violence and despotism of certain EMPERORS? Did they not frequently espouse the cause of the people against the ruling classes? And on these occasions are they not to be regarded as the champions of liberty? If I am not mistaken, their writings are not thus to be interpreted. In the reproofs they uttered, their object was the reform of Imperial abuses, and not the curtailment of Imperial rights in order to secured greater liberty for subjects.

For the origin of this great difference between East and West we must look to history and social science. Certain writers on the history of European civilisation assert that the love of individual liberty in Europe is the result of the high rank that personal courage and daring held among virtues in past ages. Self-assertion and self-preservation were for centuries reckoned essential qualifications for successful warfare with life's difficulties. The habit of each individual's defending his own rights against those of other individuals gradually led to a combination of aggrieved individuals against the despotism, real or supposed, of reigning monarchs and oligarchies, and in many cases ended in their overthrow. If in Europe the highest esteem in which individual liberty is held is to be traced to a highly developed moral courage, the servility of the Chinese is the result of self-effacement and cowardice such as it would be hard to find in any country to the same extent. There could be no greater contrast than is afforded by the picture of China's teeming millions from age to age quietly subjecting themselves to their rulers' will, and the picture of Europe pouring out its life blood for the sake of establishing the principle that monarchs possess no rights but such as have been ceded to them by their subjects. To us neither system appears perfect. The implicit trust that the Chinaman places in his ruler leads to abuse of power on the part of Monarchs and their Ministers. But on the other hand, the absence from the European mind of anything like real respect for Royalty and high rank is a distinct defect. The whole history of European conquests shows that virtue has never been held in the same regard as in China. The relation of ruler and ruled in the West is of a legal, rather than a moral, character. It is the rights of the parties that so often become a bone of contention. This absence of moral feeling in European government is an element of weakness, as has been often shown in past history, never more signally than during the French Revolution.

Fortunately, Japan is not committed to

either of the systems that I have been discussing. She can avoid both extremes and blend what is of value in Eastern and Western methods of consolidating the various units that combine to make a great nation. It is common to find European scholars regarding the patriarchal form of government as essentially barbaric and as possible only in unenlightened countries or in the dark ages of the world's history. That with the exception of the comparatively short period when the country was subject to military rule, Japan flourished and made progress under this form of government, is a fact of which these scholars are profoundly ignorant. They do not know that, even since the revolution of 1868, both in theory and practise this same form of government has been closely adhered to and brought to a high state of perfection in Japan. The thing that exists only in name in China exists in reality here: the EMPEROR rules by means of virtue and his subjects obey him from pure loyalty. The relationship between ruler and ruled is that of parent and children. Neither of the defects that we have discussed above characterises the Japanese system of government. In the possession of a Constitution, the liberty of the subject is guaranteed to all time. In the adoption of a new code of laws we have reared another bulwark of liberty. The Japanese of to-day is not the man that lived in the TOKUGAWA era. He knows he has individual rights and is determined to maintain them. But at the same time he is loath to part with a form of government in which rulers and subjects are bound together by the strongest of all ties—moral feeling and devotion.

Although there is much that is extremely interesting and suggestive in Dr. KATO's lecture, we cannot say that the comparison on which he lays such stress appears to us to be founded on fact. The situation in China and the situation in Europe are, to our mind, both incorrectly described. In China, the Government is doubtless patriarchal, and in theory this implies the existence of a strong moral feeling between rulers and subjects. But in reality that feeling no longer exists. The local officials are hated, notwithstanding the fact that they constitute the link that ought to join subject and SOVEREIGN. China has been hitherto saved from disintegration, not by the strength of moral feeling among her subjects, not by loyalty regarded as one of the most sacred of duties, but by the fact that her people have grown too servile and too cowardly to rebel. A thoroughly despotic government needs no moral power at its back to enforce obedience, as has been proved in the history of nations over and over again. When once people have been rendered spiritless by ages of oppression, physical force is all that is necessary to keep them in order.

While admitting the truth of most of Dr. KATO's remarks bearing on the high

regard in which individual liberty is held in Europe, we fail to see what that has to do with national unity and stability. Did anything like the importance assigned by Dr. KATO to this feeling exist; were this the one dominant sentiment in the minds of Europeans, national disintegration would be the result. As things now are, a deep respect for certain old institutions, an ineradicable spirit of conservatism, acts as a brake on the wheel of liberty and prevents it from endangering the existence of the State. Dr. KATO entirely under-estimates the power of moral feeling in Europe. To the existence of this feeling is to be traced some of our greatest reforms and the abolition of crying evils, such as the slave trade. It is an absolute misrepresentation to assert that a virtuous Monarch in Europe is less highly esteemed than he is in China. Though for the purposes of his argument Dr. KATO finds it convenient to represent Western forms of government as all belonging to one class, and Western nations as held together by the prevalence of one sentiment, nothing could be more contrary to the reality than such an assumption. There are countries in Europe where subjects enjoy no more liberty than they do in China. If, as Dr. KATO contends, love of personal liberty be the tie that binds men together, despotically governed nations would soon cease to exist. Dr. KATO's comparison rests on imperfect data, and hence has no philosophic value, but notwithstanding this we think the lecture well worth reproduction for the sake of the light that it throws on a variety of subjects. Whatever exception may be taken to many of Dr. KATO's remarks about China and Europe, his representation of the state of feeling in Japan is in the main, we venture to think, true to facts.

BRITISH ENTERPRISE IN JAPAN.

AT the present time, when everything seems to point to the probability that Japan is on the eve of inaugurating an extensive shipbuilding programme for the satisfaction of her legitimate ambition to become in the near future one of the great Naval Powers, it will be of interest to Englishmen here to know how far their own country is displaying activity in competing for the orders that may be expected.

An enterprising Naval programme, such as we look to hear announced before long, must have the effect of stimulating several important industries in which the United Kingdom of Great Britain and Ireland has always excelled. There are ship-builders, then armour-plate makers, makers of engines and boilers, of heavy shafting, of big guns, of machine guns and small arms, of ammunition, of electrical machinery and appliances, and of a host of other materials too numerous to detail but all absolutely necessary for a complete ship of war. In every one of

these trades the United Kingdom holds a leading place, and notoriously stands unrivalled for the celerity with which it can complete and deliver in working order, fully equipped for immediate use, every description of vessel from a first-class battle-ship to a high-speed torpedo boat. It is to be expected, then, that the advantages offered by England's leading position in the ship-building industry will receive due consideration, and we note with satisfaction that several prominent English Firms are sending representatives to this country. One of these—formerly an Engineer Officer in the British Army, and now a Director of the Firm of JOHN BROWN & Co. of Sheffield—has given us some particulars on the present state of the question of armour versus ordnance which may be of interest to our readers.

The development of heavy armour, which has been going on during the last twenty years, has during the last three or four advanced with gigantic strides. In the early days Cabinet Ministers visited JOHN BROWN and COMPANY'S Works to see the first 4-inch iron plates rolled (for H.M.S. *Warrior*), so great an achievement was this then considered to be; but not many years had passed before the heavy and powerful mills put down for the purpose at Sheffield were turning out quantities of rolled iron plates 12, 18, and even 24 inches in thickness. Still, as fast as the weight of the plates increased, the power of artillery advanced in proportion, and before long it became clear that a stronger material than wrought iron was desirable. In France steel plates were substituted, but at first with indifferent success, as it was long before improvements in manufacture enabled a satisfactory quality of steel for the purpose to be produced. In England recourse was had to a system of uniting a hard and comparatively thin steel face to a thicker plate of wrought iron, by fusing the two together when hot with molten steel poured into a narrow space left between them, the whole being afterwards consolidated by pressing and rolling. Plates made on this system were the patent of Mr. ELLIS, the head of the Firm of JOHN BROWN & Co. They were known as compound plates, and gave very satisfactory results so long as chilled cast iron continued to be the best material available for projectiles, their comparatively hard faces causing the shot to fly to pieces on impact. As, however, the difficulties of making projectiles of forged and hardened steel were gradually overcome, the compound plates, whose advantage lay in their power of breaking the shot, began to be equalled and even surpassed in resisting power by the French all-steel plates, which had all along been steadily improving. This was the state of things five or six years ago when two new inventions began to attract attention. One of these, the patent of Captain TRESIDDER, of

Messrs. JOHN BROWN & Co., consisted of a special method of producing adamantine hardness in the face of any armour-plate when that face was formed of high-carbon steel. The other, the invention of the late Mr. HARVEY of the U.S. of America, consisted principally in a method of supercarbonising the face only of an all-steel armour plate, so as to render it capable of being subsequently made quite hard while the body of the plate remained tough and ductile. Strange to say, the original patent for these two inventions were applied for on two consecutive days; TRESIDDER'S application being filed in England one day before HARVEY'S was filed in the United States, neither party having any knowledge of what the other was doing. Under these circumstances, the Companies formed to work the HARVEY process in Europe made arrangements with Messrs. JOHN BROWN & Co. by which the TRESIDDER patents were acquired and added to the other patents protecting the HARVEY process. The HARVEY armour-plate is undoubtedly the armour-plate of the day, a 6-inch plate of this make being accounted practically equal in resistance to 10 inches of ordinary steel or 12 inches of wrought iron, so the following brief description of its manufacture will not be without interest. First, a steel ingot of extremely high quality is cast, weighing rather more than half as much again as the finished plate. This is then forged under a powerful hydraulic press into a flat slab, some inches thicker than the required plate, and nearly one-third by weight is cut off at the same time from the top end where slight unsoundness in the steel may generally be expected. The slab is next rolled to the finished thickness and cut approximately to length, and the rough plate thus produced is placed in a "Harvey" furnace together with another similar plate, in such a way that both are completely surrounded by sand but are separated the one from the other by about five inches of a special form of solid carbon. The whole mass is then exposed to intense heat for about a fortnight, exclusive of two or three days occupied in getting the heat up and two or more in allowing it to cool down. The result is that wherever the plates are in contact with the sand, carbon is abstracted from them, and wherever they are touched by the solid carbon—that is on the sides which will respectively form their faces—absorption of carbon into the steel takes place; so that after this process the face of each is very high in carbon, the back very low, and the interior mass is not affected. The plate is next bent to the proper curve (with an allowance for subsequent warping or hardening), and after being machined to size on the edges (with an allowance for subsequent shrinkage), any holes required for attachments in the face are drilled and tapped. Indeed, the plate

is now approximately finished as regards machine work except the drilling of bolt holes in the back, which can be as easily done after hardening as before. The next process is the chilling or hardening, and this calls for the greatest care and experience. The plate is brought to a moderate red heat in a special furnace, every precaution being taken to avoid oxidation and to ensure a proper and absolutely uniform temperature. When this is attained, it is quickly removed from the furnace and placed face up on a special apparatus so designed that thousands of small jets of cold water can be instantaneously caused to impinge forcibly on both its upper and lower surfaces. In this way it is rapidly cooled, and if everything has been properly done, it will have warped and shrunk so nearly to the required form and dimensions that the shape can be made exact with a slight amount of cold pressing, and the size adjusted by a little grinding on the edges with an emery wheel or grit-stone. After chilling, the face is tested with large hardened steel punches, which are held in a pair of tongs and struck heavily with a sledge-hammer. These being shattered at the point without indenting the plate, indicate the intense hardness of the face-steel, which may then be relied on to destroy the best steel projectiles attacking it under ordinary conditions.

One of the modifications in the above described process, for which Messrs. JOHN BROWN & Co. obtained a patent early in their experience, consisted in applying the carbonising operation to the slab before rolling it to the final thickness, so that the face of the plate would receive its final consolidation after being carbonised instead of before. Pressure of work prevented this idea being practically tested at the time, and pending such test a condition was inserted by the British Admiralty in contracts for Harveyized plates specifically forbidding its adoption. It appears, however, from reports of a trial in America, that the rolling subsequent to carbonisation improves resisting powers. Further experiments to confirm this may be thought desirable, but Messrs. JOHN BROWN & Co.'s representative states that his firm would as soon make the plates the one way as the other, and it is merely for the purchaser to choose which he prefers.

It will readily be understood that the machinery and appliances at such works as those of JOHN BROWN & Co., turning out yearly from 5,000 to 6,000 tons of finished material in the armour-plate line alone, require to be of special power and involve a huge capital outlay. In addition to a fine forging press capable of exerting a total pressure of 4,000 tons, and a bending press of 6,000 tons, this firm has just put to work a mammoth forging press of 10,000 tons power, which, with the engines, cranes, furnaces, &c., necessary to make it complete, has alone involved a capital expenditure of no less than

£100,000 sterling. To attempt to enumerate all the smaller presses, gigantic planing machines, big lathes, electrical machinery, rolling mills, hammers, &c., kept at work by this Company would be an endless task. Next to armour-plates their most important line of products is large forgings, either rough or finished, for gun work and marine shafting. In such railway material as springs, tyres, axles, buffers, &c., they have also a world-wide reputation, and almost every marine engineer of eminence has paid at least one visit to Sheffield on purpose to see their patent system of boiler installation. In this system, which is steadily gaining favour, PURVES ribbed furnaces and SERVE "winged" tubes are combined with retarders, assisted draught and hot-air feed in a way that claims to equal the much belauded water-tube boiler in efficiency, and to excel every known system as regards economy of fuel. The best general idea of the importance of the Company may be derived from the fact that their Works cover 32 acres of ground, every square yard of which is occupied to the full with costly plant; that they employ about 5,000 workmen; and that all this is quite exclusive of their extensive colliery property, where another 5,000 men find employment.

THE "JIYU-TO" AND THE CABINET.

IT is a singular fact in Japanese constitutional history, that never yet has any political party been an avowed supporter of the Government. In the first session of the Diet a section of the members were not unwilling to be tacitly regarded as friendly to the Cabinet, but the Opposition, then an overwhelming majority of the Lower House, succeeded in enveloping the term *Seifu-to*—Government party—in such an atmosphere of contempt that very soon no one was found willing to acknowledge himself an ally of those in power. It frequently happened in those days that when a member found himself constrained by the unavoidable dictates of common sense to vote in favour of an official measure, he took care to deprecate any inference of pro-Government tendencies. The late Mr. AWAYA SHINAZO was, perhaps, the sole exception to this rule, but the reputation he enjoyed for frank fearlessness was equally exceptional. There is no difficulty in accounting for this state of affairs, unprecedented as it is in parliamentary annals. Beyond question, numbers of politicians were perfectly sensible that many of the ablest men in the Empire served in the ranks of officialdom, and that, on the whole, the country owed a heavy debt of gratitude to the statesmen of the *Meiji* era. But so long as the Ministers of the Crown steadily maintained their irresponsibility to the Diet, and refused not merely to be openly

connected, but even to be privately associated, with any political party, it was of course a practical impossibility that any party should work openly in official interests. Nobody can ever have imagined that the state of affairs then existing could be permanent. Party Cabinets are the inevitable outcome of parliamentary institutions, and though the best interests of the country demanded that a system so delicate, and a system hitherto workable in one country and one only, nor even there conspicuously successful—should not be inaugurated until the elements essential to its smooth operation were duly organized, there was, at the same time, evident danger that the progress of the nation would be interrupted seriously in the interim. For three years, indeed, every Bill introduced by the Government for the development of the country's armament or resources was opposed by a majority of the Representatives, not on its merits, but simply for the sake of creating a legislative deadlock such as should ultimately force the Cabinet to acknowledge dependency on a parliamentary majority. Had there been then in existence any party apparently capable of assuming the administration of State affairs, it is very probable that an opportunity would have been afforded to it to try its hand. But there was no such party, and since, though avowedly unqualified to replace the Cabinet, the various sections of the Opposition persisted in their destructive programme, no hope offered except that some issue too vital to be made the sport of party politics should arise between the Government and the Opposition. That was what happened in 1893, when the doctrine of Strict Treaty Enforcement, with its anti-mixed-residence corollary, having been adopted by the extremists, it became necessary for the Opposition to choose between ranging themselves on the side of the Cabinet and giving their adhesion to a policy plainly detrimental to the empire's foreign relations. The Liberals (*Jiyu-to*) showed no hesitation in the face of such an alternative. They came out flat-footed against the vexatious and petty scheme of strict enforcement, and against the retrogressive and cowardly notion of postponing mixed residence. The split in the ranks of the Opposition was final, and every student of the time then foresaw that since the Liberals had preferred their country's interests to their party's cause, the probability of their becoming Government supporters in opposition to the purely destructive policy of their former confederates, was not remote. Apparently the forecast is now to be realized. Believing that the Cabinet's action with regard to the Liaotung Peninsula could not have been other than it was, and persuaded that to precipitate an administrative crisis on account of that issue would be to hamper the adoption of measures absolutely necessary under the empire's altered circum-

stances, the Liberals are about to declare themselves openly supporters of the Cabinet. Their example will be followed, in all probability, by the National Unionists, and since these two parties alone command over 130 votes in the Lower House, their combination with the practical, though hitherto not professed, friends of the Cabinet will give the latter complete control of the parliamentary situation. It is a conjuncture of the greatest interest in the history of Japanese constitutional government. Of course, as the *Nichi Nichi Shimbun* explains in an article translated elsewhere in our columns, there can be no definite adhesion of the members of the Cabinet to the ranks of the Liberals, neither can there be any pledge as to the administrative or legislative action of the former. But nevertheless we shall see for the first time a large party in the Lower House openly supporting the Government, and the fact will of course contribute immensely to general political tranquillity.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

MISS ABBOTT'S EXHIBITION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In a letter from "T.," inserted in your issue of the 5th inst., the following words occur:—"I fancy this is the first encounter of Miss Abbott with hoodlumism, but it strange she should have met with the experience from students of the University of Japan." Will you allow me to state that whether students under Mr. Kano did or did not act brutally, the question has nothing whatever to do with the students of the Imperial University, or the "University of Japan," if "T." prefers to have it so. It is strange that a man when he is going to charge others with hoodlumism should not take trouble to find out more accurately at whom he is about to hurl his accusation.

I remain, Sir, yours, etc.,

STUDENT.

November 6th, 1895.

A CHALLENGE.

SIR,—As you observe, there is anything but order in the present discussion. There is also great danger of forgetting the real points at issue and degenerating into a mere war of words and smart sayings that cannot edify but only gender strife. I therefore suggest that the proposition—or the propositions as the case may be—be distinctly and formally stated and that the rules of decorum worthy of such a discussion be observed. To help matters forward I will therefore agree to defend the following proposition: *Jesus is the Messiah, the Son of God; he is our once crucified but now risen Lord; and he only is the saviour of the world.* Is there one of an opposite view who will agree to meet me on this theme? And who will agree to defend his belief over his real name? Or at least give me his name by private correspondence? Hoping all may see the wisdom of some such arrangement, and the impropriety of proceeding in such a haphazard way as the present,

I remain most faithfully yours,

J. M. McCALEB.

November 8, 1895.

"THE DOCTRINE OF IMMORTALITY."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I beg your kind permission to enter an emphatic protest against the misrepresentation of the doctrine of the Christian Church on the subject of the future life by the writer of a communicated article on "The Doctrine of Immortality" in to-day's *Mail*. When such misrepresentations come from writers plainly animated by a general

hostility to Christians and Christianity, while they are not pleasant reading, they can be passed by with the contempt they deserve. But when a writer like this one, who appears to be honestly aiming at a broad and philosophical view of the subject, and apparently thinks that he has attained it, so entirely misrepresents the beliefs that he is attempting to discuss, I must own that I for one find it difficult to be patient. If such writers do not find it worth while to find out what the Christian Church really does teach, why will they not save themselves the trouble, and others the pain, of a public discussion of that teaching?

I do not wish to debate the questions involved. They can not be satisfactorily discussed in any space that you could allot for the purpose. But I deny that the Christian Church teaches that "among those consigned to perdition are to be reckoned all rejectors of orthodox teaching, all deniers of miracles, all men of the Huxley and Spencer type, despite their sincerity." The teaching of the Christian Church could only be proved in one of two ways; from some symbol of practically universal acceptance like the Nicene Creed, or from the practically universal consent of all Christians, shown from an exhaustive examination of the writings of representative Christians of all ages. Your correspondent's assertion can be proved neither in the one way nor in the other.

This writer shows the same want of understanding of the subject he discusses in other ways. He makes the believers in conditional immortality to hold "that men are to be saved from extinction only by believing in the doctrine of the Atonement, as explained by Church authorities," while all others are "doomed to annihilation." I doubt if there is or ever was a mortal man who would accept that as a statement of his belief. Certainly the greater number, if not all, of those who have accepted the idea of conditional immortality would maintain that the faith which saves a man is essentially a moral and spiritual relation to God, of which the chief manifestation is obedience to God's will, and the strenuous endeavour to "be perfect as our Father in heaven is perfect," and that it can not be adequately described as belief in any "doctrine" whatever.

It is not in itself a matter of very great importance that this same article misrepresents Bishop Butler as holding in his "Analogy" that the lower animals also survive death, whereas in fact he only holds that a future existence for them can not be disproved, nor the idea of it used as a *reductio ad absurdum* of the belief in human immortality. But the misrepresentation is at least significant of the amount of pains that the writer takes to be correct in his attribution of opinion to other people. Of all the defects of this article, however, the worst seems to me to be this;—that in discussing the Christian belief in the future life, while he has tried to consider it broadly, and has attempted to find a psychological explanation of it in men's feelings and desires, he has left altogether out of the account the Christian belief in God, and in man's filial relation to God, on which it really rests. The Christian doctrine of the future life was stated long ago by an apostle, who wrote: "Beloved, now are we the sons of God, and it doth not yet appear what we shall be, but we know that we shall be like Him, for we shall see Him as He is." Apart from that faith, there is no Christian doctrine of a future life. It does not need three columns, or three lines of the *Japan Mail*, to show that when God's Fatherhood and Man's sonship to him are denied or ignored, the Christian hope for the life to come must disappear.

Very truly yours, T. S. TYNG.
Tokyo, November 8th, 1895.

PROPHECY AND PHRASE-TORTURE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Before replying to Mr. McCaleb's latest deliverance on the question of prophecy, I have waited with interest to see what defence he would offer for the assertion that I wrote "over an assumed name changing with each succeeding letter"—an accusation which there is no necessity for me to repel, as you have yourself pointed out that the charge is groundless. It is interesting, however, to find that Mr. McCaleb practically refuses to accept your assurance that the correspondents referred to by him as one and the same, are two distinct persons; but such a course is extremely characteristic of the class to which Mr. McCaleb belongs. I have repeatedly found that individuals extremely credulous concerning extraordinary events, related on the authority of persons who lived seventeen or eighteen hundred years ago, are at the same time very suspicious of the good faith of their contemporary fellow-men. Mr. McCaleb does not seem to know that outside religious circles it is customary to accept such

an assurance as you have given without question, the bare statement being sufficient among gentlemen, and needing neither oath nor proof to substantiate it. It is a well-known fact, indeed, that the man who is extremely suspicious of the veracity of his fellow-men is as a rule not a person who has himself very close dealings with Truth, and after such an exhibition as has been given I beg to decline with thanks Mr. McCaleb's offer to meet me at my own fireside and talk over these subjects face to face. It would be absurd to admit to fireside intimacy a man who has so little knowledge of social canons as to demand proofs of a personal statement affecting individual veracity, for argument under such condition would simply be a farce. Nor, after the rejection of your assurance that "Earnest Inquirer" and "Secularian" are not one and the same person, shall I make any attempt myself to convince such a sad example of the "unbeliever." To others who take interest in the present discussion I would say that though "Earnest Inquirer's" original letter, which commenced this discussion is dated from Kobe, I have not the remotest idea as to who was the writer—I neither wrote the letter, nor asked anybody else to write it, nor suggested to anybody else the query it contained, for at the time it was apparently penned I had not read Mr. McCaleb's letter.

But what is the reason for the anxiety of reverend or semi-reverend gentlemen to learn the identity of correspondents who may oppose them in argument? Is it that they desire to exert the force of social pressure against the unbeliever,—to injure materially the opponent whose arguments they find difficulty in answering intellectually? It is not unnatural that such a suspicion should arise, as there is absolutely no valid reason why the identity of the controversialists should enter into such a discussion as the present. Mr. McCaleb excuses his demand for the name of his opponents on the ground that anonymity is "a reason of suspicion that the writer is either ashamed of his position or lacking in a due degree of sincerity in actually believing what he claims." If this be so, then Mr. McCaleb must be sadly exercised about giving credence to the Gospels, which are all four anonymous. In such a discussion as the present, however, the suggestions are simply ridiculous, for the further question at once arises, Why, if the anonymous correspondents are ashamed of their position or lacking in sincerity, do they trouble to write at all? Shame would suggest concealment; lack of sincerity would involve indifference. The writer who attacks what he believes to be established error gains nothing save the satisfaction that he is performing a simple duty in the general search for Truth. Is it exactly the same with Mr. McCaleb? Presumably he is a salaried defender of the Christian religion, and naturally desires that his Mission Board and the world generally should know how energetically he is performing his commission. If it were absolutely essential in the interests of truth that arguments should be supported by names, then of course it would be imperative that the opponent of established error should declare his identity, even at the risk of social ostracism by a Christian community. But it is not essential, as such a discussion as the present can be carried on far better by leaving altogether out of sight the personality of the disputants save as disclosed in their method of controversy. I make these remarks on the question of anonymity from a general point of view, as personally I have no objection to my identity being disclosed. Indeed, I employed the *nom de plume* "Secularian" in the present discussion because to those who have taken interest in the discussions which took place in the *Japan Mail* some years ago, it is, I think, far better known than my name would be, and it is the *nom de plume* I have invariably used in these controversies on religious matters. The *nom de plume* is, however, a very open secret, and if Mr. McCaleb will take the trouble to inquire among his missionary friends living in Kobe, he will soon have his curiosity set at rest.

I am afraid, Sir, you will think that this is a long digression from the questions at issue in this discussion; but my object is in the first place to dispose of the question of anonymity once and for all, with the hope of clearing the way in future controversies of this character; and in the second place I have dealt with the matter at length, as the attitude Mr. McCaleb has taken up on this side issue is full of significance as regards his position on the larger question of the alleged predictions of Christ in the Old Testament. It is evidently a matter with him not of "proof" but "belief." Two correspondents with different *noms des plumes* write to the same journal in the course of a certain discussion. They write from the same place, and apparently hold the same opinions; and, as it suits Mr. McCaleb's precon-

ceived idea, he immediately assumes that they are one and the same person, and then proceeds to state this as a positive fact. Similarly, Mr. McCaleb and those for whom he stands as a type read in the Old Testament certain vague mystical allusions to coming Deliverers, Messiahs, and so forth,—all of which have perfectly natural explanations in the history of the Jews apart from the particular attribution to which they wrest them,—and holding that the Christian religion would be strengthened if the coming of Christ could be shown to be predicted a few hundred year before it occurred, they positively state, as if there were not the slightest question about the matter, that the various political and poetical passages they quote from the so-called "prophets" have reference to one and the same person who lived in Judea some hundreds of years later.

That this system of word-torturing and context-straining has an evil ethical effect upon those using it no one can doubt who is acquainted with current Christian apologetics. Mr. McCaleb is a case in point. In his first letter he distinctly stated that "Christ came in fulfilment of a certain line of prophecy that had long since gone before upon him, even concerning his name." Then he proceeded to give six of these names as "Wonderful," "Counsellor," the "mighty God," "Immanuel," "Christ," "Jesus." I would ask any impartial person whether in reading such a list the natural impression received would not be that each of these names appears in our translation of the Old Testament as Mr. McCaleb has written it. Taking "Jesus" as standing for "Joshua," though it is not quite ingenious to thus spell the name, five of the titles or names do so appear in the Old Testament, while the remaining name "Christ" does not. Oh! but, says Mr. McCaleb, the translation of the word "Christ" is "The Anointed,"—a fact of which the most superficial student of Christian apologetics is well aware—and therefore he argues that he was quite justified in using the Greek word "Christ," putting it within inverted commas as if it actually occurred in our translation of the Hebrew Scriptures, and presenting it as an example of "the fulfilment of a certain line of prophecy that had long since gone before upon him, even concerning his name." Nine out of ten casual readers who perused the original sentence would believe that Mr. McCaleb meant to state that the name "Christ" actually thus appeared in the Old Testament, for it need scarcely be pointed out that the custom of translators is not to give the meaning of names, but to transliterate them as closely as possible. Mr. McCaleb would be the first to denounce as disingenuous such a juggling with words and meanings in a controversialist to whom he was opposed.

But this is not the only example Mr. McCaleb gives of a lack either of controversial integrity or of understanding of the matters about which he writes. In my first letter I referred to "the absurd contradiction involved in the assertion that Christ was born of a virgin, and that he was nevertheless (by two inconsistent genealogies) of the House of David." In reply Mr. McCaleb denies that the genealogies of the Gospels ascribed to Matthew and Luke are contradictory, and positively asserts that "Luke gives the line from Mary back to David, Matthew gives the line from Joseph (Jesus's father by law) back to David." Now, if words have any meaning, Mr. McCaleb is here advancing a contention for which there is absolutely no support whatever in the book to which he refers. Matthew gives the alleged line of descent from Abraham through David to Jacob, the last verse of the genealogy reading, "And Jacob begat Joseph the husband of Mary, of whom was born Jesus, who is called Christ" (Matt. i. 16). Luke gives the genealogy also from Joseph, his words being, "And Jesus himself began to be about thirty years of age, being (as was supposed) the son of Joseph, which was the son of Heli," and so on (Luke iii. 23). The heading of the chapter in the Authorised Version is, "The age and genealogy of Christ from Joseph upwards." And yet Mr. McCaleb, who must or should be aware of these facts, says, without the slightest hesitation, that "Luke gives the line from Mary back to David."

Similarly in dealing with my objections to the famous "Immanuel" text in Isaiah, Mr. McCaleb says: "Nor can it be shown that his [Christ's] mother did not call her son Immanuel, but suppose we grant she did not, the prophet leaves it indefinite as to who is to call him Immanuel." Now the actual words which the Authorised Version attribute to Isaiah are as follow:—"Behold, a virgin shall conceive, and bear a son, and shall call his name Immanuel," the alternative reading in the margin of the Teacher's Edition being even stronger, "Or thou, O virgin, shalt call," &c.

Such is the deplorable outcome of the word-

twisting upon which so much theologic training is necessarily based. Brought to bay upon the clearest issue, the theologian attempts to escape either by flat denial of his own Scriptures or by attaching meanings to words and phrases which they can bear only by doing actual violence to the language. It is the merest beating of the air to argue with a controversialist for whom words have whatever meaning it may suit the exigency of the moment to attach to them. I shall therefore not attempt to follow Mr. McCaleb's rejoinder in detail, for much of it is altogether beside the mark, and what there is that is pertinent is vitiated by the fatal drawback to which I have directed attention. Mr. McCaleb has utterly failed to meet my criticism of the text in Isaiah which I took as a sample of the so-called prophecies, and he must, I think, realise in his own mind that he has so failed. Similar examination devoted to the other passages he quotes will be found to yield exactly the same result as in the case of the Isaiah text, but I am afraid the *Japan Mail* would scarcely find room to print the catalogue of inaccuracies and exposure of fallacies that would be involved. What I would suggest to those who are really interested in these matters is that each passage Mr. McCaleb quotes should be read with its context and with the aid of a commentary, Christian or other, and then subjected to the rules of logic and common sense. If this be done, the impartial and unprejudiced inquirer can, it seems to me, come to but one conclusion—that the passages described as "prophecies" no more foretell the coming of Christ, than they foretell the coming of Confucius, Buddha, or Mohammed, Spinoza, Voltaire or Paine, Comte, Huxley, or Spencer.

The utter futility of prophecy for any purpose whatever must, indeed, be apparent to any one who will divest himself of the predilections in which he has been nurtured, and carefully think the matter out. Of what possible value to the Jews of the ante or post-Captivity period could it have been to be promised that some hundreds of years later a Man-God should be born among them who should live, suffer, and die for the sins of humanity? Of what value could the prophecies have been to those who lived in the actual period during which the signs and wonders associated with such a teacher were performed? Of what value can the prophecies be to us, upon whom, if we are believers, the actual signs and wonders of the first century must have far more weight than predictions, and who, if we do not believe the contradictory testimony of the anonymous gospel-writers, are not likely to be convinced by the vague and mystical references of their Jewish predecessors? The only value the prophecies had were for the early Judaizers, who desired to prove that Christ was a Jew, who claimed that Jewish prophets had foretold him, and who, like Matthew, argued that what was holy was not to be given to the dogs, that is, to the Gentiles. It was in the interest of the Judaizers that Christ should be represented as coming to the Jews and for the Jews alone, and these were the first who endeavoured for their own purposes, and to support their own narrow arguments, to connect the ancient prophets with the modern creed. How clumsily the work was done will be apparent to any one who will take sufficient trouble to compare the various passages quoted in the Gospels with the originals in the Old Testament, and then read up the context and inquire into the circumstances under which the originals were written. After this is done, let

such an inquirer consider whether a superhuman intelligence would or could have adopted such a vague and roundabout method of pre-attesting an event which, if Christianity be true, was to be of such exceeding moment to every human being.

Yours, &c.,
SECULARIAN.
Kobe, November 3rd, 1895.

MR. McCALEB.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I must excuse myself for troubling you to insert these lines in your paper, but to my mind nothing coming from a reverend gentleman has ever struck me as being so painfully absurd and out of place as the Rev. J. M. McCaleb's remarks contained in your issue of the 11th inst.: "who will agree to defend his belief over his real name." How large-minded a man must be to be able to utter such a wise remark, can be estimated by the readiness with which he judges all believers of other faiths to be afraid to append their names to a note in answer to such an unreverend challenge. Such a stand in my opinion would hardly help matters forward, and as for the *wisdom of some such arrangement*, it is a consolation at least to find that not many believe such a bold attitude of defiance an attribute of wisdom.

The Rev. Gentleman wants to meet some one

on this theme. Does he want some one to prove to him that another creed has a different view of the matter, or does he wish merely to exert his best qualities in behalf of his church by finding a foeman worthy of his steel?

Hardly do I think it time well spent to try and explain any unexplainable portions of a religion; much less do I think a good religion needs defending. Mr. McCaleb seems to be ready to defend his by leaving to others to find proof of an impossible kind. The patient people may believe what he "quotes" about Jesus being the Messiah etc., but how these patient people must be grieved also to hear the same man say in a manner utterly unlike a clergyman, *is there anyone of an opposite view who will agree to meet me on this theme*. This I think an unwise and unnecessary step to an argument where one man's views are as good as another, and where common sense clearly shows that proof of the kind necessary is impossible to get. If all the theological training of the kind that this gentleman has does not instill the correct respect for other beliefs and does not teach that a man, be he of whatever sect he may, does not need to defend over his signature his belief to make it worthy of him, for one I am sorry so much valuable time has been wasted.

I have the honour to be, Sir, yours respectfully,

"DEFENDER" F.C.S.

Yokohama, Nov. 11th, 1895.

MISS ABBOTT'S EXHIBITION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—"T." makes his sincerest apologies to the students of the Imperial University. The important matter, however, is that such unfair play was allowed. One spectator declared he was sickened at the sight of it and could not sleep at night. I am informed that so far from any resentment being shown, the apparent success of the interference was greeted with cheers and shouts of *Banzai*.
November 11th, 1895. T.

THE CHRIST ACCORDING TO PROPHECY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It is to be regretted that in the discussion on "The Christ according to prophecy," carried on between Mr. J. M. McCaleb and "Secularian"; much extraneous matter has been introduced, not altogether without the fault of Mr. McCaleb himself, whose remarks on anonymity were not in any way relevant to the subject. The chief point at issue between the two disputants is the meaning of Isaiah VII. 14. "Secularian," in denying the Messianic character of this passage, finds himself in the company of the earlier as well as later rabbis, such as Hillel, Kimchi and Abarbanel, who hold the *almah* in question to be either the Queen of Ahaz and mother of Hezekiah, or the prophet's own wife (compare also *Bab Sanhedrin*, f. 99; Grätz, History of the Jews VI. 386; and Justin the Martyr's Dialogue with Trypho the Jew c. 49 and c. 67 sqq. where this very question is discussed). The latter view, viz., that the *almah* in question was the prophet's own wife (already married, or at the time of the prophecy about to be married, to the prophet), held by "Secularian," is also maintained by such learned authorities as Bolten, Faber, Fritzsche, Gesenius, Grotius, Hezel, Hitzig, Isenbiehl, and Plüschke. Other explanations not recognizing the Messianic character of the passage are given by Ammon, Bauer, Cube, Eichhorn, Heusler, Paulus, and Steudel. A double sense, the primary meaning of the passage as well as an ultimate reference to Christ, in other words, the Messianic character of the prophecy, is claimed by Dathe, Koppe, Lowth, von Meyer, Olshausen, Richard Simon, Dr. J. Pye Smith, and Williams, men with whose views Mr. McCaleb will find himself more or less in agreement. Neither the majority of Christian writers, whether liberal or orthodox, nor any of the rabbis and interpreters of the law and the prophets among the Israelites, so far as known to me, take *almah* in the sense of *virgo illibata*; Dathe, however, does so, as does also Mr. McCaleb, for the italics and the whole context place his meaning beyond the shadow of a doubt. The former, with admirable consistency, also believes in the actual occurrence of a miraculous conception at the time of Isaiah's prophecy, in due fulfilment of the word spoken through the prophet and as a sign to the generation living under the reign of Ahaz, a view perhaps also shared by Mr. McCaleb.

There was, and probably always will be, diversity of opinion on the Messianic character of Old Testament passages. The Targum of Onkelos refers only two Pentateuch passages to the Messiah, those of Shiloh and the Star out of Jacob, while the later Pentateuch Targum holds no less

than seventeen passages to be Messianic in character (Buxtorf, *Lex Chald. et Talm.* p. 1268). Similar diversity of opinion on this subject exists also among Christian writers, to a greater extent, perhaps, than either Mr. McCaleb or "Secularian" realizes. Each man must, after due inquiry and study, reach his own conclusions with regard to any given passage; but each man, while thus engaged, should also bear in mind that, according to Christ himself (Matthew XXV.), the final tests of character lie not in mere belief or profession, but in the sphere of active morality and benevolence.

Yours very truly,

Tokyo, November 11th, 1895.

EPSILON.

THE DISCUSSION ON PROPHECY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Permit me to call attention to a misprint in my letter, dated the 3rd of November, which appeared in the *Japan Mail* on Monday. A few lines from the bottom of the second column there is a sentence commencing, "The only value the prophecies had were for the early Judaizers, who desired to prove that Christ was a Jew." This should read, "who desired to prove that Christ was a Jew of the Jews," the three words omitted, as will be seen, making a distinct alteration in the sense of the clause.

Those who have followed the present controversy will be decidedly amused at Mr. McCaleb's complaint in his letter printed in Monday's issue that "there is anything but order in the present discussion," followed by a challenge to debate an entirely different proposition to what has formed the basis of the present controversy. What Mr. McCaleb set out to prove was that "Christ came in fulfilment of a certain line of prophecy that had long since gone before upon him, even concerning his name." Now he offers to defend the proposition that "Jesus is the Messiah, the Son of God; he is our once crucified but now risen Lord; and he only is the saviour of the world." And he apparently thinks that both propositions are practically one and the same. Mr. McCaleb is a hopeless controversialist. He does not even realise, apparently, that in the very act of restating the proposition he is entirely shifting the ground of argument. I am afraid that if I were to accept Mr. McCaleb's challenge after the latest exhibition of his controversial incapacity I might lay myself open to the charge that well-known gentleman Mr. P. B. Publico brings against me in your issue of the 5th inst., of lying in wait for a weak fighter, and then ridiculing his size! But where are those doughty champions of Christianity who assert that they see Mr. McCaleb's weakness without attempting to come to his assistance? Is it possible that in their hearts they realise that it is not so much Mr. McCaleb's incapacity that is at fault, as the intrinsic weakness of the Christian position?

Yours, &c.

SECULARIAN.

Kobe, November 12th, 1895.

CONCERT AT THE PUBLIC HALL.

The concert given in the Public Hall on Friday evening in aid of the funds of Christ Church, was a great success. What few seats remained unoccupied were so only in consequence of the Canadian mail that sailed at daylight. The concert began with refreshing punctuality for Yokohama, within a few minutes of the hour, and as there were no long waits between, the programme concluded by eleven o'clock. After the opening pianoforte duet by Miss Vincent and Mr. Griffin, Adams' beautiful "Star of Bethlehem" was given with charming effect by Mrs. Bent. Then Miss Laura Smith gave two dainty little pianoforte pieces (a) "Si oiseau j'étais" (Henselt), and (b) "Au printemps" (Grieg), and received a beautiful bouquet of flowers, a fitting tribute for a very pleasing performance. Mrs. James Walter secured a hearty recall for Bohm's well-known "Thine;" and bowed her thanks. One of the most successful items of a very interesting programme was Mr. Sharp's recitation "King Robert of Sicily," with musical interludes. Once or twice, however, a fine effect was marred through the speaker's voice being almost drowned by the musicians behind the curtain. In pieces of this description the music we think should never be more than suggested. The applause was loud and long at the conclusion of the item. Mrs. Irwine was down for the next number, De Faye's "Tell her I love her so." Needless to say it was given with all the marvellous intonation and delicacy of phrasing that Mrs. Irwine always throws into her songs; and the delighted audience demanded the last verse over again. The string trio, which

concluded the first half, was a most successful effort. In the duett "Les Hirondelles," by Mrs. Irwine and Miss Burdett Leach, another decided success was achieved, the blending of the lovely voices being particularly beautiful. In response to the encore, the singers kindly repeated the last verse. We have seldom heard a finer rendering of a Mazurka by Wieniawski than was given by the gifted musician whose name appeared opposite No. 2 in the second part. He was recalled and eventually responded to the encore. Mrs. J. C. Hall next gave a rendering of Benedict's "The Bird that came in Spring," which earned a recall. Mendelssohn's "Zweites Capriccio" from Op. 33, found a capable exponent in Mrs. McIvor: the pity was she would not be persuaded to give another exposition, for her command of technique and charm of expression are of high degree. The three concluding items were all vocal, "Happy Days," by Miss Lloyd Thomas; "Punchinello," by Mr. R. de B. Layard; and "In this hour of softened splendour," by Miss Thomas, Mrs. Read, Mr. Nicholas, and Mr. Sharp: all were capitally given.

PROGRAMME.

Overture...	Nabucodonosor...	Verdi.
March...	Krönungs-Marsch...	Meyerbeer
1.—P.F. Duo...	Romanza...	Haydn.
	Mr. Griffin and Miss Vincent.	
2.—Song...	"Star of Bethlehem"...	Adams
	Mrs. P. S. Bent.	
3.—P.V. Solo...	(a) Si oiseau j'étais...	Henselt.
	(b) Au printemps...	Grieg.
	Miss Laura Smith.	
4.—Song...	"Thine"...	Bohm.
	Mrs. James Walter.	
5.—Recitation...	King Robert of Sicily...	Longfellow.
	Mr. H. J. Sharp.	
6.—Song...	"Tell her I love her so"...	De Faye.
	Mrs. Irwine.	
7.—Trio...	Allegro Animato (Op. 42)...	Gade.
	Mrs. Poole, Mr. Poole, and Mr. Schmid.	
Fantasia...	Der Freischütz...	Eckert.
1.—Duett...	Les Hirondelles...	Masini.
	Mrs. Irwine and Miss Leach.	
2.—Violin Solo...	Mazurka...	Wieniawski.
3.—Song...	"The Bird that came in Spring"...	Benedict.
	Mrs. J. C. Hall.	
4.—P.F. Solo...	Zweites Capriccio (Op. 33)...	Mendelssohn.
	Mrs. McIvor.	
5.—Song...	"Happy days"...	Strelitsky.
	Miss Lloyd Thomas.	
6.—Song...	Punchinello...	Mollo.
	Mr. R. de B. Layard.	
7.—Quartett...	"In this hour of softened splendour"...	Pinsuti.
	Miss Thomas, Mrs. Read, Mr. Nicholas, and Mr. Sharp.	
	GOD SAVE THE QUEEN.	
March...	Tannhäuser...	Wagner

LETTER FROM FORMOSA.

(FROM OUR SPECIAL CORRESPONDENT WITH THE JAPANESE ARMY.)

Anping, October 25th.

The reign of Liu Yung-fu, the Black Flag Chief, dates back to the early days of June, when President Tang made his escape from Taipei-fu, the northern capital. About this time the Taotai and leading officials stationed at Tainan-fu, in compliance with the orders from the Emperor, returned to the mainland leaving an ex-mandarin, who had been serving as confidential adviser, to act as Taotai, Magistrate, and Prefect.

Ku-ku-chingsu, commonly known as Khâ, Pok-sia, and other *literati*, to the number of about one hundred, invited Liu, then at Takow, to come to Tainan-fu and protect the city. He consented, was installed in the Examination Hall, and adopted the title of Assistant Commissioner. When Tang fled, the *literati* and other persons composing the so-called "Parliament," elected Liu Yung-fu to the Presidency of the "Republic," which they determined should continue. A "ways and means" committee was formed and arrangements made for collecting the necessary funds from the people, by means of a capitation-tax and "voluntary" subscription. Besides the usual land and other taxes, a special war-tax was imposed on property to the extent of five per cent., the value being fixed by an official assessment. Besides this, Liu arranged to carry on the Foreign Customs, the proceeds from which went into his treasury. An Executive Council, elected from the "Parliament," and consisting of seven senators, sat in the city every afternoon. The Chairman and Vice-Chairman of this body was "Pok-sia" and "Khâ" respectively. Proclamations were issued setting forth that, as soon as the Japanese had been driven from the Island and peace restored, railways were to be built, mines opened, and trade otherwise developed. A Silver "Republic Seal" was now offered to Liu with much ceremony, accompanied by the

request that he would assume supreme control of public affairs. Like Cæsar, he declined the proffered dignity, saying that when peace had been restored, and he had proved himself worthy of the honour, he would accept it; but for the time being he would only promise to do all he could to attain that object. He requested the petitioners to give him unanimous and loyal support. It was also distinctly announced that the setting up of an independent Government in no way indicated a lapse on the part of the Formosans in their allegiance to China; on the contrary, it was hoped that what was done would tend to aid China in the hour of her need and helplessness; the Republic was to be conducted in unison with the Mother-Government, both working side by side as "twin-mountains." It has always been understood, too, that after peace had been established by the expulsion of the Japanese, the people of Formosa would once more place themselves beneath the laws of the Emperor of China. There can be little doubt, that Chang Chih-tung and other high officials secretly instigated and supported Liu, and through him the people, in carrying out this scheme. For many months Chang Chih-tung forwarded money, men, and arms in considerable quantity to Liu, and this support only ceased within the last month or six weeks; though, even then, Liu's principal supporters in Nanking and Foochow, proffered, at least verbally, to redeem the paper-notes which Liu was obliged to issue to his troops. The notes were really issued, and supposed to be guaranteed by a foreign compradore, and their face-values were \$1, \$5, and \$10. Cash-notes of face values of 100, 500, and 1,000 copper cash each were on the point of being circulated when the crisis culminated that put an end to all plans and calculations. All government payments have for the past month been made in notes, proclamations being issued calling on the Customs, hongts, and the people generally to accept them as good and legal tender. For some time the notes were redeemed at par on presentation to the above mentioned compradore, but during the last week or two redemption was suspended, and thereupon "bond-notes," resembling the others in appearance, were issued, these being guaranteed by the wealthy people in the city. Another form of speculative note was also circulated which purported to promise to pay the holder five dollars for every dollar note presented after peace had been restored and the republic established. Opium merchants took advantage of the depreciation in the paper currency to buy up the notes at a great discount, and then presented them in payment of duties at the Customs. The stamp mania, now so universal, was also utilised "to raise the wind." Proclamations were published that postal agencies would be established in Amoy, Swatow, and Hongkong for the distribution of letters bearing the Republic's stamps. The issues appeared: the first, from a locally cut silver die, was on a thin tissue paper, unperforated. About 5,000 only were issued. The colours were green, violet, and red. The die was then melted and attempts made to obtain one more perfect. Failing this a new die was obtained from Canton, and a new issue of stamps printed from the Canton die appeared. These were also in three colours blue, violet, and red, but were perforated. The face-values of the different stamps were, for both issues, 3, 5, and 10 cents respectively. It should be noted that the legitimate manufacture of stamps ceased with the existence of the Republic, and it is necessary that special precautions be taken by collectors to avoid forgeries, as already the demand for the first issue has called the forger into the field. Liu decreed that all Chinese letters posted through the local post should be stamped, and the bags were duly vised to ensure this having been done. A final effort to replenish the depleted treasury was made by taxing each person leaving the island—and there were many thousands of these. The rate varied from two to four or six dollars, according to the financial standing of the payee. It must be said, in justice to Liu, that he undoubtedly paid his troops in money as long as he had it, and besides this clothed and fed them at Government expense. Knowing the number of men he had under his command, and the amount of money at his disposal it seems difficult to discern how Liu could have "squeezed" the sums for his personal use that people outside the island are prone to assert. It is certain that every one speaks very highly of Liu's personal integrity.

From all that can be ascertained, the troops under Liu's command, after Tang had bolted, and including local levies, was not far short of 30,000; of these only about 4,000 could properly be styled the original "Black-flags." The local levies, even the Hakkas, who were enthusiastic followers of Liu at the outset, decreased in number daily as the Japanese advanced on

Tainanfoo, until at the end probably not more than 12,000 men remained with the colours. At one time a band of aborigines from the south, all dressed for the war-path, made a pretence of joining Liu. They encamped in the city and received food in return for their services. Two died, whereupon the remainder said it was a bad token, and, taking the dead with them, suddenly disappeared. They have never been heard of since. They obtained arms and ammunition from Liu which, no doubt, they think ample recompense for the trouble they were put to.

As the Japanese approached, and especially after the landing in the south had been effected, Liu realised the gravity of the situation and made many abortive attempts to surrender. His first was made by letter, which H.B.M.'s Consul took to the Pescadores and handed to the Japanese Admiral. The following terms of surrender were proposed by Liu:—

1. The Japanese to pay all arrears due the soldiers.

2. The Japanese to send him and his soldiers to Canton in transports, and that the Shimonoseki Treaty be carried out as to the Chinese being allowed two years in which to consider whether they would become Japanese subjects or not.

To these proposals the Admiral replied that the Fleet would be off Anping on the 12th at noon, and that General Liu, or his authorized delegates, should come on board to discuss the surrender of the Island. He promised not to open fire without first giving notice, unless the Chinese commenced the attack. The flagship *Yoshino* appeared off the port at 7 a.m. on the 12th, but for some reason unknown did not come to anchor until 2.30 p.m., which induced Liu to become suspicious as to the *bona fides* of the Japanese Admiral. He therefore refused to go off and see him. The day previous, Liu had requested Mr. Alliston, a visitor from Hongkong staying in Anping, to take a letter for him to the Japanese troops at Khagi containing a somewhat similar offer of surrender to that sent to the Fleet, of which latter fact he also informed the General. Liu begged the Commander-in-Chief to cease operations for the present. Mr. Harry Hastings accompanied Mr. Alliston as interpreter, and the party was escorted by Twenty Black Flag soldiers. The escort deserted when within about two miles of the Japanese lines. No difficulty was experienced in reaching the Japanese Head-quarters, but as the Commander-in-Chief was with the other division no practical result could be arrived at. Messrs. Alliston and Hastings returned empty-handed, though not without the credit that such a plucky and philanthropic action undoubtedly deserves.

General Liu sent a deputation consisting of two Chinamen on board the *Yoshino*. They called first on board H.M.S. *Pique* and were accompanied by H.M.'s Consul to the flagship, where they presented a request that the Admiral give Liu a written guarantee of safety to and from the *Yoshino*. The Admiral declined to parley further in the matter, as he considered that Liu had had assurances enough, and finally stated that the *Yoshino* would remain until 10 a.m. next day when, if Liu did not appear in person, or by deputy, the fleet would either open fire or heave anchor. Thereupon the deputation withdrew. At the stroke of 10, on the 13th, Liu having shown no inclination to keep his appointment, three of the ships got under way, leaving one behind. In the afternoon the Customs were asked to signal that the negotiators had left the shore. This signal was acknowledged by the Japanese ship, but again Liu failed to keep his word for no deputation left the port.

That night Liu sent two deputies to the *Pique*, but every one had grown so disgusted at his vacillation that they refused to help any further in the matter, and the delegates returned to shore. On the 15th the *Dante* with 1,800 passengers, and the *Thales* with about 1,400 left for Amoy, and from these passengers Liu levied about \$12,000. A compradore of a British firm wishing to send away \$8,000 had it seized by Liu, who said the shipper had promised to contribute that amount to the war fund and had failed to do so. The Japanese dispatch-boat *Saikio Maru*, was fired on that day by the Anping forts, as mentioned in my previous letter. On the 17th the report reached here that the Takow forts had sunk three Japanese ships. This was vouched for by Liu, who said he had it by special messenger—this was really two days after Takow had been occupied by the Japanese Forces, naval and military. On the 18th, the British steamer *Thales* returned, and the first suspicions of a "bolt" on the part of Liu became assured by the news that he had arranged for a passage for his 8 dogs by that steamer. On the morning of the 18th, General Liu successfully performed the "vanishing trick."

The last known of Liu's movements was that on the night of the 18th, he went down to the Anping (large) fort on the pretext of inspecting it. He remained there that night, and next morning had disappeared, along with about 100 officers and his immediate body-guard. Lying off the fort at dusk was a junk, and it is supposed he left in her, but how far he proceeded in that craft is not known. Some say he actually escaped, disguised as a coolie, on board the *Thales*, but nothing definite is known. One rumour assumes that he got away to the Eastern hills, though this seems improbable. The news of Liu's departure spread like wild fire, and the soldiers began pouring into Anping settlement, where the only foreigners were Messrs. McCallum, Burton, and Alliston, the others being either in Takow, or on board the *Pique*, or in Amoy. In the city of Tainan-fu were Messrs. Ede, Fergusson, and Barclay, of the E. P. Mission. Messrs. McCallum, Burton, and Alliston persuaded the soldiers, after an altercation, to lay down their arms, which were then stacked in the Customs Opium-godown. This operation took nearly all day, between 6,000 and 8,000 rifles being eventually stowed away, together with several tons of small-arm ammunition. The men were placed in the Compound, and on the night of the 20th, the forts and barracks were totally deserted, no soldier in Anping or Tainan-fu being armed. Early on the morning of the 21st the Japanese troops landed, the northern and southern divisions of the Army advanced on the city and the Japanese completed the occupation of the whole island. The Japanese, on landing, found 4,000 disarmed soldiers congregated round Fort Zelandia. These were driven, like so many sheep, into a large walled compound belonging to the Customs. Here they were kept under guard until shipped to Quemoy on the mainland, by the transport *Riojun Maru* early on the morning of the 23rd.

On the morning of the 20th, the prisoners had food and water served out to them, but after that the Japanese Navy being unable to apply food for so great a number, the sufferings they underwent, especially for water, were piteous in the extreme. Several residents and officers of the British ships did what they could to assuage the terrible thirst of the poor wretches, but, of course, even their best efforts fell far short of what was required. Why the Japanese made no effort to supply water seems inexplicable. On the 21st, the villagers were again requisitioned and they supplied a few buckets of congee-rice, but so great was the scramble and confusion that but few got even this. With the knowledge that eight Japanese heads had been exposed on the adjoining forts and five them were even then rotting in the sun, it is not to be wondered at that very little sympathy was felt for General Liu and his followers by the Japanese officers and men. One Japanese sailor guarding the corral committed an act of barbarity which should receive the most serious attention of the naval authorities. Water was being served out from a tub just outside the low stile-gateway facing the Bund. The people had been allowed to push their bowls through this opening, and were struggling for attention and relief in a most heart-rending way. One of the sentries, who had stepped on to the Bund, seeing one man leaning over rather further than the rest, made a rush at him with his bayonet, and ran him clean through the body. The unfortunate victim fell back, rolled over two or three times, and was dead. The assassination called forth universal execration from the foreigners standing by. Wild, almost maddened as the people were with thirst, they continued to be most amenable to orders and discipline, and there can be no excuse for such a display of savagery. It can only reflect injuriously on the credit of the service to which the ruffian belonged. No doubt when the case comes before the Admiral the guilty man will receive the punishment he deserves.

At 9 a.m. on the 21st, the Southern Division having reached Tainan-fu, a detachment was sent into Anping. On the outskirts of the village they met some of the sailors from the Fleet who were mustering the prisoners. These latter had been suddenly surprised while at breakfast in some houses near, not being aware of the approach of the Japanese. On sight of the latter the prisoners rushed out in great confusion and terror, and attempted to get away, whereupon 56 of them were killed at the point of the bayonet. The majority had thrown down their arms. They have all been buried in one large grave and a record board is placed over the mound.

Anping, October 29th.

His Imperial Highness Prince Kitashirakawa, Commander of the Guards Division, died on the 28th, of fever combined with heart trouble. While I was in Chang wha (Shoka) in September he was just recovering from an attack of fever. He undoubtedly failed to regain his full strength, and this

combined with the fatigue of the long trip to Tainan-fu was too much for his enfeebled constitution. His death took place in the city of Tainan-fu and his body is to be brought to Anping to-day, and transported to Japan direct.

Taiwanfoo, Formosa, Oct. 30th, 1895.

My last letter relating to the Guards Division under command of Colonel Samishima, left them at Changhua (Shoka), with a detachment holding a small village to the south. This was towards the end of September, and the Commander was awaiting the departure of the main division for the south. The unhealthiness of Changhua and the long enforced idleness of the troops, prepared them for a happy acceptance of the order from head-quarters to advance towards the south. On the fifth, the advance-guard crossed the river near Po-toa (Hoku-to), and proceeded towards Chu-wa-ka (Su-so ka) where they defeated seven or eight hundred Chinese. They arrived by night-fall at Si-tong-kang (Se-to-ko), and there encamped. On the sixth, the advance-guard proceeding, an encounter took place near Tai-lu (Ta-li-mo) with about 3,000 Chinese troops, and resulted in victory for the Japanese; the village was then occupied by them. The same day, a detachment sent to the East defeated about 1,000 of the enemy, who were occupying a small village 2½ miles south-east of Chu-wa-ka. Then advancing to Fang-ling (Oong-ling) an engagement with 3,000 troops resulted in a loss to the Chinese of 200 killed. The Japanese occupied this village for the night. The Right Detachment occupied To-ko-ke (Do-ko-ki), and the Division Staff advanced to Si-tong kang.

Kangi (Kagee) a place well fortified by the Chinese, was attacked on the 9th by the Guards Division from three sides. The city was defended by six or seven thousand Chinese troops, including 600 Black Flags. After two hours fighting the Chinese retreated in the direction of Tainan-fu and the Japanese occupied the city. Over 200 Chinese were killed in the engagement and the Japanese loss, including, all the engagements since the seventh, was 68 killed and wounded. At Kangi the Guards Division was ordered to stay until General Takashima's troops had landed.

In a letter written at the Pescadores, I informed your readers of the departure, on October 10th, of General Takashima and his expedition for Paw-tay-chui, which lies on the coast about 20 miles north of Anping. The men-of-war *Kaimon* and *Seiyeu* escorted the transports. They commenced the attack by shelling the Chinese troops who appeared on the beach. A few hours later the Chinese retired, and the landing of the troops commenced. Blue-jackets were first to gain the shore and a portion of the Mixed Brigade under command of Prince Fushimi followed. The anchorage is about 3 miles from the shore, and with a strong wind blowing the landing was extremely difficult, it taking seven or eight hours for the sampans to make the trip. The enemy occupied the village, but after a little fighting retreated, leaving the Japanese in possession. The natives informed them that a few days before several thousand Chinese soldiers had been sent to the village but had retreated during the early hours of that day. Only about 800 remained to attack the landing parties. The village being burnt, no further opposition was made to the new arrivals. The Japanese loss during the day was two wounded.

Only the Brigade Staff, the Fifth Regiment, and two companies of the Seventeenth Regiment were able to land during the day. An advance on Gam-sui Kang (En-sui-ko), Kow-wah-tow (Ko-so-to), and Ku-pa-so (Ki-hot-si) was made in three columns, and then a bivouac was ordered for the night. During the 12th the Mixed Brigade were sent out against the scattered bands of the enemy in the surrounding district, but with the exception of an engagement near Kaw-wah-tow the resistance was very feeble. Communication was opened with the Guards Division by the arrival of two staff officers from Yam Sui-kang, that had previously been occupied by a detachment sent forward from Kangi (Kagee). On the 14th, orders were given by General Takashima to the Mixed Brigade, that great care should be taken in thoroughly scouring the district for all Chinese soldiers, that none might remain to harass any small parties of Japanese passing through, or to endanger the lives or property of peacefully inclined Chinese. The brigade and Guards Division were also prepared to advance on Tainan-fu on the 18th. Word was received at head-quarters that one company of the 17th Regiment that had been sent out the day before in the direction of Tang Chui (So Ko), had been surrounded by the Chinese troops. One company and a half were accordingly sent as a reinforcement, and after some fighting the Chinese fled to A'oah and Pu-aw-kah (Boku-sio-ki-aku) with the loss of 60 killed. The Japanese lost 9

killed and 10 wounded. A detachment followed the retreating soldiers in the direction of A'oah, the next day. On the 15th, the van of the Mixed Brigade advanced to Kit-sui-ke and the Brigade staff to Yam-sui-kang. On that day the last of the supplies were landed from the transports at Paw-tay-chui. On the 18th, information was received from native spies of the sites of mines and earth works constructed north of Tainan-fu and that 10,000 troops were distributed in the district.

The Commander of the Mixed Brigade having been informed that between 5,000 and 6,000 Chinese troops were stationed near Ong-ya-toi (O-ya-to) despatched the Fifth Regiment of Infantry, one battery of Artillery, and a troop of Cavalry to engage them. After a few hours' fighting, in which 3 Japanese were killed and 14 wounded, including 5 officers, the enemy retreated, leaving 80 dead on the field. Two large cannon of ancient model were captured. On the same day the right column of the Guards Division took Mow-kang-hwi (Boko-bi) without opposition, and proceeded to Chung sha (Chu sha). Here they encamped for the night. The right detachment of the Mixed Brigade met the enemy about four kilometres west of Ta-sung-tow (Dai-sen to) and fighting ensued. Later in the afternoon Ong-ya-toi was occupied. The Chinese loss for the day about was 400 killed, the Japanese, one captain wounded. One Krupp field-gun, one mountain gun, two bronze cannon, many rifles, and much ammunition were captured. The advance Guard of the Mixed Brigade had rather a hard tussle with the Chinese all day. The first engagement was near Mo-toi (Ma-to) in which two Japanese were killed. Then advancing and crossing the So-boong-ke river about 4,000 of the enemy were encountered who were all well armed with repeating rifles. After a strong resistance the enemy fighting behind earthworks, the Japanese defeated them, but with a loss of 2 killed and 11 wounded, including two officers. The Chinese loss was only 20 dead. On the 19th, the right detachment surrounded 3,000 Chinese troops that had sought shelter in the village of Shoi lan (Sho rui). Escape was impossible and a most desperate engagement resulted, in which nearly 1,000 Chinese were killed and the Japanese lost 9 killed, including one officer, and 21 wounded, including two officers. The Chinese had laid mines along the regular route, and of course could not comprehend how it would be possible for an army to conduct operations contrary to their expectations. The extensive earthworks were consequently useless, but the mines caught two unsuspecting officers. Commodore Count Yoshii, Adjutant to his Majesty, and Capt. Ogawa, Adjutant to the Commander-in-Chief, were following at a safe distance behind the troops and had not observed the detour that was made to avoid the mines. Captain Ogawa was riding ahead when his horse struck a mine and a terrific explosion ensued. He was wounded severely and his horse killed instantly. Commodore Yoshii was wounded about the head, but not seriously. I am informed by the latter officer, that if the mine had been properly constructed the loss of all the party would have resulted, but the explosives were simply covered with sand. At this village the news reached the Brigade of the occupation of Anping and Tainan-fu. The Chinese troops had surrendered, so both the mixed Brigade and the Guards Division reached Tainanfu without encountering further opposition. My letter written from Takow gives the events of Nogi's division in the south up to their arrival at that port.

News reached Head-quarters yesterday of the engagement of October 14th near Tang-koi-sui, one of the southern villages. Two companies of infantry were in the vicinity reconnoitering, when they were suddenly surrounded by five or six hundred Chinese soldiers, who commenced to fire upon them from ambush and the surrounding mud huts. After several hours of hard fighting the Chinese were finally driven out, but not until 94 Japanese had been killed or wounded. The Chinese loss was only 30 killed. This engagement is of special interest, as it is the first in the whole war where the Japanese loss exceeded that of the Chinese. Two soldiers while tramping around Ape's Hill Fort at Takow, accidentally discharged a mine, and both were killed. From Pit-han, which is about five miles east of Takow the Division advanced early on the morning of the 19th. On the 20th at Ji-chang-hang, about five miles south of Anping the advance guard of Cavalry were surrounded. After some fighting the Chinese retreated leaving 150 killed on the field; two Japanese were wounded.

Messrs. Ferguson and Barclay, connected with English Presbyterian Mission, on behalf of the Chinese, took under to convey to the Japanese at Ji-chang-hang a letter from the residents of Tainan-fu requesting the Japanese to come at once to the city, where they would meet with no opposition. Upon receiving this epistle the Japanese moved at once, arriving at the outskirts of

Tainan-fu at seven a.m. They were in full possession of the city at nine a.m. on October 21st.

About 2,000 Chinese soldiers fled into Tainan-fu on the morning of the 21st, and discarding their weapons and uniforms for the more appropriate garb of humble coolies, mingled with the townspeople.

The *Riogu Maru* landed at Quemoy 5,182 prisoners. They were given five meals, consisting mostly of rice. Governor Kabayama, Mr. Mizuno Chief of the Civil Department, Mr. Okubo, and a large number of Civil Officers arrived on the 26th. They are mostly quartered in Tainan-fu. The Governor and his staff will return to Taipei in about 10 days.

JAMES RUSSELL LOWELL.

The following is a *résumé* of a paper upon James Russell Lowell, poet, critic, essayist, and diplomatist, read by Mr. A. B. Brown before the Yokohama Literary Society on Friday evening. The paper was freely illustrated with quotations from the poems, the "Biglow Papers," and excerpts from several of Lowell's essays:—

JAMES RUSSELL LOWELL.

In common with so much of the flower of American life, James Russell Lowell was of Puritan origin. He was the heir of several generations of men of plain living and high thinking and pious ways: the outcome of a line of eminent divines, magnificent philanthropists, and enterprising manufacturers. The best blood of Massachusetts flowed in his veins, for he was a descendant of Percival Lowell, a merchant, who emigrated from Bristol in 1639, and settled in Newbury, Massachusetts. The Russells also were men of mark in the State. The poet's father Dr. Charles Lowell, was a cultivated Unitarian clergyman, fond of books and a lover of old ways. His wife, Harriet Spence, a lady of unusual parts, was the daughter of Captain Robert T. Spence, of Portsmouth, New Hampshire, an officer of the U.S. Navy; and from him no doubt came the imagination and poetic faculty with which the brilliant author of the "Biglow Papers" was so largely endowed. James Russell Lowell was the youngest of five children, and was born at Cambridge, Massachusetts, on February 22nd—Washington's birthday—1819, in the old house—"Elmwood"—in which he died. Many lines in his poems give glimpses of his early home: and in his essays he often dwells with loving tenderness over the memories of his birthplace, then a pretty, quiet country village, with "a few houses, chiefly old, around the bare common, with ample elbow-room, and old women, capped and spectacled, still peered through the same windows from which they had watched Lord Percy's artillery rumble by to Lexington," and where before the quaint inns you might see "great white-topped waggons, each drawn by double files of six or eight horses, with its dusty bucket swung from the hinder axle, bull dog silent underneath." Elmwood, too, built in old pre-revolutionary times, was full of books, pictures, and ancestral portraits.

In this atmosphere of purity and culture, where the talk was of literature or weightier matters, of the Federal Bank, Clay's or Calhoun's last speech, Channing's latest sermon, or essay, or Scott's last novel, and where stern protests against slavery were uttered by the hearth, grew up the poet, critic, and militant abolitionist. At 16 he went to Harvard. The ordinary studies had no charm for him. Rumour has it, indeed, that at Harvard, Lowell showed a great faculty for idleness, and would read nothing except books that attracted his capricious and satirical fancy. For mathematics he conceived a settled distaste, and it was during a brief period of rustication for idleness from his *alma mater* that he first made acquaintance, at Concord, with Emerson, whose transcendental side the young satirist attacked in many humorous and playful sallies. He entered the Law School at Harvard and having taken his degree of L.L.B., actually opened an office as a lawyer in Boston. But he did not seriously attempt to practise. His only record as a "limb of the law" is to be found in a laughable story called "My first client," which appeared in the *Boston Miscellany* in 1841. After the lapse of a year he turned his back on the profession, bidding farewell for ever to "Coke upon Lyttleton," "Story's Commentaries upon the Constitution," and similar diverting calf-bound volumes beloved by the legal mind. Literature was his early passion and it soon absorbed him. Before his 22nd year he published a volume of poems, neither better nor worse than most juvenile productions, very melancholy and very musical, and with a characteristically

youthful motto. In 1843 he began to edit at Boston a literary and critical magazine called the *Pioneer*. Among his contributors were Edgar Poe, Nathaniel Hawthorne, Whittier and other writers who afterward became famous. The magazine made but a short voyage, making shipwreck after three numbers had appeared. But a great advance was already discernible, and it was clear that America possessed another poet. In 1844, the volume containing "A Legend of Brittany," "The Shepherd of King Admetus," and "Prometheus" appeared. Here and there the practised ear detected echoes of Keats, Wordsworth, and others. But true native notes were struck. If rhetoric predominated, it was noble rhetoric, and the thoughts of the young poet moved in a high region of sweet music. Many of the sonnets expressed strong anti-slavery sentiments. Had Lowell written no more than "A Legend of Brittany"—"beautiful as the illuminated marge of some old book"—he would have taken a high place among the poets of his country. But in 1848 he made greater advance and stepped at once into the front rank of writers by opening up the rich, fresh vein of the "Biglow Papers." Destined, we can scarcely doubt, to be permanent in literature the papers could have appeared at no other time. The Mexican war had just broken out, and Lowell protested against it vigorously in the witty essays and dialect poems which have since become world famous. The first of the Papers appeared anonymously in the *Boston Courier*, under date, June, 1846, and they continued every week until the middle of 1848. "They consist," writes Mr. Charles Dudley Warner, "of a series of poems in the Yankee dialect, ostensibly written by Hosea Biglow, and edited, with an introduction, notes, glossary and index, by the Rev. Homer Wilbur, pastor of the first church in Zaalam, and prospective member of many literary, learned and scientific societies"—a full list of which takes up a long page of closely printed abbreviations. These papers had no mere literary success; they are to be compared rather with the Drapier Letters than with the satires of Pope or Dryden. The whole rhetorical stock in trade of many eminent politicians of the day became at one blow unsaleable. Lowell's laughable description of the *dramatis personæ* of the Biglow papers has often been quoted, and runs as follows:—"There was the danger of vulgarising deep and sacred convictions by adopting a light, comic form. I needed on occasion to rise above the mere patois, and thus I conceived the Reverend Homer Wilbur to express the more cautious element of the New England character and also its pedantry, and Mr. Hosea Biglow, who should serve for its homely common sense, vivified and heated by conscience. Finally, I invented Birdofredum Sawin for the close of my little puppet show. He endeavours always to be on the winning side, 'opining that a genuine statesman should be on his guard, if he must hev beliefs, not to b'lieve em too hard.'" The America of Birdofredum Sawin has passed away: it is faithfully preserved for ever in the "Biglow Papers." The second series was wrung from him by a war compared with which that between the United States and Mexico in 1846 was a skirmish—a war involving the temporary disruption of the Great Republic. But the flavour of the second series was not quite so racy as that of the first. The incomparable success could not be repeated. He himself, in his own moderate, modest way, said—Friendly people say to me sometimes: "Write us more Biglow Papers," and I have even been foolish enough to try, only to find that I could not. This has helped to persuade me that the book was a genuine growth and not a manufacture.

Witty though Lowell was, he has said that he never used the mask of Momus except to command attention to serious thoughts; and it is characteristic of the man that his next works were the poems, "The vision of Sir Launfal" and "The Present Crisis." These set to music the gravest resolves of the sternest spirits of New England, and have since furnished with inspiring texts many a religious and social reform. "A Fable for Critics," published anonymously in 1848, obtained for him another success, whether a durable one is more doubtful. Loud were the cries of indignation from the crowd of poetasters who had squatted down on the highest peak of Parnassus, and whom, with a good natured shove, he pushed off into their proper place on the flat below. The "Fable" did its work. The poem introduced, says a competent critic, a due sense of proportion into American criticism. It put an end to those dull times, when, to use Lowell's words, "to write a hundred blank verses was to be immortal till somebody else wrote a hundred and fifty blander," and pruned, with good effect, the too luxuriant growth of "remarkable" men of letters

in every community big enough to maintain a grocery store or a newspaper.

In 1855 Lowell was appointed, in succession to Longfellow, to the chair of Modern Languages and Belles Lettres at Harvard. He went abroad for two years, to live chiefly in Germany and Italy, there to widen still further his knowledge of modern literature. He returned to Cambridge in 1857, and his work as a professor was varied by lecturing at the Lowell Institute, the publication of "Fireside Travels"—in the opinion of many of his admirers the best of his prose writings—and the task of editing the *Atlantic Monthly*, which, under his skilful guidance, did much for the literature of his country. "Under the Willows," containing more than one charming poem, appeared in 1869. Perhaps on some products of this time, full of subtle feeling and exquisite susceptibility to nature's tender aspects, the admirers of Lowell will linger with most delight. In his "Commemoration Ode," "dedicated to the ever sweet and shining memory of the 93 sons of Harvard College who have died for their country in the war of nationality," he once more was the chosen spokesman of the deepest thoughts of his countrymen. We English cannot, perhaps, value his Odes as highly as they do; they are for them robed in personal associations of sorrow and glory, which to Englishmen must be invisible. But no one can read them unmoved; they were the fit expression of a nation's grief. In an early work entitled "Conversations," Lowell had given the world a taste of his quality as a critic; and, as editor of the *Atlantic Monthly* and the *North American Review*, he wrote many fine critical essays. His full strength and richness, as such, were revealed in the essays published between 1870 and 1876. "My Study Windows," and "Among my Books" are in all hands. Wherever literature is loved, wherever learning and appreciation of what is beautiful and good are held in honour, these delightful fruits of a full life are prized. It is easy to find defects in him as a critic. Half of his faults, however, are due to exuberance of wit and fancy; the other half are perhaps ascribable to overkindness. With all their blemishes, these essays, a well known English critic writes, take rank with the very best of Hazlitt's and scarcely fall short of the master-pieces of Lamb. No man ever wrote less bookishly and more delightfully about books; none of his generation could distill more skilfully the subtle aroma of the finest literature. An eclectic, he was no simple product of his own New England. Many minds, the rich washings of many streams, ores from far countries, and the dust of diamonds bequeathed by the past imparted to his style its iridescence and remarkable beauty. Nothing can be better than his critical analysis of Shakespeare, Milton, Dryden, Spenser, Pope, Wordsworth, and the immortals of English poetry; but to our thinking he is still happier in dealing with smaller English writers. Perhaps the best of all is his criticism of Gilbert White, the author of "Selborne," of whom he says that the American Revolutionary War between 1776 and 1783 had no such thrilling excitement as that which marks his letter to the Hon. Daines Barrington, communicating that the swallow has made his first appearance at Selborne twenty days earlier than usual!

From his congenial life in Cambridge, Lowell was called in 1877 to become Minister at Madrid—an Embassy once filled by Washington Irving—and in 1880 succeeded Mr. Welsh as representative of the United States in England. No foreign representative was ever more respected and admired than Mr. Lowell. His was an Embassy of culture and goodwill. We prized his counsels and criticisms of England, even if pungently expressed. We rejoiced in his refined, humorous speech. An admirable public speaker, like most of the American Ambassadors to England have been, he was ever the soul and life of a congenial company. We could not have been more proud of him had he been one of us. He made warm friends in the old country; and his departure from England, on the change of administration in 1885, was regarded as nothing short of a calamity. As a learned critic in *The Times* observed, soon after Lowell passed away "to his long home," it is evident that he upon whom was showered so much success laboured under one constant disadvantage, his versatility and many-sidedness lessened his reputation. "The mountain which has far reaching spurs sloping gently into the valleys seems to a careless eye so much smaller than the peak, really a dwarf in comparison, shooting out of the plain. His culture was so wide, the hospitality of his mind so generous. He loved the warm sunshine and fresh nature of Chaucer; it did not prevent him from writing the best essay in the language on Dryden; his study of Lessing—a kindred spirit—is perhaps the great critic's most satisfactory biography; and he could not speak of Dante, Shakespeare, Keats,

or Browning without saying things, if not unsaid before, never said so well. His vision ranged with easy glance from Concord to Weimar, from Stratford to Florence, and to some minds it was natural to question his originality, while admitting his learning. Certain people always delight to praise the duckweed of the ditch, just because of its origin, at the expense of the full-blown flower, the product of nature and art. Posterity corrects such mistakes; it is apt to think cheaply of that originality, the first and almost only condition of which is ignorance." Certainly Lowell had many of the qualities calculated to secure lasting fame; and we cannot believe that such gems as "The Courtin," "The Present Crisis," or the best parts of the "Biglow Papers" will perish.

LETTER FROM WASHINGTON.

(FROM OUR OWN CORRESPONDENT.)

Washington, D.C., October 10.

Quick as Japan is to adopt new ideas and appliances we have one thing that has hardly reached any part of the Orient or even Europe—"trolley parties." You pick out your route, charter an electric street car for the evening, fill it up with your friends, put in lunch baskets and bottles, and away you go merrily rolling around town—and you have a "trolley party." There are no disagreeable stops, as no one else is allowed to board your car. No one tries in fact, as at a glance one can see that for the time it is private property, from the rows of incandescent lights strung around the roof, and the flowers festooned about the handles and posts, and flags waving from almost every seat. You can also have any music you wish up to ten o'clock, but after that only vocal, or very gentle instrumental strains in some places. Some noisy fellows at first made night hideous with blaring brass bands and discordant tin horns and drums, and the police had to check the disorder. But with congenial souls there is no pleasanter way of spending a hot evening than to whirl through the streets and out to some suburban resort, there to rest awhile, then to whisk away to another on the opposite side of the city miles away, enlivening the moments, and delighting the hot dwellers along your path with singing old familiar songs, till you go to bed in the small hours cooled by your long, swift ride. The expense per head is very slight, being about 25 cents or fifty *sen* apiece for the entire period. This form of diversion originated in Philadelphia, and has reached its fullest development there. It was probably due to this influence that "parlour" street cars have been introduced in that city, modelled after Pullman's, with a table and comfortable chairs, and curtains, to secure privacy. But you pay double for one of these. The "trolley party" craze has taken firm hold in Baltimore, where I could observe its manifestations during August. That was a very hot month and on some evenings there were as many as a hundred "parties" out. I saw nearly a dozen on one branch of one line one night. Here in Washington, though only forty miles from Baltimore, we are still old-fashioned, perhaps because our "tram" system has not attained sufficient growth.

It was confidently predicted several years ago that the electric road would prove a serious foe to its steam brother in local traffic. A verification was furnished the other day by the cut of 25 per cent. to the suburban points of Baltimore and Washington made by the Baltimore and Ohio line, one of the largest corporations in America. The same reduction, or even larger, has been brought about in Philadelphia, New York, and some of the thickly settled sections of New England. From all these places electric lines radiate, paralleling and tapping the steam ones, and bringing business men relief from the tyranny of the time tables. Thus far electricity has steadily gained ground in the fight; so much of the short travel has it captured that some of the strongest steam companies have taken off several daily passenger trains on some lines leading into the great cities. That other phase of this battle—competition over long distances—has not come into consideration yet; but it will doubtless do so in a little while, as there will soon be continuous electric tracks of nearly a hundred miles in length. It was planned some months ago to unite the spokes stretching out from New York and Philadelphia. Baltimore and Washington will be connected by an electric road, if not two, in less than a year, as the contract for the entire work has been let to responsible bidders, and numerous hands have begun grading. It is said the fare will be one dollar, while you travel now for two. There is no instance of electricity being successful at this long range and the experts have an open field for forecasting, but the burden of opinion seems to be unfavourable to any whole-

sale change until appliances have been improved. A curious pointer may be the invention by that prodigy Tesla. He puts his electric motor on the ordinary locomotive, and by first converting the energy of coal into steam and then into electricity he claims that he can get two or three times as much power from a given quantity of combustion as we now extract. While this would be a saving in one direction it would not assist the cleanliness or comfort of travellers. The same dust, smoke, and cinders would still assail us, and the slight economy in fuel would hardly compensate for the added cost. Aside from the money item, it is clearly established that the subtle current can drag the heaviest trains and can carry passengers at the greatest speed. During the past summer an electric Mogul has been pulling the most enormous loads through a tunnel, over a mile long, under Baltimore. It has done this with ease, as it weighs some 90 tons, about twice as much as its average steam rival. It has also fully met expectations in keeping the underground passage free from odours and impurities. In New England, in careful, rigid tests, this invisible agent drew passengers at nearly a hundred miles an hour. Electrical specialists pardonably point with pride to these achievements, but financiers coldly stand by the balance sheets, which invariably foot up in favour of steam.

A matter of the greatest interest to all missionaries was discussed at the regular Fall meeting of the British Association, in the anthropological section. Professor Petrie, the eminent authority in Anthropology and Egyptology, precipitated the question by his paper thoughtfully condemning us dominant Aryans for trying to force weaker races to adopt our civilization. He was very outspoken on this point, arguing that our system "is the most complex, unnatural, and artificial that has ever been known, a system developed in a cold country, amid one of the hardest, least sympathetic, most self-denying and calculating of all the peoples of the world. Such a system, the product of such extreme conditions, we attempt to force on the least developed races and expect from them implicit subservience to our illogical law and our inconsistent morality. The result is death. We make a death house and call it civilization. Scarcely a single race can bear the burden, and then we talk complacently about the mysterious decay of savages before the white man." One of his colleagues, Professor Haddon, also said: "Savage customs are often as powerful for morality as those we have sought to inflict, and there is no reason why we should interfere with them any more than is necessary to make life and property safe. Very many good people have confused clothing with morality, but the experience of all travellers is that there is absolutely no connection between the quantity of clothes and the degree of virtue. If we want to extend the markets for cotton goods let us do so honestly, and not under the pretence of advancing religion and morality." In this toleration of other customs than ours Professor Petrie claimed to have the sanction of the Apostle Paul, who he, says, "preached non-interference with any customs, even with the idol offerings provided," and who did not "prohibit slavery, polygamy or even gladiatorial shows." Other experienced and practical investigators took the same view, and the general tone was said to be decidedly hostile to the average missionary methods and aims. Of course to such an advanced people as the Japanese and to such intelligent Christian labourers among them this criticism could not apply.

While missionaries are zealously working in foreign lands there is plenty of "heathenism" at home in the opinion of some ministers, even in the metropolis of America, New York. The Rev. Thos. Dixon, of the Baptist denomination, has recently delivered a course of sermons in that city with the startling subject, "The failure of Protestantism in New York City." He made naked statements and gave some shocking figures, as exhibited in this extract. "New York is without exception, the most godless city on the American continent. In 1840 there was one church for every 2,000 inhabitants. To-day it has one church for every 4,500 of its inhabitants. There are vast districts in this city in which there are 50,000 people and no church. New York city has 500,000 human beings who, as far as regards Christian knowledge, are heathen, and heathen not in name and form, but in heart and spirit. The number of men who attend church is not equal to one-half of those who register daily at the hotels in our city. In the Methodist Church, which is the most aggressive church of our time, there was a membership in New York last year of 17,309, divided among 86 churches. The members subscribed last year \$550,000, and there was \$4,100,000 invested money besides. All this capital resulted in a gain of 241 members during the year. In the

Baptist Church the average gain is 216 members a year, with a membership of 18,000; an income of \$500,000, and an invested capital of \$4,000,000. The same state of affairs prevails in the Presbyterian Church, notwithstanding its immense wealth and power. The men have destroyed the Churches of New York. There are one thousand secret orders in New York, and they have not a single woman member, and 300 churches, the membership of which is three-fourths women." These charges if true prove a distinct loosening of evangelical forms in our chief aggregate of population, but they may not indicate any decay of spiritual life.

Perhaps a new style evangelist like Sam Jones may be needed to stir up the backsliders. His style and breeziness are as far removed from the dignity and unction of the regular conservatives as the manners of a prize fighter from those of a meek martyr. But he is very popular and affecting with the masses. He preached daily for three weeks at a Methodist camp meeting twenty miles from Baltimore, and crowds went to hear him. So well did he draw that the gate receipts, from ten cents a person, more than paid his salaries of a thousand dollars. These two quotations will give some notion of his style:—"I wouldn't vote for a man put up by the damnable old red-nosed democratic party or the infernal old hypocritical republican party, not if he were an angel sent from heaven. He's in too bad company." Again he used these choice epithets:—"How about the record of members of the Legislature? When an old bum is found utterly without character and good for nothing else, they run him for the Legislature. It's a fact. If I were running a soap factory in hell, and the devil were to bring me a lot of members of the Legislature, I would say to him: Take them on. I couldn't deodorize their damnable stinking old carcasses with all the disinfectants I've got in the place."

An incident at Coney Island, a resort near New York, might furnish a useful hint to those missionaries who have difficulty in learning the tongue native to the people they labour among. In this place the ministers all left for the summer, but one more thoughtful than the rest loaded up a phonograph with a complete burial service. It was needed too, as a baby died during the summer and the mother was frantic to have the proper rites performed. As no clergyman could be got he instrument was called into service and discharged its duties as follows:—"Mrs. Stillwell conducted the services: She changed the cylinders five times, and from the opening to the close it was just thirty-five minutes. An extra loud needle was used and the voice from the machine, as clear as a bell, penetrated to all parts of the room. Had a stranger been listening at the door he would have thought that a minister stood beside the coffin and spoke the words that rang through the double parlors. First was the Lord's Prayer, recited in a slow impressive manner. Then a shrill voice, unlike the other, announced that the Amphion Quartette would sing 'Nearer my God to thee,' and four well-blended voices sang the anthem. Then a passage of Scripture was heard. There was a buzz of the cylinder and then a deep voice pronounced the words committing the body to the grave. 'Blessed are the dead who die in the Lord,' were the words which rang out with greater distinctness than the rest, and then followed the benediction." A missionary who cannot catch the correct Japanese accent could have his written sermons talked into the funnel by a Japanese assistant, and then he could go around with the phonograph, and feel sure that he would be heard and understood.

It is a long step from Missionaries to millionaires, especially if we estimate in dollars, but the *New York World* lately considered the question of the six richest men on earth, and drew up this list, perhaps not more accurate than much of our war news from the East last summer:—

Li Hung-chang	\$ 500,000,000
John D. Rockefeller	180,000,000
The Duke of Westminster	100,000,000
Colonel North	100,000,000
Cornelius Vanderbilt	100,000,000
Woh Qua	100,000,000

Total\$1,080,000,000
Think of it! Over a billion dollars.

The London Missionary Society brought to an end on 28th ult. their centenary celebration meetings. Papers were read in the morning upon missionary work in Polynesia, in Madagascar, and elsewhere, with especial reference to the training of native workers, while the subject for discussion in the afternoon was "Christian Literature in the Mission Field." The centenary fund now amounts to £76,300.

LETTER FROM ST. LOUIS.

(FROM OUR OWN CORRESPONDENT.)

St. Louis, Mo., Oct. 18th.

The return of cool weather finds this section of America in a more flourishing condition. The roar and fury of steam and the flashes of ten thousand electric currents, intermingled with numberless multitudes hurrying to and from work of every sort, remind one that every vestige of the depression of a year ago is gone. This is truly a marvellous country. One day disaster may rudely mar the commercial or social welfare of the nation, but to-morrow every thing is prosperity. No nation even arose to greater glory in so incredibly short a space as did the United States from the ravages of war and this spirit has been repeatedly evinced in various other ways. Improvements, inventions, and advancement in every line are so rapid that if one does not studiously keep up with the times he will quickly find himself living in an era of the past and surrounded by entirely new environments. The multiplied millions invested every month in real improvements in this city alone is simply amazing.

During the past month the annual autumn festivities have been pompously and successfully observed. The Veiled Prophets and King Hots's Retinue of Funny Fellows have had their parades. The St. Louis Fair and Exposition have been ablaze. The number of visitors to the city during these weeks reach into the millions. Fully 400,000 people witnessed each parade, and on one day of the Fair there were 160,000 people who paid admission. It can be imagined what an increase in the volume of trade this multitude of visitors naturally effected. Our street cars have adopted the transfer system so that one can travel ten miles or more over the city for five cents. This greatly aids in getting about. There are three or four Japanese managing an exhibit in the Exposition. They seem to be doing a fairly good business.

While making an excavation preparatory to erecting a residence in a suburb of this city, a workman, a few days ago, dug up a human body turned into stone. The petrified body has been on exhibition at the Fair, and thousands of people have viewed it with much interest. There is no fake about it, as I saw it for myself. The body is that of a large woman laid out and in a natural position. Every part is distinct and preserved, only it is solid stone.

Rev. A. S. Ishida who has completed his education in this country, will return to Japan to take charge of the Methodist Church at Matsuyama, to which place he has been informed Bishop Hendrix has appointed him. He attended the St. Louis Conference several days ago, and is held in high esteem by the Church in America. A few days ago he received a letter from the Rev. Jerome C. Berryman, a noted pioneer Missionary veteran of 88 years, that on account of the fame of the author and its reference to a Japanese ministerial student, will no doubt be of interest to your readers. The following is the letter as it appeared in the St. Louis *Christian Advocate*:—

MR. A. S. ISHIDA—Very Dear Brother in Christ: You will excuse me for using pencil, for because of the unsteadiness of my hand, the pen is of no more use to me. In taking you by the hand a few days ago, for the last time probably in this world, I felt that I was taking leave of one whom I had learned to love most dearly. Not only as one of God's children, but as a gentleman, whose prudent deportment and well ordered Christian life during the last three or four years that you have been intimately known to me has been faultless; and further, I may safely say, your memory will be kindly cherished by those who have been your associates and instructors here, both in the church and school; your teachers all give you high praise. What I say to you here is not flattery, but for your encouragement; because you are far away from your home and kindred. "A stranger in a strange land." But He who is the Father of us all will take care of His own, whether in America or Japan. You came to America to prepare yourself for great usefulness when you shall return to your own loved native land. God and His people have been good to you, and I am persuaded that you will find both Him and them equally good to you so long as you put your trust in Him who has said: "I will never leave you, nor forsake you." Let no temptation shake your confidence. Having been sixty-seven years in the gospel ministry of our Lord and Saviour Jesus Christ, spending fourteen years of that time as missionary among the heathen Indians of our own continent, and the remainder as pastor and teacher to my own people, you may infer that my opportunities for testing the truth of the Bible as a revelation from God, have been ample, and now at the age of eighty-six, I declare to you that I would not exchange my faith in Christ to be crowned Emperor of the whole world and be made young again.

This Bible, my brother, is for your people as truly as for me and you. Should you be returned to your native land and people, tell them God hath made of one blood all the nations that are upon the face of the whole earth, and salvation is free for all who will believe in His Son, Jesus Christ. It is my expectation to die in this faith and through the merit of Him who suffered for my sins. I hope to get to Heaven, and more, I expect to meet you and other Japanese there. My wife instructs me to give you assurances of her kind remembrance and fervent prayer for your welfare. Let us hear from you as often as your convenience will allow. Affectionately yours,
Caledonia, Mo., JEROME C. BERRYMAN.

At this writing the prize-fight between Champion Corbett and Fitzsimmons is in a fix. It was proposed to hold the contest for the World's Championship in Texas, but the Governor called an extra session of the legislature which passed laws prohibiting the fight. It was next given out that Hot Springs, Arkansas, would be the scene of the battle. But this has been forbidden by the Governor of the State, and it is hard to say where it will take place. But before this is in print you will doubtless hear the result of the tangle.

Cardinal Gibbons of Baltimore, who recently returned from a visit to Rome, where he had a long conference with Pope Leo XIII., was in St. Louis last Sunday. He was on his way to Santa Fe, where he invested Archbishop Chappelle with the pallium, the insignia of his new office.

It is rumoured that the famous African explorer and member of the English Parliament, Mr. Henry M. Stanley is now in this country and will enter upon another lecturing tour. He, however, refuses to be seen by newspaper men, and even registered in San Francisco under an assumed name. Stanley is well known here and in New Orleans. His early life contrasted with his brilliant and marvelous career makes him admired by every American.

A very amusing joke has been recently perpetrated by a shrewd Japanese upon a St. Louis medicine man. The "Dr." got up a scheme to make a Japanese medicine, and accordingly wrote to a Japanese in Japan to translate an English endorsement of the medicine which he enclosed. The English version goes on to say that the medicine has been used in Japan for 2,000 years and is used as an invaluable and certain cure for various and sundry diseases. The Japanese wrote back in a bold Japanese classical hand saying that he could not indorse the medicine and if he should become a party to such a fraud the gods would punish him. He addressed the "Dr." as a horn-blower and poked ridicule at him. When the "Dr." got the writing he naturally thought it was a translation of what he sent, so large electrodes were made and a fac-simile of the Japanese can be seen in hundreds of drug stores with the English beneath as a translation of the testimonial. I met a Japanese on the street the other day and he showed me his discovery, which was very amusing to him. The "Dr." took the translation to several Japanese now in the Exposition; here they were of course too polite to tell him better, so he goes on printing an abuse of his own remedy.

The millionaire double-murderer Dr. Arthur Dastrow, now in prison here, is still pushing his simulations of Paranaic insanity. A day or two ago he had a messenger called to his cell to whom he gave \$500, with instructions to purchase flowers and carry them to his wife, whom he said was living at the mansion of his young sister on Lafayette Avenue. He killed his wife and child in a most brutal manner two years ago, but he claims to believe they are living. I have often seen and talked with him in gaol. He is a fine looking young man of 34 years, black hair and moustache. He has often spoken to me on his paranaic theories and is pleasant in his demeanor, but like nearly every other man, I believe he is simulating and never encourage him to talk to me on that line. Ex-Governor Charles P. Johnson, his counsel, says he will never hang, but the State thinks differently, and Circuit Attorney Zachritz is now endeavouring to re-indict him so that the case may be tried in this city instead of at Union, Mo., to which place it went on a change of venue. I have heard it said that Dastrow's Counsel has received a fee of \$50,000 for defending the murderer. It is certainly one of the most noted cases in the annals of criminal practice in the West.

The tobacco monopolies are at war in this country and as a result one can now buy 50 cigarettes for 5 cents, or a pound of chewing tobacco for 14 cents. This is about one-half the usual price, but cigars keep up, it being impossible to buy anything like a good cigar for less than ten cents.

H.B.M. COURT FOR JAPAN.

R. A. MOWAT, Esq., Judge.—FRIDAY,
November 8th, 1895.

BIEBER AND BRO. VERSUS THE CHINA NAVIGATION CO., LIMITED.

Judgment in this case was delivered at 10.30 o'clock this morning by His Honour.

The question that he was asked to decide was, he said, whether the damage sued for was ship damage, and the plaintiffs put in the bill of lading, which was a clean one, in support of that contention. The onus therefore lay with the defendants to prove that the damage was not done on the ship, and whether they had proved this or not was the question he had now to decide. The defendants called the Second Officer of the ship, who in his evidence stated that the leather was in the same condition at Sydney in which it was delivered here. Of course if that was established the defendants had done all they were bound to do, to deliver the merchandise in the same order and condition in which they received it. The Second Officer stated that he had given a clean receipt for the leather because he considered that the bales were in good condition, and when he was shown a sample bale in Court he still maintained that he would give a clean receipt for it. This statement was corroborated by the evidence of the Chief Officer. To meet this point, the plaintiffs called a witness, Captain Bond, who has been engaged in the Australian trade and had some experience with leather. He said that he would not have given a clean receipt for the leather in its present condition. He would have signed it as "stained." The suggestion that is offered upon this evidence is, that I should disbelieve the evidence of the Second Officer and find as a fact that the cargo was not received in Sydney in the condition in which it was delivered here. If a mass or a body of evidence of ship-masters and mates had been brought to that effect then it might very well be that I should be compelled to disbelieve the Second Officer's statement. But such is not the case. It is only the practice of one man against another. Obviously, therefore, I ought not to disbelieve one witness because another witness says he would act in a different way. I omit the Chief Officer's corroboration for the time being. For the moment I am contrasting the difference of procedure between plaintiffs' witness and the Second Officer. I think there can be little doubt that it would have been more prudent for the Second Officer to have marked the shipment of leather as stained. If the bales had been described—"ends stained"—in the shipping order or the bill of lading, we should have heard nothing of the case. Either the shippers would not have sent the goods forward, or if they had gone forward I cannot see how a case would have arisen here. But this is one thing: it is quite another thing to say or suggest that I ought to disbelieve the evidence of the Second Officer. His practice, he has told us, is to give a clean receipt to the effect that goods are in good order when there is no wet, or if the package is covered, when it is not broken. This is the principle that he proceeds upon. I am not prepared to say that such is not a reasonable principle to proceed upon. It is quite certain to my mind that I ought not to disbelieve the Second Officer when he says that the goods were received in good order and condition and were delivered in the same way. It is quite obvious that I cannot disbelieve him on the strength of the evidence on the other side. But I am not driven to dispose of the case on these narrow grounds. There were two theories set up in this case, one by the plaintiffs and the other by the defendants. Plaintiffs' theory was supported by the same witness. He thought that the damage had been caused by the ship sweating during the voyage through the tropics, that the moisture had collected in the hold through failure to open the hatches in fine weather to induce ventilation, while the ship was on this voyage from Sydney to Hongkong. But the theory that the damage was due to moisture which fell from the deck above on to the leather is wholly inadequate. After taking into consideration the place where the cargo was stowed, how it was stowed, and of what the rest of the cargo consisted; taking also in consideration the condition of the voyage, I am utterly unable to adopt the theory put forward by that witness. He said that moisture must have collected under the deck and from thence dropped down on the ends of the leather and so produced the damage we see. But in my opinion it is impossible that the damage could have been done that way. Why should the moisture only have dropped on the edges of the bales? If moisture had fallen as the witness described, then the leather would have shown

marks of the dripping of the moisture, the water also permeating the centre of the bale. The theory of the witness is wholly unsustainable. It is in my opinion, a forced theory, for it starts with the assumption that the leather is not in the same condition as it was when received on board the ship. It is more probable that the leather is in the same condition as when it came aboard the ship; that is the point I have to look for. I will now refer to that passage in the *Freedom* case, which Mr. Scidmore read the other day with so much unction. "But I think it reasonable to conclude from the defendants' evidence that from the nature and collocation of this cargo of animal, vegetable, and, to some extent, putrescible matter, by improper packing and insufficient ventilation, and the proximity of the ship's water tank, during a voyage through the tropics, where especial care is necessary, the atmosphere in the hold became heated, damp, and vitiated, without means of escape, and that this atmosphere was the proximate cause of the damage." His Honour, proceeding further, said that in the *Freedom's* case the voyage was tempestuous and when the hatches were opened in London there was such an escape of steam and vitiated air that the ship's officers feared the decks might be blown up. He was not surprised, therefore, that the Judges in that case came to the decision they did. The *Freedom's* was a different kind of case to the one they had here. All the rest of the cargo in the hold in which the leather was stowed was delivered in good condition, as the Chief Officer proved in his evidence, so that it seems impossible that the damage occurred in the way suggested. Had the whole cargo been damaged, and not merely the ends of the leather, the supposition would perhaps have been tenable. Then we have the other theory, that advanced by the defence. That, in my opinion, explains the whole matter. Here we have the evidence of a tanner of 25 years' experience. He was shown the worst skin in the whole bale, and he said that all the damage he saw there was done before the skin reached the tannery or was caused through want of care during the process of tanning. You have heard the explanation he gave, and I need not go through it again. His evidence in my mind was conclusive—if I required satisfying upon the point—that the damage was not done aboard the ship. One other point I may mention, and it is a cogent little circumstance in the case, and that is the statement of the plaintiff that this was one of three shipments of leather ordered of the same dealer in Sydney, all of which, though they came up on different ships, were damaged alike. The intrinsic value of the statement was to confirm the opinion that the damage to the leather was caused anterior to the shipping of it aboard the defendants' ship. The defendants had to discharge the onus cast upon them that the damage did not occur after shipment, and they have proved it, judgment is therefore given for the defendants.

Mr. Walford—And costs, your Honour?

His Honour—Costs follow the event. They will be taxed in the usual way if the parties cannot agree. You raised the question of some costs attendant on the adjournment: I am not dealing with them now. I shall require more information about them, and you will have to appear before me if the application is pursued.

The Court then rose.

LATEST TELEGRAMS.

(FROM THE "DAILY PRESS.")

London, Oct. 31.

The political situation is still causing uneasiness, especially the relations between Great Britain and Russia. The Bourses are nervous.

London, Nov. 1.

A Russian official communication declares that the situation is tranquil and not calculated to inspire uneasiness.

A series of strong earthquake shocks have occurred at Rome, but no serious damage has resulted.

(FROM THE "SIAM OBSERVER.")

London, Oct. 20.

Lord Salisbury has sent an ultimatum to the Government of Venezuela demanding a prompt settlement of the long standing claims of England against that country.

Söul, November 11.

Over two hundred robbers have been exploiting Hwang-ju and An-song. Requests have been made for the dispatch of police.

Kumamoto, November 11.

The election of a member of the House of Representatives for the first district of this Prefecture took place to-day. The Kokken candidates, Mr. Naito Masayoshi, was returned with 1,273 votes against 284 thrown for the Radical candidate, Mr. Awatsu Takeo.

Shimonoseki, November 11.

The *Ikai Maru*, with 700 soldiers belonging to the Second Division, called here to-day on her way to Formosa.

Takow, Formosa, November 11.

The Imperial Guards will embark on transports and start for home on the 13th inst.

Pekin, Nov. 9.

One of the members of the Japanese Legation left for home to-day with the Treaty for the return of the Liaotung Peninsula.

Nagasaki, Nov. 12.

A Shanghai correspondent reports that five leaders of the Kucheng Riot were beheaded at Foochow on the 7th inst. More accomplices are being arrested.

Wong Chi-chuan, who lately returned from Russia, has been appointed Governor of Hupeh. He was expected to arrive at Shanghai on the 9th inst. from Tientsin.

Mayebashi, Nov. 12.

Rumour has it that Mr. Nakamura, Governor of this Prefecture, had sent in his resignation. The statement is likely to be a fact, and some

residents are consulting as to the advisability of urging him to remain in his position.

Nagasaki, November 11.

The *Iwaki Kan* has arrived from Sasebo. A Russian man-of-war and two torpedo boats have arrived from Vladivostock.

Matsuyama, Nov. 12.

Nos. 9 and 10 torpedo boats arrived at Mitsugahama yesterday, and proceeded to Yokosuka to-day.

Osaka, Nov. 12.

A boiler explosion took place last night in a paper manufactory at Tamayecho, Kitaku, and one person was killed, another being wounded.

Nagasaki, Nov. 12.

A Russian steamer arrived here to-day with 900 Russian soldiers sent from Vladivostock to Europe.

Saseho, Nov. 12.

The *Akitsu* and *Yayeyama* arrived from Formosa last night.

The following Pekin telegram was yesterday received by the Government.

The Emperor of China has ratified the Treaty for the return of the Liaotung Peninsula signed by the Commissioners of Japan and China.

Söul, Nov. 12.

A conference of the Foreign Representatives was held at the Japanese Legation to-day. It is said that measures for the best arrangement of the Korean affair were discussed at the meeting.

Söul, Nov. 13.

It is stated that a resolution has been arrived at to withdraw all the Japanese soldiers guarding the commissary line in Korea, with the exception of two companies in Söul and one company each at Gensan and Fusan, and that over two hundred gendarmes will arrive here. It is gathered that the Foreign Representatives acknowledge the inability of the Peninsular Government to maintain public peace if the Japanese soldiers are suddenly withdrawn.

It is stated that the Japanese commissary office at Phyong-yang will be closed this month.

Shimonoseki, Nov. 13.

The Norwegian ship *Bjorg*, belonging to Messrs. Doshan (?) & Co., stranded off Kibunejima this morning. Her tonnage is 1,184, and she is commanded by Captain Roland Neilson, her crew consisting of 18 foreigners and 2 Japanese. She was on the way from Kobe to Vladivostock.

The *Yayeyama* passed here this morning for the east.

Nagasaki, Nov. 13.

A great conflagration took place at Funatsu, Takagi District, on the 11th inst., destroying 353 out of the 400 houses that constituted the village.

Hiroshima, Nov. 13.

Five military officers, under arrest at the Gendarmerie Office, were yesterday removed to the Military Prison. Lieut.-Colonel Kusunose and Major Umayabara are still at the Gendarmerie Office.

Hiroshima, November 14.

The *Satsuma Maru*, which left Kelung on the 13th inst. with Viscount Takashima, and over two hundred officers and men of the Imperial Guards, is expected to arrive at Ujina on the 17th inst.

The number of men belonging to the Imperial Guards Division, who were not injured during the war and are now returning home, is 12,452. They are to be conveyed in 17 transports.

The election of Mayor of this town took place last night, and resulted as follows:—Major-General Sato Tadasu, 26 votes; Mr. Kawa-ai Rinzo, 16 votes; Mr. Fujita Takayuki, 15 votes.

Shimonoseki, Nov. 14.

The Norwegian ship *Bjorg* stranded off Kibunejima through mistaking her course. The crew is still on board, but will proceed to Vladivostock by another vessel if the stranded ship is not afloat to-day.

Söul, Nov. 14.

Count Inouye leaves here on the 16th inst. for home.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets every Monday and Thursday at the Club Hotel from 5 p.m. to 11 p.m.

The Tokyo Chess Club meets at the Tokyo Hotel every Friday from 1 p.m. to 7 p.m.

SOLUTION OF PROBLEM No. 202.

- | WHITE. | BLACK. |
|---------------------------|------------------|
| 1—R to K B 6 | 1—K P takes R |
| 2—R to K 8 | 2—Anything |
| 3—Q mates | |
| 2—R to K Kt 8 | 1—Kt P takes R |
| 3—B mates | 2—Anything |
| 2—R to K Kt 8 | 1—P takes Kt |
| 3—B to Kt 3, mate | 2—Anything |
| 2—P takes P e.p. dis. ch. | 1—P to K 4 |
| 3—Q to B 5, mate | 2—P takes R |
| | 1—P to B 5 |
| 2—Q to Q 4 ch. | 2—K to B 6 |
| 2—Q to Kt 4, mate | |
| | 1—P to Q 3 |
| 2—R to K 6 | 2—P takes R |
| 3—P takes P dis., mate | |
| | 1—Any other move |
| 2—Q mates. | |

Correct answers received from Shogi, W.D.C., Omega, and J.D.

Correct solution to No. 201 from E. J. King.

KR.—Your Key-move to No. 202 is no use. 1—R to K Kt 6, 1—R P takes R; 2—P takes P, 2—P takes Kt; and there is no mate.

PROBLEM No. 204.
By KARL TRAXLER.

White to play and mate in three moves.

YOKOHAMA CHESS CLUB.

The Championship contest is now in progress and the following is the drawing for the first round.

Mowat	versus	McIlwraith.
Irvine	versus	Mendelson.
Wollheim	versus	Davieson.
Griffin	versus	Komor.
Tennant	versus	Andreis.

Conditions:—First round to be finished by 30th November. First three wins (draws not counting) to decide a heat. Staunton Rules.

Mr. Blackburne has expressed the opinion that Champion Lasker is the greatest living chess-player.

We are anxiously waiting for the score of the game won by Blackburne of Lasker in the last round of the Hastings Congress.

GAME No. 386.

| 41—Q to Q 6 ch. | 41—K to B sq. |
| 42—Kt to B 6 | 42—P to Q R 3 |
| 43—Kt to Q 3 (g) | 43—Resigns. |

- (a) Better is 2. P to K 3.
(b) We like 3. P takes Q P—Q takes P, 4. P to K 3—P takes P, 5. Kt to Q B 3—Q to Q sq. 6. P takes P with a free position, the isolated P notwithstanding.
(c) He never gets the P back. 3. P takes P was all right; if in reply 4. Q to R 4 ch and 5. Q takes B P Black gets a quick development.
(d) Here, and presently we should take off the Kt, securing thereby a passed P and Kt v. B for the ending.
(e) With a Pawn down, why this eagerness to exchange pieces?
(f) A winning move.
(g) Decisive and neat.

GAME No. 387.

A game by Mr. S. Loyd.

- | WHITE. | BLACK. |
|-------------------|------------------|
| H. Driscoll. | S. Loyd. |
| 1—P to K 4 | 1—P to K 4 |
| 2—B to B 4 | 2—Kt to K B 3 |
| 3—Q to K 2 | 3—Kt to B 3 |
| 4—Kt to K B 3 | 4—B to K 2 |
| 5—P to Q 3 | 5—P to Q 3 |
| 6—P to K R 3 | 6—Kt to Q R 4 |
| 7—Q Kt to Q 2 | 7—Kt takes B |
| 8—Kt takes Kt | 8—B to K 3 |
| 9—Kt to K 3 | 9—P to Q B 3 |
| 10—Castles | 10—P to K R 3 |
| 11—P to Q Kt 3 | 11—Q to Q 2 |
| 12—K to R 2 | 12—P to K Kt 4 |
| 13—P to K Kt 4 | 13—P to K R 4 |
| 14—Kt takes P | 14—P takes P |
| 15—Kt takes B | 15—R takes P ch. |
| 16—K to Kt 2 | 16—Q takes Kt |
| 17—Kt takes P | 17—Kt takes Kt |
| 18—K takes R (a). | |

(a) Black mates in five moves, beginning with Kt—K 6 dis ch. White lost time in the opening, and Black took full advantage of every opportunity. The ending is a problem by this celebrated composer in actual play.

GAME No. 388.

Played in the match Town v. Country, at Adelaide.

FALKBEER COUNTER GAMBIT.

- | WHITE. | BLACK. |
|---------------------------------------|-------------------|
| W. McArthur. | J. M. Belcher. |
| 1—P to K 4 | 1—P to K 4 |
| 2—P to K B 4 | 2—P to Q 4 |
| 3—Kt to K B 3 | 3—B to K Kt 5 |
| 4—B to K 2 | 4—B takes Kt |
| 5—B takes B | 5—P takes B P (a) |
| 6—Castles | 6—P takes P |
| 7—B takes P | 7—P to Q B 3 (b) |
| 8—R takes P | 8—Kt to B 3 |
| 9—P to Q 4 | 9—B to Q 3 |
| 10—R to R 4 | 10—Q to B 2 |
| 11—Q to K 2 | 11—Castles |
| 12—B takes P ch. (c) | 12—Kt takes B |
| 13—Q to R 5 | 13—P to K B 3 |
| 14—Q takes Kt ch. | 14—K to B 2 |
| 15—B to R 6 | 15—R to Kt sq. |
| 16—Kt to B 3 | 16—Kt to Q 2 |
| 17—Kt to K 4 | 17—B to K B sq. |
| 18—R to K B sq. | 18—B to Q 3 |
| 19—Kt to Kt 5 ch. | 19—K to K 2 |
| 20—R to K 4 ch. | 20—B to K 4 |
| 21—B takes P | 21—K to Q 3 |
| 22—P takes B ch. | 22—P takes P |
| 23—R to Q sq. ch. and White wins. (d) | |

- (a) Inferior. Development by Kt to K B 3 is more to the point.
(b) Black could win the B by the ch at Q 5, but at the expense of his Queen, which would be lost by R to K sq after.
(c) A similar attack by Pillsbury occurs in a recent game.
(d) A very pretty game, well played by White in every respect.

GAME No. 389.

Played in match North Adelaide v. Norwood (Australia).

SCOTCH GAMBIT.

- | WHITE. | BLACK. |
|----------------|-----------------|
| J. M. Belcher. | W. F. Harrison. |
| 1—P to K 4 | 1—P to K 4 |
| 2—Kt to K B 3 | 2—Kt to Q B 3 |
| 3—P to Q 4 | 3—P takes P |

- | | |
|---------------------|------------------------------|
| 4—Kt takes P | 4—B to B 4 (a) |
| 5—B to K 3 | 5—Q to K B 3 |
| 6—P to B 3 | 6—K Kt to K 2 (b) |
| 7—Kt to Q B 2 (c) | 7—B to Kt 3 |
| 8—Q Kt to R 3 | 8—P to Q 3 |
| 9—B takes B | 9—R P takes B |
| 10—Kt to Kt 5 | 10—Q to Q sq. |
| 11—P to K Kt 3 (e) | 11—Q to Kt 3 |
| 12—B to Kt 2 | 12—B to Q 2 |
| 13—P to K B 4 (f) | 13—R to K sq. |
| 14—B to B 3 | 14—Kt to K Kt sq. |
| 15—Castles | 15—K to B sq. |
| 16—Q to K 2 | 16—Kt to K B 3 |
| 17—K R to K sq. | 17—P to R 4 |
| 18—Kt (Kt 5) to Q 4 | 18—P to R 5 |
| 19—Q to Kt 2 | 19—P takes P |
| 20—P takes P | 20—R to K R sq. |
| 21—P to B 5 (g) | 21—Q to Kt 4 |
| 22—Kt takes Kt | 22—P takes Kt (h) |
| 23—Kt to K 3 | 23—K to Kt 2 |
| 24—Q R to Q sq. | 24—R to K R 2 |
| 25—Kt to B sq. | 25—Q R to K R sq. |
| 26—P to K 5 (i) | 26—P takes P |
| 27—R takes B | 27—R to R 8 ch. and wins (j) |

(a) It is very fashionable and apparently stronger to play the more modern variation beginning with Kt to B 3 at this point.
(b) Moves 1 to 6 on both sides are well recognized as good and sound.

(c) Said to have been invented by Fleissing and Meitner at the Vienna Congress. Another move for White leading in many continuations to an interesting game, is now Q to Q 2.

(d) B to B followed by P to Q R 3 was now better. The text play necessitates the K move to Q sq., as the Q B P cannot well be abandoned.

(e) A novel continuation which can scarcely be commended for general adoption. One objection to it is the attack gained by Black's R P advance which speedily follows.

(f) The advance is undoubtedly weak, time being wasted thus, and by the next move. Kt (B 5) should have brought into play by way of K 3 &c. See moves 23 and 24 when it was too late.

(g) P to K 5 was much more to the point. If then as to—, B to R 6; 22. Kt takes Kt, &c., with many good chances of bettering the game.

(h) Certainly good, as well as unexpected. The point is, room is made for the King at Kt 2 and the Rooks are free after.

(i) White finds out the good moves later than is desirable, as already observed.

(j) Here the game was adjudicated in Black's favour. Q takes B P seems Black's continuation. It threatens immediately Q takes R, P to K 5, Kt to Kt 5 ch. &c. A good game.

GAME No. 390.

RUY LOPEZ.

| 48—Kt to B 3 | 48—R to R 8 |
| 49—Kt to Kt sq. | 49—P to B 5 |
| 50—R to K Kt sq. | 50—R takes Kt |
| 51—R takes R | 51—P to B 6 |

(a) A good move, anticipating R to Kt sq. and making way for the Bishop.

(b) It is curious to note how long and decisively the attack on the K P, thus initiated, lasts throughout the game (Sequin).

(c) Much inferior to Q to K B 3, which gives White the better game at once (Showalter).
 (d) A fine move, prevented possible sacrifice of Kt at B 5, and allowing of Q R to K sq. (J.W.S.)
 (e) Pressure of time limit, P to K R 4 was undoubtedly much better (J.W.S.)
 (f) Mr. Showalter calls this an unfortunate venture which loses the game and the match. The play at this point and onwards is deeply interesting.
 (g) Splendidly played in this, and the whole ending. But obviously the sacrifice of B was forced in a measure, as Mr. Showalter points out. Otherwise Black loses too many pawns.
 (h) A Kt against a pawn, and yet White's game is hopeless.

ONLY A PAWN.

It is stated, we think of Mtesa in "The Two Kings of Uganda," that he could lose a battle with as much equanimity as a chess-player regards the loss of a pawn. In regard to this it may be observed that the loss of a single pawn often implies the loss of a game, and hence what outsiders may regard as of small moment is really of vital importance. But it is a lesson only learnt after bitter experience. The fact is, no one has learnt sound chess who tamely submits to a shade of loss either in material or position. This is a great leading principle, but by no means implies that oversights may not be made, that miscalculations are impossible, or that pawns and pieces may not be sometimes safely sacrificed when results can be surely foreseen and carefully weighed. Some one has well said "Take care of the pawns the pieces will take care of themselves." Only a joke was of course intended, but is not something infinitely more important conveyed?

THE PAWN.

[A chess moral written in the seventeenth century by Thomas Jackson.]

A lowly one I saw,
 With aim fixed high;
 Ne to the righte,
 Ne to the lefte,
 Veering, he marched by his law,
 The crested Knight passed by,
 And haughty Surplice-vest,
 As onward toward his heste
 With patient step he prest,
 Soothfaste, his eye—
 Now, lo! the last door yieldeth,
 His hand a sceptre wieldeth.
 A crowne his forehead shieldeth.
 So, mergeth the true-hearted,
 With aim fixed high,
 From place obscure and lowly;
 Veereth he naughte
 His worke be wroughte.
 How many loyal paths be trod,
 So many royal crowns hath God.

Per French steamer *Yarra*, for Shanghai via ports:—Raw Silk for Europe, 152 bales; Waste Silk for Europe, 103 bales.

REPORTS.

The British steamer *Victoria*, Captain Pantou, reports:—Left Tacoma, Wash., the 26th October at 6.30 a.m., and Victoria, B.C., at 6.30 p.m. the same day; fresh head winds and moderate sea were experienced to the meridian which was crossed in lat. 50° N.; thence to port strong gales from N.W. and W.N.W. with heavy head seas. Arrived at Yokohama the 12th November at 9 p.m.

The British steamer *Gaelic*, Captain W. G. Pearne, reports:—Left Hongkong the 6th November at 6.12 a.m., via ports; had variable winds and fine weather to Kobe; thence to port strong westerly gales and high sea. Arrived at Yokohama the 14th November at 4.35 p.m.

LATEST COMMERCIAL.

IMPORTS.

Market generally quiet, although Yarns show some little sign of waking up. All else dull, both in Cottons and Woollens. Italian Cloth and Velvets move slowly, but other kinds stick.

COTTON PIECE GOODS.

	PER YARD.	PER PIECE.
Grey Shirtings—8 1/2 lb, 38 1/2 yds, 39 inches	\$2.30	to 2.90
Grey Shirtings—9 lb, 38 1/2 yds, 45 inches	2.75	to 3.35

METALS.

Market continues very quiet. Quotations nominally unaltered, but there is hardly any business to test prices.

	PER PICUL.
Flat Bars, 1 inch	\$3.25 to 3.30
Flat Bars, 1 1/2 inch	3.20 to 3.25
Round and square up to 1 inch	3.20 to 3.30
Iron Plates, assorted	3.50 to 3.65
Sheet Iron	4.30 to 4.50
Galvanized Iron sheets	9.00 to 9.50
Wire Nails, assorted	5.60 to 6.00
Fin Plates, per box	5.75 to 6.00
Pig Iron, No. 3	1.60 to 1.65

KEROSENE.

At last we have seen the upward move. Buyers got uneasy at the stand which holders made and rushed the market, so that prices soon improved and are close upon 20 cents per case over our last week's quotations. Buyers are now eager and holders conservative.

American	\$2.10 to 2.15
Russian	2.05 to 2.10
Langkat	—

SUGAR.

Brown—Sales have again exceeded arrivals, and

prices are raised accordingly. White—Steady trade at late rates.

	PER PICUL.
Brown Takao	—
Brown Manila	\$4.50 to 4.80
Brown Daitong (New)	3.90 to 4.00
Brown Canton	3.80 to 4.30
White Java and Penang	6.40 to 6.70
White Refined	6.25 to 9.50

EXPORTS.

RAW SILK.

A quiet week, with rather more doing at the close. Prices nominally unchanged, with perhaps a slight tendency in buyer's favour.

QUOTATIONS.—(NEW SILK.)

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health
for all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribu-
aries in Abyssinia," says—"I ordered the dragoman Mahomet
to inform the Fakir that I was a Doctor, and I had the best
medicines at the service of the sick, with advice gratis. In I
short time I had many applicants, to whom I served out a
quantity of Holloway's Pills. These are most useful to an ex-
plorer, as, possessing unmistakable purgative properties, they
create an undeniable effect upon the patient, which satisfies
them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations
of all kinds. It acts miraculously in healing ulcerations, curing
skin diseases, and in arresting and subduing all inflammations.
Mr. J. T. COOPER, in his account of his extraordinary travels
in China, published in 1871, says—"I had with me a quantity of
Holloway's Ointment. I gave some to the people, and nothing
could exceed their gratitude; and, in consequence, milk, fowls
butter, and horse feed poured in upon us, until at last a tea-
spoonful of Ointment was worth a fowl and any quantity of peas-
and the demand became so great that I was obliged to lock up
the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughout
World. May 1st, 1890.

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY AND SATURDAY.
Annual Subscription, post free, 25s., in the United
Kingdom. Ditto, 29s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dinero, London.

"MONEY" is a fearless critic and exposé of all shams, frauds,
and swindles.

"MONEY" is the Journal for Investors, Speculators and
Business men.

"MONEY" is a thoroughly up-to-date Record of all Financial
and Business Matters.

"MONEY" is not subsidised by any financial association,
clique, or syndicate, but is absolutely free, independent,
and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing
Shipping, Trading, and Trust Companies, are fearlessly and
impartially criticised in "MONEY."

"PAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, NOV. 23RD, 1895.

BIRTH.

On the 18th inst., at No. 9, Yama, Kobe, the wife of F. W. GOTCH of a son.

MARRIAGE.

On the 21st November, at the Union Church, Kobe, by the Rev. S. Swann, CHARLES BARTON, second son of Rev. P. M. Stedman, to GRACE, daughter of Thomas Archer, Esq., C.M.G.

DEATH.

At No. 2, Bentendori, Ichome, after a short illness, Ko, the beloved wife of K. Tamamura, in her 31st year; deeply regretted.

SUMMARY OF NEWS.

ADMIRAL CARPENTER of the U.S.N., has returned home.

A NEW railway line to Dzushi via Sugita, Tomioka, Hayama, etc., is under contemplation.

THE Meiji Fire Insurance Co. lost yen 10,000 by the great conflagration which took place at Sanjo, Niigata Prefecture, on the 15th inst.; yen

6,000 was also placed with the Tokyo Fire Insurance Co.

THE Imperial Guards have returned from Formosa, and received a remarkable ovation in Tokyo.

THE Osaka Water-works have been completed after four years' work. They cost over yen 2,200,000.

MR. MIURA, Governor of Tokyo, refuses to resign at the suggestion of the Municipal Council, of which he is Mayor.

THE Emperor despatched a Chamberlain to welcome the Guards when they arrived at Ujina from Formosa this week.

It is stated that the *Saikio Maru* and *Omi Maru* will be released from Government service in two or three days.

THE Yokohama Athletic Sports have been postponed till December 7th, in consequence of the illness of Mr. Kenyon.

MARQUIS NAKAYAMA, Grand Chamberlain of H.I.H. the Crown Prince, has been released from his post at his own request.

MUCH anxiety prevails in Yokohama over the non-arrival of the N.P. steamer *Strathnevis*, now about 40 days out from Tacoma.

SOME residents at Shimoda, Izu Province, are contemplating the building of a dock, capable of receiving ships of about 200 tons.

A CONCERT and Organ Recital was given at the Union Church on Friday evening, in aid of the funds. The affair was very successful.

OWING to the sudden indisposition of Judge Mowat, a civil case set down for hearing in the British Court on Monday was postponed for a fortnight.

It is stated that the Japanese Representative in Russia reported to the Tokyo Government that the Empress of Russia gave birth to a daughter on the 15th inst.

MR. HARA RYOTARO, Third Secretary of Legation, has been appointed to the Netherlands, and Mr. Yamaza Enjiro, Third Secretary of Legation, to England.

THE funeral of the late Mr. Yoshikawa, President of the Nippon Yusen Kaisha, took place in Tokyo on Wednesday. The arrangements were on a most lavish scale.

THE Yokohama Town Assembly decided at a meeting held on the 18th inst. to build on Noge-yama a water reservoir of a capacity of one million gallons, at a cost of yen 94,800.

Two thousand artisans assembled by the military authorities left Tokyo on the 16th inst. for Formosa, where they are to be employed in constructing various buildings for the Army.

A RAILWAY train on the Nara line collided with a Fushimi electric car at the level crossing near Fushimi on Tuesday evening, and five persons were killed outright, many others being injured.

THE presence of Marquis Ito, Count Mutsu, Count Itagaki, Mr. Kono Hironaka, and Mr. Hayashi Yuzo at Oiso during the week has afforded much food for political gossip mongers.

MR. C. E. LLOYD THOMAS, of Yokohama, an officer on H.M.S. *Edgar*, was among those who escaped from the disaster that befel a boat's company in Chemulpho Bay on the 12th inst.

THE sealing schooner *Saipan* returned to Yokohama on Tuesday with seventeen of her men missing. They were landed at Robben Island,

and the Russian authorities evidently caught them in *flagrante delicto*.

MARSHAL Marquis Oyama, Minister of War, gave a garden party on the 21st inst. at his private residence, Aoyama, to the leading officers of the Army and Navy, to celebrate the first anniversary of the fall of Port Arthur.

LIEUT.-GENERAL VISCOUNT KAWAKAMI gave a banquet to the military *attachés* of the various Legations in Tokyo on the 16th instant at the Maple Club, Shiba Park. Over fifty officers of the General Staff Office were invited to meet the guests.

MR. HYODO, Governor of Chiba, dismissed the Headman of Karui-sosa District. This occasioned strong excitement among the Chiba residents, who are preparing a petition to the Central Government praying for the removal of the Governor.

REUTER telegraphs:—The Duke of Devonshire speaking at the Cutler's Feast, said that everyone must see that we are not far removed from the re-appearance of the Eastern Question, if indeed it has not already re-appeared. He also pointed out that previous history shows how difficult it is for even the most pacific sovereigns and the wisest statesmen to effect a permanent solution of the difficulties which the Eastern Question may bring. A sharp fall is being experienced in Home and Foreign Stocks. The tone of Lord Salisbury's speech at the Lord Mayor's Banquet at the Guildhall on Saturday was essentially pacific. Referring to the reports of Russian designs with regard to Port Arthur, he stated that England was equally prepared to entertain any proposal, which regards either war or commerce in that direction, and may look with equanimity upon any person who thinks he can exclude her from that fertile region. In concluding he said that England was prepared to meet any combination, either in war or commerce. The Press unitedly approves of Lord Salisbury's speech, especially as regards his references to Turkey and his warning to the Sultan. There has been a meeting of Paris Bankers to consider the financial situation, and what measures are to be adopted to restore confidence. It is doubtful if the Sultan would carry out the reforms in Armenia, but all the Powers are coöperating. Any failure to execute reforms must lead the Turkish Government to its doom, nevertheless, it is believed that the Powers adhered to the maintaining of Turkey, so as to avoid a calamitous outbreak in Europe.

THIS has been a quiet week all round, with prices firm for most things. In Cotton piece-goods holders seem able to maintain their position without difficulty, and the wintry weather is helping the Woollen market. Metals are dull, though some kinds are moving slowly, and there are indications that up-country men are running short of supplies. In Kerosene a strong market offers, but dealers do not seem particularly anxious to follow up recent operations; perhaps they fondly imagine prices will recede with fresh arrivals. The probable loss of the *Barcraig* will not affect Japan. Sugar, both White and Brown, remains as last week, though the stocks are much reduced—prices are all maintained. Raw Silk has had a quiet week, buyers being very cautious. With the large stocks now on hand holders are beginning to look anxious, and a further drop in prices may be anticipated. In Waste no particular change is to be noted, for notwithstanding recent shipments, there is no life in the trade. Tea still struggles along with a few retail orders, but the season is practically over. Exchange weakened towards the close of the week, and rates are far from firm.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The coalition between the Cabinet and the Liberals, and the alleged resignation of Marquis Ito, form the principal topics of discussion in the columns of the vernacular press. The stories circulated in political circles have been noticed in these columns from time to time, and our readers know all, probably more than all, that is worth knowing about the peculiar state of affairs now existing. In truth, the situation is unsettled. This may seem strange now that the coalition between the Cabinet and the Liberals has been made public through the columns of the *Nichi Nichi*, and in the Party's Manifesto. But so many aspects have to be considered that everybody seems perplexed to decipher the exact facts, and we strongly suspect that something of the same feeling of bewilderment is felt even by those directly concerned in solving the problem. But light may be expected to shine soon through the darkness.

The tone of the metropolitan papers on the subject of the alliance has undergone a change since the time of preparing our last weekly summary. We shall first consider the alteration of tone in the case of the Opposition party organs. These papers at the outset pretended to regard the news of the alliance with suspicion and doubt. But they have since come to acknowledge its reality, and they now devote their pens to depreciating its value for either side. On the one hand, the Liberals are taunted with having suffered themselves to become servile supporters of the Cabinet; on the other, the Ministers are ridiculed for relying on the support of an utterly disorganized party like the *Fiyu-to*. It will be sufficient for our purpose to refer to an article in the *Mainichi Shimbun*, the chief *Kaishin-to* organ. That journal thinks it very doubtful whether the alliance will last long, or whether it will serve the Cabinet's purpose, namely, to obtain a majority in the coming session of the Diet. In its opinion, the Cabinet is far from being united: influence and power are slowly gravitating to the Ministers of the second order. The Premier, it recognizes, is still very powerful, but not sufficiently powerful to ensure the smooth carrying out of his designs in opposition to the wish of his colleagues. As to the condition of things among the Liberals, the same criticism is said to apply with even greater force. Their leader is a mere puppet in the hands of two or three artful schemers, and these latter exercise little authority over the members of the Party in remote localities. Thus the *Fiyu-to* are lamentably deficient in cohesion. An alliance between such a party and such a Cabinet can never be expected to accomplish any effective work." Moreover, the *Mainichi* believes that a split is unavoidable among the members of the Liberal Party in consequence of the unconditional surrender that their leaders contemplate, and that the fraction of the Party actually supporting the Cabinet will dwindle to a small and insignificant number. Such a result would be especially disastrous to the Cabinet, because, apart from their numerical strength, the individual Liberals have, in the *Mainichi's* opinion, little to recommend them.

The change of tone has been more remarkable and significant in the case of non-party organs, whether favourably or unfavourably disposed toward the Government. They originally welcomed the news with delight as the inauguration of a new epoch in the political history of the country. But they are now inclined to set little value upon the incident, and even to doubt the motives of those in power in effecting an understanding with the Liberals. Such is the attitude of journals like the *Fiji* and the *Nippon*. The latter observes that it was originally opposed to the introduction of Government by Party into Japan, but in its opinion the subject has undergone great modification, so that it would now even welcome such a conjuncture. This marked change in its political creed has been produced by an improvement in the character of parties in recent years. Formerly political parties in Japan had

their *raison d'être* more in personal considerations than in political principles, and while they remained in such a condition it would have been obviously dangerous to introduce a system of Party Government. But things have essentially changed since then. Political parties are now differentiated by principles, not by mere personal considerations. Hence the *Nippon* thinks it possible and safe to inaugurate Party Government. Will the desired political revolution result from an alliance between the Cabinet and the Liberals? At first the *Nippon* was disposed to answer in the affirmative. But it is now inclined to take a different view. Instead of leading to true Party Government, an alliance between Count Itagaki and Marquis Ito may end in a combination of most injurious tendency, a combination for the purpose of governing in defiance of national sentiment. Our contemporary appears to attach importance to the absurd rumour that Marquis Ito and Count Itagaki have agreed upon dissolving the Diet in case they find themselves in a minority, and upon continuing to dissolve until, by fair means or by foul, they succeed in obtaining a friendly Legislature. Crediting such a silly story, it is no wonder that the *Nippon* writes in a silly manner.

It passes our comprehension to discover what has induced the *Fiji Shimpō* to change its views about the alliance. Like many of its contemporaries, it has abandoned the hopeful tone in which it originally welcomed the news, and now strongly suspects that the object of the Ministry is, not to form a permanent alliance with the Liberals, but to utilize the latter simply as a means of tiding over the crisis in the next session of the Diet. In consequence of the undoubted success they have achieved during the past twelve months, and the dazzling rewards they have received for their services, the statesmen in power, says the *Fiji*, have become objects of intense and universal jealousy and envy. They know this very well, and are anxious to resign office. But they find it improper to do so on the eve of the convocation of the Diet. The approaching session promises to be stormy, and it may become necessary to advise the dissolution of the Lower House. In that event, the Ministers would have to stay in office until the convocation of the new Diet. The prospect, therefore, is very unpromising, and they seem to have struck upon the device of a coalition with the Liberals on the basis of some vague understanding, so that they shall be free to carry out their cherished desire, namely, resignation, immediately upon the conclusion of the coming session of the Diet. Something must have occurred to offend our usually sober and moderate contemporary: otherwise it would not write in such a manner about statesmen with whom it but lately showed much sympathy.

The *Nichi Nichi* has an article interesting on account of the opinion it freely expresses about the position and capacity of Count Okuma. Our contemporary is rather severe upon the Progressionist leader. It alleges that he lacks fixed political principles, his strength lying in the ability with which he adapts himself to the varying circumstances of each epoch. By way of illustrating his want of fixed views on any subject, reference is made to the fact that, notwithstanding his declaration, while in office in 1889, that the utmost limit of reduction in public expenditure was only two million *yen*, he did not hesitate, a year later, to approve the Progressionist Party's demand in the Diet for a reduction of over eight millions. Again, after having signed new commercial treaties with the United States, Germany, and Russia, he not only endorsed the Cabinet's decision to repudiate those treaties, but consented to undertake the task of repudiation. He is said to possess exceptional capacity for carrying out plans devised by other persons but to be without any definite opinion of his own. Hence it ill becomes him to lay any stress upon the necessity of his opinions being approved by the Ministers as a condition to his entrance into the Cabinet. The

Nichi Nichi advises him to enter the Cabinet without any conditions, for to impose conditions would be futile on the part of a statesman without settled views. As a financier, the *Nichi Nichi* fails to agree with his worshippers. In point of fact, he must yield the palm to Counts Matsukata and Inouye, if services actually rendered to the country be a test. As a diplomat, too, despite his undoubted decision, powers of conversation, and fertility of resource, he is inferior to Marquis Ito and Count Mutsu in foresight and capacity for practical management. The *Nichi Nichi*, however, acknowledges him to be by far the ablest diplomat among the statesmen out of office. "Whether he enters, or does not enter, the Cabinet, is not a question of any great importance. But if he means to accept office, he ought to do so promptly. If not, it looks exceedingly unbecoming and ridiculous that he should suspend his attacks on clan Government and even flatter a section of it."

The position of the National Unionists is one of great interest. They actually hold the balance of power in their hands. Supposing that they remain neutral, the Cabinet is expected to have about 140 supporters, and the Opposition will number about 120. The scale will therefore be turned in favour of whichever side obtains the adhesion of the National Unionists. Conscious of this circumstance, they are apparently determined to sell themselves dear, for they refuse to declare in favour of either side. Hence a great sensation was produced by a statement in the *Nichi Nichi* that they had cast, or were about to cast, their lot in with those in power. This statement has since been denied by the *Chuo Shimbun* and Viscount Shinagawa. But the fashion of the denial is not quite reassuring to the opponents of the Cabinet. The *Yomiuri Shimbun*, writing on the *Nichi Nichi's* news before its contradiction, observed that all was over with the Opposition in the coming session of the Diet. But it tried to support the drooping spirits of the Opposition politicians by reminding them that they would not permanently remain in the minority, for history proved that the ruled were always ultimately victorious over the rulers. Our contemporary, moreover, seemed to have some hope of a dissension among the National Unionists. There were two sections among them, it said. One led by Viscount Shinagawa and Mr. Shirane, including members from Mikawa and some other provinces, was stated to be favourably inclined toward the Cabinet. The other, following the lead of Count Matsukata, was opposed to the Cabinet, and consisted of politicians from Kago-shima and Fukuoka. The National Unionists of the latter group were said to have expressed themselves strongly in favour of the agitation against the Cabinet in connection with the Liaotung question. Consequently, our contemporary hoped that, in the event of the first section's going over to the Government, the second might remain true to the Opposition. But the *Yomiuri* confessed itself conscious of the slenderness of this hope, and would not have been surprised to hear that the National Unionists in a body had joined the Ministerialists. Our contemporary called upon the Opposition parties to stand firmly united and to bide their time.

The question of the settlement of Formosa is discussed by several papers. The *Kokkai* lays particular emphasis upon the necessity of completely Japonicising the inhabitants of the island by means of education. Primary schools should be established all over the land, and boys and girls should receive instruction in the Japanese language. The *Yomiuri* calls upon the Buddhist priests and Christian propagandists among its countrymen to take upon their shoulders the task of civilizing the savage aborigines of Formosa. They are encouraged and stimulated by reference to the heroic conduct of the early Buddhists in Japan, and the no less heroic enterprise of Western Christians in their work among the savages of Africa and elsewhere.

We may here notice an interesting article

published by the *Kokumin Shimbun*. It commences by observing that in governing her new subjects in Formosa, Japan ought to be firm and unbending. The Chinese hold the Japanese in as much contempt as the latter do the former. Consequently, any tendency to magnanimity on the part of the Japanese rulers of the island is sure to be misconstrued by the Chinese as an evidence of weakness. The only way to govern the Formosans effectively is to inspire them with sentiments of awe and respect. As to the details of administration, they are dealt with seriatim. First, the property of all inhabitants proved to have joined in resistance to the Japanese troops, should be confiscated. The celebrated Lius are supposed to have been active in measures of resistance, and should the suspicion prove well founded, no mercy ought to be shown them. On the other hand, those that were submissive to the Imperial troops should receive efficient protection of person and property. Secondly, a strong body of troops should be quartered among the mountain savages, and these should be led into the path of peaceful improvement by a firm hand. In this context, our contemporary recommends the authorities to encourage the emigration of poor *samurai* in large groups for settlement on lands adjacent to the savages. The emigrants should be provided with arms for protection, and treated somewhat in the manner of the colonial militia of Hokkaido. Thirdly, all Chinese desiring to become naturalized subjects of Japan should be required to cut off their pigtailed and give up the habit of opium eating. Fourthly, all real property illegally held by foreigners should be confiscated. Fifthly, while, on the one hand, encouraging the moneyed class of Japanese to go to Formosa and engage in commerce and industry there, the rich inhabitants of the island should be induced to make visits to Japan, as a means of acquiring affection for the country of which they have become subjects. Sixthly and lastly, the whole island should be speedily opened for the free ingress of the Japanese. Hitherto, the exigencies of the situation have compelled the authorities to impose restrictions upon the going of private individuals to Formosa. Taking advantage of this state of things, certain officials and favoured individuals are monopolizing advantages that in fairness ought to be open to the free competition of all Japanese. In short, the *Kokumin* urges the importance of converting the island not into a colonial dependency but into part and parcel of the Japanese Empire, so that in the event of a foreign war the loyalty of its inhabitants may be relied upon.

Other topics discussed by the vernacular press are the Iron Foundry case, the foreign affairs of the country, and some economical questions. On the subject of the Iron Foundry case, the Opposition papers bitterly criticize the refusal of Mayor Miura to accept the impertinent advice of the Municipal Council and resign his office. He is compared to the Cabinet Ministers who declining to act upon the advice of the Opposition politicians, will not resign in connection with the late Korean affair.

EDITORIAL NOTES.

THE LATEST MOVEMENT AGAINST SOCIALISM IN GERMANY.

AFTER the Anti-Socialist bill had been defeated in the German Reichstag, little was heard about the Socialistic problem until the German nation celebrated its political birth, within the past few months, during which time the opposition of the German Socialists proved to be more than merely a discordant note in the midst of national rejoicing. The Socialistic press treated the celebration with unmeasured contempt, which in turn created profound indignation throughout the nation. The climax seems to have been reached when the *Vorwärts*, the leading organ of the German Socialists, bitterly attacked the person of Emperor William I. This led the present Emperor to refer to the subject in several public addresses. In an address to the Imperial Guard, he is reported to have expressed himself as follows: "A note has been struck at

our glorious celebration which has no place here. A rabble unworthy of the German name has dared to drag in the dust the sacred person of an Emperor whom we universally honour and whose memory is sacred to all of us. May the whole people find in themselves the strength to repel such monstrous attacks. If not, then I will call upon you to resist this treasonable hand, and free us from such elements." Outside of the Socialists circle, the German press generally admits that the situation justified the Emperor in making the above and several similar declarations. However, the *Kölnische Zeitung* complains that some party papers are not as earnest as they ought to be in their endeavours to suppress revolutionary tendencies. They are chiefly concerned about private affairs and consequently more or less indifferent when questions of national interests are involved. The *Zeitung* continues: "The Kaiser has not requested the Reichstag to proceed against the Socialists. He calls upon the whole nation's strength to repel this destructive element. And indeed, this is necessary. The Emperor has spoken so clearly that it is impossible to accuse him of duplicity. If he wanted anti-Socialistic law (*umsturz gesetz*), he would not call upon the people, but rather upon their legal representatives." The *Frankfurter Zeitung* thinks: Social Democracy defending its constitutional rights is far different from the Socialists who deliberately wound the feelings of the nation. The defeat which followed the latter action need not be feared by the Socialists in the former case. The Socialists will be much pleased if anything is done that will neutralize the effects of the defeat they have suffered. Many of the leading papers in the Fatherland are unanimous in saying "honest indignation prompted their Sovereign to utter threats, and it would be unwise for those in question to disregard these threats." The Socialists themselves have become less reckless in their statements than before. The *Vorwärts* which, for instance, called the Franco-German war a crime and the transfer of Alsace-Lorraine a theft, which Germany ought to restore to France, now says on the latter subject: "We opposed the annexation. After its consummation a new situation has come into existence—how, is another question,—and to restore the provinces to France would cost streams of blood. Therefore without harm to our principles, we can never advise the return of Alsace-Lorraine, for this would result in such a terrible war that no one would wish to shoulder its frightful consequences. We want no war on this account. If the French think different about this matter, it is their affair. The more sensible among them are of our opinion." The *Neue Zeit*, a prominent Socialist Magazine, in treating the Emperor's address, says: "As usual, the Kaiser has opened the political winter campaign with a war-cry against Social Democracy. It is no doubt a good sign of his natural vigour and freshness that he continues to hold up the banner for that which he regards as right and good, notwithstanding his repeated defeats in this respect. We are all the more willing to acknowledge his activity, as we are far from feeling over sensitive with reference to the hard words which the Kaiser hurls against the self-conscious proletariat. * * * We are therefore in the position to examine the remarks of the Kaiser against the organized Labour Party without prejudice. The Kaiser calls the Socialists "a rabble unworthy to be called Germans. He thinks this rabble ventures to defame the German people and drag in the dust the sacred person of the most honoured, deceased Emperor." With regard to the first point the Kaiser has been obviously misinformed by his responsible advisers. How could the Socialists defame the nation of which they constitute a considerable and important part! Neither in the Labour press nor in Labour meetings has the German nation been defamed. Possibly those that brought this fable to the Kaiser did not intentionally tell a lie. But in that case they are afflicted by that comic imagination that they, the ruling classes, an insignificant minority, constitute the nation. This insignificant minority

deemed it good to celebrate the twenty-fifth anniversary of the greatest human butchery which this century has witnessed. In this celebration working classes could not participate and our press has duly criticised the affair as it deserved to be criticised. If this criticism is to be called defamation we will not dispute about words. . . . We would have greater reason to speak about the Kaisers remark's against the Socialists concerning the deceased Kaiser. The Kaiser loves his grand-father fanatically, and this is quite in order, it would be unnatural were it otherwise. The old Kaiser Wilhelm lived so exclusively for the House of Hohenzollern, and did so much for it, that all its members needs must bless his memory. Therefore it is quite conceivable and humanly an admirable trait of the present Kaiser to regard the person of his grandfather as sacred! Therefore any criticism of the historical acts of William I. will be regarded by William II. as dragging him in the dust. Therefore the very reasons which justify the attitude of the Kaiser strip it of all objective significance. We say William I., though a good Hohenzoller, was not a good German. The German Empire came into existence against his will and he had to be pressed into it. His offensive treatment of the masses of the people can only be overlooked or excused on the ground of his make-up, culture, and training. It is possible that the present Kaiser can judge his grandfather better than we, for we are as little infallible as he is. However, this question will be decided by historical science, but not by the state lawyers or criminal judges of the Prussian guard." In conclusion, we quote a statement of Professor Weber, of Freiburg. He says: "Proudly the modern proletariat announces itself heir of the ideals which formerly led the middle classes. What chances has it to obtain the political leadership of the nation? Those who would to-day declare that German labourers, as a class, are either politically fit or on the road to fitness, would assume the rôle of a flatterer and a seeker of the doubtful honours of popularity. In their economical views the upper circle of German workmen are much more advanced than the egoism of possessing classes is willing to concede. Politically, the working classes are immeasurably less fit than the clique of journalists who seek to monopolize their leadership. These disgraced *bourgeoisie* like to juggle with the reminiscences of a hundred years ago—and they have succeeded in presenting themselves to the timid as the intellectual descendants of the men who sat in the French National Convention. But they are less dangerous than they think they are. There is nothing of Catiline in their character, neither is there any of the powerful national emotion which inspired the men of the Convention."

THE TANAKA BANK.

It is stated that the arrest of Mr. Amenomiya, in connection with the Iron Foundry fraud, is likely to ruin the Tanaka Bank. That institution belongs nominally to the Itohei family, but is chiefly concerned with the Tanko Railway Company. The Bank is said to have lent to Mr. Amenomiya a large sum—six or seven hundred thousand *yen*—as security for which it holds shares of the Tanko Railway and other stocks. The transactions between Mr. Amenomiya and the Bank having been, however, on a credit basis, no documents pass, and the law consequently does not permit the Bank to appropriate Mr. Amenomiya's shares for the purpose of meeting his over-draft. They will be seized at the suit of the Tokyo Municipality. Considering that the capital of the Bank is only six hundred thousand *yen*, it can scarcely survive such a blow as this. The collapse of the Bank would, it is alleged, inflict heavy loss upon many of the silk merchants of Yokohama. Many depositors have begun to withdraw their money, and the state of the institution is reported to be very insecure.

NATURALIZED JAPANESE IN LIAOTUNG.

ACCORDING to the *Mainichi Shimbun's* information, there are some four thousand naturalized Japanese subjects scattered about the Man-

churian district now in Japanese occupation. On the evacuation of the region by the Japanese, it is feared that these people will receive very summary treatment at the hands of the Chinese. The Japanese Government, continues our contemporary, proposed to the Chinese Government that they should be treated as prisoners of war, but the proposal was rejected. Under the circumstances, it is said to have been decided to carry them all to Hokkaido, where suitable grants of land will be made to them. We presume that by "naturalized Japanese subjects" the *Mainichi* means Chinese that have become naturalized. It will certainly be a remarkably magnanimous and benevolent measure on the part of the Japanese Authorities if they carry these persons to Hokkaido and give them tracts of land to reclaim, but the wisdom of the step is open to discussion.

A RAZOR'S EDGE.

OLD fashioned fallacies die one by one. It used to be a common belief, for example, that the edge of the Japanese sword was a fine band of steel welded on the body of the blade. Doubtless that idea was suggested by the line of demarcation, sometimes straight, sometimes wavy, that separates the clear blue steel along the edge from the darker metal of the body. But we now know that no such process as that of welding is resorted to by the sword-maker of Japan. The difference in colour between the edge and the body of the blade is produced at the time of tempering the former, a coat of clay-like composition—the exact ingredients of which are supposed to be determined by a secret receipt—being applied to the body in such a way as to leave only the edge exposed to the influence of the fire. It used also to be supposed that these remarkable swords owed their cutting properties to an exceedingly fine serration of the edge, as was believed to be the case with razors. But careful microscopic examination, recently conducted, has shown that the edge of a good razor has no serrations and does not by any means act like a saw. The edge is, in fact, a true wedge, of the greatest delicacy, which, owing to its extreme tenuity, sinks into any material with which it comes in contact, and divides it just as a wedge splits wood.

POLITICS AT OISO.

DURING the past few days Oiso has been the centre of attention in the political world. We may say that is so even now. Marquis Ito is for the present staying there on account partly of his own health and partly of that of the Marchioness. On the 15th, Mr. Hoshi went down to see the Premier, with whom he had a long talk. Scarcely had he left for the capital, when Count Itagaki, Mr. Kono Hironaka, Mr. Hayashi Yuzo, and a few other well-known Liberals arrived. They had, it is said, repeated conferences with the Premier. The *Kokumin's* correspondent reports that among the subjects discussed at these conferences, one related to the appointment of Count Itagaki to the post of Minister of Home Affairs; Mr. Hayashi to that of Metropolitan Police Inspector-General; and a number of other Liberals to local Governorships. This report must not be received without caution.

THE KYOTO EXHIBITION.

WE are indebted to a Kyoto correspondent for some interesting statistics concerning the recent Domestic Exhibition. The total cost, which is defrayed by the Government, amounts to half a million *yen*. A little over one-tenth of this sum was taken at the gates, or rather less than 60,000 *yen*. The buildings, which cost 70,000 *yen* to erect, have been sold for 20,000 *yen*, the buyer being pledged to remove all by the end of the year. This then represents the price of the material alone. But despite the large outlay connected with the Exhibition, it has more than fulfilled its purpose, new channels of trade having been opened up and a great impetus given, particularly to the industries of the sister cities of Osaka and Kyoto. The latter has, it is computed, profited more than two million *yen* directly, while the indirect gain promises to be still larger. Famine prices prevailed in

the city during the months of July and August, eggs that fetch one *sen* or $1\frac{1}{2}$ *sen* in Tokyo selling readily for three times as much. Milk that could be had in the capital for 2 to 3 *sen* per *go*, brought 8 and even 10 *sen* for a like quantity. Cotton stuffs, towelling, etc., went at exorbitant rates. One consequence is that the city has grown decidedly larger, and that villas are springing up all over the suburbs. The Kyoto people declare that the Osaka-ites are jealous of their success; but as many large-sized crumbs fell to the share of the latter city, neither has much to complain of, except it be the cholera, which raged with unprecedented fury in Osaka for nearly two months. Had it not been for the epidemic, it is stated, Kyoto would have done fully twice, if not three times, as well.

FLOATING OF THE "BJORG."

FROM information which reached the *Kobe Chronicle* on Friday, we learn that the *Bjorg*, which stranded somewhere near Bakan on Wednesday, got off successfully on Thursday night. The sensational news published by a Japanese contemporary as to the damage she had met with appears to have been unfounded, as on examination she was found to be so little injured that the captain determined on proceeding with the voyage to Vladivostok, and the *Bjorg* was to leave for that port yesterday. It had been arranged to send the *Rheingold* down to take her cargo, but on receiving this news the departure of the latter vessel was countermanded.

MR. W. S. WETMORE.

AFTER forty-five years of residence in the East, Mr. W. S. Wetmore has left Shanghai for England. In the early eighties, when the subject of bimetalism received considerable attention in these columns, Mr. Wetmore was one of the very few merchants in the Far East that recognised the great issues involved. His private letters to us at the time would have constituted valuable contributions to the public's understanding of an extremely abstruse subject. But it was not until very recent years that he sought the publicity of the press, and gave to the world writings that have been widely read and appreciated. We join the Shanghai journals in an earnest tribute to his marked financial ability, and in the hope that he may soon return to China.

THE OLD RUSE.

IT is alleged that the French priests at Ch'engt'u having inspected the bodies of the six men executed nominally for the anti-Christian riots, found them to be wretched looking persons who had evidently lain a long time in prison, and must have been originally incarcerated for some other offence. It is plain that if Chinese officials choose to resort to such devices there is little to prevent them. Men lying in prison under sentence of death can always be carried out and executed to expiate a crime that they never committed.

PROPOSED NEW LINE TO DZUSHI.

THE promoters of a new railway between Yokohama and Dzushi *via* Sugita, Tomioka, Kanazawa, Yokosuka, Otsu, Uruga, Kurihama, Nagasawa, Sashima, Hayama, and Horinouchi, a distance of 32 miles, have applied for a charter. Among the promoters are Messrs. Morioka Masazumi, Oye Taku, Fukuzawa Sutejiro, Nakakamigawa Hikojiro, and Yonekura Ippei. The capital is fixed at *yen* 1,800,000.

THE CHINESE MINISTER TO TOKYO.

IT is rumoured at Peking, says the *N.-C. Daily News*, that the friends of H. E. Yü Keng, the Chinese Minister in Tokyo, are trying to get that gentleman transferred as Minister to Washington upon the expiration of H. E. Yang Ju's term next summer.

CHINA'S NEW WAR-VESSELS.

THE torpedor-catcher *Fei Ying*, which has just been constructed at the Vulkan Wharf at Swinemunde for the Chinese Government, underwent her gunnery trials at Kiel at the end of September. The vessel, after taking on board six

loaded torpedoes, sailed for China with a crew of 60 Chinese and 16 Europeans. On 3rd October she proceeded through the North Sea and Baltic Canal.

IMPERIAL GARDEN PARTY.

The Imperial Chrysanthemum Party came off on Tuesday and was as usual a very brilliant affair. The weather was perfect, and the scene was enlivened by the presence of a large number of French and Russian naval officers in full uniform. His Majesty the Emperor entered the park punctually at half-past two o'clock, but the Empress was prevented by indisposition from being present. The chrysanthemums showed as fine bloom as ever. Single flowers not less magnificent may be seen in London or Paris, but to the Japanese belongs the palm for growing an immense number of blossoms—a thousand and upwards on one stem. A cold collation was served in booths specially erected, the Emperor presiding and setting a very hearty example to the guests.

THE "EDGAR" DISASTER.

Through the kindness of Mr. Tom Thomas we are placed in possession of a few particulars concerning the terrible disaster that occurred at Chemulpho on November 13th, when 48 bluejackets belonging to H.M.S. *Edgar* were drowned. The news comes in a letter from Mr. C. E. Lloyd-Thomas, who is serving as an officer on the *Edgar*. It appears that on the 13th inst. a detachment of blue-jackets in charge of Lieut. Bruen, with Sub-Lieut. Rymer and Midshipmen Hobson and Mackworth, and Mr. Thomas were landed on Wöl-mè-to, an island near Chemulpho, for the purposes of company drill. Everything seems to have gone on satisfactorily and preparations were made to return aboard. We give what followed in Mr. Thomas' own words. He says:—"After finishing drill we marched back to the boat and embarked for the ship; seas began to come in over the bows and she was filling, so we turned round and made for the shore. When about 600 yards off the shore she filled and sank. Nearly everybody jumped overboard at once, but I couldn't, as I was in the bottom of the boat trying to bail out. When she sank I swam clear, and then swam back to get hold of something and found about a foot of the mast sticking up. I held on to that for a short time and then it sank. I then swam about looking for something and saw Hobson with a breaker and joined him, but we found it sinking and we had to look out for something else, and I was just starting to swim for shore when I saw two men with a breaker, so I joined them, and just put my finger through the becket to keep myself afloat until I was picked up by a Russian steamboat." Continuing, Mr. Thomas says:—"We were in the water 15 minutes, temperature 48°, and tem. of air 40°. All of the officers were saved, but only 18 men, making only 23, out of 71." Such is the brief story sent home to Yokohama, of one of the most distressing catastrophes recorded for many years in connection with the British squadron in Far Eastern waters. We would have liked to have placed before our readers more minute details—such as the time of the accident, whether the boat was under sail or oars, or in tow of a launch: whether a gale sprang up suddenly, or not; and other particulars as to the state of the weather before launching the boat; the condition of the craft when all were aboard, etc., but for these we must wait until the official reports are available. Mr. Thomas gives no explanation of the reason for the great loss of life except in one sentence, where he says:—"I am afraid the men lost their heads completely, for they seemed to let go of things they had hold of." Of course it may be hazarded that the men may have been numbed by the cold, and this combined with the weight of their accoutrements, may have caused them to sink under the water, after a very few minutes' battle with the icy waves. Mr. Lloyd Thomas is indeed fortunate in escaping the deadly peril.

CURRENT TOPICS.

A certain section of the public in Tokyo still continue to believe, or pretend to believe, that the *Nichi Nichi's* proclamation of a coalition between the Government and the Liberal party is premature, and that the so-called coalition does not amount to more than an understanding between a small portion of the Ministers, on the one hand, and the leading Radicals in the Capital on the other. According to this view, the alliance was the work of the Choshu elements in the Cabinet, the Satsuma statesmen being dissatisfied with it. Among the Liberals, besides the Tosa section and a few others, the bulk of the Party, according to this theory, are said to be opposed to the step. It is rumoured that the younger generation of Satsuma malcontents in the Government circle are taking active steps to organize a counter-movement. Count Matsukata, who is about to leave again for Kyoto, is naturally regarded with much attention. It is conjectured that although his avowed object is to attend an industrial conference in Kyoto, his real purpose is to consult with Marquis Yamagata about the situation. Count Inouye is reported to have left Seoul on the 16th instant. It is surmised that his arrival in Tokyo, which will be in less than a week's time, will precipitate some decisive issue, one way or the other. None of these rumours seems to rest on any solid foundation, but if they are not trustworthy, they at least serve to show that the situation is still somewhat unsettled. An impression prevails in the capital that some changes in the Cabinet are unavoidable before the opening of the Diet.

The attitude of the National Unionists remains undecided. Their organ, the *Chuo Shimbun* does not afford us the slightest glimmering as to the sentiments of the Party. But from their past history and the connection between their leaders and the Cabinet Ministers, it is not likely that they will take the side of the Progressionists in the coming session of the Diet.

The middle of next month promises to be a busy time in the political world. The Liberals are to hold a general meeting on the 15th, while on the preceding day the Progressionists will assemble for a similar purpose. The Progressionists will issue a manifesto on that occasion, and the drawing up of the document has been entrusted to a committee, consisting of Messrs. Shimada Saburo, Ogaki Yukio, Minoura Katsudo, Koizuka Ryu, and Takata Sanaye. On the part of the Liberals, it is stated that the manifesto declaring the coalition with the Cabinet will be published in the *Toho* of the 25th inst.

The *Fiji Shimpō* attempts to classify the members of the House of Representatives into parties for and against the Cabinet. According to its information, the situation is approximately as follows at the present moment:—

		Numerical strength.
Ministerialists	Liberals	107
	Kishu members	5
	Non-party members	29
	Total	141
Uncertain	National Unionists.....	32
	Non-party members	2
	Total	34
Opposition	Progressionists	53
	Constitutional Reformists..	40
	Ote Club	25
	Middle Province Progressionists	5
	Non-party Members	2
	Total.....	125

The non-party supporters of the Cabinet in the above list consist principally of the so-called "Industrial Members" (*Fitsugyo Dantai*). Concerning the National Unionists, the *Fiji* remarks that their past history would seem to warrant the supposition that they will support the Government, but that under existing circumstances a considerable degree of uncertainty attaches to their attitude.

Concerning the recent conferences at Oiso

between Marquis Ito and the Liberal leaders, very contradictory stories are told in Tokyo. While, as we have already stated, one report mentions that among the subjects discussed was the appointment of the principal Liberals to official positions, another account is that the Liberal leaders repaired to Oiso to persuade the Premier to desist from his intended resignation. It is also stated that the recent journey to Oiso of Count Itagaki, Mr. Hoshi, Mr. Kono, and others, was the result of an indignant remonstrance made by the Premier to Count Mutsu against the premature announcement of the coalition between the Cabinet and the Liberal Party. These two last stories rest on the presumption that the revelation of the alliance was a mere device on the part of some followers of the Premier to compel him to cast in his lot definitely with the Liberals, thereby ensuring the stability of the present Cabinet and preparing the way for the promotion of the intriguers to Ministerial positions. According to this theory, Marquis Ito is dissatisfied with the policy of his followers and determined upon resignation. These views are generally entertained among the politicians opposed to the Liberal party. One of the Progressionist organs even hints in a tone of confidence that the Liberals building extravagant hopes upon the so-called alliance with the Cabinet, will be most grievously disappointed, for the present Ministry will soon have to give place to another from which the Liberals will have little ground to expect favour or countenance. We direct our readers' attention to the source of these anti-Liberal stories.

Marquis Yamagata is reported to have left Kyoto for the capital on the evening of the 19th instant. Before setting out, he had a conference with Count Matsukata who had just arrived from Tokyo. The speedy return of Marquis Yamagata to the capital is regarded as very significant. Count Inouye is expected in Tokyo in a few days. Viscount Takashima, too, is coming back in a short time. It is thus supposed that in the course of the next fortnight or so, the situation will be settled one way or another.

Concerning the attitude of the Progressionists, the *Fiji Shimpō* believes that their views about the Government have undergone a wholesome change. They no longer seem to be actuated by uncompromising antagonism to those in power. In support of this statement, the *Fiji* refers to an article that will be published in the next issue of the Party's journal. The article will discuss the bearing of the recent meetings between Marquis Ito and Count Okuma upon the position of the *Kaishin-to*. After observing that Marquis Ito is now engaged in the task of reconstructing the Cabinet, the article is expected to proceed thus:—"The Progressionist Party's attitude toward the Cabinet is not in any way affected by the meetings between these two statesmen, for the Party's policy remains unchanged amidst all the vicissitudes of political combinations. However, the Party will not hesitate to give its support even to Marquis Ito, if only he promises to conduct the administration according to public opinion. Neither will it scruple to attack even Count Okuma, should he show himself opposed to such a method of Government."

The *Nichi Nichi Shimbun* states that Marquis Ito is not likely to return to the capital soon, for he has just sent instructions to his residence in Tokyo to forward a fowling piece to him at Oiso. It is also announced by some other papers that he has just tendered his resignation. Those that believe in this rumour regard Marquis Yamagata as Marquis Ito's successor in the post of Premier. Marquis Yamagata arrived at Shimbashi at 5 p.m. on the 19th instant. He drove from the station direct to Viscount Nomura's official residence, and early on the following morning he repaired to the Palace and had an audience with the Emperor. It is said that he returned from Kyoto in obedience to urgent instructions from His Majesty. On his way, it is stated, he had a conference with Marquis Ito at Oiso, but this

report does not seem to be well founded. Probably it originated in the fact that at that station he was accidentally joined by Mr. Shirane, Minister of Communications, Count Itagaki, and Mr. Kono, who had been on a visit to the Premier.

Concerning the National Unionists the *Nichi Nichi* has the following note:—"We have hitherto thought it strange that the National Unionists, not being entire strangers to the statesmen in power, should stand aloof after the latter have definitely entered into coöperation with the Liberals. We are now informed, however, that the relations between the Cabinet and the National Unionists have once more become very intimate. Seeing that both sides have always been virtually agreed about the principles of nationalism and the question of national defence, it is no wonder that they should join at a juncture like the present." We (*Japan Mail*) have always regarded such a consummation as very natural and there is little reason to doubt that the *Nichi Nichi's* information is true. The National Unionist organ, the *Chuo Shimbun*, however, preserves complete silence upon the subject. It is easily conceivable that, before any authoritative statement can be made by the official organ of the Party, the question must be definitely settled at a general meeting, though the probable result of such a meeting is not difficult to foresee.

The Opposition papers continue to publish reports tending to show that the Liberal Party is on the brink of a serious split, and that a large number of the provincial members will leave the Party in consequence of the coalition that their leaders in Tokyo have formed with the Cabinet. But the *Fiji Shimpō* is strongly inclined to think otherwise. It bases its opinion upon the general tone of the provincial papers, which, without distinction of party or faction, regard the news of the coalition as a matter of course, and refrain from any extravagant attacks upon the Liberals; while, on the other hand, the journals belonging to the Liberal Party accept the intelligence not merely without any protest but even without the slightest show of dissatisfaction. Such is the impression produced on the *Fiji* by a careful perusal of the provincial press of all parties and localities.

The *Chuo Shimbun* remarks that at a recent meeting in the Atago-kan, the politicians of the Opposition parties adopted a resolution to the effect that should the Cabinet refuse to resign in connection with the Korean question, consent must be withheld in the next session of the Diet from all the expenditures not coming within the scope of the 67th Article of the Constitution, their idea being to force the Ministers to resign. It would be premature to accept this as the policy mapped out by the Opposition in general, but undoubtedly some such course is mediated by the extreme section of the politicians hostile to the Cabinet.

Count Inouye, who is expected in Tokyo in a few days, seems to be the last hope of the persons opposed to an alliance between the Liberals and the Cabinet, or, as these persons prefer to say, between the Liberals and Marquis Ito's faction. Count Inouye, it is stated, is not in favour of such an alliance, and it is expected that his return may upset the arrangement and lead to the reorganization of the Cabinet upon entirely new principles. His return, it is also rumoured, is impatiently awaited by Marquis Ito, who, according to the enemies of the Liberal alliance, is resolved to abide by the decision of the Count. These rumours, of all those in circulation, seem to be the least worthy of credit.

COUNT INOUE'S RETURN.

The return of Count Inouye will probably be a little delayed. A telegram received on the evening of the 20th, said that the steamer carrying His Excellency had been obliged to put into Kozaki in Tsushima on account of stress of weather. It may be concluded, therefore, that the Count will not reach Tokyo before the 24th.

THE RETURN OF THE GUARDS.

The Head-quarter Staff of the Imperial Guards arrived on Thursday forenoon at Shimbashi terminus and were received by thousands of shouting citizens. The capital had been in a state of "reception" from the preceding evening, for one battalion reached Tokyo on the afternoon of the 20th, and two others in the small hours of the following morning. The exact times of the three battalions' arrival being, however, uncertain, no attempt was made to give them an elaborate welcome, except that the streets were gaily hung with flags and two or three thousands of enthusiasts assembled to do a modicum of shouting. But it having been duly announced that the Head-quarter Staff would reach Shimbashi at half-past ten in the forenoon of the 21st, a very hearty demonstration was prepared by the citizens. It would be difficult to form an estimate of the crowds that packed themselves densely in the immediate vicinity of the terminus. There were about as many as the great space in front of the station could hold, and an overflow that defied estimate lined each side of the streets, half a dozen deep, all along the route from the terminus to the barracks. The student class was conspicuously represented, and the lusty roaring of its members betrayed a fever of military zeal not without suggestiveness for prophets of Japan's future. There was also a students' band, which played totally unrecognisable tunes with instruments among which a hoarse drum alone could be identified. Needless to say that the lamp-posts carried their usual clusters of urchins, and that the roof of every pent-house within visual range was loaded to its utmost limit of endurance. The usual door of exit from the side of the station had been chosen for the passage of the troops, though the door of ingress in front would certainly have been better adapted to the occasion, had any idea of producing a picturesque effect been entertained. Perhaps intentionally, the police were not at all *en evidence*. To a slender rope stretched between frail supports was entrusted the whole function of reserving a space for the soldiers, and even in the absence of constables' batons and sheathed sabres, it accomplished its task, though the swaying crowds sometimes threatened to snap it. The arrival of the train was tolerably punctual, and the engine, as it glided forward to the points after uncoupling, and sent up a puff of notifying steam, received the first roar of the ovation. The Head-quarter Staff of a Division is not, at the best of times, a very imposing body, and after a long railway journey its claims to public notice are not augmented. But the citizens of Tokyo were determined to see a Formosan hero in every wearer of a uniform that arrived at Shimbashi on Thursday morning. No distinction of persons was made. Groups of fatigue-men straggling out of the station, laden with parcels and bundles, received cheers as hearty and as vehement as did the company of weather-beaten soldiers that ultimately emerged, marching to the music of a band within the station. The men looked as brown as berries and as thin as greyhounds, but their uniforms were fairly smart and their general appearance did not suggest much hardship. The crowd would have preferred, of course, to see them in the mud-coloured costume that they actually wore on campaign—the costume that made such a sombre feature in the funeral cortège of His Imperial Highness Prince Kitashirakawa. But the raw cold that precedes rain on a dull November morning forbade any sacrifice to the picturesque in that direction. The soldiers, as they marched in the ranks, preserved a mien of stolid indifference. Neither their return to Tokyo nor the ovation that awaited them seemed to awaken any enthusiasm in their breasts. They were too chilled and too weary to remember anything but the mechanics of discipline. The officers, on the contrary, behaved as if they had been specially drilled to receive popular ovations, saluting the people right and left, and treading gaily forward as

though to invite the cheers that rang about them everywhere. Field Marshal Nodzu, who wore a heavily-furred cloak lined with scarlet, made a particularly conspicuous figure and was wildly cheered, as were also Major-General Kawamura and Colonel Sameshima, Chief of the Staff, who accompanied the Marshal. Nevertheless the arrivals had been so few and the troops had seemed so small a body, that the big crowd, evidently dissatisfied with its opportunities to be vociferous, expended its surplus cheers upon straggling baggage-guards in *jinrikisha*, shouting at them, clustering round them and *banzai-ing* them in the heartiest manner conceivable. Altogether Tokyo took care that there should not be the slightest room to doubt its lusty gratitude to the men that had suffered so much for their country's sake in Formosa.

TARIFF CONVENTION BETWEEN GREAT BRITAIN AND JAPAN.

The Supplementary Convention, provided for in the Revised Treaty between Great Britain and Japan, having been concluded and ratified, the ratifications were exchanged yesterday at the Foreign Office in Tokyo, their Excellencies Marquis Saionji and Sir Ernest Satow representing the High Contracting Parties. It will be remembered that the purpose of this Supplementary Convention, as defined in the Protocol to the Treaty, was to convert the *ad valorem* duties mentioned in the new Tariff into specific duties, as far as possible, the basis for such conversion being the medium prices, as shown by the Japanese Customs Returns during the six calendar months preceding the date of the protocol, together with the cost of insurance and transportation from the place of production, purchase or fabrication to the port of discharge, as well as the commission, if any. The Convention was to have been concluded before the 16th of January in the present year—that is to say, within six months from the date of the Protocol—but it having been found impossible to finish the work in that time, owing to the immense increase of abnormal functions devolving on the Japanese Foreign Office in connection with the war, an extension of time until July 16th of the present year was agreed upon. The Convention having been concluded by that date, was duly ratified, and the ratified document having arrived from England on the 14th instant, ratifications were exchanged on the 21st. It may be presumed that the final settlement of this question will promote the progress of the negotiations now going on with other European Powers.

MR. PARSONS IN TOKYO.

The Honourable J. Langdon Parsons, Commissioner for South Australia to Japan, China, and the Philippine Islands, delivered a very interesting and instructive lecture at the Higher Commercial School last Saturday on the subject: "Australia and Japan; their mutual interests." The large Lecture Hall was filled with a very appreciative audience, among whom were H.E. Mr. Makino, Vice-Minister of Education, the professors and alumni of the school, and the students. Beginning with Australia, Mr. Parsons spoke of (1) her early history, natural features, climate &c., (2) her political position and conditions, and (3) her social condition. Then he touched upon the history of Japan, saying that he had been a very careful reader of her recent wonderful changes, and wound up by speaking of the commercial future already opening to the mutual benefit of Australia and Japan.

In the evening he attended the Reunion Dinner of the alumni of the above institution, at which a gold medal was presented to their former director, Mr. Yano, in token of their grateful recognition of services to them and the country.

ECONOMICAL AND INDUSTRIAL.

The following figures show the capital, receipts, and dividends of some of the railway companies for the half-year ending the 30th of September:—

	Capital. Yen.	Receipts. Yen.	Dividend. Per cent.
Tanko Tetsudo.....	6,500,000...	381,563 029...	12
Osaka Tetsudo.....	3,000,000...	147,091 732...	13
San-yo Tetsudo.....	13,000,000...	434,261 773...	10
San-gu Tetsudo.....	1,100,000...	55,978 507...	10
Settsu Tetsudo.....	240,000...	6,595 845...	4.62
Chiku-Ho Tetsudo...	3,700,000...	199,783 830...	10
Ryomo Tetsudo ...	1,500,000...	78,198 721...	8.5
Naniwa Tetsudo ...	250,000...	4,307 142...	6
Ome Tetsudo	150,000...	1,378 023...	4.08
Kawagoye Tetsudo.	300,000...	19,932 916...	8
Kobu Tetsudo	1,500,000...	78,585 580...	11
Kyushu Tetsudo ...	11,000,000...	307,386 816...	8

Commenting on these statistics, the *Shogyo Shimpō* observes that, with the exception of the San-yo and Kyushu lines, the exceptionally prosperous condition of the above mentioned roads is owing to the revival of commerce and industry during the period under review. As to the San-yo and Kyushu railways, the increase of their profits was brought about in large measure by the conveyance of troops and war material. The low rate of profits on the Settsu, Naniwa, and Ome lines, is easily explained by the fact that they are new roads just opened for traffic. While congratulating these companies on their prosperous condition, the *Shogyo* is constrained to offer some criticism about the improvident eagerness shown to declare high rates of dividend without making a sufficient provision against bad seasons. The directors of these companies are reminded of the fact that their *confrères* in the West pursue a very different method, their care being always to set aside a sufficient sum for the equalization of dividends from year to year. The same prudent course is strongly recommended to the Japanese companies.

Among the railway projects just announced, we may mention the Tokushima Tetsudo, capital 750,000 yen, connecting Tokushima and Kawada in Tokushima Prefecture; the Ka-No Tetsudo, capital 700,000 yen running from Tsubata in Kaga to Nanao in Noto; the Isesaki Tetsudo, capital 200,000 yen, connecting Isesaki and Takabayashi in Joshu; the Kibi Tetsudo, capital 200,000 yen, from Okayama to Samban; the Hoshu Tetsudo, capital 200,000 yen, between Oita and Beppu in Bungo, Kyushu; the Chikugo Tetsudo, capital 700,000 yen, between Kuroki and Wakamatsu in Chikugo, Kyushu; the Jo-Gan Tetsudo, between Mito and Koriyama on the Nippon Tetsudo line.

An industrial mania is sweeping over the land, as may be seen from the following table showing the market prices of the shares of the new companies:—

	Paid up as security. Yen.	Market price. Yen.
Narita Tetsudo	1.10	11.50
Toyokawa Tetsudo	1.00	6.00
Gan-Etsu Tetsudo.....	1.00	2.00
Kyoto Tetsudo	1.00	3.50
Nankai Tetsudo.....	1.00	7.00
Seiwa Tetsudo	1.00	2.00
Chugoku Tetsudo	1.00	2.30
Isoimato Tetsudo.....	1.00	1.70
Joya Tetsudo	1.00	1.50
Denki Tetsudo25	3.70
Kyohoku Tetsudo	nom.	7.00
Shanghai Spinning	nom.	5.00
Yokohama Commercial Bank50	12.50

The projected Dockyard Company at Moji has been joined by Tateno Gozo, Hiromi Nisaburo, Hamanaka Ihachiro and others. The capital has in consequence been increased to 900,000 yen, the capacity of the projected dock being sufficient to admit ships of 3,000 tons at least.

The projects for the establishment of docks in Kobe and its vicinity are said to be making favourable progress. The first is that promoted by the Mitsu Bishi Firm. This programme includes the construction of a dock at Onohama, capable of admitting ships of upwards of 7,000 tons. The

next project, promoted by a number of well-known capitalists of Osaka and Kobe, contemplates the establishment of similarly large docks at Iwaya in the island of Awaji. The third and last under contemplation by influential merchants of Kobe and Osaka relates to the establishment of big docks at Komabashi, Hyogo.

The Prefectural Government of Yamanashi recently caused some officials to make a tour through the localities where the silk fabric, *Kaiki*, is produced, in order to call the attention of the manufacturers to the importance of forming themselves into a guild in order to prevent the production of articles of inferior quality. The need of such a guild having already been strongly felt by the manufacturers themselves, the officials found little difficulty in securing favourable attention. A guild has been organized binding all the members to submit their manufacture to the inspection of certain examiners appointed by the guild.

With the development of commerce, the system of credit is rapidly improving. Speaking on the subject at a recent Bankers' reunion in Tokyo, Mr. Yamamoto Tatsuo, of the Bank of Japan, expressed surprise at the wonderful increase during the past few years in the amount of credit bills and notes used in business transactions in the capital. The total of the bills and notes discounted at the Clearing House in 1891, the first year of the institution's operation, was 106,000,000 yen. It increased gradually until the amount reached 282,000,000 yen in 1894. There are a large number of banks that have not yet joined the Clearing House, and have their bills exchanged at the Bank of Japan. The average daily amount of bills thus treated at the Bank during the month of October was 110,570 yen in 1893, 180,000 yen in 1894, and 310,000 yen in 1895.

The project of Mexican Emigration, undertaken by the Colonization Association, is said to have matured. It is stated that Mr. Ono Kanemoto, formerly of the Hokkaido Administration Board, will be dispatched to Mexico as agent.

A general meeting of the promoters of the Yayeyama Sugar Manufacturing Company was held in Tokyo on the 18th instant. Mr. Shibusawa was in the chair. The principal business was the discussion of the Company's constitution and the election of Managers and Assessors. To the board of Managers were appointed Messrs. Torimi Seizayemon, Umeura Seiichi, Nakagawa Torasaburo, Tonoki Zenbei, and Oye Taku. Messrs. Shibusawa Eiichi and Komura Shinobu were elected Assessors.

Investigations relating to the development of foreign trade, undertaken by the Tokyo Branch of the Japan Trade Association (*Nippon Boyei-ki Kyokai*) have just been brought to a conclusion. The members of the Investigation Committee assembled at the Seiyoken on the 16th instant, and the results of the investigations conducted by separate members were submitted for general discussion. The draft reports thus debated upon and corrected have been placed in the hands of printers.

The match manufacturers of Osaka, Kobe, Nagoya, Tokyo, and other localities, constituting the Japan Match Association, recently held a conference in Osaka. As a result of the discussions, the head-quarters of the Association, hitherto established in Tokyo, have been removed to Kobe. Mr. Takikawa Benzo was appointed Director of the head-quarters.

The quantity of rice exported during the year ending the 31st of October last, was 117,627 tons, valued at 7,967,584 yen. Of this quantity, nearly the whole was exported from Kobe, the only other place where the cereal was shipped being Shimonoseki, with only 12,237 tons, valued at 783,168 yen. The quantity exported from Kobe is classified as follows:—

	Quantity, Tons.	Value, Yen.

Cleaned Rice.....	28,376.....	2,287,713
Total	105,390.....	7,184,416

KOREAN NEWS.

SATURDAY, NOV. 16.

The last anniversary of the Emperor's birthday was celebrated by the Japanese in Söul in a manner never witnessed there previously. The weather, rather dark and threatening on the preceding day, cleared up on the 3rd instant and became bright and warm. The whole settlement wore an appearance of unusual gaiety, abundance of national flags and paper lanterns being used to decorate each house-front, or suspended from ropes crossing the street at regular intervals. At eleven in the morning, the residents assembled in the newly-built higher primary school, which was fitted up in a manner suitable to the happy occasion. After the singing of the national anthem by the boys and girls of the school, the residents, marshalled in the enclosure, gave three cheers for the Emperor. The company then partook of a cold collation, after which they were entertained with dances on a temporary stage specially erected for the purpose, and by wrestling matches between amateurs. Meanwhile, fireworks were sent up from the top of Hwa-söng Hill (Japanese Castle Hill). The streets of the Settlement were filled with a crowd of Koreans, high and low, old and young. Toward evening, about eighty of the principal residents were invited to the Consulate where they were entertained by Consul Uchida. At seven, the party repaired in a body to the Legation to attend the ball. At the Legation, a number of distinguished personages had been invited to tiffin at noon, among them being the Korean Minister and Vice-Minister of Foreign Affairs, the Ministers of the United States and of Russia, the British Consul-General, the German Consul, the French Diplomatic agent, other members of the diplomatic and Consular bodies, Count Inouye, Minister Komura, and other members of the Japanese Legation. The Korean Foreign Minister, Mr. Kim proposed the health of His Imperial Japanese Majesty, and thanks were given by Mr. Komura. The ball in the evening was attended by over a hundred persons, Korean, Japanese, and European and American. Among the Occidentals were the German Consul, Colonel Cockerill of the *New York Herald*, Mr. Greathouse, Colonel Dye, and others.

The Japanese Ambassador, Count Inouye, had an audience with the King on the 5th inst. He proceeded to the Palace in a palanquin specially sent from the Court, and was followed by Minister Komura, Mr. Inouye Katsunosuke, Secretary of the Foreign Department, Mr. Nagasaki Seigo, Confidential Secretary to the Minister of the Household and Chamberlain to the Emperor, and Mr. Kokubu, Interpreter of the Legation. The escort consisted of Korean and Japanese policemen. About two in the afternoon the procession left the Legation. At the Waiting Chamber, they were met by Mr. Li Saiben, Minister of the Household, and Mr. Kim Inshoku, Minister of Foreign Affairs, and several other high officials, and were served with champagne. Soon afterwards, on being ushered into the Audience Chamber, the Japanese Ambassador was greeted by the King in a particularly courteous manner. His Majesty repeatedly asked Count Inouye to be seated, but the latter continued standing throughout the interview. The Count presented to His Majesty the gifts with which he had been charged by his Emperor and Empress, namely a *suzuri-bako* (a lacquered box containing an inkstone, pencils, and other writing materials) from the former, and a book-case from the latter. There was also a present of a stationery box to the Crown Prince from the Imperial Heir Apparent of Japan. When Count Inouye had delivered a message entrusted to him by the Emperor, conveying expressions of sympathy and condolence for the unhappy occurrence of October 8th, the King seemed desirous of opening conversation with the Ambassador on various political topics. But the Count's mission being confined simply to the conveyance of his Sovereign's message of condolence, he retired from the royal presence without entering into any conversation with the

King on subjects not immediately connected with the object of his mission. The audience did not last more than half an hour. The Crown Prince was not present on account of indisposition.

Concerning Count Inouye's influence in Korea, the *Choya Shimbun's* correspondent states that the mere mention of his name produces awe among the Koreans, not only in the capital but even in remote provincial districts. A certain Japanese recently travelling in the interior of the country is said to have completely intimidated some Korean rascals by telling them that he should report their evil doings to Count Inouye. The story may be somewhat exaggerated, but it is a fact that Count Inouye's name is now a household word in Korea.

By a recent change in the organization of the Army, the new Palace Guards and the Garrison Battalions are to be composed of men selected from the disbanded troops of the old Palace Guards and the *Kunrentai* Battalions. Those picked out from the old Palace Guards are now being drilled by two Japanese officers, Captains Fujita and Sakuma, preparatory to their final amalgamation with the former *Kunrentai* troops.

TUESDAY, NOV. 19.

The latest letters from Söul agree in stating that the situation is unsettled and precarious. The principal source of danger is the Min faction, some of the leaders of which are said to be still hiding in a certain foreign Legation in Söul. The Japanese correspondents refrain from naming the Legation, but there is no doubt that they refer to the Russian. Eight well known partisans of the late Queen are reported to be concealed there. The most distinguished being Li Hanshin (ex-Minister of Agriculture and Commerce), Li Inyo (ex-Police Inspector-General), Li Kanyo (ex-Minister of Education), Li Ka-ei (a Court Official), Gen Kotaku (ex-Commander of the Palace Guards) and Li Gakukin (a Court Official). These men are suspected of being engaged devising a plot to avenge the death of their patron, the late Queen, and ousting their enemies from office. According to a report very generally circulated in Söul, they meditate the seizure of the King's person and his temporary detention in the Legation where they are hiding. Their scheme is so complete in detail, that the members of a ministry to replace the present are already nominated. The list, headed by Min Yong-chun, includes Li Inyo, Li Kanyo, An Keiju, Min Shoko, and so forth. The persons on whom the Min faction vow vengeance, are Kim Koshu (Minister President), Cho Giyen (Minister of War), Yu Kitsuyei (Acting Minister of Home Affairs), Ken Eichin (Police Inspector-General), and Cho Haku (Acting Minister of Justice). The Min politicians are watching for a favourable opportunity to carry out their plan of a counter-revolution, and as a means of preparing the way, are putting into circulation various rumours intended to excite the suspicion of the King as to the loyalty of the present Ministers. The latter, on their part, are said to be fully aware of the design of their enemies, and to be making preparations against an emergency. The Premier, Kim Koshu, and the acting Minister of Home Affairs, Yu Kitsuei, have apartments in the Palace and never pass the night outside, and His Majesty is always attended by Li Saiben, the Minister of the Household, so that none of the calumniators in the employ of the Min conspirators can find an opportunity to approach the throne. The Cabinet, it is also rumoured, is beginning to show signs of disagreement. Yu Kitsuei tries to throw the whole blame of the recent *Imoute* upon the shoulders of Cho Giyen, who, in turn, holds the Commander of the disbanded *Kunrentai* troops responsible for the affair.

As to the absence of the members of the diplomatic corps from the ball given at the Japanese Legation in honour of the Emperor's birthday, the *Choya's* correspondent states that they did not attend lest they should have to join hands with the present Korean Ministers of State, whom they regard in the light of usurpers and bloody traitors.

A report from Fusan mentions that a Russian

military surveying party, consisting of two officers and five men, arrived there by steamer on the 30th ultimo. They surveyed the principal places in the vicinity of the port, and as soon as passports could be obtained, they were to start overland for Seoul.

THE LATE MR. YOSHIKAWA.

The funeral of Mr. Yoshikawa, late President of the Japan Mail Steamship Company, took place yesterday (21st inst.), the cortège leaving the residence of the deceased in Mukojima at 1 p.m., and proceeding to the temple of Kichijō in Komagome. A great concourse of friends and relatives assembled to pay the last tribute of respect to the deceased. Seldom indeed has a funeral ceremony of more imposing character been witnessed in Tokyo. The gifts of flowers were innumerable, their magnificence and the general costliness of the preparations suggesting the reflection that these rites are beginning to exceed the limits of reason in Japan. The attendance of foreigners was exceptionally large, and the great majority of them not only proceeded to the point of departure but also accompanied the procession on its long journey to Komagome. Mr. Yoshikawa Taijiro, whose death at the early age of forty-four is deeply lamented by the nation as well as by a large number of foreigners, was born in the family of a *Shin-to* priest of Nara. Losing his father while a boy, he came to the feudal capital of Yedo to pursue his studies at the age of about fifteen or sixteen, and matriculated into the private seminary of Kinoshita, a high official in the Government of the *Shogun*. His studies, however, were soon disturbed by the war of the Restoration, when his master, Kinoshita, like many of the retainers of the fallen House of Tokugawa, fled to the provinces of the North-east. Young Yoshikawa shared the dangers and privations of his master in his wanderings. He had imbibed so much of his master's zeal for the cause of the Feudal Government, that he endeavoured persistently to approach the person of an Imperialist General with a view to assassinate him. For that purpose, he assumed the disguise of a coolie, carrying about his sword and pistol in a straw bundle as if they were workman's tools. He did not, however, succeed in this object, and after the termination of the war, he returned to the new capital, then called Tokyo. Being without money and friends, he became a "student" in the house of a physician, the father of the present Dr. Ando Masatane, of Kayaba-cho, in the Nihonbashi District of the capital. A "student" in that sense meant a hanger-on, who, by working for the family, earned his board and utilized odd moments to qualify himself for the profession. But Mr. Yoshikawa had no taste for the healing art. In fact, like most young men of those times, he held the medical profession in hearty contempt, and devoted his leisure hours to writing political tracts and studying current political topics. Dr. Ando, himself having a political bent, did not rebuke his young disciple's inattention to the medical science. Yoshikawa, however, had to pay the penalty of his negligence. On one occasion, when his master and the rest of his fellow-students were absent, a messenger arrived from a certain well known patron of the physician, requesting an immediate visit. Mr. Yoshikawa tried to excuse himself, but the messenger would accept no apology, for the case was urgent. So he had to assume the airs of an experienced physician and repair to the house of the patient. His embarrassment on this occasion may well be imagined, for he knew nothing about medicine. But after examining the patient, he prescribed some medicine at random. Strange to say, the patient recovered in a few days, and the matter afterward became a standing jest among the disciples of Dr. Ando. Shortly afterwards, Yoshikawa entered Mr. Fukuzawa's school, the *Keiwo Gijuku*. It was so poor that being unable to pay the entrance fee, he had to work as an assistant accountant in the dormitory, thus obtaining the privilege of studying free of charge. After a year, he went to Wakayama with Dr. Matsuyama Toan to teach

a school established there by the latter. In 1870, he again came to Tokyo and continued his studies at the *Keiwo Gijuku*. In 1872 he accepted a professorship in the English School at Hiro-saki (the parent of the present *To-o Gijuku*), and in the following year, he was appointed an official of the 9th grade in the Department of Education. In April, 1874, he was promoted to degree grade in the scale of officialdom, and a few months later he received the appointment of Director of the English Language School of Nagoya. In 1877, that school having been abolished, he was transferred to the directorship of the Normal School in Sendai. In October, 1878, he entered the service of the Mitsu Bishi Steamship Company. Upon the amalgamation of that company with the Union Steamship Company in 1885, thus forming the present Nippon Yusen Kaisha, he joined the new company, and having served as manager of various branch offices, was appointed to the Board of Directors in 1817. The following year, he was promoted to the Vice-Presidency of the Company, and in March, 1894, he succeeded Mr. Morioka as President. In May, 1895, he was honoured by the Emperor with the fifth grade of the second class, and on the 13th of November, he was decorated with the 3rd Class of the Order of the Rising Sun in recognition of the services rendered by him as President of the Company during the recent war. On that day he breathed his last, the cause of his untimely death being disease of the lungs. In him Japan has lost one of her most talented and energetic leaders in the field of business.

THE HABIT OF WAR.

It is quite curious to note what a commonplace character has been imparted by habit to events that would have roused the Japanese public to great excitement a year ago. All the latest stages of the Formosa campaign have been treated with the utmost nonchalance. Nobody seems to have conceived the smallest forecast of disaster, and the bulletins, as they arrived, were conned with scarcely less respect than that accorded to quotations on 'Change, or reports of political squabbles in local assemblies. Yet the episodes of the fortnight, from Nov. 5th to Nov. 19th, deserved a great deal of attention. Two events are specially worthy of note. One occurred on the 19th instant, when a portion of the Mixed Brigade surrounded the village of Shoi-lan, where 3,000 Chinese troops were quartered. The affair differed from the general fashion of encounters between Japanese and Chinese, in the fact that no road of escape was left open for the latter. The fighting was consequently of a desperate character, the Chinese losing about 1,000 of their number and the Japanese 30. The Japanese, on the other hand, met with something very like a disaster at Tangkoisui, on the 14th of November, when a reconnoitring force, consisting of two companies of infantry, marched into an ambush of five or six hundred Chinese, posted well under cover. The Japanese lost 94 men in killed and wounded, and had to fight for several hours before they succeeded in dislodging their enemies, who left only 30 corpses on the field. That must have been an exceedingly warm affair. The two companies can not have mustered more than 250 men, so that more than one man in every three was put *hors de combat*. Altogether, in the interval of 15 days, from the 5th to 19th (inclusive), the two Japanese columns, one advancing from the north, the other from the sea, fought fifteen engagements, large and small, and had a list of casualties aggregating 255, while the Chinese losses in the same time aggregated 2,300. Such a record certainly merits a good deal of attention, but the novelty of winning victories has entirely worn off in Japan, and we suspect that the Guards, despite their very arduous campaign, will not be received on their return with anything like the acclaim they deserve. It will scarcely be remembered that during the months while they lay comparatively idle, they had to encounter perpetually an enemy far more deadly than either the Hakkas or the Black Flags, and that they have left a very large percentage—some say one-half—of their numbers dead in Formosa.

METHODS OF QUOTATION.

The *Japan Gazette*, in a characteristically violent paragraph, accuses us of "disreputable conduct," of a "mean trick" and so forth, and concludes a very angry tirade with the words, "We can only regret that the man adopting these tactics still bears in the directories a title with which it is usual to associate the term gentleman." The basis of this attack is that we wittingly attributed to the *Japan Gazette* words that really formed part of an extract from the *Hongkong Daily Press*, and, contrasting them with editorial utterances of the *Gazette's*, convicted the latter of a flagrant contradiction. Probably no editor in the world would be knowingly guilty of the clumsy blunder thus attributed to us. It is impossible to suppose that the editor of the *Japan Gazette* believes in the justice of his own accusation. The quaint part of his angry charge is that he says:—"It is true we did not use inverted commas to mark the quotation from the *Daily Press*." That is to say, the *Japan Gazette*, according to its own admission, appropriated matter from the *Hongkong Daily Press*, published it in such a form that no reader could suppose it to be anything but the writing of the *Gazette* itself, and then flies into a passion and calls people ugly names because they read it as an editorial utterance of the *Gazette's*. "It is true we did not use inverted commas!!" How can the *Gazette's* readers possibly draw a distinction between original matter and quotations if the recognised method of indicating the latter is neglected? In order to expose the case clearly we quote the whole of the original paragraph from the *Japan Gazette*—an editorial paragraph, be it observed:—

The fact that the shares of the Hongkong and Shanghai Bank were unquotable on the London market on Friday last is, states the *Hongkong Daily Press*, indicative of the serious apprehensions that have been entertained of war with Russia breaking out. Reuter now informs us that "a Russian official communication declares that 'the situation is tranquil and not calculated to inspire any uneasiness.'" But Muscovite official communications on international questions are not ordinarily to be accepted unreservedly. Several times Russia has declared that she did not intend to occupy such and such a place, and the declaration has been speedily followed by the actual occupation of the territory in question. That language is given to conceal thought is a cardinal principle of Muscovite diplomacy, and if there was any fixed intention of making war on another power the execution of the intention would in all probability be preceded by some such declaration as that made in connection with the present crisis. On this occasion, however, the declaration may, we think, be accepted as correct, in so far as the decision rests with Russia herself. She will pursue her designs quietly but persistently, but they will not lead her into conflict with England unless England deems it necessary to oppose her by force of arms. If there is to be a fight it is England that will start it, not Russia. The responsibility is not one to be shirked if there be any real interference with British interests, but we fail to see anything in the present position, or in the designs attributed to Russia, to justify any serious apprehension of a breach of the peace.

According to the universally accepted rules of quotation, one sentence, and one sentence only, in the above paragraph can be attributed to the *Hongkong Daily Press*, and even that sentence may or may not be quoted verbatim. The sentence is:—"The fact that the shares of the Hongkong and Shanghai Bank were unquotable on the London market on Friday last in indicative of the serious apprehensions that have been entertained of war with Russia breaking out." The whole of the rest of the paragraph must be read, can only be read, as an editorial utterance of the *Japan Gazette* itself. Not the remotest suspicion ever crossed our minds, or could cross the mind of an intelligent reader, that the remainder of the paragraph emanated from any source other than the *Japan Gazette*. It comes to this, then, that the *Japan Gazette* appropriated, without acknowledgment, editorial remarks from the *Hongkong Daily Press*, published them in such manner that they must be read as its own, and then became passionately indignant because they were so read.

MR. OZAKI YUKIO.

Mr. Ozaki Yukio, the well-known Progressivist, delivered a lecture on the subject of "The Attitude of the Japanese toward Foreigners" at the Young Men's Christian Association of Tokyo on the 16th instant. In all his utterances on subjects connected with foreigners and foreign affairs, Mr. Ozaki has been noted for an attitude of very marked self-conceit and contempt toward alien races. But on the present occasion, he adopted an entirely different tone, showing himself not blind either to the defects of his own nationals or to the merits of foreign peoples. He strongly censured his countrymen for a conspicuous lack of steadiness in their notions about foreigners and foreign things, illustrating this assertion by a review of the history of Japan's foreign intercourse during the past three decades. At first, the attitude of the Japanese toward foreigners was characterized by hearty contempt and inveterate hatred. This was succeeded by a reactionary period, during which the Japanese went to the other extreme of worshipping Europeans and Americans, and regarding them as their superiors in every respect. But of late an opposite tendency has displayed itself, and the lecturer regretted to notice that his countrymen were now over-confident in their civilization and military prowess. He requested his youthful listeners to remember that the country's late victories were obtained over the Chinese, the most cowardly nation on the globe. Japan's strength must remain untested until she had fought with a European foe. The issue of such a struggle was at best very doubtful. Mr. Ozaki then proceeded to compare the state of morality in Japan and in the West, and the comparison, in his opinion, was not uniformly favourable to his country. He told his audience that the standard of morality was somewhat lower in Japan than in certain European countries, as, for example, England, where, to cite one out of numerous possible illustrations, no respectable family would admit Zola's novels into its library, whereas they were rapidly finding favour among his countrymen. Another circumstance to which he referred as an instance of want of social morality in Japan, was the marrying of women of questionable reputation into respectable families. He also told his listeners that their countrymen had much to learn from Europeans in matters of true courage and honour.

We (*Japan Mail*) are disposed to think that Mr. Ozaki's inferences, founded on the increasing circulation of Zola's novels in Japan, are somewhat superficial. The French author's works can not be called "immoral," in the true sense of the term. They do not in any single instance portray immoral subjects in an attractive guise. They are simply immodest. Zola's intention being to depict with absolute accuracy the lives led by certain classes of his countrymen and countrywomen, he necessarily unveils for his readers' inspection matter that finds no place in the thoughts or conversation of strictly modest people. It is impossible to suspect him of any evil purpose. On the contrary, one is compelled to perceive that the revolting portraits he paints are intended to arouse impulses of reform not to create instincts of imitation. There are to be found in every representative collection of Japanese novels (*kusasoshi* or *shosetsu*) many books infinitely more pernicious than anything written by Zola, because the Japanese author's immodesty—and in very truth Zola can give him no points—is associated with elements of humour and suggestions of pleasure that reconcile instead of deterring the reader. What makes Zola exercise an immoral influence upon many minds is that even to become familiar with the subjects he discusses is demoralizing to persons for whom such subjects have always been tabooed. But that ought not to be the case with the Japanese, who can be startlingly natural without any approach to immorality. To them Zola's works may be simply a very curious photograph of the manners and customs that disfigure the lives of certain classes of an

eminently civilized Occidental people. However, the subject is too large to be exhaustively discussed in a paragraph. One word only may be added. The disfavour shown toward Zola's works in England is due, not simply to the general principle that all contact with pitch defiles, but also to the evident reflection that an author's sole excuse for unveiling the plague-spots of any social stratum among his nationals is the hope of educating reformatory impulses, and that outside nations having no practical concern with that hope, have no excuse for contemplating the plague-spots.

THE WAR SCARE.

We have been treated during the past few days to a very sensational war-scare. We have been told that "the majority of men have long foreseen that events were swiftly moving to a catastrophe;" that "it unfortunately can not be doubted that matters have reached a very serious stage," and that "great anxiety must prevail for many months to come." So far has the alarm been carried that detailed comparisons have been instituted between the fighting capacities of the British and Franco-Russian maritime forces in the Far East, very much to the disadvantage of the former, and Europe has been represented as trembling on the brink of a panic. A sudden change, however, has come over the spirit of this nightmare, and we can best illustrate it, perhaps, by direct quotation from the columns of the sensational journal that has been devoting itself to sounding the trumpet of war:—

Japan Gazette Nov. 13th.
In our experience of over a dozen years in journalism we never remember reading such constant and ominous forebodings. A friend, who well recalls the period preceding the Crimean War, declares that what occurred then is the only parallel his memory can recall to the present situation.

We should be glad if we could believe that all these things were mere journalistic froth. But France's offer of Bizerta to Russia is a very portentous fact—Bizerta which France promised by all that was honest in affairs diplomatic not to fortify! The recent decision of the French Government to annex Madagascar is contrary to the understanding arranged with Lord Salisbury. The secret Treaty concluded with China, by which she acquired territory then in dispute, was a direct challenge. As to England quarrelling with Russia over Turkey that would be neither new nor unexpected. Once England fought Russia on behalf of Turkey; on a second occasion she interfered to deprive Russia of the fruits of victory; is it then so improbable that Russia may now side with Turkey in resisting demands which Turkey bitterly resents? On November 6th the British Cabinet decided that the time had come for action. Is it not possible that Russia has shown herself unwilling to co-operate, in other words that she is antagonistic? As to China the man must be blind indeed who does not see how Russia is menacing British interests. England's trade with China is greater than that of any other country. Russia's perhaps the least. Yet Russia controls Peking and, it is said, is about to take charge of the Customs. If the *Japan Mail* considers that in all this there is a conspicuous absence of any cause of quarrel, we cannot praise its perspicacity.

There is a story told of an American editor whose Republican proprietor was suddenly changed for a violent Democrat. The new owner wired the editor, "Will you edit democratically?" The editor replied, also by wire:—"It's a d—d sharp turn, but I guess I'll take it." Somebody seems to have swept the *Japan Gazette* round an equally sharp turn in the interval between Nov. 13th and 14th.

Ma Sei-zui, a Chinese ex-prisoner at Osaka, who was sent back to China the other day, arrived in Osaka recently with the intention of teaching the Chinese language in that city. The kind treatment received by him while in exile induced him to return to Japan.

MESSIANIC PROPHECY.

It has always been our rule to open our correspondence columns to every writer having a fair case to state and stating it fairly. Holding, further, that religious topics have at least as full a right to occupy journalistic attention as any secular subject, we have followed that principle with regard to theological controversy. But there are times when editorial discretion ought to be exercised, in the interests now of the public in general, again of the theme discussed, and it appears to us that the present is such a time. Several writers, engaging in a controversy with regard to the truth of Messianic prophecy, have occupied a large space in our columns for some time past. At the outset we did not attempt, of course, to impose any limits, but it having now become quite plain that the discussion can lead to no results, either definite or useful, our duty to our readers forbids us to insert any more communications on the subject. We are the more induced to take this step when we observe how greatly the controversy threatens to be disfigured by irrelevancies and even personalities, and how imperfectly modern Biblical interpretation is represented by the solitary champion that the controversy has evoked on that side. We therefore beg our correspondents to accept this intimation and to refrain from addressing to these columns any further letters on the subject of Messianic prophecy.

A TALE OF THE NORTH PACIFIC.

Some strange stories were in circulation on Tuesday after the small schooner *Saipan*, belonging to Mr. J. Kernan, dropped anchor in the harbour. Six weeks ago she left here with a crew of twenty-two men on a voyage having for its ostensible object a few months' shark-fishing. On Tuesday when she returned there were only five men on board, including the Captain, Mr. Wilson. Even before the vessel sailed a tale had gone round that one of the crew, in answer to a question, had laughingly said that he was bound on a "fishing voyage in search of *awabi* and shell-fish," and "that he intended to obtain the quarry with the aid of a club—a seal-club at that." But this was dismissed as an idle jest. Nevertheless, one of H.M.'s cruisers, when putting into Hakodate a few weeks ago, inquired particularly after the whereabouts of a vessel of the description of the ostensible shark-fisher, and seemed disappointed at hearing nothing of her. Be this as it may, the *Saipan*, in quest of sharks or some equally fishy denizen of the Pacific, gradually sailed further north, and one day Robben Island—a place of strange histories so far as some residents in these parts are concerned—was sighted. This was on October 29th. A party of seventeen from the *Saipan's* crew landed there, presumably to stretch their legs. They were, Frank Peterson, a Guam hunter; James Mahoney, another hunter; John Ross, a cook; James Riley, James McCarthy, Steve Brennan, R. Sheehy, F. Hill, A. Winger, A. Andersen, H. Carlson, E. Larkin, Ned. Howe, Alex. Le Rieke, K. Ericson, C. L. Nelson and C. Campbell. The men landed, the *Saipan* sailed away, to return in eight days. When she came back she found that all of the men had disappeared. These are the facts so far as we can learn. A rumour was in circulation that the *Saipan* had seen a Russian man-of-war heading to the westward a day or so before reaching Robben Island, and there can be little doubt that the seventeen men, having been found within prohibited waters, have been taken by the Russian authorities to Vladivostok, there to give an account of themselves. It is said that when the men landed at Robben Island they found the huts of the Russian hunters all deserted, as if the men had left for warmer quarters; and that snow was lying in plentiful quantities on the Island before the *Saipan* started back on her voyage to Yokohama. It is freely asserted among the residents in the vicinity of Honmura Road that Saghalien will be the temporary, if not permanent, home of the lost seventeen for some time to come.

THE ECONOMICAL ASSOCIATION.

The *Keisai Gaku Kyokai* held a meeting on the 16th instant. There were present Viscount Soga, Mr. Matsumoto Soichiro, Director of the Imperial Railway Bureau, Mr. Taguchi Ukichi, M.P., editor of the *Keisai Zasshi*, Mr. Minoura Katsunao, M.P., Mr. Yasuda Zenjiro, a banker, Mr. Shigeoka Kungoro, M.P., and others, a little more than twenty in all. The question for general discussion was the advisability of giving State subsidies to private railways. Mr. Minoura advocated the step within certain limits. Among the lines entitled, in his opinion, to State aid, he enumerated the Otaru-Hakodate, in Hokkaido, the Kofu-Hachioji, in the main island, and the Kumamoto-Kagoshima, in Kyushu. As to the manner of giving subsidies, he recommended that the basis of calculation be so much per mile instead of a percentage of the capital involved. The amount might vary, but, to cite an example, Mr. Minoura thought the rate in the case of the Otaru-Hakodate line should be about 2,000 yen per mile per annum during the first ten years. An exactly opposite course was advocated by Mr. Taguchi, who abhors all sorts of State subsidies in industrial and commercial fields. Supposing that the views of Mr. Minoura were adopted and a subsidy of 2,000 yen per mile granted to a railway 100 miles in length, that would mean a grant of 8,000,000 yen (?) in the course of ten years. Instead of squandering such a sum, it would be better policy to construct and maintain at State expense lines which, though of great public utility, could not be profitably taken up by private companies. In all other cases, he would recommend that the construction of railways be left to unaided private enterprise. Should the principle of State subsidies be once adopted, it would lead to the corruption of the Diet. He pointed, as an instance, to the Iron Foundry case, which had revealed corruption on the part of some members of the Municipal Council. The question was then debated at great length by several other members of the Association. But it does not seem that any vote was taken. After the discussion of this matter was over, Mr. Sakurada Sukesaku spoke on the subject of Luxury. Lastly, Mr. Taguchi delivered an interesting lecture on the Wars in the Eras of *Hogen* and *Heiji*—was apparently between different Court Nobles but really between the great military families of Taira and Minamoto.

COUNT INOUE AND THE FOREIGN REPRESENTATIVES IN SÖUL.

If the *Kokumin Shimbun* be well informed—which seems to us very problematical—the Foreign Representatives in Söul have adopted a very emphatic course with regard to the recent *coup d'état*. After various meetings to consult, they deputed the United States Minister to act as their Representative. Proceeding to the Japanese Legation, he stated that as the responsibility of the *coup d'état* rested with the Japanese, it was expected that the Japanese Government would oblige the Tai Wön-kun to restore the administrative power to the King, and would take measures to restore the conditions existing prior to the *coup d'état*. The Foreign Representatives farther desired that the Japanese guard should undertake the duty of protecting the King's palace, and also of securing the tranquillity of the foreign legations and consulates. Count Inoue, our contemporary adds, is returning from Korea to consult the Tokyo Cabinet as to the policy to be pursued with respect to the Foreign Representatives' action. Whether he will go back to Korea is questionable. If he does not, a competent diplomat will be sent in his place. We greatly doubt whether reliance can be placed in this account. That the Foreign Representatives should convey such an intimation to Japan would be to give her a mandate in Korea, a step in which Russia is most unlikely to have concurred.

THE TOKYO IRON FOUNDRY CASE.

Three of the Water-works Standing Committee of the Municipal Council have been arrested in connection with the Iron Foundry case. They are Messrs. Yamanaka Rinnosuke, Takao Takuma, and Kazama Shinkichi. It is reported that the last named gave information to Hamano and others about their impending arrest, and recommended them to take immediate steps to destroy all incriminating documents. Simultaneously with the apprehension of these members of the Standing Committee, two officials of the Water-works Office, Messrs. Hotta Seikai and Inama Yasuhisa, were placed under arrest. The houses of these five persons having been searched, papers bearing upon the case were found and carried to the Court. It is rumoured that, as the preliminary examination progresses, more members of the Municipal Council will be apprehended.

The *Chuo Shimbun* declares that vain attempts were made by Hamano Shigeru to bribe Mr. Suyeyoshi Tadaharu, a member of the Municipal Council. The same paper also discloses some facts about the corruption resorted to by Amenomiya Keijiro. With regard to the details of bribery supposed to have been practised by the company extensively among the members of the Municipal Council, the books in which the items were entered were destroyed at the suggestion of Mr. Kazama Shinkichi, as stated above, but the *Chuo* thinks that it will be possible to learn every particular of the transactions by reference to the diary and account books of Mr. Abe Hikotaro, and urges the immediate seizure of these documents by the Court. Mr. Abe is known to be very particular in keeping a record of even the most trifling transactions with which he is connected.

The number of prisoners in this case has increased to thirty-seven. The excitement among the citizens of Tokyo is increasing, those in the ward of Kanda being the most perturbed.

As to the loss sustained by the City, the amount seems to be approximately 900,000 yen. Of this sum it is believed that about one-half will be recovered from the confiscated property of the principal offenders, Hamano and Amenomiya.

THE LIAOTUNG CONVENTION.

The following are the terms of the Liaotung Convention, recently concluded in Pekin, and ratified by the Emperors of China and Japan, as published in the *Nichi Nichi Shimbun* :—

Art. I. The Imperial Japanese Government hereby restores to China the possession of the territories ceded by China in the First Clause of the Second Article of the Shimonoseki Treaty of Peace; that is to say, territories lying to the South of Mukden city and the islands appertaining thereto.

Art. II. All fortified places, implements of war, factories, and State property within the said territories, shall be handed over by Japan to China in the condition that they retain at the time of the withdrawal of the Japanese troops in accordance with this Convention.

Art. III. The Chinese Government shall pay to the Japanese Government, by way of compensation, the sum of thirty million Kuping Taels in silver, within ten days after the conclusion of this Convention.

Art. IV. Within three months after the payment of the above sum, the Japanese Government shall withdraw all its troops from the above-mentioned territories.

Art. V. As a result of this Convention all the Articles in the Shimonoseki Treaty of Peace relating to the determination of boundaries and the accessibility of overland trade routes shall cease to have any binding effect.

Art. VI. The Chinese Government shall not inflict, or allow to be inflicted, any punishment whatever upon Chinese subjects who have had relations with the Japanese troops within the above territories during the war or during the period of occupation.

Art. VII. This Convention having been ratified by the Emperors of the contracting countries, the exchange of ratifications shall take place in Pekin within three weeks from the date of the Convention's conclusion; that is to say, by the 28th day of the eleventh month of the 28th year of Meiji.

The *Nichi Nichi Shimbun* adds, that in order to carry out the article relating to the exchange of ratifications, the utmost celerity has had to be observed, and that Mr. Secretary Takasu has set out for Pekin bearing the ratified Convention, as well the commission conferring upon H. E. Baron Hayashi plenipotentiary powers for the purposes of performing the exchange.

THE NEW ALDERMEN FOR TOKYO.

The Tokyo Municipal Council's meeting on the 20th inst. was expected to be very stormy, and consequently a large crowd of spectators assembled long before the hour at which the proceedings were to be opened. The attendance of the members of the Council was also very good, there being present as many as forty-seven. President Kusumoto occupied the chair. The first business was to consider the propriety of the reason assigned by Messrs. Sudo Jiichiro and Matsuda Hideo for resigning their membership of the Council. Their reason was, that they believed the members of the Council were bound to resign in connection with the Iron Foundry case. The members of the Council found themselves in an awkward dilemma, for, if they decided that the reason was good and proper in the case of two of their fellow-members, it would follow that they were all bound to adopt the same course. On the other hand, should they come to the opposite conclusion, it would be tantamount to declaring that they held themselves free from all blame in relation to the affair—a declaration that must sound extremely anomalous in the mouths of men who, but a few days previously, had so strongly recommended Mayor Miura to resign for exactly the same reason. The dilemma was temporarily evaded by postponing the consideration of this thorny question. Then followed the election of a new Board of Aldermen, the former Aldermen having all resigned in connection with the Iron Foundry case. In the course of a discussion on this subject, a tumultuous scene was caused by Mr. Suyeyoshi's ill-considered statement that the Council, since it no longer enjoyed the confidence of the City, was not entitled to exercise its function of electing Aldermen. He was severely rebuked, as he richly deserved to be, by his fellow-members, many of whom exhibited much anger. A motion to postpone the discussion of the question for two days having failed to receive the approval of a majority, the election of Aldermen was proceeded with. The total number of Aldermen is twelve, and their ordinary term of office is four years, one-half of the number retiring every two years. The Aldermen to be elected on the present occasion being required to serve out the remainder of the term of those that have just resigned, six of them have to retire on the 9th of June, 1899, and the other six on the 6th of June, 1897. The election of those destined to serve for the longer period, was first proceeded with, the ballot resulting in the return of the following persons :—Messrs. Yoshino Seikei, Matsuda Hideo, Sudo Jiichiro, Nisugi Hide, and Tomita Tetsunosuke, and Viscount Nagaoka Moriyoshi. The election of the remaining six resulted as follows :—Viscount Tani, and Messrs. Shibusawa Eiichi, Gimbayashi Tsunao, Oku Saburobei, Tsuji Shinji, and Shiraishi Go. It is to be noticed that the Council, taught by the recent bitter experience, tried to choose Aldermen from the better classes of the citizens. Especially reassuring is it to find among the new Aldermen the names of such men as Viscounts Tani and Nagaoka, and Messrs. Tsuji Shinji, formerly Vice Minister of Education, Tomita Tetsunosuke, formerly President of the Bank of Japan, Gimbayashi Tsunao, ex-Governor of Tokyo, and Shibusawa Eiichi. The last named gentleman's election is significant, for he is known to have stoutly opposed from the beginning the contract with the Iron Foundry Company. Among other names noticed on the ballot papers were those of Marquis Ito, Count Itagaki, Mr. Ozaki Yukio, and Mr. Inukai Ki.

THE PICTURE EXHIBITIONS IN TOKYO.

The autumn exhibition of pictures in Tokyo, under the auspices of the Kyoshin-Kai, has just come to an end. On the whole, a slight improvement was noticeable in the quality of the pictures and the choice of subjects, but it must still be confessed that the average Japanese painting of the present day ranks little higher

than a design for wall-paper. There are, of course, some noteworthy exceptions. Mr. Ogata Gekko's works, for example, show not only originality of conception but also delicate treatment and highly skilled manipulation. A picture exhibited by him on this occasion deserves to rank with the best productions of the Ukiyo-ye School. It represents a family group worshipping the sun as it rises over the roofs of a city through the fog of a summer morning. The composition of the work, the pose of the figures, and the mist effects are admirable. Some artists of the Kyoto School, also, as Mr. Nakajima Gekko, Mrs. Okada, and Mr. Koyama Tokichi, contribute paintings that happily relieve the general inferiority. It should be observed, too, that some of the most renowned painters of the day stand aloof from these periodical exhibitions. They seem to distrust either the competence or the impartiality of the Judges. We confess that, in their place, we should be deterred by similar scruples. Plainly the judges at this autumn exhibition see with eyes very unlike those of ordinary mortals. What they found to admire or commend in the majority of the paintings to which they awarded medals or certificates of merit, we have been unable to form the smallest conception. We shall not enter into this question in detail. It is enough to say that the kind of talent encouraged by these marks of distinction will never earn a reputation for Japanese artists in any foreign gallery. Possibly that comment would not disturb the judges at all were it brought to their attention.

The exhibition of pictures of the Japanese School was held in the rooms of the Fine Art Society, a place more or less suited for the purpose. Farther north the Uyeno Park, in one of the annexes of the Industrial Exhibition of 1890, a few water colours, paintings in oil, and crayons, were hung, forming the autumn display of the Meiji Fine Arts Society. The desolate character of the place and its general unsightliness were strongly suggestive of the difficulties against which Japanese students of Western pictorial art have to struggle. That they persist in their effort is worthy of all praise. Absolutely cut off from all the advantages enjoyed by their confrères in Europe and America; without patrons, without a market, and confronted by the opposition of those that ought to encourage them, they continue to work as though nothing disturbed their faith in the future. This fine patience promises to bear fruit. The water colours shown at the recent exhibition were on a distinctly higher level than any hitherto submitted for public criticism. Some of them, indeed, would have attracted notice in any European gallery. In oils, however, technical difficulties still seem to defy the strength of the Japanese artist. Thus, a picture of an exile seated on the sea-shore, by Mr. Watanabe Kuya, though full of poetical instinct and indicating, in some respects, talent of exceptional quality, was marred by crude manipulation. Similarly, a portrait of a girl by Mr. Ito Jumpachi would have been really admirable had the painter possessed fuller knowledge of technique. But in truth when we remember the circumstances under which these pictures were produced, we find no heart to criticise them, especially since the impression carried away from the two exhibitions was that Mr. Watanabe's "Exile" possessed elements of artistic greatness such as could not be found in the whole display of purely Japanese pictures put together.

CREDULITY AND ITS CONSEQUENCES.

The Times generally places such full reliance in its correspondents, and is so seldom deceived by doing so, that we can not greatly wonder at its implicit reception of the news recently telegraphed to it from Hongkong. Besides, we learn from telegrams in American journals that The Times speaks of its Hongkong correspondent as being in close relations with men competent to penetrate beneath the surface of things, and therefore considers that intelligence from him can not be disregarded. It is not easy to

see, however, where the "penetration beneath the surface of things" was exercised in the case of the statement that Russia had concluded with the Cabinet in Peking a treaty virtually securing to her the ownership of the Liaotung Peninsula. The news emanated from "some one" in Nagasaki, and was first published by the Hongkong Telegraph, from the columns of which journal it was transmitted over the wires to London. Thus none of the intermediaries, except the last, perhaps, was qualified to inspire confidence, and the intelligence itself bore such inherent marks of untrustworthiness that we, at this side, placed not the slightest belief in it from the outset. Yet, among the London Journals, the Standard alone seems to have possessed sufficient political acumen to conclude that the story could be at best nothing more than a *ballon d'essai* on Russia's part. All the others treated it seriously. Knowing, as we now know, that it was a mere canard, no special interest would attach to it, except in respect of the hypothesis that it was really devised by Russia as a means of feeling England's pulse, and in respect of the very marked expression of public feeling that it elicited in Great Britain. If Russia set the story going for the purpose of ascertaining how England would take it, she has received all the information she required. Nothing could have been more emphatic than the unanimity of the London journals' expressions on the subject. They all agree in declaring that even war with Russia would be an alternative preferable to letting her get such a hold upon China as to be in a position to strangle the commerce of Western nations with the Middle Kingdom. We have often insisted in these columns that Great Britain could not sit inactive in the face of Russian designs against Liaotung or Korea. It matters little which peninsula she acquires first, for if she held Korea she could easily possess herself of the northern littoral of the Yellow Sea, and thus obtain command of the land approaches to Liaotung. Field Marshal Nodzu showed, in the recent war, how readily that could be done. Russia in Korea would mean Russia at Port Arthur, sooner or later. We know now how such a conjuncture would be regarded by the British nation.

THE MAYOR AND THE MUNICIPAL COUNCIL OF TOKYO.

The Municipal Council of Tokyo are behaving in a manner that seems very childish. At a meeting on the 16th instant, they decided, after animated debate, to wait upon the Mayor, Mr. Miura, who is at the same time Governor of Tokyo City, and advise him to resign his office. Before adopting this resolution, they unanimously agreed, in so far as they were themselves concerned, that it was not yet time for them to consider whether they ought to resign on account of the Iron Foundry case. The same argument that induced them to adopt this decision on their own part—namely, that their resignation at the present juncture would involve inconvenient results—ought to have applied at least with equal force to the case of Mayor Miura, especially as he was the first to expose the fraud. But the Municipal Council found no difficulty in persuading themselves that Mr. Miura's immediate resignation was a matter of absolute necessity. In conformity with this strange phantasy, they sent a deputation of fifteen members to wait upon Mr. Miura on the 18th instant, to advise him to resign his office at once. As might have been expected, Mayor Miura politely but firmly rejected the recommendation. Not only was there no necessity for such a step on his part, he said, but also he was bound to make arrangements for the settlement of the Iron Foundry affair. To resign his position would be contrary to his official duty and injurious to his personal reputation. The deputation, thus deservedly repulsed, had to withdraw, but not before they had given vent to their ill-considered feelings of umbrage. It is believed that in a few days the Municipal Council will pass a vote of want of

confidence in the Mayor, in which case the Council will be dissolved and new elections ordered. Sober-minded citizens are thus led to fear that the unreasonable conduct of the Council may cause needless waste of time and money as well as excite regrettable ill-feeling between the citizens and their administrators.

CHINA NEWS.

The story recently circulated that the Governor of Kwangtung had died from the effects of poison administered to him and the other high provincial officials at a banquet on the 24th of October, turns out to be baseless. The truth is that the Governor, a man of 75, having obtained a month's leave to recuperate, shut himself up in his family residence within the Yamen, and his absence gave rise to the wild rumour of poisoning.

The following account of the Kungpai disaster is published by the North China Daily News, the information being obtained from the sole European survivor Mr. From, Third Engineer of the ill-fated ship:—

The Kungpai had been engaged conveying troops from Kinchou Bay, at the head of Liaotung Gulf, to Tientsin. She made two trips, each time carrying 1,100 soldiers and was about to make her third and last. Lying off the barracks in Kinchou Bay, she received some 800 men and waited for the remaining 300, who were detained by the tide.

All went well till Monday (14th October) morning at 11 o'clock. At this time the second engineer, Mr. Wise, and the chief officer, Mr. Ljunglöf, were on watch. The 3rd engineer, Mr. From, and 2nd officer, Mr. Petersen, were off duty. Mr. From was asleep in his bunk when he was suddenly awakened and thrown out on the floor of his cabin and found everything knocked down. He looked at his clock; it was then 11 o'clock. An explosion had occurred and it appeared to come from forward. He rushed out on deck and looking forward, saw a hole in the deck on the port side, the same side his cabin was on, opposite the captain's room, and still further forward four more holes in the deck the edges of which were burning. A man came up through one of these holes and he must have been terribly burnt. Mr. From met Mr. Ljunglöf coming from forward and he said there had been an explosion and asked for steam to work the fire pumps. The engineer then went to the engine room and found the steam gauge showing 49lbs. steam pressure. The donkey pump was set going while Mr. Ljunglöf attended to the hose. Having supplied the steam, Mr. From returned to the deck, and went as far as his own cabin and saw the chief officer with the hose. Captain Soden had, prior to this, given orders to lower the boats, and the mate dropped the hose to obey the order, at the same time telling Mr. From that there would be another and a worse explosion. All this time cartridges were going off in the hold with an occasional shell, and while the Captain and mate were seeing to the lowering of the Captain's gig, the soldiers rushed into the boat when half lowered, and their weight broke the forward davit and the boat hung by the stern, with her bow in the water, Captain Soden being carried overboard as he had hold of the tackle at the time. Master Clements, the passenger, was also carried overboard, but he managed to scramble up on board again. Captain Soden, who was wounded in the head, the blood pouring down his face and neck, still held on to the rope, while the soldiers in the water held on to him. Mr. Ljunglöf, Mr. From, and Master Clements tried to pull the Captain on board, but the weight of the soldiers hanging on to him prevented their doing so. Mr. From then suggested that the mate should get another rope and heave it to the Captain from further forward, and he left apparently with this object, though he did not say so. A little before this the chief engineer, Mr. Graham, was standing on the engine room skylight walking from side to side, and the second officer and second engineer, further aft, had stripped to swim ashore.

While the two referred to above were holding the rope, a terrific explosion occurred forward, the ship was enveloped in smoke and Mr. From found himself knocked down and wounded on the head and hand. When the smoke cleared away young Clements had disappeared, so had the chief engineer, while the skylight the latter had been standing on was splintered to pieces and the rivets in the iron coaming of this skylight were all forced out; the 2nd officer and the 2nd engineer had gone too, though a Chinese survivor says they had got into a boat which apparently had been smashed by

some of the falling wreckage. The Captain also was gone; the fore part of the vessel from the engine room bulkhead had disappeared, including all the cabins and more than half the ship. When soundings were taken afterwards there was deep water over where the fore part of the vessel ought to have been. The remainder of the vessel heeled over to starboard so that the mainmast was nearly parallel with the water. The funnel had been knocked out and it rested on the deck against what had been the mainstay; many of the soldiers were in the water, some dead and terribly mutilated; others alive but floating away with the tide and they were eventually drowned. After the remains of the vessel had heeled over it gradually filled and finally sank on an even keel. Mr. From and those who could make for the rigging, and as the vessel righted while going down, they climbed up out of reach of the water which they thought would come up to them, as they did not know how far she would sink. After being about ten minutes in the rigging, Mr. From saw the chief officer coming aft. He crawled upon the fallen funnel, and Mr. From called to him to come up on the rigging, but he said he could not because he had broken his leg. Mr. From then saw that he was bleeding profusely and tried to get down to him, but could not because there were so many soldiers below him. From loss of blood Mr. Ljunglöf grew weaker, so he tied himself to the stay against the funnel, but that broke, and he was dashed against the mast. He could not reply when called to, and died soon afterwards, but before this happened he drew a ring from his finger and threw it overboard. His body being lashed to the stay did not go overboard but was washed in and out with the waves as the weather was beginning to get rough. Whether he bled to death or died from drowning it is hard to say. The last time Mr. From hailed him he did not reply.

Fortunately there was no explosion of the boiler, but the weather got worse, and a thunderstorm and hailstorm added to the miserable plight of the poor fellows in the rigging, where they remained from 11 a.m. on Monday, till about daylight next day. During all this time there were at least twenty junks anchored in the vicinity, but no attempt was made by them to render any assistance to the perishing people, some of whom fell off into the water and were drowned, while others rolled off the top of the after cabin where they had sought temporary refuge. After being on the wreck for eighteen hours, a junk, bound in from sea, went to their aid. The junk lowered a boat and after reporting to the master returned and took the men off in batches of ten, for the boat was a small one. The junk then proceeded in shore and landed them. They were taken care of by the mandarin in charge of the barracks and he did what he could for them; he gave medicine to those who needed it and some clothes to Mr. From as he was hatless and bootless. The mandarin then despatched a telegram to Tientsin conveying the news of the catastrophe, the result being that the steamer *Irene* was sent round and she arrived at 11 a.m. on the 19th, having on board Mr. Kingsley of the Customs and a foreign-trained Chinese doctor. Mr. From and the remainder of the *Kungpai's* crew went on board and their wants were attended to.

A party landed to make all enquiries while others visited the wreck and made an examination. They found the boiler intact, though some of the pipes had burst, and the survey was made by four engineers. Many bodies were seen in the water, and the day before the *Irene* left the body of Captain Soden was recovered. It came up close to the wreck. The *Irene* left on the 25th for Tientsin where she arrived next day, and landed Captain Soden's body and the survivors of the crew.

According to one of the soldiers who was badly burnt they were smoking below, some tobacco and others opium. One of the men blew the tobacco out of his pipe and this falling on some gunpowder ignited it and caused the first explosion.

A very quaint incident is reported from the province of Honan. On the 18th of October the *Pekin Gazette* published a memorial from the Governor of that province stating that a formidable insurrection had just been quelled after four months of almost continuous fighting, in which twenty-five thousand troops were employed. But a foreigner living in the very district where the alleged rebellion took place, has written to the leading Shanghai paper declaring that the so-called insurgents were simply three or four robbers to capture whom a detachment of soldiers were sent. The meaning of the memorial, however, was that the Governor drew pay for twenty-five thousand men, together with war expenses, and obtained promotion for himself and all his zealous officers.

As the facts of the Whasang massacre come

out, fuller and clearer evidence is obtained of the criminal deception and perfunctoriness shown by Chinese officials. The massacre took place before 8 a.m. on Thursday the 1st of August, and there is indisputable proof that telegraphic news of it reached the Viceroy in Foochow before nightfall the same day. Yet he said not a syllable about the tragedy to any of the foreign Consuls until Saturday morning, and even then his mouth was opened only by a visit from the United States Consul to whom the intelligence had come independently. Meanwhile, the Viceroy had sent off the Prefect of Foochow to investigate and report, and that official, after an inquiry lasting 5 days, reported that the whole affair had been nothing more than a conflict between two rival sects. Again, after the labours of the Mixed Commission had been interrupted by the obstructiveness of the Chinese, a large number of witnesses were privately examined by the English and American Consuls, Captain Newall and the Rev. W. Banister, with the result that the following facts were clearly proved:—

(1) On the night of the midnight march from the fastness, the *Liengkah* on watch in the village of Angchiong (through which the band passed on its way to Whasang) counted 289 armed men as they marched past to their work of plunder and murder. On the 9th of the moon (30th July) the day before this march, the same *Liengkah* had petitioned in person the Kucheng magistrate for soldiers to resist a rumoured attack on the chapel in their village. Had the soldiers been sent there would have been no Whasang massacre to stain the record of foreign intercourse with China. (2) After the massacre was over the murderers returned *via* the village of Twaikiang, about nine miles to the east of Whasang, where they halted and leisurely proceeded to cook their mid-day meal. No fear of pursuit or capture, no haste to escape but clearly a complete sense of security was present in their minds. The villagers counted over 130 of these men, who sat down to their dinner in the village or on the hill-side. Those were all armed, and carrying loot of different kinds and quantities. This number, of course, only includes the main body, who went in this direction, and takes no account of other scattered bodies of men who returned, as we know they did, to their own villages in other directions. (3) Later in the day, about the middle of the afternoon, this main body of men passed down the valley from Twaikiang to the village of Kasai and here again they were counted and many of them recognised, as they passed through the village, by two independent witnesses. There were 116 men carrying loot and arms. (The diminution in number was natural, as men were dropping off on branch roads for their own homes as they proceeded further from the scene of the outrage.) (4) It is proved beyond doubt that there must have been at Whasang, on the fatal 1st of August, at least 150 or 160 men, all engaged in one way or another in the terrible doings of that morning. Of these 45 had been convicted up to the present date, seven of whom had been executed. This left over 100 men still at large.

The difference between the 289 who passed out from the fastness on the night of the midnight march, and the 160 present at Whasang, would be accounted for by desertions, under cover of the darkness, through fear or compunction.

A feeling of much uneasiness continues to prevail in Chungking. Anti-foreign placards are frequently posted in the town, and the force of soldiers available in the event of a riot is very small. In Kiukiang, on the other hand, the only proclamations visible are those of the Emperor, the Viceroy Chang, and so forth, inculcating respect for foreigners. But even against these latter proclamations the complaint is made that while they publish information of the killing of many foreigners in Kucheng, they contain no word of regret nor any reference to the punishments inflicted on the murderers, and moreover they apply the disrespectful term *Fang-yen* to foreigners.

The list of punishments meted out to the Whasang murderers seems to have now attained its full dimensions. The notorious ringleader, "Butterfly," who was said to have committed suicide, fell into the hands of the authorities so soon as a reward of 500 Tls. was offered for his apprehension. He was executed, together with the four other ringleaders, at the public execution ground of Foochow on the 4th of Novem-

ber. Thus the number of men executed totals 26, and of the others convicted 6 were banished to Manchuria for life; 11 for shorter terms; 27 were sentenced to 10 years' imprisonment, and 4—the blacksmiths that forged the spears and swords—were condemned to be chained to a stone for three years.

The Yellow River is working its usual annual devastations. It has broken its banks near Ch'itung city in Shantung, and hundreds of square miles of country are under water. The gap is said to be two-thirds of a mile in width and a heavy stream is steadily pouring from it. The usual process of repair is going on vigorously. It is thus described by a correspondent of the *N.-C. Daily News*:—

Huge square rafts of *kaoliang* stalks are made and launched from both ends of the broken dike. These rafts are securely anchored to the old embankment, and earth is tramped upon them by hundreds of men. When it sinks in the water a few inches, another woven sheet of corn-stalk (*kaoliang*) is placed on top and the work continued as before, until the raft is sunk to the bottom. Then another is launched in like manner, and so on till only a space of fifty feet remains unclosed. This work must be pushed on steadily day and night, or what is accomplished during the day will be undone by the water at night. Now comes the most dangerous part of the undertaking, to wit, stopping the final gap. Three river-junks are dismantled, lashed firmly together, two end to end, and the third overlapping the other two. These are floated from above the gap, being anchored at the shore end to the dike. The current carries this floating mass around till it closes the gap to the depth of the junks' draught. The pressure of the water holds the boats firmly against the new dyke, and as the boats are sunk in the water by loading them with earth, the newly made dyke is tested to its utmost, and if not properly constructed, will give way, to the imminent danger of hundreds of lives. To guard against this catastrophe huge ropes of *kaoliang* are stretched across the final gap and anchored firmly at the ends.

The flooded area includes seven counties (*hsien*), and only seven villages have survived in that district. The loss of life is stated to have been enormous.

It is difficult to discover whether Lanchou, the capital of Kansu, has really been captured by the Mohammedans or whether it still holds out. A telegram from Peking, dated November 4th said that the place had fallen early in October. But the *North-China Daily News* of November 7th says that a telegram dated at Lanchou on October 23rd represented the city as not having yet been taken. One does not know what to believe. The latest news is that in addition to 12,000 Hunan troops already despatched to aid General Tang the special brigade of 12,000 men, organized during the war with Japan to protect Her Majesty the Empress-Dowager in the event of her being obliged to fly from Peking to Hsian, is also to proceed to Kansu. It is further stated that a telegram sent from Hsian on the 8th of November describes both Kuyuen and Lanchou as still safe, and reports that General Tung has gone to Tiho to engage the Mohammedans.

It has been ordered that tribute rice shall no longer be sent through the Grand Canal, and that in lieu of grain hitherto forwarded by that route, money shall be sent. The Government expects to save about a million Taels a year by this change, which money will be spent on the new grand trunk railway between Chinkiang and Peking.

The Newchwang correspondent of the *North-China Daily News* says of Mr. Mitsuhashi, an official well known and universally liked in this Settlement:—"Mr. Mitsuhashi, the Governor of this district, is an exceedingly able administrator. Since his arrival last April he has done all in his power to make things go smoothly, and has kept excellent order in the town.

Count Itagaki, the leader of the Liberal Party, returned to Tokyo on the 19th inst. from Oiso, where he has been staying since the 16th inst. Mr. Shirane, Minister of Communications, also returned to the capital from Oiso the same day. They took the train which was conveying Marquis Yamagata from Kyoto.

THE CABINET AND ITS POLITICAL SUPPORTERS.

WE observe that some curious assertions have been made in the press of this Settlement as to the significance of the *Fiyu-to's* impending announcement of a pro-Government programme. It is stated, for example, that the Premier will no longer be allowed freedom of action; that he has never consulted the other Ministers of State as to the alliance; that it is an alliance, not of the *Fiyu-to* and the Cabinet, but of the *Fiyu-to* and Marquis ITO and that Marquis ITO has become a member of the *Fiyu-to*. It would be difficult to display greater ignorance of Japanese politics than these allegations show. Marquis ITO, the compiler of the Constitution, has never deviated from the principle that the Ministers of the Japanese Crown are responsible to the SOVEREIGN only, and can not accept a mandate from the Diet. That such a man should become a member of a political party while holding the office of Minister President, is about the most unlikely incident conceivable—impossible would not be too strong an expression. Nor is it less extravagant to pretend that in consideration of receiving the support of the *Fiyu-to*, the Premier has agreed to accept his new associates' dictation in administrative and legislative matters, and has agreed without consulting his colleagues. There can have been no such agreement, for it would mean that the head of the Cabinet had deliberately renounced the obedience he owes to his SOVEREIGN'S direction, and had pledged himself to obey the dictates of a group of politicians. Indeed, the very term "alliance" is a misnomer. There is no alliance, in the ordinary acceptance of the word. The case is simply this—that the Liberal leaders have decided to openly avow themselves supporters of the Cabinet, in order to bring about such harmony between the Government and the Diet as shall secure the passage of measures nationally essential under the circumstances of the time. It is not to be imagined, of course, that the Liberals have adopted this attitude without some prospect of furthering the principles that form their own platform, as, for example, greater freedom of speech and pen, extension of the franchise, and so forth. The labourer is worthy of his hire, and moreover, the Government would not be consulting its own interests unless it gave to its supporters some means of justifying themselves to their constituencies. The Liberals should be helped to derive strength from this coalition, instead of being weakened by it, as they certainly would be did they totally abandon the pursuit of their party principles. Nothing could be happier for the country than the step they are about to take. It will effectually put an end to the vexatious strife that has existed be-

tween the Cabinet and the Diet ever since the latter's convocation. The Liberals will certainly be joined by the National Unionists, and these two parties, combined with the independent members already disposed to vote with the Government, will secure to the Cabinet a plurality of votes in the whole of the Lower House. Everybody capable of looking behind the scenes must understand that this fortunate consummation is due in great part to the intervention of Count MUTSU, himself a distinguished leader of the Liberals before his entry into the Cabinet. In truth the recent war has brought great changes in its train. It has not only induced a much wholesomer tone of public feeling toward foreigners by fully satisfying the people's morbid desire to assert themselves and to obtain international recognition, but it has also dwarfed to insignificant dimensions the vexatious issues that used to keep the Administration and Executive in a constant state of friction. As the *Fiji Shimpō* puts it, instead of a hot discussion about naval reform, we have now a unanimous cry for naval and military extension; instead of agitation inside and outside the Diet for reduction of the Land Tax, we have the most ardent advocates of that measure proposing to increase the people's burdens. The war has unified the nation, and diverted men's mind from petty party squabbles to Imperial interests.

THE MODERN MIRACLE-WORKER.

IT is certainly strange to read that ability to work miracles should be accredited by intelligent folk to a man living in the year 1895. Some pious people, perturbed by the fire of sceptical criticism through which the New Testament miracles have passed during recent years, go so far as to wonder that the Divine Power does not vouchsafe some repetition of these phenomena to recall the world from its mood of incredulity. Others laugh at the notion of subjecting such questions to the ordinary laws of physiology, inasmuch as the conditions of GOD-derived strength are not limited by any such considerations. Perhaps if JESUS alone had been a worker of miracles, the sceptics might be less obdurate. But in the days of the CHRIST and in the times immediately succeeding his Incarnation, persons for whom no claim could be advanced, over and above that of simple manhood, are stated to have cured the sick by mere laying on of hands, and in explanation of their power it has been asserted that absolute obedience to GOD, as they understood him, was sufficient to endow them with miraculous potency. The difficulty of this last contention is that it applies to men of modern, as well as ancient, times. If an ordinary mortal, living in the first or second

by conforming strictly to the self-denying principles of ascetic Christianity, an ordinary mortal in the eighteenth or nineteenth century should be able to repeat the experience with equal facility; nay, with greater facility, for are not the heirs of all the ages endowed with faculties of larger potentialities than were their comparatively rude forefathers? But the eighteenth and nineteenth centuries seemed about to close without any such comforting evidence, when suddenly there has appeared in Colorado a veritable healer of the sick by the laying on of hands. His name is FRANCIS SCHLATTER. Two years ago he was a shoemaker, when there came to him a kind of apostolic call. He obeyed it by travelling into the nearest desert, where he fasted 40 days and 40 nights. Then he began to heal people by clasping their hands, but as he declined to wear either head-gear or foot-gear, the unsympathetic police threw him into prison. While in durance he passed through the process of reincarnation and on emerging from jail performed some remarkable cures. Then he underwent a second fast of 60 days and 60 nights, and after a brief rest resumed his miraculous mission. Denver was the place chosen. Daily from nine o'clock in the morning until half-past four in the afternoon he stands in front of Alderman FOX'S house and shakes hands with thousands of people. The physical feat is in itself almost miraculous, seeing that it is performed day after day, that SCHLATTER is an old man, and that he remains bare-headed and bare-footed in all kinds of weather. His method is to grasp firmly the hand of the sufferer, utter a short prayer with face turned heavenward, and say, "Have faith and you will be made well." Incompatible with any supposition of deceit is the fact that he persistently refuses to accept presents of money or jewellery offered to him at all hours. He has no need, he says. "When the Father wants me to get anything, I get it." Portraits published in American journals represent him to be just such a man as an artist would choose for a CHRIST model. It all reads like a comedy, but that the man has performed wonderful cures seems to be unquestionable. His power, whether it be subjective or objective, has no immediately final effect: the cures are accomplished gradually. Prominent editors discuss his work in serious articles, and well-known divines declare from the pulpit their belief in his sincerity, sanity, and miraculous power. Possibly his case is only another instance of the now well-established efficacy of faith. But since the keen lens of American practical scrutiny has not reduced him to a chalatan, he certainly deserves attention.

ANOTHER WORD ABOUT ANONYMITY.

IT is a wholesome editorial rule never to interfere between controversial correspondents, and we must therefore preface with an apology the few words we are about to speak. As a matter of fact, we were originally driven from our position of reticence by a charge that directly concerned ourselves—the charge that we had permitted the same correspondent to write about the same subject over differentonyms. Had we permitted anything of the kind, we should have been guilty of a deliberate act of dishonesty, since such procedure on the part of a correspondent is intended to convey, and does actually convey, the impression that several persons—as many as theonyms employed—support his position, whereas in truth he stands alone. Mr. MCCALED, referring to that matter, and to the comments evoked by it from ourselves and others, now alleges that his statement was not positive but only supposititious. Had such been the case, the accusation would never have drawn from us the strong protest that we felt constrained to utter. Mr. MCCALED'S *ipsissima verba* were:—"I request that before Mr. 'Secularian' attempt further objection to my letters, he either give me satisfactory reason, by private note, for *writing over an assumed name, changing with each succeeding letter*, or give his real signature." There is no trace of hypothesis about the italicized portion of the above sentence—italicized by us. It contains a direct and explicit accusation that "Secularian" was carrying on the controversy under various assumed names. We now readily believe that Mr. MCCALED intended, not to prefer a specific charge, but only to suggest a suspicion. His language, however, left no room for such an alternative.

As to the general question of anonymity, we may be permitted to say a word. To write to a newspaper anonymously is plainly permissible, in principle. There may be a thousand valid reasons which, while forbidding a writer to append his own name, do not in any way militate against his participation in a public controversy. The subject discussed may in itself furnish a strong plea for anonymity. The doctrines of a religious creed are eminently such a subject. In analysing their truth or error the personality of the analysts ought to be kept as far as possible out of sight. Moreover, when the creed in question is Christianity, and when the controversy is carried on among a community largely consisting of professed Christians, anonymity becomes doubly desirable, because, while a defender of the creed can count on the moral support of a majority of his fellows, its assailant exposes himself to all the intolerant discredit still attaching to "dissent." The days of martyrdom are past. There is no

reason why a man should suffer for his faith or want of faith. Above all, there is no reason why the path to truth should be impeded by such obstacles as prejudice or persecution. But while admitting the propriety, and even the wisdom on some occasions, of anonymous controversy, there is a fundamental rule from which no writer over an assumed name should ever depart. It is his first duty to refrain from saying anything such as he would not say were he writing over his own signature. Anonymity becomes cowardice so soon as recourse is had to personalities. From that point of view we think that Mr. MCCALED has just cause of complaint, and has also a right to ask for the name of a correspondent that speaks of him as "a salaried defender of the Christian Religion," and charges him with championing it publicly because he wants to show to his Mission Board in particular, and to the world generally, how energetically he is performing his mission. No man is justified in imputing mean motives to another, above all when the imputation is made under the cloak of anonymity. The most pernicious classic in the English language is "JUNIUS' Letters." They violate all the rules of fair controversy. Such cowardly, vindictive, and scurrilous productions would not find a place in any respectable journal to-day, or if they did find a place, would bring universal contempt on the morals of their writer, whatever admiration their ability might command. "Secularian," we are persuaded, agrees entirely with that view, and we beg of him, should he seek further space in these columns, to observe more carefully the law we have here defined. Two wrongs do not make a right. If Mr. MCCALED set out by accusing "Secularian" of deceit, that does not justify "Secularian" in attributing mercenary or self-interested motives to Mr. MCCALED. One word more. Mr. MCCALED seems to have a somewhat confused idea of the journalistic rule that correspondents must furnish their own names if they seek to have their communications published. He appears to think that since editors require a correspondent to expose his identity as an evidence of good faith, every newspaper controversialist may demand as much of an opponent. Mr. MCCALED is perhaps unaware that with whatever disavowal of responsibility an editor may preface his correspondence columns, the law holds him rigorously responsible for their contents. Mr. MCCALED also forgets that unless correspondents furnish their own names to a newspaper, no means are available to check the flagrant deception of one correspondent's writing over several different *noms de plume* with reference to the same subject. He also forgets that newspaper columns can not be recklessly thrown open to every one and any one: some right of discrimination must be reserved to the editor. It would seem,

finally, that he still entertains a lingering doubt as to the justice of our refusal to satisfy him by revealing "Secularian's" identity, and as to our warrant for insisting on the sufficiency of our assurance that "Secularian" and "Anxious Inquirer" are different persons. He is remarkably sceptical, but we must leave that matter as it stands.

RUSSIA AND JAPAN FROM AN ENGLISH POINT OF VIEW.

THE editor of the London *Spectator*, writing in the seclusion of his study in Wellington Street, conjures up phantoms that excite his imagination the more closely he scrutinises them. He used to be tormented by a vast yellow nightmare. The narrow-eyed Chinese were about to sweep in a resistless wave of ruthless and semi-savage invasion from end to end of Europe, and the hands on the clock of Western civilization were to be put back at least a cycle. That chimera has been completely exorcised. The *Spectator* seems to have forgotten it entirely, for it now speaks of China as "lying, a huge but feeble Power, at the mercy of any State that can land a moderate but effective army within her confines." In place of this Mongolian phantom, however, the *Spectator* is now oppressed by a vision of a deadly struggle between Japan and Russia. The bases of this dread are not very substantial. It assumes that Russia is about to occupy the Liaotung Peninsula, obtaining it by cession or lease from Pekin, and that with a Russian army at Port Arthur and Vladivostock, the Japanese cannot venture to leave any troops in Korea, which peninsula also will thus become a Russian possession. With these hypotheses, we have already dealt so fully that they need not be considered again in detail. If Russia contemplates the conversion of the Regent's Sword Peninsula into a basis of military operations, the realization of her project is certainly not imminent, and as for Japan's withdrawal from Korea, we know that she intends to recall only such portion of her troops as are not required to protect her lines of communication with Manchuria. We also know that Russia has not exerted any pressure to force Japan out of Korea and, therefore, that the vindictive wrath attributed to the Japanese by our London contemporary in consequence of that pressure has no existence in fact. Apart from these erroneous assumptions, however, there are one or two points in the *Spectator's* article that deserve brief notice. "The Japanese consider," says the *Spectator*, "that in the negotiation of the Treaty of Shimono-seki they were not only injured, but insulted by the Russians, who gave the Pekin statesmen assurances which enabled LI HUNG-CHANG to sign any proposal presented to him by Count ITO, knowing that Russia would prevent it from being carried

out. The Japanese think they were treated like children—as indeed they were—and have settled down into a cold rage to devise plans for obtaining full revenge." Now it happens that this analysis greatly misrepresents the sentiments of the Japanese. They do *not* think that when he ceded to Japan the Liaotung Peninsula and the northern littoral of the Yellow Sea, the Viceroy Li had received from Russia any assurance such as would render his concession finally nugatory. They have excellent reasons for not thinking anything of the kind, and by-and-by those reasons will doubtless be published. Meanwhile, the nation is not possessed by any fit of "cold rage" against Russia, nor is it devoting its whole strength to such military development as shall enable it to attack Russia off-hand. We need scarcely add that the appropriation of 25 million pounds sterling, supposed by the *Spectator* to have been made for the increase of the Japanese Navy, is a pretty large multiple of the real amount. In point of fact, Japan's mood at present, so far as we can judge, is neither revengeful nor aggressive. The great majority of her thinking men must recognise that the extension of her dominions into Manchuria would over-tax her present resources, and that it would not be easier for Russia to occupy Liaotung without controlling the Korean Peninsula, than it would be for Japan to control the latter while the former was in Russian occupation. Moreover, the broader side of the question presents itself very plainly to the Japanese. They can perfectly understand and sympathise with the mainsprings of Russia's action during the past year. For if Japan's safety compels her to oppose Russia's advance into Korea, Russia's safety equally dictates that she should resist the incursion of a war-like and ambitious race into territories marching with her own. In a word, Japan's reason for keeping Russia out of Korea is Russia's reason for keeping Japan out of Manchuria, and instead of revengeful fury against the Northern Power, Japan's sentiment is one, not indeed of acquiescence, but certainly of comprehension. Hence we are persuaded that this latest nightmare of the *Spectator's* will prove as visionary as has proved its Mongolian invasion of Europe. The irrepressible forces that push forward all growing nations seem more than likely to bring Russia and Japan into collision hereafter, but that Japan is eagerly waiting to fly at Russia's throat we do not in the least believe.

The following men-of-war are now at Yokosuka:—*Chinyen, Chinto, Chinhoku, Kongo, Tenriu, Fuso, Amaki, Takao, Takachiho, Nantua, Tatsuta, Saikio, Musashi, Tsukuba, Itsukushima, Akitsu, and Yayeyama.*

A train which left Shimbashi on the 19th inst. at 9.55 p.m., was derailed between Yamakita and Gotemba, and four empty freight cars were smashed up, but no injury was done to persons or the track.

THE SAN FRANCISCO MURDER CASE.

FOR many months past California has been in a state of considerable excitement over a double murder that took place in San Francisco in April last. The whole affair is full of mystery, and the trial of the accused has already lasted several months and was not concluded when the last American mail left San Francisco. Nothing could be more sensational than the details of the crime. The victims were two young and beautiful girls. They were cruelly butchered in a church, and the supposed murderer was a constant attendant at prayer-meetings and other religious services, an assistant superintendent of a Sunday-school, and, according to published accounts of his life, had been one of the gentlest and steadiest of young men up to the time of the murders.

The first victim was Miss BLANCHE LAMONT, second daughter of the late Captain DAVID LAMONT, a resident of Dillon (Mont.) from 1881 until his death, two years ago. BLANCHE LAMONT was 21 years old, a graduate of the Rockford, Ill., Female Seminary and, subsequently, a school teacher. She went to San Francisco for a course of study in order to fit herself for the position of teacher in the Dillon public schools. She expected to go to Dillon early in June. She is described as a girl of considerable talent and promise. Miss LAMONT entered a Normal School as a special student two days before she was missed. The day on which the murder took place, April 3rd, she left that school at about 3 o'clock in the afternoon and at 3.15 was seen to go off in company with a young man, the supposed murderer, on a Powell-street car. She was again seen in the vicinity of the scene of the murder between four and five the same afternoon.

The first news that reached the San Francisco public was that Miss LAMONT had mysteriously disappeared, how or by what means no one had the least conception. But it was not long before her schoolmates came forward and asserted that the young man who went off with her was no other than THEODORE DURRANT, a medical student at the Cooper Medical College. From that time to the day of his arrest suspicion fastened on him. The body of the murdered girl not having been discovered, however, and DURRANT having circulated a rumour that Miss LAMONT had probably gone to the bad and would be found in some house of ill-fame, the public and the police could do nothing but wait for further disclosures. These were not long in coming. Saturday, April 13th, several ladies assembled at Emmanuel Church, Bartlett Street, a Baptist Church of which the Rev. Mr. GIBSON is pastor, for the purpose of trimming the Church for Easter. They had occasion to go to the library, and there certain Sunday

school girls, three in number, who were helping to prepare the Easter decorations, found secreted in a small closet the body of a murdered girl, subsequently identified as MINNIE WILLIAMS. Deputy Coroner J. L. MCCORMICK was immediately sent for, and he thus describes what he saw:—"The body was lying on the floor, with the head to the north and one limb was bent up somewhat. The clothing was about up to the knee, showing the lower part of the limb. I saw a knife lying across the breast and a piece of a knife sticking out." The medical evidence of Dr. J. S. BARRETT, who performed the autopsy, given at the Corners inquest, was to the effect that death resulted from asphyxiation, caused by choking from the insertion of rags into the throat—into the larynx and trachea—(these rags were found in the throat when the body was examined by the Deputy Coroner); also by lacerated wounds of both wrists, the principal arteries of both being severed. The body was covered with wounds, but in the opinion of Dr. BARRETT most of these were inflicted after death. The Doctor produced evidence to show that MINNIE WILLIAMS had been ravished before being killed. The Coroner's Jury brought in a verdict of murder, and charged THEODORE DURRANT with the crime.

Evidence was forthcoming to show that on Friday afternoon (the 12th), DURRANT met MINNIE WILLIAMS when she arrived from Oakland, and was in her company later in the day. She was to have attended a Young People's Society meeting held on Friday night at Dr. VOGEL'S house, but did not appear there, and was not seen alone by any one who actually knew her after she had left a friend's house to attend that meeting. Her pocket-book or purse was found in DURRANT'S coat pocket. DURRANT had constant access to the church, having a private key by which he let himself in and out. He was allowed to remove books from the library at will, and the theory is that he met Miss WILLIAMS on her way to the meeting, and induced her, as he had, it is asserted, induced Miss LAMONT previously, to enter the Church with him in order to procure a book, and that, after committing the murder, he went on to the meeting, at which there is evidence to show that he arrived late.

The Detectives in charge of the LAMONT case were of opinion, after the discovery of the body of MINNIE WILLIAMS, that the body of BLANCHE LAMONT was secreted somewhere in Emmanuel Church, and on the Sunday morning before service time (April 14th), the missing corpse was found in the belfry of the church. To reach this spot the murderer had to climb higher than the roof of the Church. On the last landing in the tower is a little room 12 x 12 feet in size. For months before the murder it had not been visited, as was shown by the thick layers of dust

that covered the rough, boarded floor. On his way to this room the murderer had a long hard climb up a winding stairway only 2 feet in width. To drag a heavy body up this flight of steps was a feat that only a man of muscle and determination could accomplish. The murderer was evidently secure against interruption, for he must have spent hours in hiding the clothes of the unfortunate victim. The body was found in a perfectly nude state, and the girl's clothes had been so cleverly secreted in places accessible only to a man of great agility and daring that it took a dozen searchers two hours to find them. The corpse had received some respectful attention at the hands of the murderer. It was stretched out smoothly, face upward, the feet were propped on blocks of wood. The hands were folded across the breast and there was only a slight disarrangement of the head, which had fallen over on the left side. Marks of discoloration about the neck showed that the girl had been killed by strangulation. The marks appeared to have been left by a hand that had grasped the throat with great force, for on one side of the neck the flesh was indented. Slight blood-stains were found on some of the murdered girl's clothing. The manner in which the garments were rent gave evidence of a fierce struggle. The sleeve of a man's white shirt, rolled up tightly, as though it had been stripped off the arm, was also found. It was very soiled and had blood stains on it, but they were old. An old hatchet was also discovered in the belfry; but there were no signs that it had been used.

The first intimation DURRANT received that he was to be arrested was contained in a message flashed by sunlight from Telegraph Hill to the squad of the National Guard to which DURRANT belonged. The squad was engaged at the time in signal exercises in the neighbourhood of Walnut Creek. This was on Easter Sunday (April 14th). DURRANT was then charged with the murder of MINNIE WILLIAMS on the previous Friday night. The other murder was not mentioned to the accused, as when the Detective who made the arrest left San Francisco the body of BLANCHE LAMONT had not been found. DURRANT, when arrested, was clad in what is called the fatigue uniform of the National Guards, and he expressed great anxiety lest he should not be able to re-clothe himself before going to prison. When he was told that he would be allowed to go to his home in San Francisco and exchange his uniform for every-day garments his mind seemed much relieved. So say the newspaper reports.

During the trial numbers of witnesses testified that up to the time of the murders they had known DURRANT and considered him to be quite incapable of committing the crime of which he was accused. But the evidence against him is of a damag-

ing and circumstantial nature. To take the murders in the order of their occurrence, the following are the facts bearing on DURRANT'S alleged connection with BLANCHE LAMONT on April 3rd. He was identified by two schoolmates of Miss LAMONT as the man in whose company she went away in the tramcar when she left her school. According to the testimony of a person living in the district, a young woman dressed like Miss LAMONT and a young man of the same height as DURRANT were seen near the Emmanuel Church, about the time that DURRANT admits having entered the building, namely, 4.55 p.m. The witness saw the backs only of the two young people and therefore was unable to identify them, but the dress of the lady corresponded with that worn by Miss LAMONT on the afternoon of the murder. GEORGE R. KING, the organist of Emmanuel Church, made the following statement to the police on April 15th. "On April 3rd last, the day that Miss LAMONT was first missed, I strolled into the church by the front door at about 5 o'clock that afternoon, and the first thing I noticed was that the library door was open and a strong smell of gas impregnated the air throughout the building. I closed the library door and locked it, and then played the piano. This was in the lecture room. I had been playing, I should judge, some five or ten minutes when DURRANT came down through the back folding-doors. He came into the room with his coat off, in his shirt sleeves. His hair was mussed about and he looked quite pale and worn, and was somewhat nervous. I imagined that he might have been startled at my appearance there in the church. He said that he had been overcome by the gas, and that he had been upstairs fixing the gas fixtures. He said he was so overcome that he could barely come down the ladder. At this time he asked me to go out and get him some bromo-seltzer and I went to the drug-store to get him some. What he did during the time I went to the drug store I do not know. . . . He drank a dose of the bromo-seltzer and it seemed to nauseate him. He then went into the other room and asked me how he looked, and I told him he was somewhat pale and that his eyes were a little congested. He then went into the ladies' parlor, where there is a mirror, to look at his face, and I afterwards found on a little shelf underneath the mirror a little clot of blood, as though he had wiped his finger on it. . . . At about 6 o'clock we left the place and he walked a little way down Capp street with me. I do not remember whether he went back to the church or not when he left me." Then there is the testimony of the Pawnbroker, ADOLPH OPPENHEIM, who swore that on a day between April 4th and 10th DURRANT came to his store to offer for sale a ring, subsequently identified as that of BLANCHE LAMONT.

Other rings worn by the poor girl on the day of her murder were wrapped in a piece of paper having two names inscribed on it—GEORGE R. KING (the organist) and PROF. SCHERNSTERN—and posted to Mrs. NOBLE, 200-21st Street, City, an aunt of the deceased girl. The penmanship of the address is said to bear a strong resemblance to that of DURRANT.

With reference to the murder of MINNIE WILLIAMS for which, however, DURRANT has not been tried, the pastor of Emmanuel Church, Mr. GIBSON, left the church at 7.30 on the night of the murder, so that the crime must have been committed between this hour and 9.30 p.m. when DURRANT appeared at the Church Meeting at Dr. VOGEL'S house. DURRANT asserts that he left home at 8 o'clock and went to Dr. PERKINS' office and from thence he walked direct to the VOGEL residence. In contradiction of this account, a witness, Mr. HILLS, testifies that he saw a couple answering perfectly to the description of DURRANT and MINNIE WILLIAMS enter Emmanuel Church by the side entrance at about 8 o'clock. DURRANT was not seen afterwards till he arrived at VOGEL'S house at 9.30, with his hair dishevelled and his clothes in a state of disorder. According to one witness his hands had blood marks on them. At any rate he asked leave to wash his hands. Attached to the coat that he wore that night were found 3 hairs. Microscopically examined, two of these hairs showed strong evidence of having come from the head of Miss WILLIAMS. The other hair was identified as that of the horse on which it was proved that DURRANT rode before reaching Dr. VOGEL'S house on the night of the murder. The purse that Miss WILLIAMS had when she left the house of Mrs. VOY, the person with whom she was staying at the time of the murder, was found in DURRANT'S overcoat pocket at his home. He says that he picked it up in the street.

DURRANT has many friends. They are doing their best to save him and he is defended by clever counsel. According to certain reports, there is evidence to show that many of his shrewd expedients to prove an *alibi* at the supposed time of the murder were elaborated by barristers who, without any real belief in his innocence, are unscrupulous enough to devise any means whatever of rebutting the strong case that the prosecution has made out against him. It has been attempted to prove that when the murder of BLANCHE LAMONT is supposed to have taken place he attended a medical lecture. Notes of the lecture have been produced in DURRANT'S handwriting. But it is asserted that he borrowed the notes from a fellow-student and drafted his own so as to agree with them. The roll was called on the occasion in question and he is marked as present, but this goes for little or nothing, as American medical

students are in the habit of occasionally answering for each other. There is considerable mystery attached to this part of the evidence, owing to the conflicting testimony of the medical students present on the occasion. DURRANT has been convicted of direct falsehood in several matters connected with Miss WILLIAMS. Altogether his case looks very bad. But in matters of law it is hard often to foresee by what deficient link in the chain of evidence a verdict appearing certain to lay eyes may be rendered legally impossible. The general impression produced by the published evidence is that DURRANT is guilty, but of the exact cumulative legal weight of the proved points we can judge only when the concluding speeches of Counsel and the Judge's summing up are before us, which will be within the next ten days. If not convicted on the LAMONT case, DURRANT will be tried on the charge of murdering MINNIE WILLIAMS, and, if the reports of certain San Francisco papers are to be credited, the evidence that the people's attorney can produce in this case will render the acquittal of the accused an impossibility.

DURRANT is a man of extraordinary coolness and presence of mind. With the exception of a slight pallor and nervousness displayed on the day of his arrest he has been perfectly calm and collected throughout the trial. Whether innocent or guilty, he is not a man of normal sensibility. His dress in court as he appeared day after day was a picture of neatness and propriety. He answered questions and explained the process of fixing electric burners with the nonchalance of one entirely unconscious of, or indifferent to, the fact that issues of life and death were at stake. But this proves nothing; nor is it new. The greatest criminals have always been cast in abnormal moulds. The nerve and determination enabling them to perpetrate deeds that chill the blood of ordinary mortals suffice to sustain them through the ordeal of a long trial and help them to look forward with almost absolute indifference to the most ignominious of deaths.

THE MINISTER PRESIDENT.

THE Opposition journals, among which we include the *Nippon* and the *Asahi*, persistently lend their columns to circulate rumours pointing to the speedy retirement of Marquis ITO from Office. They seize the opportunity to attack the Liberal Party also, pretending that the leaders of the latter have been, on the one hand, imposing terms by way of payment for their promised support of the Government, and, on the other, endeavouring to dissuade Marquis ITO from resigning. Political affairs are shrouded in so much mystery at present that we hesitate to deny or endorse any of these rumours.

Our own impression is that no Cabinet changes of a radical nature are impending. Yet the inveterate nature of the reports current in Tokyo during the past three weeks forbids us to regard them as altogether chimerical. Probably the return of Count INOUE to Tokyo will elucidate the situation, though we place little faith in the idea that his judgment is awaited as finally decisive. The only really disquieting element of the situation is that the Satsuma statesmen in the Cabinet may be unwilling to endorse any alliance with the Liberals, in which event the Government would have to choose between a split in its own ranks or an overwhelming Opposition in the next session of the Diet. We have already pointed out that with the support of the Liberals and the National Unionists, the Cabinet would command about 170 votes in the Lower House, so that all measures of importance could be passed without difficulty. There are objections, it is true, to any step such as would finally establish the principle of party government in Japan at this early stage of parliamentary institutions. But, on the other hand, the nation has arrived at such a crisis in its career that no effort should be spared to facilitate legislative efficiency, and if the Liberals and National Unionists, recognising that fact, are willing to lend their support to statesmen like Marquis ITO and Count MUTSU, statesmen that have proved their thorough competence to appreciate the country's needs and direct its progress to brilliant results, theoretical objections should not be suffered to exercise a deterrent influence. It is easy to understand that the Satsuma leaders might be unwilling to acknowledge any reliance upon political agitators' support for the consummation of a work already carried so near completion by a purely Imperial Cabinet. It is further easy to understand that personal considerations might weigh against the proposed alliance, since the entry of the Liberals and National Unionists into the Government's camp would reduce the Progressionists and their allies to a state of political impotence, not less unwelcome to Count OKUMA'S Sasshu allies than to the Count himself. But if party government is ever to be successfully introduced in Japan, there must be able leaders on both sides, and it would conduce infinitely more to the nation's best interests that Count OKUMA should lead an Opposition with a legitimized status and a recognised future, than that his followers should obstruct all legislation for the sake of winning for themselves prospects and a position. The one thing required, as it seems to us, to secure for Japan the respect and consideration of Western Powers is that her national strength should cease to be frittered away by party squabbles. If Marquis ITO and Count MUTSU have that consummation within their reach, we doubt whether even the defection of some of their old Satsuma

allies should deter them. A dozen times within the past three years we have ventured to predict that party government can never be safely inaugurated in Japan until a division among the Meiji statesmen distributes them between the two camps headed respectively by Count ITAGAKI and Count OKUMA. Neither camp, without the accession of such a contingent, can furnish competent administrative elements, or be regarded as a party seriously bidding for power. It seems as though no less an issue were now impending, and while every friend of this country must view with disquiet the severance of allies under whose guidance Japan has escaped so many grave perils and achieved so many notable results, no one can institute any reasonable comparison between the rupture of that alliance and its preservation at the cost of reverting to the legislative deadlock that effectually blocked Japan's progress up to the outbreak of the War with China.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

MR. McCALEB.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I did not think that it would ever be required of me to again appear in print, but in a letter from the pen of our learned friend, recently published, he intimates that he has reasons to suspect that writers under assumed names are either ashamed of the positions they take, or are lacking in a due degree of sincerity in actually believing what they claim. As this is a mere matter of opinion, I will not discuss it, and as long as I observe with courtesy the rules of debate, nothing more can be asked of me. I am an ignorant man "rude in my speech, and little blessed with the soft phrase of peace." If my memory serves me, in a very interesting letter from Mr. McCaleb published a little while ago, he astonished us all by declaring that the coming of Jesus had been foretold seven hundred years before. The high authority making this announcement at once attracted attention, and feeling that all reading and labour of investigation had been in fault, I became an "Anxious Enquirer," and asked the question.

It is my pleasant duty to acknowledge the courteous reply, replete with quotations gathered from all parts of the Bible, tendered as proofs, of the truth of the prophecies. If Mr. McCaleb asserts that he clearly knows the quotations to refer to Jesus, he will have to measure his strength with some of the greatest intellects of the present century. The most profound thought has been devoted to the study of the Bible, and to the prophecies mentioned, with the result that it has been discovered that they are not prophecies at all, and are only passages relating to events that had happened, or were then passing among the Jews. As the Old Testament is purely historical, and anecdotal, this appears to be the true solution. So uncertain is Mr. McCaleb of his position that he writes "but I would by no means be understood as believing that this line of prophetic evidence relates to nothing but the names of Jesus." This is a fatal admission, and I feel sympathy for the learned scholar in the pitiable plight he has placed himself in; if one word of the Book of God is not true, or if one word is equivocal, or if anything in the Book is left to the imagination, then the whole structure must fall, and Mr. McCaleb with it. A feeling of disappointment crept over me, as I read the letter in reply to my inquiry: the same old platitudes were brought out, with skill and eloquence I admit, but not a new idea could I trace to convince one that my views had always been erroneous, and should be immediately changed. I am left in the same position I was before, but I

will offer our friend once more a chance to set himself right. I will now ask him to point out a chapter, or even a verse, in the Bible where direct reference is made to the coming of a person, in seven hundred years, to fulfill a certain mission of which he was to be the vicarious sacrifice.

I do not want the gentleman's opinion, neither what he thinks, for I can do all that; I want the absolute truth. Surely if the Bible is the word of God, it is not a book of equivocation. Mr. McCaleb must either know that the so-called "prophecies" of the coming of Jesus are true, or that they are not: there is no middle ground for him to stand on: if they are true, then he must measure strength with the greatest intellects that the world has ever known, who say they are not true; and if he says that they are not true, then he is trifling with us, and it is right that we should ask him to retire at once to the town he came from. Some other vocation in life will be better suited to him.

To illustrate how great minds differ, I must refer to a letter from Mr. McCaleb, published some time ago, in which he reviewed Strauss. As I have mislaid it, unfortunately, I cannot quote from it, but in substance our learned friend says, that Strauss having written a mass of illogical matter, at last found himself unable to hold his ground, and had ignominiously to step down, his book passing to oblivion. Our friend Mr. McCaleb must have the strongest reason for making such a statement, and it will be interesting to many to read what Professor John Fiske, of Harvard, a most profound thinker and writer, has to say regarding Strauss:—

"The Life of Jesus published by Strauss when only twenty-six years of age, is one of the monumental works of the nineteenth century, worthy to rank as a historical effort along with such books as Niebuhr's History of Rome, &c. It instantly superseded and rendered antiquated everything which had preceded it; nor has any work on early Christianity been written in Germany for the past thirty years which has not been dominated by the recollection of that marvelous book. Nevertheless, the labours of another generation of scholars have carried our knowledge of the New Testament literature far beyond the point which it had reached when Strauss first wrote. At that time the dates of but few of the New Testament writings had been fixed with any approach to certainty; the age and character of the fourth gospel, the genuineness of the Pauline epistles, even the mutual relations of the three synoptics, were still undetermined, and as a natural result of this uncertainty, the progress of dogma during the first century was ill understood. At the present day it is impossible to read the early work of Strauss without being impressed with the necessity of obtaining positive data as to the origin, and dogmatic character of the New Testament writings, before attempting to reach any conclusions as to the probable career of Jesus."

As these two great minds are diametrically opposed, and both claim to be inspired, who is it that suffers? In the conflict it is the small minds that go to the wall!

I cannot help giving Mr. McCaleb a quotation from the famous letter of Henry Ward Beecher, dated Chicago, 1883. In giving his opinion of Christian Truth. He writes to Dr. Kennard:—

"My life is drawing to an end. A few more working years only have I left. No one can express the earnestness with which I feel that in the advance of science, which will inevitably sweep away much rubbish from the belief of men, a place may be found for a higher spirituality, for a belief that shall have its roots in science, and its top in the sunlight of faith and love. For that I am working, and shall work as long as I work at all. The discussion has begun. God is in it. It must go on. It is one of those great movements which come when God would lift men to a higher level."

Could the great preacher be wrong in his views of what God is educating us for? If he was, who will put him right, and show us the way?

I cannot help making another quotation, after which I must bring this rambling letter to a close. Renan, in his Life of Jesus sums up:—

"The love of God, charity, and reciprocal forgiveness were the whole Law of Jesus."

For Mr. McCaleb's guidance, I feel that it is right for me to declare that I believe in One God with whom is no variableness, neither shadow of turning, the Supreme Ruler of the Universe, the Source of Life, to which it eventually reverts.

I believe Jesus to have been the most gifted man that ever lived, whose insight into the needs of humanity enabled him to preach and practice a morality of the most benevolent kind. And as a celebrated writer says, "although similar systems of morality had been preached by Confucius, and by some of the Greek philosophers many years be-

fore, by the Quakers since, and by many good men in all ages, it has not been exceeded by any."

I beg to thank Mr. McCaleb again for his reply, and most sincerely regret that I am still compelled to be an

ANXIOUS INQUIRER.

Kobe, November 8th, 1895.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I am glad to notice that Mr. McCaleb has recognised "the impropriety of proceeding in such a haphazard way as the present;" but I regret that, with the best of intentions and in all sincerity of heart, he has again started in the wrong way. It is a fundamental principle of every properly conducted discussion as well as a general rule enforced in courts of law that "he who affirms must prove." The burden of proof as to any particular proposition lies on him who wishes the public to believe in its truth; in other words, it lies on the affirmative side until that side has established a strong presumption in favour of its propositions. Mr. McCaleb must, of course, open the argument and should, in doing so, not forget to give concise definitions. It is then, and then only, that "Secularian" or "Defender" can properly reply.

Yours very truly,

EPSILON.

Tokyo, November 14th, 1895.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—If controversy is to be more than mere *flatus vocis*, it is before all things necessary to define terms. Mr. McCaleb's first proposition runs thus:—"Jesus is the Messiah, the Son of God." By Jesus I understand him to mean a certain historical character, crucified in Jerusalem nearly nineteen hundred years ago. The term denotes, that is to say, one of those concrete objective entities that we call men. The relation of sonship and fatherhood is one that obtains between two of these concrete objective entities that we call men. In stating, therefore, that Jesus was the Son of God, Mr. McCaleb means, I take it, to imply that between God and Jesus there existed (or, if Mr. McCaleb prefers to use the present tense, exists) a relation similar to that which existed, for example between Charles I. and Charles II. Without for the moment inquiring too closely how far the analogy in this relationship of fatherhood is to be pushed, I am surely right in believing Mr. McCaleb to imply that God, like Jesus, has objective existence. A purely mental representation, corresponding to no outward reality, a griffin for example, cannot by any permissible stretching of terms be said to stand in the relation of fatherhood to an objective being. I regard it therefore, as implied in the terms of Mr. McCaleb's proposition that God is not a mere representation of the human mind, but is objective, an outward reality. But this implication appears to me at the very outset to demand proof.

Let Mr. McCaleb, then, give an exact definition of the meaning he attaches to the term God; let him prove the objective existence of a Being corresponding with the concept as defined by him; and then only will the terms of his challenge have any meaning to me. I need hardly say that in these post-Kantian days it will be idle for him to bring forward the arguments of the speculative reason in proof of the existence of a Supreme Being, the ontological proof, the cosmological proof, and the physico-theological proof, for I hold with Kant that such proofs are impossible. Nor need he bring forward the argument considered cogent by Kant himself that though we are not entitled to hold speculatively that any Supreme Being exists, yet a consideration of ethical relations lays us under a moral necessity to believe in a Supreme Lawgiver, for, with Sidgwick, I am "so far from feeling bound to believe for purposes of practice that I see no ground for holding as a speculative truth, that I cannot even conceive the state of mind which these words seem to describe, except as a momentary half-willful irrationality, committed in a violent access of philosophic despair." Least of all need he appeal to Revelation, since the credentials of Revelation are disputed by the very nature of my doubts as to the existence of its supposed author. No, Mr. McCaleb must bring forward arguments of an entirely new character, and when he has thus made his position intelligible to me, I shall cheerfully proceed to an examination of the historical evidence he can bring forward to prove that "Jesus is the Messiah, the Son of God."

To forestall possible criticism, I may say that it is as obvious to me as it will be to others, that my demands are a *reductio ad absurdum* of all controversy of this character. The difficulty of agreement in preliminary definition is one with which thoughtful persons in both camps are familiar, and is well exemplified in a suggestive letter by the Rev. T. S. Tyng which appears in

the same issue of your paper with Mr. McCaleb's challenge. It is evident that Mr. Tyng and the writer of the article he criticises would find it difficult if not impossible to agree on a definition of the terms Christianity and the Christian Church; and yet in default of such agreement all discussion as to the nature of Christian teaching is utterly vain.

In truth, Christian thought and agnostic thought are in different planes, and lines drawn in different planes do not intersect.

Yours truly,

MAURICE EDEN PAUL.

Nagasaki, November 14th, 1895.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—“Secularian” could have saved himself the long and laboured attempt at identity by simply forwarding his card, a very simple and in no wise improper thing to do. He says he is not somebody else; but he says this as *Secularian*, a name that is impersonal and represents nothing. It is impossible for him to identify himself under a name that *has* no identity. He says, I stated as a “positive fact,” he changed his name. That is a mistake. It was only a supposition, as I have already explained, for I cannot be positive about any thing that pertains to this being called *Secularian*. It is a mere spectre; whether it be Mailey's ghost of Dickens or one of Shakspeare's, or something else, I have no possible means of knowing. Yet I am expected to give to this “airy nothing” “a local habitation and a name,” and deal with it as having flesh and bones when at the same time it has the magic power of vanishing away at any moment. It can wax bold and say anything it pleases and be responsible for nothing. The Christian is taught to “Cast not your pearls before swine lest they trample them under their feet and turn again and rend you.” Now I am not saying or even intimating that “Secularian” is of that class, he may be a strictly moral and upright man as to that matter, but I have no possible means of knowing either the one or the other. “But the Editor knows who it is.” So he says. But the Editor himself will not go upon such testimony as he expects me to receive. Although keeping a standing notice over the Correspondence column that he disavows all responsibility for the views that may be expressed therein, he nevertheless requires each to first send him his real name before he is permitted to appear over an assumed one. Nor will he in any case take their word for it that they write in good faith, for though he may believe it true he is wholly at their mercy for this fact and has no way of showing it to others. Suppose some correspondent should remonstrate with the Editor against giving his real name, and say, “If the Editor is not satisfied with my statement he will have to go unsatisfied, for I am not inclined to give proof of a thing I am abundantly able to show,” I presume the correspondent would hardly, under such circumstances, be permitted to appear. Yet this is precisely what is expected of me, namely, to take the good faith of “Secularian” without the slightest evidence, save such as the Editor himself constantly refuses. This don't look fair. If people mutually carry on a correspondence under *noms de plume* I have no criticism to offer. But it will be remembered that my defence began with the Editor over my real name. Somebody (or something) assails me from Kobe not as a “fellow-man” but as a phantom, an impersonal something that can neither be identified or held responsible for anything it says. It don't look manly to strike from the dark. John says, “Men love darkness rather than light because their deeds are evil. For every one that doeth evil, hateth the light, neither cometh to the light, lest his deeds should be reproved. But he that doth truth, cometh to the light, that his deeds may be made manifest, that they are wrought in God.”

But “the gospels are written anonymously.” I am glad to see “Secularian” for once throw himself on the side of the inspired writers. If I were writing for a Christian, a sufficient answer to this would be that “it is not ye that speaketh but the Holy Spirit that speaketh in you,” hence it was a matter of no special moment whether the author identified himself or not, as the Holy Spirit makes his own defence and the gospels carry their own proof. But as this would hardly satisfy an unbeliever, I answer further that it was no uncommon thing in that age for writers to omit both name, date, and place from their writings. The writers of the gospel narratives did not write over an assumed name. Editors do not usually sign their names, but they are so identified with their writings everybody knows who they are. So with the writers of the gospels, everybody understood who they were and their names were attached to their writings almost from the beginning. Be-

sides, they mutually refer to each other by name in such an artless way as to leave one without the slightest suspicion that they make any effort at concealment. And better still, one of these writers in the last public document he has left on record signs himself thus: I, JOHN, WHO ALSO AM YOUR BROTHER AND COMPANION IN TRIBULATION! I hope therefore "Secularian" may continue in company with these writers long enough to follow the same good example, and step down into the world of mortals and indeed be a "brother" and "companion" among his "contemporary fellow-men" and will help to bear the "tribulation" with which we have to do.

But then I must excuse him from identifying himself, since all he has at stake is a simple defence of truth while I am "a salaried defender of the Christian religion," and want to show my "Mission Board" in particular "and the world generally" "how energetically" I am "performing" my "mission." Now suppose I should grant this—what then? Well, it would only show that I prize a salary higher than Mr. "Secularian" values the truth. But this accusation is made with at least as much foundation as the objections to the prophecies, which are simply *none whatever!* While I am very far from saying there are not many in this country receiving salaries, who are nevertheless fully capable of defending the truth for its own sake, it so happens that I am able to inform my opponent that I have never yet received a salary for preaching the gospel. I came to this country without a pledge or a promise save from Him who says, "Seek ye first the Kingdom of God and his righteousness and all these things shall be added unto you;" and here I wish to add that it is a proof of the divinity of Jesus of no mean character that his promise has been made *remarkably* sure. Again, I have never had any connection whatever with "Mission Boards" nor received a cent at their hands; nor do I "stand" for any body under heaven save myself and the Lord. (A hint here to one Politico). I am entirely alone, save Him whom I serve, in this discussion, so far as backing is concerned. And now having delivered myself so fully to assure you that I myself, also am but a man, do come down I entreat you, from your secure hiding place, Dear "Secularian," and let us reason together as "contemporary fellow-men" indeed and in truth; for I assure you not a hair of your head shall perish. Especially do I deem your condition a precarious one since you say you are already better known as a myth than a man and are thereby in great peril, I fear, of that "social ostracism by a Christian community," which you so much dread. Knowing your exceeding fright at the board I had behind me for your chastisement, I can readily understand also how it was you took time by the forelock and "ostracized" me from the "social canons" (?) of your own fire side.

Before coming to the point at issue I wish to say a word or two further in regard to the genealogies. Mr. "Secularian" shows an error of logic in asking me to give *proof* of my explanation that there are two lines of ancestry instead of only one. My friend made the affirmation that the genealogies were contradictory. The burden of proof lies with him. I gave an explanation—one that is common to every royal house where the throne is inherited—by which they were not contradictory but perfectly harmonious. This, though there could not be the slightest proof shown in its favour, forever destroys the force of the objection; for before the objection that they are contradictory can have any force, it must be shown that the genealogies *could not be otherwise*; for if there can be any other reasonable way than that which makes them conflict they are not *necessarily* conflicting. Were it my province to prove in this case, however, I am not without evidence. The reference to the caption over the chapters that every body knows to be no part of the Bible, all of which have very properly been omitted in the revised text, requires no notice. I must express surprise, however, at one who is so fully abreast of the age in everything else yet some three centuries behind in regard to the New Testament. This is a sufficient explanation no doubt for many of the errors into which my friend has fallen. But to the points at issue.

It will be noted that all that has been claimed for the prophetic names of Jesus has been conceded, save it seems that I did not make myself very clear to a "casual reader" in regard to the name, Christ, who would conclude that I meant to say that the word "Christ" actually occurs in the Old Testament. But I am pleased to see my opponent is so generous as to lift me out of this little ambiguity by saying it is "a fact of which the most superficial student of Christian apologetics is well aware." As my friend seems to have some preference for the Received Text I shall favour

him with its rendering once more on this point: "Know therefore and understand that from the going forth of the commandment to restore and to rebuild Jerusalem, unto the Messiah the Prince shall be seventy weeks." (Prophecy.) "The woman saith unto him I know that Messias cometh which is called Christ." Jesus saith unto her I that speak unto thee am he." (History.) My opponent may continue to object as usual, but I see no room for further argument on the statement that Christ came in fulfillment of a certain line of prophecy that had long since gone before upon him, even concerning his name.

Again my critic misrepresents the prophecies in making it appear that they speak of Jesus "as coming to the Jews and for the Jews only." While the Jews as a nation were chosen as the channel through which God chose to bless the world, the blessings of the redemption in Christ were by no means to be limited to the Jews only. And in passing, I wish it to be noted that here is a very strong proof that the prophets spoke by inspiration. For it is next to an impossibility that a nation, with as much prejudice as had the Jews against other nations, would prophesy blessings upon those they considered dogs. But let us hear one of the prophets on this point: "And it shall come to pass in that day, that the root of Jesse, which standeth for an ensign of the peoples, unto him shall the nations [Gentile dogs] seek; and his resting place shall be glorious" (Isaiah, 11:10). Again, "And righteousness shall be the girdle of his loins, and faithfulness the girdle of his reins. And the wolf shall dwell with the lamb, and the leopard shall lie down with the kid; and the calf and the young lion and the fatling together; and a little child shall lead them. And the cow and the bear shall feed, their young ones shall lie down together; and the lion shall eat straw like the ox. And the sucking child shall play on the hole of the asp, and the weaned child shall put his hand on the basilisk's den. They shall not hurt nor destroy in all my holy mountain; for the earth shall be full of the knowledge of the Lord, as the waters cover the sea," (Isa. 11:5-9). A more beautiful passage and bolder figures could not be used to show that this root of Jesse was not to come to the Jews only but to all mankind. And not to go deeper into the Old Testament prophecies on this point, nor could the New Testament historians with all their prejudices against the Gentile nations, being under the influence of the Holy Spirit, evade the force of giving utterance to the same universal gospel. For this very same Matthew whom my friend would represent as forbidding the gospel to the Gentiles (in that he says, give not that which is holy to the dogs) closes his narrative in these remarkable words: "Go ye therefore and make disciples of all nations, baptizing them into the name of the Father and of the Son and of the Holy Spirit, teaching them to observe all things whatsoever I have commanded you: and lo I am with you alway, even unto the end of the world" (Matt., 28:18, 20). John, another Jew, no doubt against every fibre of his fleshly nature was also impelled by the same Spirit that moved the prophets to give utterance to the following: "After these things I saw and behold a great multitude, which no man could number, out of every nation, and of all tribes and peoples and tongues, standing before the throne and before the Lord arrayed in white robes and palms in their hands" (Rev. 7:9). Again Paul, another Jew, full of nation-prejudice against the Gentiles, was moved to quote the prophecy of Isaiah (Isaiah, 65:1) in the following remarkable language: "But Isaiah is very bold and saith, I was found of them that sought me not [the Gentiles]; I was made manifest unto them that asked not after me" (Rom., 10:20). For one to ask therefore what benefit could the prophecies have to any save the Jews only shows that he has not the slightest acquaintance with their nature. I only wish I had space to do justice to this one feature of the prophecies.

In closing, I wish to call attention to my opponent's statement, "that the passages decried as prophecies no more foretell the coming of Christ, than they foretell the coming of Confucius, Buddha, or Mohammed, Spinoza, Voltaire, or Paine, Comte, Huxley, or Spencer." If the gentleman can make good this remarkable statement I will give up the prophecies. I suggest therefore that he cease mere objections and bare assertions long enough to lay himself out in his next on this proposition and show to the world for once that this thing called prophecy has no reality whatever.

Most respectfully, J. M. McCaleb.
Tokyo, Nov. 15th, 1895.

AS TO THE PROPOSITION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—“Epsilon” evidently does not understand which way I propose to travel in saying I am headed in the wrong direction. I had no other thought than to take the affirmation of the proposition submitted. Thus far I have *logically* been on the negative, or defensive, but having to deal with interrogations and objections without proof, it has *practically* put me in the affirmative. If I am expected to produce all the proof, I prefer to proceed in my own way. Besides, it will doubtless be conceded by all that I cannot justly be expected to carry on a discussion with some half a dozen opponents, all writing from so many different points of view at the same time. I ask therefore that all agree to let some one take the negative of the proposition that we may be able to proceed in a more orderly manner and in a way that will be more profitable to all. Or if you each one *must* speak, if you will “have patience with me I will pay you all,” or in the language of Paul “you may all prophecy one by one.”

The proposition proposed (through my own fault in not giving a heading the Editor made me say “Challenge”) exactly covers the ground under consideration: the first member—*Jesus in the Messiah the Son of God*—is the point “Secularian” denies; and the second—*He is our once Crucified but now risen Lord*—is denied, I believe, by the Editor; while the third—*He only is the Saviour of the World*—meets “Anxious Inquirer’s” objection. The terms used have no peculiar sense from that commonly accepted by Christians. I take them in the exact sense the Bible uses them. The entire proposition, taken together, is about as plain as any definition that can be given of it. Hoping to receive a favourable reply to the above, I remain, most respectfully yours,

J. M. McCaleb.

Tokyo, November 4th, 1895.

P.S.—“Anxious Inquirer” is mistaken, I never at any time wrote a line of criticism against Strauss.

J. M. M.

POSITIVISM AND THE DOCTRINE OF IMMORTALITY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the communicated article in your issue of the 8th instant on the doctrine of immortality, there occurs a passing reference to an eminent Positivist writer which is so wide of the mark and so likely to mislead, that it ought not to pass uncorrected. Says the article:—

“When we examine the writings of poetic geniuses of the type of Goethe and Emerson, of philosophic mystics such as Hegel and Max Muller, or of the greatest modern Comtist, Frederic Harrison, we find that they all believe in some kind of immortality.”

From this passage, taken along with the context, and from the concluding paragraph of the article, in which the Positivist doctrine of subjective immortality is referred to only to be dismissed as a misnomer unworthy of serious discussion, it is evident that the writer includes Mr. Harrison amongst the believers in objective immortality, that is to say, in the sort of immortality believed in by theologians and mystics and metaphysicians. Therein he is mistaken. I challenge him to produce from Mr. Harrison’s writings a single passage which could justify so surprising a misapprehension.

And what does he mean by calling Mr. Harrison a modern Comtist? Considering that Comte died less than forty years ago, and that his fundamental discovery, the law of intellectual evolution, dates only from 1822, there could be no ancient Comtists. If his meaning is that Mr. Harrison is the greatest of living Positivists, then he is wrong; for that distinction belongs unquestionably to Comte’s chief disciple and successor, M. Pierre Laffitte, Professor of the History of the Sciences at the Collège de France; a chair which, in view of his unrivalled competence in that wide subject, has been specially created for him by a decree of the Government of the French Republic. But why call Mr. Harrison a Comtist at all? He has publicly and explicitly repudiated the appellation; and so do Positivists in general, both in France and in England. Unlike Christians and Mahometans, the students of Comte’s writings admit that the great teacher was fallible, that he made a few mistakes. Unlike Christians and Mahometans, who accept the doctrine because they reverence its founder, Positivists honour the founder because they accept his doctrine. They accept the doctrine not because of its source but of its substance and its method. To persist in calling them Comtists is therefore misleading.

I must add that a better general acquaintance

with the substance and method of Positive doctrine would have saved the writer from the mistake of supposing that its leading English expositor could possibly be classed amongst "believers in the inherent immortality of the soul," whose belief "rests on feeling, intuition, aspiration, but not on reason." Baseless assertions of that kind are largely responsible for the misconceptions that prevail in the public mind as to the character of a system of thought which, while according its due place to the Logic of feeling, aims at replacing the decaying theological props of religion by a foundation of demonstrated scientific truth.

J. C. H.

Yokohama, November 13th 1895.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The school of modern materialism possesses many remarkable characteristics, of which not the least notable are an intellectual arrogance and a certainty of assumption in discussing grave and difficult problems, hardly in keeping with the modest motto of "Agnosticism." To this is sometimes added a strong tendency to distort and misrepresent opposed opinions in such a manner as to make them seem the merest travesty of what they really are, so that, this distortion once accomplished, the task of ridicule and refutation becomes one of the greatest ease. An article to which you have been pleased to accord a leading place in your column admirably exemplifies the assertion.

It is replete with misrepresentation. Professing to be a review of the Doctrine of Immortality, it is really a severe attack on the whole subject, inculcating pure annihilation. But the misrepresentations are also specific. Treating them in the order in which they occur, we find in the first place the unconditional assertion that Bishop Butler maintained a belief in the immortality of brutes. "Consistently with the great doctrine of analogy which he elaborated with such logical acumen, he maintained that beings whose cause of birth and manner of birth bore an exact resemblance should alike be regarded as endowed with a nature capable of surviving death." Then follows a bit of pleasantry at "the Bishop's" expense. The entire question has importance only in so far as it may seem to impair the validity of Butler's magnificent argument from analogy. To such at least as have not studied the chapter on a Future Life, the assertion that it necessarily leads to belief in the immortality of brutes is *prima facie* evidence that the argument is visionary and unstable. But it is utterly misleading to say that Butler maintained the immortality of brutes as a necessary part of his system. It was urged against a portion of his argument that the same premises by which he posited human immortality would likewise establish a future life for brutes; the argument proved too much, and therefore proved nothing. Replying to this objection, Butler grants that brutes are immortal, and proceeds to show that even on this assumption his argument is not invalidated. Moreover, a large part of his reasoning is altogether untouched by any such objection.

We are told in the next place that "Wordsworth was expressing the views of a large number of Christian believers when he wrote" the beautiful lines beginning,

"Our birth is but a sleep and a forgetting."

Now these lines shadow forth the ancient doctrine of transmigration, or metempsychosis, a doctrine supported by "a large number of Christian believers." As a matter of fact, the statement is untrue. Origen adopted the theory, but the action of the Council of Nicea rendered it practically untenable. We find it surviving only in the writings of very few philosophers or theologians, whether ancient or modern. It is an exceptional belief, with extremely few adherents among Christians. Even Wordsworth himself, so confidently quoted, did not hold it as a sober tenet of faith. In his own account of the poem he writes: "I think it right to protest against the conclusion. . . . that I want to inculcate such a belief. It is far too shadowy a notion to be recommended to faith as more than an element in our instincts of immortality. . . . I took hold of the notion of pre-existence as having sufficient foundation in humanity for authorizing me to make for my purpose the best use of it I could as a poet."*

Misrepresentation of another type is found in the contemptuous reference to "men whose minds are accustomed to the idea of constant supernatural interference with the laws of nature"—men believing that "miracles may take place at any time." What reputable Christian theology so teaches? Intelligent Christians do believe in miracles, but they certainly do not believe in

such as may "take place at any time," nor in any constant interference with natural laws. Such extraordinary phenomena demand the highest occasion, and occur only in times of supremest moment, as when God certifies his Son to men. Even John Stuart Mill has given the weight of his great name to what is really a dictum of common sense: God is a sufficient cause for miracles. And it is quite in accordance with law that the law-giver should reveal himself as superior to and working in his laws. Such books as Gore's "Incarnation of the Son of God," or Fisher's "Grounds of Theistic and Christian Belief," are plentiful, and none that have read them can honestly prefer such charges as those just quoted.

Again, is it not unjust to insist that the Church consigns to perdition men like Marcus Aurelius, Socrates, Confucius, and Shaka Muni? Different views have always been held of this subject, and always will be so long as speculative thought exists. The Bible is not clear in its revelation, except as to the great fact that all men are imperfect before God, and require in some way the application of the redemption of Christ. Knapp, among prominent theologians, writes:—"We may confidently expect, from the goodness of God, that since he has heretofore given so many nations only the light of nature, he will not make them miserable for the want of that higher knowledge of which they are innocently destitute." Only a short time ago, one of the oldest and ablest missionaries in Japan maintained in these columns that the "larger hope," as it is called, is entertained by many orthodox Christian believers. We are not here discussing the truth of any particular view; we desire merely to point out the injustice of representing the perdition of Plato as an essential element of the Christian faith.

Emerson is pitied for the feeble way in which he defends the doctrine of immortality. But even cursory students of the great poet and essayist know that it is very doubtful whether he was a believer in personal immortality at all. Query—Why does the reviewer choose for review only the "childish" and "illogical" arguments of poets and of doting editors, rather than the arguments of philosophers like himself?

But even the poets are perverted. The argument from activity, attributed to Goethe, is by no means based solely on emotion, or desire; "I shall always be active." It is really based on the law of continuity: everything now existing will continue to exist until some greater power destroys it. We have the powers of thought now, and upon the law of continuity will have them after death unless death can be shown to destroy them. There is an argument based on the Sensibilities, but it is rather different from that given by the reviewer.

Perhaps the most serious misrepresentation of all is the use of a long quotation from John Stuart Mill, for the purpose of gainsaying this doctrine of immortality, when the fact is that Mill allows the hope of a future life to be philosophically defensible.

Passing now to the consideration of the usual temper of agnostic writers, it would be difficult to find, even among the writings of bigoted theologians, a stiffer assurance than is contained in the following sentence: "It is only those who by the most careful and rigid mental discipline have accustomed themselves to regard with suspicion and mistrust any opinion based solely on emotion, that can estimate the value of the hackneyed arguments in favour of immortality at their true worth." Here again is a misrepresentation in the italicised assertion that the doctrine of immortality is based solely on emotion, whereas there are no less than six great arguments that are purely intellectual—summarily disposed of, indeed, by agnostic reviewers, under the ban of "intellectual sophistry." We are told, moreover, that such men as Pherecydes, Pythagoras, Socrates, Plato, Aristotle, Philo, Plutarch, Galen, Cicero, Plotinus, Augustine, Anselm, Abelard (*Intellige ut credas*), William of Auvergne, Albert Magnus, Thomas Aquinas, Occam; Bacon, Descartes, Spinoza, Malebranche, Leibnitz, Rousseau, Bocke, Hooker, Newton, Fichte, Kant, Schleiermacher, Schopenhauer, Lotze, Cuvier, Quatrefages, Hamilton, Reid, Calderwood, Fiske, Edwards, Porter, and McCosh—all these men (not poets), from ancient times to the present day, were believers in this foolish doctrine because they lacked the power to "estimate the value of the hackneyed arguments in favour of immortality at their true worth!" And never was there a cooler instance of "begging the question" than is found in the *ipse dixit*, "All that can be known bearing on the future of the human soul points to annihilation." Agnostics, claiming to know nothing of the future of the human soul, claim likewise to know "all that can be known." Such being the case, no amount of the "intellectual sophistry" of Plato, or Kant, or Fiske (the

evolutionist); no amount of the pathetic "ardency of feeling" of poet and peasant the wide world over, "can induce them to believe in the doctrine of the immortality of the soul." Truly, there is but one God, and his name is Ego.

The arguments for immortality cannot be presented in any single number of a newspaper. Readers desiring to pursue the subject from a purely intellectual standpoint, will find an excellent handbook in the recently published "Evidences of a Future Life," by Prof. L. A. Fox, an American. Meanwhile it is interesting to note that Ingersoll, weak enough in the presence of death to exalt hope above reason, has beautifully said, on sundry occasions: "He who sleeps here, when dying, mistaking the approach of death for the return of health, whispered, with his latest breath, 'I feel better now.' Let us believe, in spite of doubts and dogmas and tears and fears, that these dear words are true of all the countless dead." At another time, "The heart will always say, 'Perhaps there is another life.'" "We, too, have our religion, and it is this: Help for the living; hope for the dead." Again, at the coffin of another, "Immortality is a word that hope, through all the ages, has been whispering to love." Again, over a dear friend, "He was afraid to do wrong, and therefore he was not afraid to die." Again, in Boston, over Horace Beaver, "He lived for this world; if there be another, he will live for that." Again, over Roscoe Conkling, "He entered the darkness, or dawn, we call death. Unshrinkingly passed beyond our horizon . . . to that vast realm of silence or of joy where the innumerable dwell." It is interesting to read, in the words of the most prominent agnostic now resident in Japan, that "Hope is stronger than reason." It is passing strange to read the epitaph lately carved on the tombstone of Professor Huxley, in compliance with his own request:—

"And if there be no meeting past the grave,
If all is darkness, silence, yet 'tis rest.
Be not afraid, ye waiting hearts that weep,
For God still giveth his beloved sleep,
And if an endless sleep he wills, so best."

S.

Saga, Japan, Nov. 15th, 1895.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have read with interest the communicated article on "The Doctrine of Immortality," which is in your weekly issue of Nov. 9th. Will you allow me space for comment upon it? The article commends itself to the reader for its good spirit, in spite of the almost unavoidable failings of an earnest advocate; those of understating the opposing views, and accusing all who see otherwise than the author, of being prejudiced. The author challenges purely rational defence of the doctrine in the light of nineteenth-century science. I am one of those who, bolder than Emerson, hold the logical demonstrability of the doctrine of immortality. I hold, besides many corroborative evidences, there are at least three distinct lines of syllogistic proof. Before proceeding to outline them, I could call your correspondent's attention to certain peculiarities of scientific demonstration often overlooked in controversy and apparently not very clearly before him. All the conclusions of pure science rest on hypothetical premises, and their statements necessarily include the word "if." (E.g.: The first proposition of Euclid: "If one right line meet another right line, the sum" etc.) The establishment of the premises has in every case to depend on observation of phenomena. It would be unscientific to adopt any other method in discussing the doctrine of immortality. Perhaps I may then be pardoned for proceeding to state three arguments for the doctrine according to the scientific method instead of criticising in detail, and necessarily at great length, the argument against it, which is not so stated.

I give below the three arguments in the hypothetical form, and follow each with a brief comment on the premises assumed. I give the three in ascending order. First argument:—1st syllogism: If all existing organs or forces possess (or are survivals from periods of such possession) adequate functions, and if the conscious ego is an existing force or organ, then it must possess (or have outlined the possession of), an adequate function and syllogism. If the conscious ego possesses (or has outlined, etc.) an adequate function; and, if the function of guiding the physical and intellectual man through a few decades of time is a function entirely inadequate to such an organ; then the conscious ego must have a function beyond this life. (See note.)

I do not imagine that any one in the light of nineteenth century science will question the first premise. Every organ of the human body, down to the useless *vermiform appendix*, is confidently assumed by science to have possessed a function. Nor do I expect any denial from your correspond-

* "Chita; a Memory of Last Island."

ent of the second premise regarding the existence of the soul.

Further, no scientist for a moment claims that the soul is a survival; quite on the contrary, it is claimed to be the latest product of evolution. The point where I anticipate denial is as to the inadequacy of mortal life to employ the full powers of the soul. It is a matter of observation, nevertheless (and universal observation at that). No man is content with his limited exercise of function. This discontent increases with the moral stature of the man.

Second argument. If the history of all organisms is cyclical, passing through successive periods of development, service, and decay, and if the conscious ego is organic, then it may reasonably be expected to complete a cyclical history. If so, and if no such complete cycle appears this side of death, then it may reasonably be expected beyond. (See note.)

Probably no rational person will deny the first premise. True, the violent interruption of the cycle in a vast number of individuals of every species gives some basis for belief in conditional immortality. But all observation shows that the interrupted cycle is the exception (however prevalent) to the universally accepted rule. As to the third premise, that the human cycle is always incomplete this side of death; that was what Goethe felt, Socrates (or Plato) felt, and Jesus Christ (or the synoptic writers) felt and confidently affirmed. My own belief in intrinsic immortality rests on the additional fact that the higher the organism, the smaller the proportion of wasted individuals to perfected ones, and the conviction that the soul is the last and highest product not to be wasted. The argument I have reserved for the last appeals to me as the best among conclusive ones.

Third demonstration:—If the infinite is unchangeable, and if the infinite is capable of entering into relations, then these relations must be permanent and unchangeable. Consequently: if man is capable of conscious relations with the infinite; his consciousness must be permanent. Granted these hypothetical premises, and no one, I think, can question the conclusion. It is the Argument Christ used in Matt. 22: 30. Of course it is exactly in the premises that I shall be accused of begging the whole question. It was the denial of the second one that left Emerson in doubt. They are not universally conceded because not according to universal observation. Neither are the costly and ingenious experiments of distinguished biologists, or other scientists. They are open to all who will fit themselves to make them and interpret them. All are, however, not experts, and so many have to take their premises on testimony of the expert. I shall be accused of arrogance when I claim for myself and all Christians, however humble, the authority of experts. Nor is this begging the question. The experiments of myself and fellow Christians are open to all who take the trouble to comply with the condition of the great teacher, Jesus.

Neither the late lamented Pasteur nor any other teacher could carry about his apparatus or force his conclusions on those who would not follow. Jesus of Nazareth was under the same human limitations. He spoke "whereof he knew," and gave directions for all who would try the experiment for themselves. All who "will" to do God's will can test Christ's doctrines. Darwin could do no more for his pupils. If I do not believe Darwin's premises, it is my fault for rejecting his testimony (based on erroneous observation) and refusing to test it for myself. I, with your correspondent, prefer custom-made clothes, but modesty drives me at times to ready-made clothes as better than no clothes at all. So it is with some of my premises in matters scientific. I have never calculated the orbit of a comet, but I believe some have done, and that some are elliptical and finite while others are parabolical and infinite. On the other hand, I have traced enough of the curve of human relationship to God to believe it as infinite as the parabola. If some one else has not he has every right to say so. If he confines himself to his own lack of experience I have no right to pity him in any way that implies disrespect. Still I cannot help, as an honest seeker after truth, being sorry for a brother seeker who has not witnessed the phenomena I have, and I must reject his testimony as inexpert.

Yours truly,

SAMUEL C. BARTLETT, Jun.

Note:—These two propositions do not, strictly speaking, prove immortality, but merely the power of the normal human soul to survive physical death, which answers the only great presumption against immortality, and thus serves for proof. This insufficiency does not appear in the third proof.

Tottori, November 12th, 1895.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Apropos your article on Immortality; which I have just read, I would like to state a few

facts and ask your explanation of them. I am not a philosopher, I have no logic or reason to explain them myself. I am not even a physician to have some theory of physical death, though I have seen many death-beds. But while I cannot explain I can not help but believe: believe in a "beyond" and also in the something we cannot see "above nature"—"the supernatural," the something "standing above" which is the true superstition. A something perhaps standing above and out of reach of the logicians and philosophers.

The facts are these. My father was a godly man, that is, he feared God, walked uprightly, loved righteousness and his neighbour. At the immediate time of his death, after a long life, there was nothing especial to note. It was not even one of those beautiful, joyous, triumphant deaths which one sometimes sees when Christians die. There were no last words or blessings. A few hours before his death he had roused to greet a neighbour, saying in a loud strong voice, "I soon shall go the way of all the earth." Then he relapsed into a stupor and from that time until he died 2 or 3 hours later, there was no word or sign from the spirit. There was apparently just a physical death, the gasp, the pallor, the convulsive tremor, at first the drawn and then relaxed features, the fluttering and then the quiet pulse. There was the heart absolutely motionless. It was just like the death of any animal such as might be seen by the roadside. He was placed in no undertaker's hands, only kindly, neighbourly hands performed the last offices which mortal can need.

But an hour or two after all this, when all was done and he was lying in the calm of death in the quiet of the bright, sunset hour in our country home, there came into his face a smile, not simply a calm relaxed passive smile, there were actually little smile wrinkles on his temples such as I never saw in his life except in his happiest, most exalted moments. His face was as if he had some glad, happy, blessed surprise.

Please tell me what it was, this strange smile, where did it come from? The physical man was certainly dead. I do not understand: but was not the soul in an active, conscious state, which had not yet so far forgotten or departed from the body, but that it left its impress or a "trailing cloud of glory," in its flight, on the face which was once its window? It was not our imagination, for we were not wrought up and nervously excited or benumbed by a shock in my father's death. He had been an invalid for years and we had expected it long. His death was "as when apples fully ripe fall, or as when a ship after a long voyage comes into harbour." Neither was it only we, his loving relatives, who saw and noted that strange smile, but the neighbours saw and remarked it. By the next morning it was nearly all gone, leaving just a happy placid expression. It seemed a fitting accident, but to loving hearts a token, when a few days later as we gave "earth to earth," while loving eyes were looking the last time on the familiar face, the clouds broke and the afternoon sun shone like a blessing across the silent brow. I may have no logic or reason for it, but I believe with every fibre of my being that sunset here promises a sunrise elsewhere.

Yours, etc.,

A DAUGHTER.

THE GOTEMBA LEPER-HOSPITAL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Many benevolent persons of Tokyo and Yokohama have kindly taken interest in the Leper-Hospital of Gotemba. They are, no doubt, desirous of knowing the present state of the work. In answer to their legitimate wishes, I consider it a duty for me to give them the following information.

My first intention had been to address these few lines to our generous benefactors at an earlier date, and appeal once more to their benevolence, but as other more pressing work demanded help at the time of the war between Japan and China, I was afraid to transgress the laws of discretion, by adding to preoccupations already so legitimate.

The Gotemba hospital numbers at present nearly 80 lepers, about 50 men, 20 women, and a few children: 27 patients have died in the course of the two last years. Happily they had all been baptized, and they died with the best dispositions.

Since two years Rev. Father Bertrand has taken up his residence in the hospital and manages its direction. Owing to his presence everything is kept in good order. A wise discipline assures morality and economy. I dare say that, in every respect, our patients are perfectly well provided for. The most tender care is bestowed on them during life, and especially at the approach of death. Indeed, they all claim to be happy.

Some patients feel much better after prolonged treatment. Two or three have even believed themselves cured; but such are exceptions. As a rule, the awful disease always gets worse. Healthy

food, fresh air, and corporal exercise heighten the good effects of medical treatment.

Such lepers as can yet use their hands, and are not suffering too much, willingly take up some manual labour. Such occupations not only lighten, however slightly, the truly considerable expenses of the hospital, but furnish our patients with an agreeable pastime and healthy exercise.

Some of our patients go to try the mineral baths of "Kusatsu." Our benefactors are, no doubt, aware that "Kusatsu" is a village situated on the mountains of "Gumma-ken." It enjoys thermal springs of high temperature and well-known efficacy. Its hotels are, at the same time, bathing establishments. The lepers are excluded from the upper village, but they are allowed to frequent the lower parts of the place, and thither they flock in search of health.

Unfortunately our means do not allow us to help our lepers, in any way, to go and reside in "Kusatsu," although it is beyond doubt that the said springs bring about in the end a marked amelioration. The mountains of "Kusatsu" are covered with snow during a considerable portion of the year; and the support of numerous patients in such a solitary place, lacking in many things necessary for life, is too expensive for us at present. Our resources are all absorbed by the Gotemba hospital.

As our benefactors may readily ascertain for themselves, the hospital prospers more and more every day, owing not only to the increasing numbers of patients, but especially to the fact that the good administration of the work has been placed on a more solid footing. I therefore venture to beg our benefactors to have ever more confidence in the future of this work, which their charity has founded, and to continue favouring us with the help of their alms.

My dear patients and myself feel happy to be able to express to them in advance our most sincere gratitude.

P. VIGROUX, MISS. APOST.

November 18th, 1895.

NOTE.—The offerings may be addressed to *The Japan Daily Mail*; to Rev. A. Pettier, 80, Yokohama; to Rev. P. Vigroux, 33, Tsukiji, Tokyo.

SUNDAY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I would like to suggest to your correspondent Shō Shinomichi that it may be that the matter of keeping Sunday as a holy or holiday depends much upon the value one puts upon a man, not simply the physical man who needs the recreation (which word by the way means to re-create, not to amuse oneself simply) for his body. May it not depend upon his cognizance of the needs of the whole man, physical, intellectual, and moral, and upon what he considers his highest and noblest being.

Your correspondent speaks rather lightly of meditating and worshipping, as if the putting oneself into harmony with the Supreme Being were not the highest act of which the human being is capable, and from which he may get an uplift, an exaltation, a true recreation which shall make light and joyous and helpful all other and more prosaic days of the week.

He says that "the whole of one day out of every seven is too valuable to be spent in worshipping and meditation." I should not limit the keeping of Sunday to worshipping and meditation, but supposing it were thus to be limited, what more valuable than this would your correspondent suggest that man can do? Is it dancing and yielding to the "social stress?"

Keeping the Sabbath was evidently a part of Christ's religion, why should it not be of ours?

I am inclined to think that he takes the broadest view who considers the needs of his whole being, and that he who says it is nonsense to keep Sunday as a religious day, thus scoffing at the doing so, is in danger of becoming more bigoted than he who thinks of something else for Sunday beside pleasure in a social sense.

Yours truly,

November 19th, 1895.

AN ACKNOWLEDGEMENT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As I see that you, not without good reason, decline to publish any more correspondence on the subject of "Chinese Characters," I shall of course say nothing more about it. Your reason I suppose to be that; as those readers who may have taken an interest in the discussion of that subject, will have come to their own conclusions long before, it would be mere waste of space to insert any more arguments respecting pseudo-arguments. The only thing I would still beg of you, as a last parting favour; is to give me the oppor-

tunity of publicly acknowledging the throughout gentlemanlike manner in which that discussion was carried on on the part of the author, especially as evinced in the letter published in your issue of to-day. In this respect his "last word" will perhaps have been appreciated, even by those to whom the subject in itself was of little or no interest.

I remain, Sir, your faithfully,

P. EHMANN.

Tokyo, November 15th, 1895.

A BILLION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your to-day's issue, in speaking of the wealth of the six richest men on earth, after giving the names and their possessions in dollars you tot it up 1,080,000,000, and then say—"think of it;" "over a billion of dollars." I think you have fallen into a very common error. A billion is a million of millions, or thirteen places of figures instead of ten as you have erroneously stated. In fact there has not been a billion of seconds since the birth of Christ.

MAC.

November 14th, 1895.

(It depends upon the method of numeration. According to the French system, a billion is a thousand millions; according to the English, a million millions. We follow the French, or metric, system, whenever possible.—Ed. J.M.)

AUSTRALIA AND JAPAN.

BY JOHN PLUMMER, M.J.S.

Sydney, October 12th.

Although the provisions of the Anglo-Japanese Treaty have been for some time under the consideration of the various Australian Governments, there is a strong unwillingness on the part of each to take individual action, and recently Mr. G. H. Reid, the premier of New South Wales, received the following telegram from the Premier of South Australia:—"It occurs to us that Australasian relations with Japan are of such importance that it is desirable that they should be discussed by a conference of representatives of the Australasian Governments with a view to united action. We will be glad to hear if New South Wales will be able to take part in the suggested conference, and, if so, what time and place will best suit you. We think the Japanese Treaty might well be a federal question, and that the influx of Japanese into Northern Australia requires prompt federal consideration. We will esteem your early reply a favour. We are communicating with the other Australasian Governments." In reply, Mr. Reid stated that there could be no objection to the proposed conference, but, in his opinion, the matter was not one of great urgency, and might be effectually discussed when the different Australian Parliaments were in recess. Sir Edward Braddon, the Tasmanian premier, replied to the effect that his Government would be happy to join the proposed conference, considering that it was fully justified by the possibilities of a wool trade with Japan. The other colonies have answered in a similar spirit, but it is doubtful whether the conference will be held before the early part of next year. Hobart will probably be selected as the place of meeting. Meantime, the question is beginning to attract the attention of the colonial parliaments, and a few nights ago, in the New South Wales Legislative Assembly, one of the metropolitan members, Mr. Hogue, asked whether the New South Wales Government had received a communication, inviting them to take concerted action with the other colonies in regard to the commercial treaty between Great Britain and Japan. The subject of the treaty was to extend the trade relations between the mother-country and Japan; and while it would be well if the trade of the colony could be extended to that rising country, he was of opinion that they might have to pay too high a price for it, especially if the condition was to be free access by the Japanese to the colony. In reply, the Colonial Secretary said that nothing had been done in the matter. Commenting on this, the Sydney *Evening News* says,—"New South Wales is ready to deal with the question on its own part, but this will be very little use if Japanese are allowed to swarm into other parts of the continent, and the inducements towards allowing them so to swarm are of such force that it is possible that a pro-Japanese cry might be raised by, say, the same sort of people as have in Queensland succumbed to the temptations to employ Kanaka labour. The Japanese side of the argument was, when the treaty was published, stated with much ability by the London *Times*, stated in a way well calculated to appeal to 4,000,000 Australians growing more wool and more mutton than they know what to do with, and raising silver which they would gladly dispose of at a fair price to the 40,000,000

Japanese, who have been silver users from time immemorial, and are just beginning to awake to the comforts of wearing wool and the joys of eating mutton. According to the London *Times*, the Japanese Minister for Agriculture was thrown into an ecstasy by learning that mutton could be produced at 1½d. per lb. He at first would not credit the good news. The Japanese, added a *Times* writer, "regard mutton as one of their greatest luxuries; they also want wool, leather, and raw sugar." The idea of 40,000,000 of people regarding mutton as a luxury is one that will appeal pleasantly to the ordinary Australian mind. But there is another side to the picture. Japan, if willing to import mutton, will probably be anxious to export labour. The 40,000,000 people who have hitherto not had mutton enough to go round must be pretty crowded, and some of them who have not hitherto been able to get mutton may be desirous to emigrate to the land whence mutton comes, instead of waiting for mutton to come to them. This view about the danger from the surplus of the 40,000,000 people is the one we have held all along, and which we continue to hold, despite the recent interestingly stated views of Mr. Villiers on the subject: Everyone knows the trouble that the United States have had, and still are having, with imported non-European races, everyone knows how almost impossible it is for a working man, except a very skilled one, to compete in South Africa against the indigenous Kaffir element; everyone knows our own troubles here with the Chinese. One great advance that Australia has enjoyed is that it never had a native black race capable of pauperising the labour market. That advantage it would throw away if it allowed a yellow race with a strong Government behind it to establish a footing in force. The evil would be far worse than any native problem that has confronted other colonies. No new market for wool and mutton would compensate for it. If Australia got tired of the Japanese it could not restrict their immigration as it has that of the Chinese. Even before the late increase of the Japanese Navy competent authorities thought that Australia and Japan were destined to become the two great naval powers of the Pacific. The encountering of the second naval power in the Pacific might in years to come be so tough a job for local and Imperial forces that it will be well to keep clear of the causes of quarrel that would undoubtedly in time arise between a great Japanese cheap labour colony in Australia and the white workers. If Japan goes on progressing, and if Japanese be allowed here *ad libitum*, the question would doubtless some day come whether they or white men should own the country."

The above remarks very fairly represent the general tone of Australian opinion in the matter, but the other side is represented in a letter published in the same paper, in which the writer, alluding to some remarks made by Mr. F. Villiers to the effect that the racial question would not arise in Australia, as the Japanese immigrants would bring their wives with them, says:—"No doubt five or six millions of the surplus population of Japan (wives included) would be very glad of the opportunity of emigrating here, but I think Mr. Villiers has mistaken the racial question. Surely it lies not so much in the Japanese being absorbed by the inhabitants of this country (although this did not happen in the case of the Chinese; who did not bring their wives), as in the possibility of Japanese emigrants flooding the country until they form the largest part of the population, and by keeping themselves a distinct and separate race, become the dominant people in Australia. Already in Thursday Island they are ousting the white population through being able to obtain cheap labour from Japan. The result of the opening up of the country, especially Queensland, of which Mr. Villiers speaks, would be the formation of an entirely distinct Japanese colony, and their energy and activity being known, it is to be presumed that where they obtained an inch they would take a yard. The cry of Australia for the Australians may seem selfish to people of Mr. Villiers' opinions, but with the example of America before us, where the question of colour occupies such a prominent place, and what they are to do with negro and the Chinaman is pressing for attention every day, and leading to the racial riots of which we often hear, it is questionable whether the suggestion that was made some time ago should not be carried out, namely, that the colour line be all round Australia, three miles from the coastline. We can see how the Chinaman has driven out the farm labourer from California, and if the Japanese ever started emigration to Australia, there is a vague possibility of the suggestion that Japan should annex Australia being carried out. I think the majority of Australians are of the opinion that the Asiatic, no matter

how energetic he may be, should be excluded, and Mr. Villiers's impression that it would be well for England to ally herself to Japan and offer her facilities for populating Australia with her surplusage, will not alter their opinion on the matter. The Asiatic question is the most pressing reason why the federation of Australia should be proceeded with, in order that the Federal Government should settle the matter once for all."

The *Queenslander* tells us that "the Japanese at Thursday Island are still in a tremendous ferment over their club. They are keeping the *Torres Straits Pilot* busy with their letters and advertisements; and now the latest development is the appearance of 'The Japanese Club,' with Mr. T. Satow, LL.B., as president. Mr. Satow, it will be remembered, was declared to be an enemy by a majority of the Thursday Island Japanese. He was deposed as president of the original club—during his absence in Japan—and new officers were appointed amidst much oburgation and dust. All this ran into money for advertising, to say nothing of ink for extensive murders of the Queen's English; and at this distance it looked very much as if the sea about Torres Straits would soon be dyed a reddish-blue-black with spilt blood and wrecked ink-pots. So there are two clubs now; both fairly heavy for use in a row. Naturally the large figured advertisement of Mr. Satow's club has roused the enemy. Be it observed that one side uses very good English—Mr. Satow and his satellites have evidently studied the language to some purpose; while the other simply revels in broken-backed sentences, mangled phrases, and long-tailed participles and adjectives wrongly placed. The following is the beginning of a protest of certain Japanese against the new club:—"On the June of this year Mr. Torajiro Satow and others, assembling only several tens of Japanese, personified as the representatives to the members of the perfect Japanese Club, beyond their power and Mr. Satow becoming the President, Mr. Sakurai the Vice-President in ordinary, Mr. Hayashi the Secretary, giving the names of officers to us, had advertised this into your newspaper." That is the preamble. If our readers will stand on their heads the meaning may get clearer. The body of the protest runs:—"Having recognised this the false Club consisted of the most unreasonable meeting, unjust election and the action exceeding the power, we have repudiated his false Club entirely by its decision at the meeting of our hundred and several tens of men, holding the special general meeting of the Club by the vehement public opinion during the July last. On that occasion as they could not endure its assaults, Mr. Sakurai denominating as the agent of Mr. Satow, Hayashi and himself together, but the decision of the aforesaid general meeting, not regarding them as the officers of the Club from the first, rejected them immediately so that there was no reason to adopt them. Under such circumstances as we could not be silent in order to preserve our reputations so that he may have to utilise something with this, we hereby have to advertise the annihilation of his false Club and that we are not also its officers." Signed by eleven Japanese."

Here the matter ends for the present. Meanwhile both the Queensland and South Australian Governments are considering how far, if at all, Japanese immigration to the northern shores of Australia should be permitted. In the South Australian Legislative Assembly, on July 31st, Mr. Walter Griffiths, junior member for the Northern Territory, moved that no further licenses for pearl-shelling purposes be granted to Asiatics or their representatives. This was opposed by the South Australian Government, whereupon another member, Mr. Grainger, proposed as an amendment that only electors of the province should be licensed as pearlers. A further alteration, suggested by Mr. Batchelor, sought to make it compulsory that the divers, as well as the owners of the boats, should be electors. Before any decision was arrived at the debate was adjourned until this week. In the course of his speech, Mr. Griffiths affirmed that the Japanese were rapidly shouldering Europeans out of the pearl-shelling industry, and in support of this assertion the following telegram was received by the members for the Territory from Messrs. S. T. Brown, George McKeddie, and Lionel B. Treherne:—"Re Asiatic licenses, prompt action necessary stop influx Asiatic boats from Thursday Island. One boat arrived; reliable information received that 20 other Japanese owned boats starting for here immediately and others to follow later. Thursday Island experience shows European proprietors cannot exist in competition with these people; if no restriction same result inevitable here. If strengthen your hands all Europeans here will sign petition. Matter vital importance to the country." This telegram was handed to the Colonial Treas-

suror, and it was arranged that he should have a conversation on the subject with the two representatives of the Northern Territory, but it is doubtful whether anything will be done pending the holding of an intercolonial conference.

Local affairs, such as the startling developments in connection with the Dean case, have largely overshadowed outside topics, but public attention has not become diverted from the possibilities of Russian interference in Japanese and Chinese questions and the probable influence of the same on Australian interests. Among other papers, the Melbourne *Age* remarks:—

"China might have gone on for another thousand years in its old groove but for the disturbance caused by outside activity. The British, the Germans, the French, and the Americans have been successively worrying about trade and about missions. Japan revived the old war about Korea with such vigor that the giant Empire staggered under the well-directed blows, and finally, Russia comes in as the one particular friend on whom China is invited to lean. No one at St. Petersburg, we may assume, would pretend for a moment that the friendly offices of Russia to China are disinterested. Large accessions of Chinese territory may not be desired just now, but evidently the constant object of Russian solicitation, the acquisition of an open seaboard, is not lost sight of. The Japanese seem to have made up their minds that Russia will not be content with their evacuation of the Liaotung Peninsula and Port Arthur, but will finally insist upon their abandoning Korea in order that the Russians may take their place. Support is given to their supposition by the recent reinforcement of the Vladivostok garrison. Probably Japan will only retire from Korea as the result of an unsuccessful war with Russia, and even then it is quite likely that Great Britain will have something to say in the matter. Altogether there are the elements of a great international quarrel in the present state of affairs in the Far East."

The President of the Rockhampton (Queensland) Chamber of Commerce has received a lengthy communication from Mr. Douglas McTavish, who has been lecturing for some time on the subject of Japan and China, in reference to the advantages of trade with Japan. Mr. McTavish says:—"I may state at once, from personal knowledge acquired officially and authoritatively, that Japan's sole desire is to become a great commercial power. Public opinion, too, as expressed in all circles of society, and given utterance to by the native press, continually urges the extension of the empire's foreign trade, irrespective of war or any other influence; and the conquest of China, or the expansion of the power of Japan in China, is of secondary importance as compared with their designs, as well as their desire, to become an influential commercial country. In confirmation of this statement, I may adduce the fact that on the 7th of February of the present year the Diet—or Parliament—of Japan adopted the following resolution having reference to the extension of Japanese maritime communication. 'As it is essential to engage in the shipping business on those important routes—namely, Australian, European, and American, in order to develop the foreign commerce of Japan, competition must be stoutly and promptly met, and consequently it is essential that assistance be extended by the Government on account of such special routes. To open at once the three lines to Australia, Europe, and America, would require an outlay much larger than the resources of this country could at present afford. Therefore, the Australian line should be opened first. The House now suggests, that based on the foregoing considerations, the Government should complete a draft scheme and introduce it to the Diet for consent.' A Bill was accordingly prepared recommending the appropriation of 600,000 yen per annum—equal to £60,000—towards the immediate establishment of a 'Japanese-Australian service.' Now that the war has terminated—for the present at least—and the mercantile and the business portion of the empire have time to devote their energies and attention to the development, and the extension of its Pacific trade is Queensland's opportunity to secure a large share of that trade. The geographical position of this colony gives her an immense commercial advantage over the southern colonies of the Australian group, the first Australian port to touch at and the last to leave. Japan has never been keener or more actively and intelligently alive to what the people designate 'the maritime extension' and foreign trade than at the present time." After enumerating various Australian products for which a market might be found in Japan, Mr. McTavish says,—"Japan imports at the present time over £800,000 worth of woollen goods annually, and it goes without saying that Japan is in a position—with labour at from 2d. to 4d. per diem, unlimited

working hours, and cheap motive power—to manufacture successfully for outside markets. The prospects of Australian wool, therefore, in the markets of Japan, are, at the least, promising. Australia can never hope to become a manufacturing country under its present wage and labour regulations and conditions; but Australia is the raw material and prepared raw products supplier of many countries—and especially will become so of this eastern portion of the world. Australia can—I mean more especially Queensland—supply many products which Japan is now importing in increasingly large quantities each year, and in the manufactured production of which working hours and the rate of wages are not of much account, for in all these cases nature is really the chief factor. The sole consideration now in international trade, in these times of keen competition, is for Queensland to keep, or endeavour to keep, its trade with Japan as nearly evenly balanced as possible, otherwise the rates of freight will paralyze the enterprise, and prevent its expansion in due course."

Mr. McTavish gives a lengthy list of Japanese commodities for which a market could be found in Queensland, and declares that a mutual trade can be established without accepting the conditions of the Anglo-Japanese treaty, of which he speaks in somewhat unfavourable terms. "That treaty," he says, "however well it may suit Great Britain, and 'the island empire,' would be highly injurious to any colony accepting its terms, and we must not be willing to run risks, to which we are inevitably exposed, in order to gain the advantages of the Japanese markets. We can buy with the Japanese, we can sell with them, at a distance; but their free admission into Queensland must be resolutely opposed, and every Chamber of Commerce throughout Australia should debate the subject with that end in view. This question is one of vast importance and must not be postponed to the last moment, and then some hasty, ill-advised action be entered upon. There are too many Japanese in Queensland already, and many more manifest a strong inclination to come from their romantic ideas of what they call English liberty."

THE KOREAN COUP D'ÉTAT.

In the last number of the *Korean Repository*, we find the following editorial account of a part of the recent *coup d'état* in Söul:—

At the time of the celebration of the mid Autumn Festival a row arose between certain troops in Söul and the Metropolitan police forces. On October 6th, a further encounter occurred which resulted in the defeat of the police forces, and the following day the patrol boxes and police stations were deserted, the city being virtually in the hands of the military. The troops who were raising the disturbance are a regiment which has been organized recently under the auspices of Japanese military officers, largely out of material which had been already trained under foreign auspices and had reached a degree of efficiency. They number over 1,000 men, and were in command of Colonel Hong, who, in 1882, rescued Her Majesty the Queen amid circumstances of the greatest danger, and being regarded as a loyal adherent of the Royal Family had risen to this high and responsible position. The trouble between these troops and the police naturally gave rise to some concern, but no inkling of the real truth transpired outside the ranks of the conspirators.

The Royal Palace was in the hands of the old guard under Colonel Hyön, who, in 1884, when Her Majesty's life was endangered, had assisted her to escape in a similar manner to Colonel Hong. This Palace Guard, however, had for a few days past had its strength shamelessly sapped as if in preparation for an evil deed. Men were withdrawn from the Palace and their numbers greatly reduced. Arms and accoutrements were taken away and inferior and useless weapons substituted, and the supply of ammunition reduced to *nil*. Thus His Majesty's defences were withdrawn at the time he needed them most. On the afternoon of the 7th the approaches to Her Majesty's quarters were observed to be open and unguarded—a most unusual occurrence. Outside the Palace bodies of the troops who had been rioting were observed moving about, and marching from place to place in the vicinity of the Palace. Though no special significance was attached to it, the fact was noted and commented on inside the Palace.

The Palace is situated in the northern part of the city and consists of a large area surrounded by a fine wall 12 feet or so high inclosing a perfect labyrinth of buildings. About one third of a mile in from the main entrance, measuring in a direct line, lies a small lake or pond, back of which is a

foreign residence often occupied by His Majesty, whose usual apartments are alongside but just beyond. Her Majesty the Queen's apartments are to the east of these buildings but immediately adjoining, and have still further to the east a pine grove of about five acres. Facing the lake but to the left of it are the quarters of the officers of the Royal Guard, all these buildings are close to the western outer wall of the Palace, which is pierced by a gate 200 yards below the lake, this gate being guarded by a squad of troops.

The approach to the main entrance to the Palace is *via* a magnificent road a third of a mile long, 300 feet wide and flanked on both sides by the quarters of the various ministries of State. As you come out of the Palace, immediately to the right are large barracks now occupied by a battalion of Japanese troops.

Throughout the night of the 7th inst., some uneasiness was felt in the Palace, for the insurgent troops continued marching and countermarching until they could be found on all sides of the Palace. At 4 a.m. on the 8th, came the first serious alarm. The cry was raised that the Palace was being attacked, and the officers of the Palace Guard rushed from their quarters, most of them to His Majesty's residence, some of them to the various posts. Nothing, however, transpired at this time, but a body of Japanese soldiers were discovered outside the west wall of the Palace in the vicinity of the Gate near the little lake. The condition of affairs in the meantime was communicated to Col. Hong, who mounting his horse, hastened from the Palace to notify the Minister of War. When Hong reached the Palace on his return he found the main entrance surrounded by his troops massed in front of the Japanese barracks. What happened we do not as yet know in detail. The Colonel ordered the troops to disperse or return to their barracks. He was fired at, eight shots taking effect, and also cut up in a horrible manner with swords.

This was the signal for a rush on the Palace. The Gates were forced, the Guards fleeing without discharging a gun, and the white coated insurgent soldiers who had surrounded the Palace swarmed in from every direction. A small squad of Japanese troops, numbering possibly 15, soon made their appearance on the west side of the little lake close to His Majesty's quarters, and before them came a fleeing rout of Guards, Palace servants, and runners,—in fact the rout came flying from every direction. An attempt was made to rally the fleeing troops and about 120 massed themselves in a small alley-way. But they were too excited and scared to maintain order or to pay attention to commands. In the confusion, one soldier in loading his rifle had it go off accidentally, and this was the signal for a general fusillade, the soldiers firing promiscuously, the shots taking effect only on their own men, 7 or 8 of whom were either killed or wounded. Soon after the appearance of the Japanese troops on the west side of the lake another company was discovered approaching along the east side of the lake, followed by the rioting troops who now made their appearance for the first time and were accompanied by Japanese in civilian dress, many of whom were armed. Reaching the entrance to the immediate quarters of His Majesty, the Japanese troops took possession, stationing guards of their own men at all the approaches to His Majesty. The white coated Korean troops were drawn up in front of the enclosure containing the buildings in which the King was present, but were excluded.

Just at the beginning of the alarm, sounds as of the smashing in of a gate were heard in Her Majesty's quarters, and later on the reports of two shots were heard, but as to what really transpired, there are many conflicting reports. But a ready entrance had been found and a mad search for Her Majesty, the Queen, began. Ruffians, probably *soshi* who seemed to have joined the insurgent troops, led the way. The report is that they seized women by the hair of the head and dragged them about to make them lead the way to Her Majesty. But the bloody work was done in one of those two storied structures where it is now admitted the Queen had taken refuge. Here was found the Minister of the Royal Household, Yi Kyöng-jik, who was cut down and killed. In the upper storey a number of ladies were found, and the first one to be seized was the Crown Princess, who was dragged about by the hair, beaten, wounded with a sword, and thrown down the stairs. It was difficult to discover which one among the women was the Queen and in the hope of making sure work four women were brutally murdered. A Palace maid says one of them was Her Majesty, and that she was knocked down, trampled and jumped upon, and finally dispatched by the sword. For hours, even days, after the shocking news reached the foreign community, it was refused credence. It seemed too inhuman and

devilish to be true. But this hope has proved baseless and it is now, Oct. 14th, generally believed that Her Majesty the Queen is no more.

Some time during the night, the guard of the Prince-Parent (the Tai Wön-kun) at the river were startled by a call to open the gates and admit a visitor. This was refused, when without any more ado a window was burst in and Japanese *soshi* sprang in amid the frightened guard. These latter were overpowered and an entrance forced in to the Prince-Parent's apartments. He soon appeared, accompanied by his visitors, and the rest of the party having deprived the police guard of their uniforms, dressed themselves in them and started for Soul. When they reached the Palace they were further accompanied by Japanese regulars acting as a guard of honour. The Prince-Parent was then installed in power and the two following proclamations posted in public places.

The first Proclamation reads as follows:

"At present the national power is endangered and the hearts of the people dissolve through the presence in the Palace of a crowd of base fellows. The abuses of the past are being revived. The laws are in disorder and the dignity of His Majesty is violated. The government stands in imminent danger and the people are in distress like unto a furnace fire. So the National Grand Duke is returned to power to inaugurate changes, expel the base fellows, restore former laws, and vindicate the dignity of His Majesty. He returns to power to insure national peace, and to quiet the alarm of the people. This is all; so this proclamation is published. Therefore all are exhorted to follow their ordinary vocations and feel no alarm.

8th Moon, 20th Day, (Oct. 9th).

Signed—Committee on National Independence.

The second Proclamation reads:

"Nowadays low fellows interfere with the royal glory, drive away men of integrity, substituting inferiority, so that that which would benefit the nation fails on the path to accomplishment. A nation of 500 years is run into danger in a single morning. I was born of the Royal Family and cannot bear the sight of such doings. I have now entered the Palace to aid His Majesty, expel the low fellows, perfect that which will be a benefit, save the country and introduce peace. Everyone should attend to their usual affairs and feel no alarm. Those who now interfere with me will have cause to repent of it.

Signed—National Grand Duke (Prince-Parent.)

His Highness still remains with His Majesty to help him guide affairs at this juncture.

We were awakened by the report of firing in the direction of the Palace about five a.m. This was the useless and disastrous fusillade of the remnant of the Palace Guard that attempted to rally near His Majesty's residence. We hastened to the vicinity of the Palace and found the great street leading to the main entrance crowded with people numbering fully 10,000. The great front Gate was guarded by Japanese troops, and more could also be discerned inside. A surging crowd of Koreans could be seen at the far end of the great rectangle just inside the Great Gate, and among them were some Palace women. Only two were permitted to pass out and they were wounded Koreans who were carried out by their fellows. About seven o'clock the guards were changed, the white coated fellows who had by this time cleared the Palace of the old guards, taking the place of the Japanese at the Gate, though the latter remained inside the Palace.

About 9.30 a.m. as we turned into the great Palace road leading to the main entrance, on a second visit to the scene, the crowd of Koreans appeared not to number more than 4,000. The first object to catch our eyes was a Japanese coolie dragging a cart on which was a mass covered with matting. Four infantry men with fixed bayonets guarded it, while just behind marched a platoon of infantry in heavy marching order. It was proceeding towards the southern part of the city. From time to time small bodies of Japanese troops passed us marching from the direction of the Palace, and when we arrived at the Main Gate we discovered that some of them came from the interior of the Palace, while others came from the barracks above alluded to as occupied by Japanese troops. The centre and the east entrance of the great Palace Gate were barricaded; at the west entrance a double line of the white coated Koreans kept guard with fixed bayonets. A constant stream of straggling Koreans was pouring out. They were probably the last of the old Palace Guard. They had thrown off their uniforms and hidden their arms; everyone of them as he came to the Gate was seized and searched before he was permitted to pass out.

The first of the diplomats to arrive at the Palace was Viscount Miura, who was soon followed by Mr. Waerber and Dr. Allen. They

all had an immediate audience with His Majesty, who was found in company with the Prince-Parent. Throughout the morning of the 9th nothing of note happened. Rumours were constantly flying about, but the Korean people seemed to be impervious to any impression one way or the other. When interrogated they said it was a quarrel of the aristocracy, some of whom were getting killed and many others were fleeing,—it did not concern the people. Yi Wan Yong, Minister of Education; An Kyöng Su, Minister of War; and Yi Yun Yong, Minister of Police; were dismissed from their posts, and the two latter ordered to be arrested. An Kyöng Su was found and confined to his house; Yi Wan Yong escaped. For the offices thus made vacant Cho Heni Yöon was returned to the War Ministry, and also ordered to act as Sup.-General of Police. Sö Kwang Pöm, Minister of Justice, was ordered to act also as Minister of Education. A number of high officials sought safety in flight.

The *Official Gazette* of Oct. 11th, contained the following edict of deposition of the Queen. It is based on the supposition that she is still alive, but is unsigned by His Majesty. When this paper was presented for Royal signature, the king refused to touch it, very properly affirming he would rather have his hand cut off than affix his signature to such an edict.

EDICT.

It is now thirty-two years since we ascended the Throne, but Our ruling influence has not yet extended wide. The Queen Min introduced her relatives to the Court and placed them about Our person, whereby she made dull Our sense, exposed the people to extortion, put Our government in disorder, selling offices and titles. Hence tyranny prevailed all over the country and robbers arose in all quarters. Under these circumstances the foundation of Our dynasty was in imminent peril. We knew the extreme of her wickedness, but could not dismiss and punish her because of helplessness and fear of her party.

We desire to stop and suppress her influence. In the Twelfth Moon of last year We took an oath at Our Ancestral Shrine that the Queen, and her relatives and Ours should never again be allowed to interfere in State affairs. We hoped this would lead the Min faction to mend their ways. But the Queen did not give up her wickedness, but with her party aided a crowd of low fellows to rise up about us, and so managed as to prevent the Ministers of State from consulting us. Moreover, they have forged Our signature to a decree to disband our loyal soldiers thereby instigating and raising a disturbance, and when it occurred she escaped as in the Im O year. We have endeavoured to discover her whereabouts, but as she does not come forth and appear, we are convinced that she is not only unfitted and unworthy of the Queen's rank, but also that her guilt is excessive and brimfull. Therefore with her We may not succeed to the glory of the Royal Ancestry. So we hereby depose her from the rank of Queen and reduce her to the level of the lowest class.

Signed by

Yi Chai Myöon, Minister of the Royal Household.
Kim Hong Chip, Prime Minister.
Kim Yun Sik, Minister for Foreign Affairs.
Pak Chöng Yang, Minister for Home Affairs.
Shim Sang Hun, Minister of Finance.
Cho Heni Yöon, Minister for War.
Sö Kwang Pöm, Minister for Justice.
Sö Kwang Pöm, Acting Minister for Education.
Chöng Pyöng Ha, Vice-Minister, for Agriculture and Commerce.

This edict has been revoked, however, by a further one issued the following day in which Her Majesty was "raised" to the rank of Concubine of the First Order. This was explained in the edict to be issued out of pity for His Royal Highness the Crown Prince, and as a reward for his deep devotion to his father.

Upon the news reaching Japan, the Imperial Government immediately and emphatically disavowed all knowledge of and connection with these deeds. It appointed Mr. J. Komura, Director of the Diplomatic Bureau, and also one other gentleman special commissioners, to proceed to Korea and with Viscount Miura thoroughly investigate the whole matter. The two Commissioners from Japan reached Soul the evening of October 15th. The Japanese Consular authorities have caused the arrest of fifteen *soshi* and hold them for investigation. An exodus we understand, under the circumstances, of certain characters, has taken place. It is hoped that none of the guilty are among them.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, November 14.

The Porte is calling out more reserves, and intends to occupy every strategic point in Asia Minor, and form two columns for the suppression of disorders.

The authorities at Woolwich have ordered the despatch to Accra of material for the Ashantee Expedition.

Later.

The Italian Squadron has been ordered to the Levant, possibly to join the British Fleet now at Salonica.

Kobe, November 15.

The steamer *Bjorg* has been floated, and, being practically uninjured, she proceeded today on her voyage to Vladivostok.

Hakodate, Nov. 21, 9 a.m.

A fire broke out here at 2 o'clock this morning and twenty houses were speedily burnt, including a *Kwankoba*. No casualties are reported, but many persons had narrow escapes.

Kobe, November 21.

A collision occurred on Tuesday evening between the Nara train and the Fushimi electric car at the level crossing on the Takeda-road, near Fushimi. Several passengers were killed and many injured.

(FROM JAPANESE PAPERS.)

Osaka, November 20.

Rumour has it that orders were given on the 18th inst. to the Commander-in-Chief of the Japanese Forces in the occupied districts and the Commander-in-Chief of the Fourth Army Division, to withdraw their troops from the Liaotung Peninsula.

Kyoto, November 20.

The 5.59 p.m. train from Momomi on the Nara Railway, collided with an electric car on the 19th inst. at the level crossing at Takeda, Kii District. The electric car was smashed to pieces, and three passengers were killed, five severely and 15 slightly injured.

Söul, Nov. 20.

An armed mob has been behaving in a violent manner at Kang-hwa-do and Hwang-ju, Kyong-ki-do.

Hiroshima, Nov. 21.

Mr. Masujima Rokuichiro called yesterday on Viscount Miura, Messrs. Yamada Ressei, Tsukinari Mitsuru, Kikuchi Kenzo, Sase Kumatsutsu, and Shiba Shiro, and will leave for Tokyo to-morrow.

The preliminary examination of the suspects will conclude in a few days. Messrs. Tanaka Kenzo, Shiba Shiro, and many others will be released.

Shimonoseki, Nov. 21.

Three Russian men-of-war arrived here this morning from the west, and left for the east at 2.25 p.m. It is supposed that they are proceeding from Vladivostok to Kobe, and called at this port merely to coal.

Saga, Nov. 21.

The special session of the Prefectural Assembly has been suspended by the Governor.

Hiroshima, November 21.

Mr. Hirayama Katsukuma, who was arrested in Tokyo, and has since been imprisoned here on suspicion of being connected with the Korean affair, was released from confinement last night.

Hakodate, November 21.

A destructive fire broke out in a *Kwankoba* at Nishikawa-cho at 2 o'clock this morning, by which 131 houses, and 10 sheds were destroyed, 4 houses and 4 godowns being damaged. The fire was extinguished at 4 o'clock.

Osaka, November 22.

Messrs. Tanaka Ichibei and Miwa Chobei have resolved to contest the election of a successor of the late Mr. Awaya Shinazo, M.P. for the first district of this city.

A report has been received to the effect that the Japanese garrisons in the Liaotung Peninsula have begun to withdraw from the north-eastern boundary, the transfer of the territory to the Chinese commissioners having been made in that portion of the Peninsula. The troops are to be withdrawn without effecting a formal transfer of the Peninsula if the Chinese officials do not arrive at Haicheng or Fenghwang by the end of this month. The troops will leave on the 22nd inst., and reach Chinchow on the 13th or 14th prox. The staff of the Fourth Division leaves Haicheng on the 27th inst., and is expected to arrive at Chinchow on the 20th instant.

Shimonoseki, November 22.

Count Inonye, Mr. Nagasaki, private Secretary of the Minister of the Imperial Household, and party arrived here at 2 p.m. to-day by the *Nanyetsu Maru*. They put up at the Dai-kichiro Hotel.

Colonel Cockerill, correspondent of the *New York Herald*, arrived by the same steamer, and put up at the Fujino Hotel.

Hiroshima, November 22.

The *Matsuyama Maru* and *Taiwan Maru*, which were expected to arrive at Ujina yesterday afternoon with the Guards, have not been sighted yet, and fears are entertained of their safety.

Matsuyama, Nov. 22.

The Directors of the Nanyo Railway Company have decided to extend the company's line to Uwajima.

Moji, Nov. 22.

A Russian torpedo-catcher left here last night for the east.

CHESS.

NOTES BY JASNOGRODsky.

- (a) Lipke's variation; it prevents Kt to K 5.
(b) Not good. Black's intention was to force White to move Kt (Q 2) to B 3, followed with B to Q 3.
(c) Probably best.
(d) Preparation for P to K B 4, and for subsequently bringing his Kt to K 5. Besides, this is a little trap; if B takes P ch, K takes B; Kt to Kt 5 ch, K to Kt sq.; Q to R 5, Kt to B 3, and Black wins a piece.
(e) Preparing P to K Kt 4 after Kt to K 4.
(f) Better than B P takes B.
(g) Necessary to win time for the intended move, Kt (R 3) to B 2.

(h) The exchange of bishops is forced, otherwise Black's K P is lost.

| 41—B to K 3 | 41—Kt to Q 3 |
| 42—B to B 2 | |

Adjudicated a win for Mr. Jacobsen (k).

(a) We approve of this defence, which was introduced by Steinitz against Wisker in 1868.

(b) Inferior to 8. P to Q 4, to which Black replies with 8. P takes P (best), 9. Kt to K 4! with an even game.

(c) The right square is Q B 4 with the better position.

(d) He should have brought the Q home.

(e) Weak compared with castling, which would have given Black the advantage.

(f) Forced; any other move would give Black a very bad game.

(g) K should have gone to K 2 to protect the Kt next move.

(h) White misses his way; here R to B 5 must win at least a P.

(i) Black defends himself very cleverly.

(j) If B takes Kt Black should win by his majority of pawns on the K's side.

(k) The ending has been played with great accuracy by Mr. Jacobsen.

25—Q to K 5
26—Q to Q 5 ch.
27—R to Q B sq.
28—R takes Kt ch.
29—Q to Q 7

White resigns.
(a) Up to White's seventh move the position is identical with the French defence game in the match Wallace v. Crane. The former now played 7. P to Kt 3, which we consider inferior to casting.

(b) Here 9. Q to R 3 is to be preferred, for the reason that White can presently play P to Kt 4 with advantage.

(c) Premature. He should have castled K R.

(d) White errs in trying to preserve his Pawn position. His proper game was 15. P takes Kt with a promising King's side attack.

(e) Well played.

(f) Badly judged. The P at B 7 was protection from attack. The K should have moved to B sq.

37—Q to R 2
38—P takes R
39—P takes R

(a) Mr. J. D. Séguin (*Times Democrat*) says that this variation of the Zukertort opening is the invention of Mr. O. M. Tennison, of New Orleans. It may be remarked that the Centre Counter Gambit 1. P to K 4, P to Q 4 may be similarly converted by 2. Kt to K B 3, P takes P 3. Kt to Kt 5.

(b) The tempting line of defence by 3. P to K B 4 is wholly unsound, e.g. (a game won by the inventor); 3..... P to K B 4, B to B 4, Kt to K R 3; 5. Kt takes R P, R takes Kt; 6. Q to R 5 ch, K to Q 2; 7. Q to Kt 6, R to R sq; 8. B to K 6 ch, K to B 3; 9. B takes B dis ch, Q to Q 3; 10. Q to K 8 ch, K to Kt 3; 11. Q to R 4 and Black resigned. In a match between Messrs. Miniat and H. Jones at Manchester, 1891, exactly the above moves were played except that from the last move the continuation was: 11. P to Q R 4, P to R 3; 12. P to Q 3, P to B 4; 13. Kt to Q 3, K to B 2; 14. Kt to B 4, Q to Q sq; 15. B to K B 4 ch, and Black resigned. The last edition of Freeborough's Chess Opening points out that after 3..... P to K B 4; 4. B to B 4 if 4. Kt to K B 3, then 5. B to B 7 ch, K to Q 2; 6. Kt to K 6! wins (Séguin).

(c) To preserve the pawn, players may be advised to play 4. B to K Kt 5; 5. B to K 2, B to K B 4.

(d) Clearly the sacrifice of B or Kt either by B takes K P or Kt takes B P would be good. In the former case if P takes B, Kt takes K P attacking the Q and threatening Kt takes Kt P ch with a good attack left. In the latter case if Black replies K takes Kt, then Q takes K P ch, and it will easily be seen that Black must lose after Q to B 7 ch.

(e) White now gets his bishop into a splendid attacking position, and that attack proves irresistible, notwithstanding the pawn minus.

(f) This weakening move seems necessary in view of the fact that White threatens immediately R to R 3, followed by Q takes R P ch.

(g) Here the real threat is R (B sq.) takes Kt followed by R to Kt 6, a pretty finish if it had not been prevented.

(h) A very well played game (on both sides) is finished by a pretty move which leaves Black helpless.

(i) It may not be so clear that White threatens not merely to win the Queen, which is a mere detail, but at once Q to R 8 ch, followed by R takes Q mate.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health
for all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribu-
aries in Abyssinia," says—"I ordered the dragoman Mahomet
to inform the Fakir that I was a Doctor, and I had the best
medicines at the service of the sick, with advice gratis. In 1
short time I had many applicants, to whom I served out a
quantity of Holloway's Pills. These are most useful to an ex-
plorer, as, possessing unmistakable purgative properties, they
create an undeniable effect upon the patient, which satisfies
them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations
of all kinds. It acts miraculously in healing ulcerations, curing
skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels
in China, published in 1871, says—"I had with me a quantity of
Holloway's Ointment. I gave some to the people, and nothing
could exceed their gratitude; and, in consequence, milk, fowls
butter, and horse feed poured in upon us, until at last a tea-
spoonful of Ointment was worth a fowl and any quantity of peas-
and the demand became so great that I was obliged to lock up
the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughout
World. May 1st, 1890.

THE PROCEEDINGS

OF THE

IMPERIAL JAPANESE DIET

IN BOOK FORM.

YOKOHAMA: SATURDAY, NOV. 30TH, 1895.

BIRTH.

On the 26th inst., at the Royal Naval Hospital, the wife of Surgeon MATTHEW O'REGAN, R.N., of a Daughter.

DEATH.

WARD-COLE.—On the 20th of October, at St. Ninian's, Bay Street, Brighton, Victoria, Australia, AGNES BRUCE-COLE, second daughter of the late Hon. George Ward-Cole, Commander in the Royal Navy, Member of the Executive and Legislative Councils of Victoria, Australia.

SUMMARY OF NEWS.

MARQUIS ITO is still at Oiso, where he is being treated for influenza.

THERE have been several small fires in Yokohama during the week.

THE coalition between the Cabinet and the Liberals is gaining favour in the provinces.

The National Unionists' position in the matter is a subject of much comment.

A long-continued earthquake was felt in Yokohama on Thursday morning.

A RACE meeting at Kamakura last week was productive of some good sport.

THE Crown Prince is to spend the winter at Hayama, Kanagawa Prefecture.

OVER 500 gendarmes left Tokyo on the 26th inst. for Ujina, whence they proceeded to Formosa.

COUNT OKUMA, the Progressionist leader, is confined to his residence through indisposition.

THE twenty-third of November being the anniversary of the *Shinjosai*, was observed as a national holiday.

ST. ANDREW'S BALL, given this year on St. Andrew's Eve, passed off with much *éclat* in Yokohama.

IT is contemplated to establish a commercial and agricultural school at Akashi, Hyogo Prefecture.

PRINCE WI-HWA, of Korea, is still in Tokyo. He passes the time in visits to Government offices, etc.

THE students of the Wakayama Ordinary Normal School left the institution in a body on the 20th instant.

A BOAT was upset off Naoyetsu, Niigata Prefecture, on the 20th inst., and seven out of twenty-six passengers were drowned.

THE total amount of property now attached by the Court, in connection with the Tokyo Waterworks scandal is *yen* 1,425,700.

MR. MUTAGUCHI, President of the Hantan Railway Co., has resigned, his position being taken by Mr. Kajima Hidemaro.

THE transport *Sokoku Maru* left Kelung for Ujina on the 22nd instant with the final detachment of the Imperial Guards on board.

MARSHAL MARQUIS YAMAGATA, while conversing with Viscount Shinagawa, is said to have stated that he has no intention of entering the Cabinet.

IT is stated that Count Orfini, the Italian *Chargé d'Affaires*, has been promoted to Envoy Extraordinary and Minister Plenipotentiary.

ANOTHER attack has been made upon the Palace at Söul by dissatisfied Korean soldiers. It was speedily put down and the ringleaders arrested.

TOKYO residents are contemplating the holding of a grand war celebration, as nearly all the soldiers belonging to the Tokyo Divisions have returned to the capital.

MR. DE SPEYER, the newly appointed Russian Minister to Korea, arrived at Yokohama on the 26th inst. by the French steamer *Saghalien*, and at once proceeded to Tokyo.

THE Miyagi Prefectural Assembly has decided to abolish the Ordinary Female Normal School, and to devote the money set apart for it to extending the Boy's Normal School.

No. 1 dock at Yokosuka, which is now occupied by the *Chin-yen*, will shortly be vacated to receive the *Yoshino*; the repairs to the bottom of the former are now completed.

DR. PAUL RITTER, acting Swiss Consul-General at Yokohama, having been promoted to the position of Consul-General, the Japanese Government has issued an exequatur acknowledging the promotion.

FIVE local political associations, named the *Kwanto-kai*, *Tohoku-kai*, *Hoku-shin*, *Hashu-*

kai, *Tokai Jiusshu-kai*, and *Kwansai-kai*, belonging to the *Jiyu-to*, have acquiesced in the new policy of the *Jiyu-to* to support the Cabinet.

A PECULIAR case was before the United States Consular-General Court this week, in which a plaintiff sued to recover goods, or their value, alleged to have been parted with unlawfully by his landlord. In the opinion of the Court plaintiff did not establish his case, and the suit was dismissed with costs.

VICE-ADMIRAL ARICHI and Vice-Admiral Baron Inouye have been decorated with the Order of the Rising Sun, and the former has received an annual pension of *yen* 600, and the latter *yen* 500, in recognition of their distinguished services during the late war.

REUTER telegraphs:—The Congo Free State has paid to Great Britain six thousand pounds as an indemnity for the murder of Mr. Stokes. An American squadron is going to the Levant. Lebanon is in a restless state, and the Mussulmans in Damascus are equally incensed against the Christians and the impotent Government. The garrisons on the Dardanelles have been doubled, and a look-out and search-light have been placed on the island of Tenedos. H.I.M. the Czarina has given birth to a daughter, and both are doing well. The religious racial movement in Turkey is growing beyond the control of the officials, and the Christians everywhere in Armenia are in the greatest danger. There have been massacres in Kharput and the number of victims is said to be eight hundred. The buildings belonging to the American Mission have been burned down, but the missionaries have escaped. The massacres continue at various points in Asia Minor. The Armenian agent in Constantinople has wired to London imploring for help to end the carnage which is going on. There has been a great Arab rising at Yemen, where forty-five thousand Arabs armed with Martini-Henry rifles, have defeated the Turks three times. The situation with regard to Turkey on the 26th of this month was said to be generally improving. Armenia is quiet, and there is a better feeling on the bourses.

BUSINESS generally is quiet in Imports. Only a moderate enquiry has been made for Yarns, while Piece-goods, both Cotton and Woolen, are very dull. Dealers in Metals hold off the market, though prices are unchanged, except for Wire Nails and Tin Plates, which are decidedly lower without exciting much demand. Kerosene is strong, and there are no sellers at recent quotations. The fire in the Baku district has raised values here, and buyers, who recently had prices down to a low figure, but refrained from dealing, have now lost their chance, for no doubt Oil is wanted. The Sugar market is active, and supplies of Brown being on a small scale, prices are advancing. Whites are in sympathy, and Refined follows suit, large sales of both having been made at a fresh advance. There is very little doing in Raw Silk, and though prices are lower the staple commands but small attention. With arrivals continuing, the stock is on the increase, and is now more than 17,000 piculs. There has been a small business in Waste for less money, and holders are desirous of moving the continually accumulating stock. Though the Tea trade is rapidly approaching the end, there has been rather more leaf taken during the past week, but the total does not amount to much. The export, however, included another shipment to the Straits. Exchange has been reported "unchanged" or "steady" most days during the past week, and there is no alteration to report at the close.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The political situation naturally engrosses journalistic attention. The rumours prevailing in the capital having been noticed in these columns from time to time, need not be again detailed. To many persons the situation evidently looks perplexing, and wears an aspect of decided mystery. For our own part, however, we find no difficulty in believing that the temporary deadlock is due simply to the Premier's persistent desire to retire from office on account of failing health. Marquis Yamagata and Count Kuroda have been consulted about the matter by the Emperor, but they are believed to have expressed their conviction that the juncture imperatively demands Marquis Ito's continued presence at the head of affairs. Such is undoubtedly the opinion prevailing among the statesmen of the older generation, and the Premier has been strongly pressed by the Sovereign to reconsider his resignation. In deference to the Emperor's earnest message, Marquis Ito has consented to return to the Capital and receive the Imperial commands in person, a promise he is prevented by influenza from fulfilling immediately. Thus stands the matter, and although the Premier does not appear to have positively renounced his intention of retiring, it is hoped in Tokyo that he may consent to sacrifice his private wishes on the altar of public interest, as he has done on several previous occasions.

Groping in the dark, it is not surprising that the metropolitan journals should sometimes be betrayed into singular attitudes when discussing the situation. Most of their articles on the subject seem to be wide of the mark, but one or two may be briefly noticed in order to show how the crises is viewed by vernacular journalists. The *Kokumin Shimbun* thinks it intolerable that the comparatively simple question of the Premier's resignation should be left unsettled so long. It advises the six elder statesmen, namely Marquis Yamagata, Marquis Saigo, Marquis Oyama, Count Inouye, Count Kuroda, and Count Matsukata, to assemble in Tokyo, and settle the matter by holding a conference in the presence of the Emperor. Such has always been the custom under similar circumstances in the past. When Count Matsukata tendered his resignation in August, 1892, a similar conference was opened at the instance of Marquis Ito, and was attended by the latter, by Marquis Yamagata, by Marquis Oyama, by Count Inouye, by Count Kuroda, and by the late Count Yamada. Why not follow the same course in the present instance? Such a step would be more decisive and better adapted to the needs of the situation than separate conference between Marquis Yamagata and Count Kuroda in Tokyo and Counts Inouye and Matsukata in Kyoto.

The *Fiji Shimpō* censures Marquis Ito's conduct as unmanly and equivocal. According to that journal's information, the Premier secretly submitted to the Emperor his prayer to be released from office, and left the capital without acquainting any of his colleagues with his intention. He ought, says the *Fiji*, to have frankly communicated the design to his colleagues, and openly tendered his resignation. As to his motives, the *Fiji* is entirely at a loss to understand them. Some noise, it is true, is made about Ministerial responsibility in the matter of the Liaotung and Korean questions. But with the Liberals as his avowed friends and the possible support of the National Unionists, the Premier ought to feel perfectly secure. Does he, then, fear dissension in official circles? The *Fiji* is informed that there is not the slightest ground for any such fear. As to the alliance with the Liberals, that can never be the cause of Marquis Ito's resignation. Some say that the Premier is desirous of resigning, because he has obtained enough honours and served his country sufficiently. If so, the *Fiji* thinks that he has chosen a very bad time for carrying out his wish. He ought either to have resigned at the time of the conclusion of the Shimonoseki Treaty, or to

have waited till the end of the coming session of the Diet. Yet another explanation put forth by men that love to fathom mysteries, is that Marquis Ito is not really desirous of resigning, but that, by threatening to resign and compelling the other statesmen of the elder generation to solicit him to remain in office, he aims at strengthening his position *vis à-vis* those statesmen. That theory is regarded by our contemporary as too subtle to be credited. The *Fiji* is confident that Marquis Ito is above such a clumsy artifice. Hence, after examining all the explanations put forth, our contemporary remains in the dark as before. It strongly urges the Marquis to be more frank and straightforward.

The *Nippon* severely criticizes the prevailing tendency in official circles to attach undue importance to compromise. In private intercourse compromise is an excellent thing, but in the conduct of public men nothing could be more undesirable. The statesmen of the clan Government are far from favouring compromise in their private intercourse, but in their public conduct compromise is their guiding principle. Whenever a new question arises, the first thought that occurs to the clan statesmen is how will it affect the harmony among themselves, and no scheme nor any reform, however desirable in itself, has any hope of being adopted if it be judged prejudicial to the maintenance of union in the clan Government. This tendency to make harmony and compromise their first objects has been gradually increasing among the clan statesmen during the past fifteen years. It is not confined to the conduct of public affairs, but is also observable in the case of Ministerial retirements. Rarely does a retiring Minister assign the true reason of his resignation. Doubtless the motive underlying such reticence is that to avow the true reason might prejudice harmony among the clan combination. That tendency is the curse of politics in modern Japan. Public men ought to be frank and straightforward and opposed to compromise where public interests are concerned.

The coalition between the Liberals and the Cabinet, and the manifesto by which the fact has been proclaimed, continue to be discussed by the press. But we have already given the gist of the principal journals' comments, and no fresh points have since been brought out. Suffice it to say that the organs of the Opposition show increasing virulence in their denunciation of what they call the unconditioned surrender of the Liberals. The favourite practice of these bitter critics is to hunt up opinions expressed by individual Liberals in their days of opposition to the Government ten years ago, and to contrast them with the tone of the manifesto just issued. In this way it may well be imagined that ample material for ridicule and sarcasm is obtained.

The *Nichi Nichi's* article on the Korean question is noticed separately. No other journal has yet discussed the matter since the occurrence of the latest disturbance in Sōul. But the course of events in the peninsula had for some time been attracting notice in Tokyo, where an impression prevails that the situation in Sōul is fraught with danger. Alluding to the precarious condition of the present Korean Cabinet, and to its conduct in connection with the affair of October 8th, the *Fiji Shimpō* and the *Kokumin Shimbun* express their belief that there is no hope for the maintenance of Korean independence by the Koreans themselves. It had been supposed that the late Queen was the principal obstacle to the smooth progress of reform, and that her removal would prove the emancipation of Korea. But now that is no more, the task of reform is as hopeless as ever. The only possible conclusion is that the Koreans have not the capacity for independence. The *Nippon* also calls the attention of the Japanese Cabinet to the gravity of the situation in Korea. It notes with regret that the state of affairs in the peninsula is rapidly reverting to what it was before the commencement of the war last year. The Cabinet in Sōul is unstable, while the country is distracted by the raids of lawless de-

predators in various places. To complete the analogy, the people in remote provincial districts are said to be manifesting, at the instigation of the Min faction, a spirit of hostility against the Japanese. The *Nippon* fears that Korean affairs may at any moment invite the interference of a foreign Power, and urges the Government to keep vigilant watch over the course of events in the peninsula.

The Iron Foundry case still finds a place in press discussions. The affair is utilized by the Opposition papers as a weapon of indirect attack upon those in power. These journals most absurdly assert that men like Hamano and Amenomiya would have been unable to obtain a footing in society had they not been countenanced by persons in high official places and that consequently, those in office, though not directly concerned in the iron-pipe affair, must be held indirectly and morally responsible for it.

The *Fiji Shimpō* discusses in an interesting manner a question that has been raised in connection with the Iron Foundry case. Some scientific specialists have been found to be implicated in the affair, and men have begun to recollect that the corruption of educated specialists has been by no means a rare thing during recent years. It is noticed that instances of corruption are very infrequent among specialists in administrative or judicial service, whereas those employed by private companies are not so free from the evil. Some persons explain this by saying that men employed as specialists in private companies regard themselves in the light of superior mechanics, in other words, that they consider themselves members of a class inferior to gentlemen, and behave accordingly. But the *Fiji* does not accept this explanation. It seems to endorse another theory, namely, that low rates of salary are principally responsible for this liability to corruption. Whatever be the correct view of the case, our contemporary considers it a matter of urgent necessity that measures should be taken to improve the moral standard of scientific experts. It suggests the establishment of an association presided over by a man of acknowledged probity and honour, the members of which should be kept under sound discipline, so that intending employers may know where to apply for men of good moral character.

The other questions discussed during the week are the method of employing the war indemnity, the question of railway extension and improvement, the establishment of industrial banks, and so forth. The *Hochi's* articles on the last mentioned question are specially interesting, and deserve independent notice.

EDITORIAL NOTES.

THE CAMPHOR MARKET.

SINCE our last remarks on the camphor trade, the market has undergone a considerable change. The consuming refineries in Europe apparently had been reckoning on supplies after the close of the campaign in Formosa flowing as amply as before the Japanese set foot on the island, and they consequently withheld their orders. The London syndicate, too, may have been guided by similar considerations, and this caused the market to decline somewhat rapidly by about 20 per cent., at which figure the Japanese would have been ready sellers if they could have found buyers. The same opinion doubtless prevailed in Hong-kong as to the re-opening of Formosa's supplies after the close of the military campaign, as it was thought that supplies locked up through the closing of the ports would thus come forward. This state of affairs, however, lasted only a few days. Though it is estimated that about 1,000 piculs changed hands at comparatively low prices, yet the smallness of the offers and the timidity with which they were made at the lower rates must have convinced intending buyers at home that the prospect of large sup-

plies in the future was delusive. The refiners are now preparing for the spring season. Local buyers, whose orders are beginning to come in, fail, it is said, to elicit offers from the Japanese, and already the decline in price has partly recovered. What the future of the market will be we shall probably soon know. As we pointed out when we last referred to the camphor market, the high prices which ruled up to a month ago have in no way increased the production of the article in Japan, while the recent decline has acted as a check on the producers. Furthermore, the reports of the speedy exhaustion of available trees gain in strength, and it seems that those who are fortunate enough to hold small stocks of camphor hold them tighter than ever and are not tempted by present quotations. Much speculation has been rife as to the probable course of events in Formosa, and it must be confessed that so far as positive information goes we are as much in the dark now as before. One thing, however, is certain—namely, that all the exertions of the Japanese merchants who went to Formosa with the object of getting at the hidden stores of camphor or to start distilleries have been doomed to disappointment, and nothing has yet appeared in this market. What at present arrives in Hongkong is limited to the production of those few Chinese who are in possession of unquestionable title-deeds and are permitted by the Japanese authorities to go on distilling to a limited extent.—*Kobe Chronicle*.

THE RECENT COLLISION AT WOOSUNG.

On the afternoon of Nov. 23rd, the *Hector*, inward bound from Japan, collided with the *Rohilla* at anchor at Woosung. It appears that the incoming vessel took a sheer and struck the P. & O. boat about amidships. The *Rohilla* has three of her plates cracked, but it is anticipated the repairs can be effected without the vessel going into dock. The *Hector* has her stern twisted to starboard about two feet above the water line extending a similar distance up, while the rivets are knocked out of the plates on the port side for several feet, and there is a hole in one of the upper plates. The *Hector* after the accident came up to Shanghai.—*North China Daily News*.

CARRIAGE ACCIDENT.

A CARRIAGE belonging to Messrs. Cobb & Co, in charge of a *belto* was the cause of a somewhat serious accident on Thursday evening. It seems that the pony, for some unexplained reason, took fright, and galloping away from No. 72, Bluff, was not stopped until he reached Yoshihama-bashi. A Japanese man was run over and sustained severe injuries to his leg.

FIRES IN YOKOHAMA.

AT twenty minutes past two o'clock on Monday Supt. Morgan, of the Yokohama Fire Brigade, was called to a fire that had broken out at No. 124, Settlement. He took twenty men along with him, one hose-reel, stand-pipe, and a steamer. On arriving at the spot he found the fire to be raging in a kitchen in one of the tenements on lot 124, occupied by Mr. Engl. Nelson. The flames were extinguished with little difficulty. The origin of the fire is unknown. About ten minutes past five o'clock this morning another fire broke out, this time in a house at Ota, belong to Uchida Kinzaburo. The flames were subdued within twenty minutes. The cause of recent fire in the cook-house of No. 87, the Old Oriental Hotel, has been ascertained. Five Japanese beggars went there and lighted a fire to keep themselves warm. Two beggars, named Saito Yasugoro and Negishi Kakusaburo, have since been arrested and examined by the Kagacho police.

"SKETCHES OF TOKYO LIFE."

A Dainty seasonable gift-book bearing the above title has just been issued by the Torando printing office, Yokohama. The author is Mr. Jukichi Inouye, a writer now well known to the foreign public for his exceptional command of easy, graceful, idio-

matic English. The volume is profusely illustrated, both in colours as well as in black and white, and the subjects of the sketches have been well chosen. To the resident in Japan the book is very inviting, depicting as it does in a bright and attractive fashion scenes and sights familiar to every visitor to the capital: while to the larger public beyond the seas, who are ever ready to receive a souvenir from Japan, "Sketches of Tokyo Life" will be heartily welcome as an exceptionally dainty production. It is printed on soft Japanese paper from clear, fine type, and is put up in an illuminated cover. The book can be obtained from Maruya & Co. at the moderate price of \$1.25.

CUSTOMS RETURNS.

THE following is a summary of the Customs Returns for October, showing the foreign trade of the Empire for the month:—

	1894. SILVER YEN.	1895. SILVER YEN.
Exports	11,008,879.170	13,771,947.460
Imports	10,546,313.980	12,039,546.000
Total exports and imports	21,555,193.150	25,811,493.460
Excess of exports	962,565.190	1,732,401.460
CUSTOMS DUTIES		
Exports	239,592.061

DR. GRACE AND THE "TELEGRAPH" TESTIMONIAL.

THE *Daily Telegraph* announced on October 18th, the close of the National Shilling Testimonial to Dr. W. G. Grace. In forwarding to the foremost player of the popular game a cheque for 100,000 shillings, Sir Edward Lawson referred to the phenomenally comprehensive character

of the list as indicative of the warm appreciation felt throughout the Empire of Dr. Grace's high and worthy qualities as a cricketer, and of the general love of those out-of-door sports and pursuits which serve to develop British manliness of mind and body. To this communication Dr. Grace has sent an appropriate and characteristic acknowledgment, in the course of which he says:—"To have attained proficiency in the national game has ever been a source of pleasure to me, but to be the recipient of such a recognition from my fellow-countrymen, both at home and abroad, as well as from very many not of our nationality, is an honour as unexpected as it is overwhelming, and one for which I am most deeply grateful. The expressions of personal kindness and goodwill contained in many of the letters which you have from time to time published have touched me more than I can tell you, and have, indeed, afforded me as much gratification as the practical tribute of the writers. I can only marvel at the prodigious number and generosity of my friends. I think and believe, with gratitude and pride, that I must have more than any other man ever possessed. May the noble game which has been such a source of happiness and pleasure to me flourish for ever, and continue to help to make our boys into good and manly men."

THE "GUTHRIE'S" UNFORTUNATE VOYAGE.

THE steamer *Guthrie*, says the *Daily Press* of the 9th inst., left Australia with twenty-five Australian horses destined for Yokohama. Only seven reached this port. Rough weather was experienced and the poor animals had a dreadful time. One day five of them were hurled from their stalls on the starboard side over the winch, and they sustained such frightful injuries that they had to be shot. Thirteen others were also so badly cut and knocked about that they also had to be killed. The seven survivors, on arriving at this port, were taken to Mr. Kennedy's stables at East Point, where they will remain a week and then be sent on to Yokohama. The horses are the property of Mr. T. J. Burke, of Melbourne, and were very valuable. There was a four-in-hand team amongst them, also a pair of cobs, and five racehorses, and the others were of a mixed sort. Mr. Burke had received a special commission from the Japanese Government, and five of the horses were intended for the Japanese cavalry. They were of a similar class as those constantly being shipped to India.

The seven horses mentioned above arrived in Yokohama on Sunday, and are at present put up at Mr. Morton's stables, No. 118. They are fine animals, and lovers of the equine race should not lose the opportunity of seeing them.

KAMAKURA RACES.

THE race meeting at Kamakura, conducted on Saturday and Sunday last in the interests of farmers and others in the vicinity owning ponies, afforded considerable amusement, and the peasants who thronged the place were no doubt considerably edified by the spectacle. On Sunday a number of Tokyo and Yokohama residents, well known in racing circles, were on the ground and subscribed to several prizes, the contests for these being very keen. The course, which is laid out on the right hand side going towards the Hachiman shrine, encircles the lotus-pond, while on the left, under the shade of the ancient pines, the saddling and other preparations are carried out. A nice stand has been erected from which a good view of the racing can be obtained.

SHIPPING NOTES FROM SINGAPORE.

THE British Consul at Batavia telegraphed to the Master Attendant at Singapore news of the destruction by fire of a British ship, supposed to be the *Avonia*, at sea, about a hundred and fifty miles south-west of Padang. A boat containing nineteen souls was launched from the vessel and has not yet been reported. Masters of ships passing in that direction are instructed to keep a good look out. The *Avonia* is of Windsor, Nova Scotia, 1,629 tons burden, and to third parties. The case came on for hear-

was built in 1886. The telegram announcing the disaster gives the name of the ship as *Avouca*, but as there is no vessel of that name in Lloyd's list, it is probable that *Avonia* is meant. She was bound from Calcutta to Boulogne.—The Blue-funnel steamer *Menelaus* arrived at Singapore on the 13th inst., having in tow the Scottish Oriental steamer *Taichow*, whose piston rod broke while on a voyage between Bangkok and Hongkong. The injured vessel went to the Tanjong Pagar Dock to effect repairs. Captain Street, of the P. & O. steamer *Ravenna*, which arrived at Singapore on the 12th, reported that at 4.45 a.m. on the 10th inst. he observed signals of distress away to eastward, and standing by he stopped and communicated with the *Taichow*, which stated that her engines had broken down and asked to be taken in tow. At 5.48 he proceeded ahead to the Holt steamer *Menelaus*, bound for Singapore, and communicated with her, the *Menelaus* immediately proceeding to the assistance of the *Taichow* and taking her in tow. Captain Street stood by until he saw the *Menelaus* in company with the *Taichow*, and then proceeded on his way.—The master of the steamer *Wuotan*, which arrived at Singapore on the 11th inst. from Hongkong, reports having picked up three Swatow fishermen in distress sixty miles off Hongkong.

GAS ON THE BLUFF.

THE announcement made this week by the Yokohama Gasworks will doubtless be fully appreciated by Bluff residents for several reasons, foremost among which is the poor quality of the electric light and the uncertainty of its working properly. For private consumption gas will be supplied at the rate of yen 1.80 per 1,000 cubic feet, and for street lamps or lights at entrance gates the charge will be yen 1.89 per lamp per month. Gas stoves are said to be economical both for heating and cooking, and with coals at the present price residents on the Bluff may find it to their account to use gas for these purposes. It can hardly be hoped that gas lamps will immediately replace the wretched apology for an illuminant at present existing on the roads, but the time will doubtless come when the arrangement now in force will be put an end to unless better value be given for the money paid. The Electric Light Co. broke faith with Bluff residents at an early stage after the installation of their light by placing lamps on Daikan-zaka and after a time abolishing them, and persons who use that approach would do well to stop their subscriptions to the company until the lamps are replaced. The quality of Yokohama gas has lately much improved, and since the new mains were laid the supply has been full and constant at all hours.

RUSSIAN APPRECIATION.

THE Director of the Russian Steam Navigation and Trading Company has just issued to all the captains and officers of the fleet a printed circular embodying a report of the recent collision between the British Channel steamers *Seaford* and *Lion*. The circular calls attention to the splendid discipline, admirable obedience, and praiseworthy coolness and promptitude of the commanders, officers, and crews of the colliding vessels, thanks to which there was not only no casualty to life or limb, but the whole of the passengers' baggage and other effects were saved. After speaking in very laudatory terms of the "enlightened mariners" of England, the Director holds up this particular incident as an example to Russian seamen.

PONY AUCTION.

MR. JNO. W. HALL held his semi-annual auction of racing and other ponies on Wednesday afternoon at No. 61. The prices obtained must be characterised as fairly good for the hacks and carriage ponies, while some that are likely to race fetched high prices. The prices paid were as follow:—Refugee \$20, Blackmoor \$76, Cœur de Lion \$25, Yoshino \$350, Yalu \$50, Babel \$240, Bicycleette \$140, Tashika \$65, Kinshu \$25, Gaisen \$260, Rastaquère \$85, Varuna \$50, Gem \$110, Great Mogul \$90,

Braganza \$57, Agate \$75, Virginia \$175, Minnesota \$85, Zero \$45, Cairngorm \$20, Tantalus \$60, Cuckoo \$85, Rowena \$21, Prophet \$30, Abdalah \$15, Nippon \$50. Rokasen was withdrawn at \$145, War Dance at \$45, Kachidoki at \$50, and an Australian horse at \$270.

HUMBUGGING.

THE following, which we quote from an American newspaper, indicates the extent to which humbugging may be carried, and the tendency of some people to believe every advertisement they chance to read:—

Generally speaking, humbugs prosper in proportion to the absurdity which underlies them, and its self-evident character to a normal mind acquainted with the human system.

The following circumstance shows that it is impossible to write a testimonial so absurd as to make it impossible of belief:

The *Northwestern Christian Advocate*, of Chicago, at that time edited by the eloquent, shrewd, and witty Dr. Thomas M. Eddy, published without a signature an article headed *Apocryphal Ministerial Certificates*, sent to him by a Western correspondent as a satire upon the ministerial certificates to an advertisement which declared that the remedy "had raised to life hundreds of persons who had been consigned to their grave by their medical attendants." This was the article, adapted in part from some English book of humor:

"Dear Dr. Skinner:—I am an old man, one hundred and twelve years old last September. For ninety-eight years I have been wholly unable to move, except when stirred by a lever and fulcrum. Hearing of your *Granicular Syrup*, I bought a bottle, smelt the cork, and find myself a new man. I can now run twelve miles an hour and turn sixteen successive double somersaults without personal inconvenience.

I may also state that one of my sons, a victim of consumption—on account of which he had suffered a great deal, both of his lungs having been entirely consumed—took some of the same invaluable remedy, and has entirely recovered, new lungs having been formed, and his chest having expanded twenty-one inches since last May. These results, dear doctor, I owe, under God, to your *Granicular Syrup*. Long may you live to mitigate the woes and assuage the griefs of your suffering fellow creatures.

"Gratefully yours, TIMOTHY STRETCHER. "P.S.—I may also state that one of my neighbors, using a little of your *Thunder and Lightning All-Permeative Liniment* for a wound on his left leg, accidentally dropped a little on his right leg, which was a wooden one, he having lost the original member in the Mexican war. Judge of his surprise when in two weeks he found it covered with a fresh coating of white pine bark.

"STATE OF MICHIGAN, } ss.:
COUNTY OF OAKLAND, }
"Personally appeared before me, WILLIAM GWYNNE, Justice of the Peace, the writer of the foregoing, the Rev. TIMOTHY STRETCHER, who is well known here, who deposes to the above-mentioned facts, and expresses a willingness to depose to as many more as may be thought desirable."

Some month afterward Dr. Eddy, in speaking of humbugs, informed some of his friends that he received various inquiries as to the genuineness of his testimonial, and in particular a letter from one of the largest cities in Illinois, running thus:—

"Dear Doctor:—I have taken the *Northwestern Christian Advocate* since it was started. During that whole time I have been an invalid and have tried the different remedies advertised in that and other papers. I have generally found that for a little while they seemed to do me good, but afterward I was as bad, or worse, with heart, stomach, and lung symptoms, rendering life miserable. I have been much impressed with the testimonial of the Rev. Mr. Stretcher which appeared in your last number. It seems almost too much to believe. I have inquired at one or two drug-stores for the *Granicular Syrup*. One of them said he thought he had heard of it, but did not know where it could be obtained. I looked through your paper for the advertisement, but did not see any. If you can give me the address of Dr. Skinner, or if you do not know that, if you can give me the address of Brother Stretcher, I would be very much obliged.

Dr. Eddy stated that he was at first inclined to think this letter a hoax, but, on reading it more carefully, concluded to write to the pastor of the brother, and found that he was a man of considerable intelligence in business matters, and that he really believed there might be something in the *Granicular Syrup* and the *Thunder and Lightning All-Permeative Liniment*, and had written in good faith.

JAPAN RED CROSS SOCIETY.

THE Yokohama branch of the Japan Red Cross Society has resolved to send 1,000 *kin* (one *kin*=1½lb.) of tea to the wounded French soldiers in the Madagascar expeditionary army, and 500 *kin* of tea to the Spanish soldiers wounded in Cuba. The presents will be forwarded early next month.

NEW LIGHTHOUSE AT ACAPULCO.

THE Department of Communications and Public Works of Mexico has issued a notice to mariners which states that on the night of the 20th September last and thereafter the new light for the port of Acapulco will be exhibited. The lighthouse is on the island of La Raqueta, and is situated in lat. 16° 49' 10" N. and long. 99° 55' 50" W. of Greenwich. The illuminating apparatus is of 59 Carcel lamps intensity,

showing a fixed white light of the fourth order. In fine weather the light should be visible from seaward 23 nautical miles viewed from a height of five metres above sea.

LABOUR IN JAPAN.

"HERE," says a London paper, "is a little incident which may advantageously be studied by the leaders of the labour movement of which we hear so much. A locomotive engine ordered for Japan was put on board ship in the U.K. at a cost of £1,550, and the expense of taking the engine to Japan, including duty (£77 10s.), amounted to £242, bringing the total cost of the British made machine to £1,792. That is one story; here is another. A similar locomotive was made in Japan from English designs, and in great part from material sent from England, but built by native foremen and workmen, her total cost being £1,349, against £1,792 for the engine built on this side. Now this may be the beginning of considerable change. If, as in the case of the locomotive engine built in Japan, the greater part of the material was exported from this country, and then handled by native labour at so great an economy of money, it is possible that this movement may be carried very much further, and it is one to which workmen should give their attention."

NEWS BY THE CANADIAN MAIL.

THE retiring Lord Mayor, Sir Joseph Renals, has been greatly criticised for giving an official banquet to Mr. Barney Barnato, the ex-circus tumbler, but now a multi-millionaire.—The U.S. elections up to the 7th inst. show that the Republicans are winning. The Republican State ticket has been elected in New York with a net gain of 20,000 votes. The new assembly will contain 99 Republicans and 51 Democrats: the Senate 35 Republicans and 14 Democrats and Independents.—Durrant has been convicted at San Francisco of murder in the first degree.

NAVAL NEWS.

H.M.S. *Porpoise* arrived at Hongkong from Yokohama on Wednesday, Nov. 13th, to make good defects. She will dock at Kowloon, coal, and take in stores. The flagship *Centurion* left Hongkong at 9 o'clock on Nov. 14th for Singapore and will return about the 8th December. H.M.S. *Pique* was inspected by the Commander-in-Chief, Admiral Buller, on the 12th. She is coming to Japan. H.M.S. *Undaunted* is expected to sail from Hongkong about the 19th or 20th inst. for Singapore, where she relieves the *Mercury*.

STOWAWAY WOMEN AT NAGASAKI.

THE Nagasaki Shipping List of November 23rd, says that Captain Schuldt, of the *Tai Yick*, discovered on November 21st no less than fourteen Japanese women stowed away on board that vessel, which was to leave for Vladivostok on the 23rd. They were found in various parts of the ship, and in one place no less than three were found in a large packing case. The matter was reported to the police, and the women, as well as a man who had been instrumental in "shipping" them, were taken into custody.

THE ITALIAN MINISTER.

TO-DAY'S *Official Gazette* says that Count Orfini, Italian *Chargé d'Affaires*, who has been promoted to Envoy Extraordinary and Minister Plenipotentiary, proceeded to the Palace yesterday to present his credentials to H.I.M. Emperor.

CORONATION OF THE SULTAN OF JOHORE.

THE coronation of the new Sultan of Johore, His Highness Ibrahim, took place on the 2nd inst. The Governor of the Straits and the heads of departments attended the ceremony and H.M.S. *Mercury* lay in the Strait.

J. DICKSON V. F. W. HOPPS.

AN action was heard in the U.S. Consular-General Court on Tuesday last, wherein the plaintiff claimed from defendant the sum of \$425.24, alleged to be due for certain goods and fixtures wrongfully delivered by defendant

ing on Saturday last, but was adjourned for the purpose of a further deposit of security for costs. On Tuesday evidence was heard from both sides, and the Court decided that plaintiff had not proved his claim, the action being consequently dismissed with costs.

THE RECENT COLLISION NEAR URAGA.

SUIT has been commenced in H.B.M. Court by the master and owner of the *W. H. Macy*, Captain Amesbury, to recover damages for loss sustained in the recent collision with the British steamer *Isis*, in Uruga Channel, on October 15th. Damages are fixed at \$80,000.

THE "STRATHNEVIS."

ALTHOUGH the *Empress of India*, which arrived Monday, brought no news of the *Strathnevis*, now over 40 days out from Tacoma for Yokohama, hopes should not be abandoned. The *Empress* packets take a more northerly course to that on which the *Strathnevis* may be presumed to have drifted. The *Evandale* may perhaps bring us news of the anxiously awaited vessel.

MARRIAGE ENGAGEMENT.

WE have received an announcement of the approaching marriage of Mr. Hermann Kessler, representative in Japan of Messrs. Siemens and Halske of Berlin, with Miss Hedwig Henle, sister of Mrs. Grasmann, who left Japan last June after several years' residence.

DR. E. BAELZ DECORATED.

ON WEDNESDAY'S *Official Gazette* states that Dr. E. Baelz, of the Medical College in the Imperial University, was decorated by the Japanese Government with the Second Class of the Order of the Sacred Treasure on the 22nd inst.

THE ACCIDENT TO THE
"EDGAR'S" BOAT.

We have learned from a gentleman who has just returned from Korea, who conversed with several eye-witnesses of the sinking of the *Edgar's* boat, some particulars of the nature of the accident. It appears that the boat was rowed from the shore, but slow progress was made on account of the high choppy sea, and wind, which came in strong puffs. It was then attempted to hoist the sail, but before this could be effected and the sheet got home and way got upon the craft, a strong gust overset her and she filled and sank through the height of the waves produced by a strong wind against tide. Assistance was immediately sent from an American man-of-war in her steam pinnace, but before this boat could reach the struggling seamen something went wrong with her machinery and she came to a stop, her crew being placed in the terrible position of seeing men drown before their eyes without being able to render the smallest assistance. The *Edgar's* boat has not been found nor any bodies recovered, which is probably due to the strong run of the tide at this place.

The *Hongkong Daily Press* has the following:—

The Commodore at Hongkong received the following telegram respecting the accident to the *Edgar's* pulling launch at Chemulpo, whereby forty-eight men were drowned:—

Landed for drill under the Guntery Lieutenant.—Weather being quite fine at the time, started pulling back, but the tide being strong anchored and made sail, double reefs. About this time wind and sea increased, but no danger was anticipated in proceeding. Boat ran under and filled seven cables from ship. Prompt assistance was rendered, and twenty-three men were saved."

NAMES OF THE DROWNED.

The following list gives the names of those who were drowned:—

Gunnery Instructor—Bailey.
Second Class Petty Officers—Elton, Rieb.
Leading Seamen—Gilding, Cook.
Signalman—Burtenshaw.
Able Seamen and Ordinary Seamen—Chapman, Kay, Lininord, Fancott, Sobey, Gregory, Jennings, Johns, Hearle, Bowden, Hancock, Smith, Harrington, Nash, Murray, Devlin, Mahony, Manning, Sibley, Long, Greasley, Doran, Martyn, Black, Cook, Davies, Andrews, Harland, Gough, Avery, Webb, Moss, Cuttings, Pettit, Wille, Drake, Cunningham.
Boys—Twidale, Pratt, Hathway, Brown.
Bugler, R.M.L.I.—Warren.

The following extract from a letter written by the Captain of the *Alger*, dated November 19th, has been kindly placed at our disposal:—"Last Wednesday, the day of my departure for Söul, there blew, from 11 o'clock in the forenoon, a strong breeze which, being in the opposite direction to the current, produced a heavy sea and caused the loss of the *Edgar's* boat. The latter, having started in the morning with 71 men for musketry and gun practice, set out to return to the ship toward mid-day. She had the wind astern (her foresail being double-reefed), and the current against her, when, at a distance of 500 or 600 mètres from us, she sunk on an even keel. Three of our boats were immediately launched and arrived first at the scene of the catastrophe, but they were able to save only 9 sailors and an officer, whom they brought to the *Alger*, where they were taken care of all the afternoon. A Russian steam-launch saved a dozen. In brief, out of 71 officers and sailors that the boat contained, 48 were drowned, the 2 officers and 2 midshipmen being saved. Captain Henderson had gone to pass the day at Kanghoa. He came to thank me for saving and taking care of his men."

LAWN-TENNIS HANDICAP IN TOKYO.

A lawn-tennis handicap (doubles) was played on the 21st instant in Tokyo for prizes given by Captain and Mrs. Brinkley. Special interest attached to the contest, as it was the first played on a gravel court with back walls. Owing to various causes only six couples entered. The drawing and the handicapping were as follow, the games being 25 up:—

CLASS I.		
Mr. Lowther	} Scratch.
Miss Lowther		
Mr. Paget		
Miss Dening		
CLASS II.		
Mr. T. H. James	} Receive 7.
Miss Divers		
Capt. Brinkley		
Mrs. Pownall		
CLASS III.		
Mr. Trevithick	} Receive 10.
Miss Tuck		
CLASS IV.		
Mr. Viengné	} Receive 15.
Miss Palmer		

Play commenced at 9.30 a.m. in beautiful weather, which continued throughout the day. The results were as follow:—

	Place.	Total Points.	Games Won.
Mr. Lowther.....	1	125	5
Miss Lowther	2	119	3
Mr. Paget			
Miss Dening			
Captain Brinkley			
Mrs. Pownall	3	114	4
Mr. Trevithick	4	113	1
Miss Tuck			
Mr. Viengué	5	105	1
Miss Palmer			
Mr. T. H. James	6	104	1
Miss Divers			

RECEIPTS AT THE FRENCH
LEGATION.

We are asked to state that Madame Harmand will be at home on Thursdays, from 3 p.m., commencing from the 5th of December.

MARQUIS ITO.

Concerning the condition of Marquis Ito, who, as already stated in these columns, is suffering from influenza, the following note appears in the *Nichi Nichi*:—"On the 25th inst. the Premier's condition retrograded slightly. In the morning he felt a chill, and at noon, his temperature was 37.7° C., his pulse 84, and his inspirations were 22. At 3 p.m., the temperature rose to 38°, and the pulse to 88, the inspirations remaining unchanged. Three hours later, the temperature fell to 37°, the pulse to 80, and the inspirations to 20. On that day the Marquis had a slight headache and a sense of weariness, but his bronchitis showed no sign of becoming worse, neither was there any indication of complications. On the following day (26th) he did not feel well, but his condition showed no particularly remarkable symptoms. That day he was examined by Dr. Ito, who had been sent down by the special order of the Emperor. Dr. Baron Hashimoto also saw the patient. The Marquis has since gradually improved, so that it is hoped that he may be able soon to return to the capital."

FOOT BINDING.

There has been so much discussion about the effects really produced by foot-binding and the pain it inflicts, that much interest attaches to the following address, delivered by Dr. J. H. McCartney at a meeting held in Chung-king, for the purpose of forming a branch of the Tien Tsu Hui, or Anti-Foot-binding Society:—

Dr. McCartney said that from his position as surgeon in the hospital he was constantly brought into contact with cases of injury from foot-binding. Many people imagined that there was no harm in foot-binding but, as a matter of fact, not only was a cruel injury done to the foot by this practice, but it resulted in many cases of female complaints which would not otherwise have occurred: no portion of the body could be cut off from the general circulation without ultimately inducing gangrene, and binding the feet certainly arrested the flow of the blood. As an illustration, he might mention one case in which he was called into a little girl. When he removed the binding he found both feet hanging by the tendons only, with gangrene extending above the ankles. Immediate amputation was at once necessary, but the unfortunate child will have to go through life without feet. The mother of the child was a confirmed opium-smoker, and her indifference had led to the result indicated. The two greatest curses in China were opium-smoking and feet-binding. Another case was an unmarried woman who had paralysis in both legs. She was treated by removing the bandages on her feet, by massage, and electric current. In less than a month she was able to walk. Her trouble was caused by nothing more or less than foot-binding. The Chinese know nothing of the physiology and anatomy of the human body, and this ignorance caused untold suffering to the women and children in China, and had nothing to recommend it but the dictates of a senseless fashion. In the case of foot-binding the women literally walk upon the great toe, or digital end of the metatarsal bone. Women with small feet are unable to stand still, but are continually swaying and taking short steps, like a person on tiptoe. He defied any Chinaman to tell him that there was not great pain and discomfort attending foot-binding. Chinese women were disinclined to confess pain. To do so would be *pu hao i-ou*. Perhaps not many present had seen a deformed foot. The toes were turned in towards the sole, except the great toe, which was used to support the whole weight of the body. There was a space like that between the closed fingers and the ball of the thumb. This space did not touch the shoe and was consequently soft and tender. Perspiration gathered there and unless kept extremely clean, eczema would result and finally ulceration and mortification. He had had several cases of double amputation. From the time the feet were bound until death, they caused pain and were liable to disease. Not only did these serious local troubles exist but others occurred in the internal organs and in many cases affected the offspring. He had not the least hesitation in making this statement. He could not bring details before a meeting such as that, but he had cases in the hospital at the present moment, by which he could prove its truth. Moreover, foot-binding had a deleterious effect upon mental development. The unbound girls in the school were the brightest and happiest; they had no torturing pain to distract them, and would make superior wives and mothers. Any interference with the physiological functions of the human body was the cause of a pathologic condition, and in tracing the etiology of disease the custom of binding the feet was found to be a considerable factor.

CURRENT TOPICS.

NOVEMBER 23RD.

That Marquis Ito has tendered his resignations seems to be incorrect, so far as the form is concerned. But it appears to be a fact that the Premier has orally made known to the Emperor his prayer to be released from official responsibilities. Indeed such a wish was expressed by him immediately after the conclusion of peace. It is believed, however, that on the 12th instant the Marquis renewed his request to His Majesty in a more serious and pointed manner. After his audience with the Emperor on that day, Marquis Ito, says rumour, attended the Cabinet but did not tell his colleagues anything about his intention of resigning. The same evening he went to Oiso, where he is still staying. After his departure from the capital, his colleagues began to suspect that something was wrong, and requested Baron Suyematsu to visit the Premier and sound his views. The Baron's visit made it plain that the Premier was bent upon resignation. This led, on the one hand, to the going of Mr. Shirane to Oiso, and, on the other, to great excitement among the Liberal leaders, some of whom at once repaired to the same place. As to whether the united remonstrances of his colleagues and the Liberals have prevailed upon Marquis Ito to reconsider his intended step, opinions differ, and for the present people evidently find it difficult to know what to believe. There is an impression, however, that the upshot of the crisis will be the appointment of Marquis Yamagata to the Premiership as Marquis Ito's successor, that the Yamagata Cabinet will have the support of both the National Unionists and the Liberals, and that Marquis Ito will render assistance to the Premier from without as the leader of the Liberal Party. This idea, too, must be received with caution.

We have already reproduced a note from the *Nichi Nichi* announcing the revival of close relations between the Cabinet and the National Unionists. The news is denied by the organ of that party, the *Chuo Shimbun*, which, in confirmation of its position, publishes a letter from Viscount Shinagawa. The epistle runs as follows:—

To the Editor of the *Chuo Shimbun*. Sir,—To-day being the thirty-seventh anniversary of the death of my master Sho-in (Yoshida Torajiro), I was reading his works before his picture hanging in the alcove of my house, when a certain visitor entering the room, asked me, in a tone of some excitement, whether I had seen this morning's *Nichi Nichi*. I told him that I had not, whereupon he informed me that it had announced an alleged coalition between the Cabinet and the National Unionists. The *Nichi Nichi*'s statement, I may assure you, is most inopportune and ridiculous. At present the *Naikaku Maru* is being tossed now this way and now that, uncertain how to steer its course through the dangerous waters in which it is floating. To increase its difficulties its captain is on leave at Oiso on account of indisposition, and endless discussions are going on as to whether or not he has tendered his resignation because of inability to steer the ship of which he is captain. Under these circumstances, I am not foolish enough to imitate the example of the Liberals and offer myself as a servile tool of the Cabinet. Whoever may enter the Cabinet, it is not to be expected that things will be conducted in a manner entirely satisfactory to the National Unionists. I am, however, incapable of the baseness of forcing the National Unionists into a pit by converting myself into a blind follower of the Government. Hearing that the members of the Party in remote localities may be misled by the official organ, I beg you to insert this in your columns. Yours, etc.

Commenting on this subject, the *Chuo* remarks that, "should the Cabinet be really devoted to the interests of the country in co-operation with the Liberals, and should its policy be identified with that of our Party, then we would not hesitate to assist it; but should things turn out otherwise, we would not scruple to be foremost in attacking it." It thus appears that the attitude of the National Unionists is still dubious.

On the 20th instant, the Liberals of the North-Eastern Provinces, now staying in Tokyo, as-

sembled in the Manyasu restaurant in Kobikicho. There were present Messrs. Kono Hironaka, Yamashita Chiyoo, Shigeno Kenjiro, Sato Shozo, Sugawara Tsutan, and about twenty others. They resolved to revive the North-Eastern League of Liberals. It is reported that perfect harmony prevailed at the conference, all present being evidently satisfied with the course pursued by the leaders of the Party.

Count Inouye's return is expected with a great deal of curiosity. Concerning his position in the political world, the *Hochi Shimbun* writes in an interesting but disparaging manner. His return, says our contemporary, is not likely to affect the political situation one way or another, for his political capacity is not half so great as is generally supposed by men that do not know him intimately. But he is pre-eminently noted for persuasive eloquence,—an accomplishment that the embarrassed Premier is now desirous of enlisting in his favour. However skilful the Count may be in the art of persuasion, the *Hochi* doubts very much whether he will venture to apply his gift to the hopeless task of extricating his friend from the present dilemma.

NOVEMBER 26TH.

An impression prevails in well-informed circles in Tokyo that there is now a fair hope of Marquis Ito's remaining in office. Marquis Yamagata, it is believed, has declined to enter the Cabinet at present, and no other person suitable for the post of Minister President being forthcoming, the Premier has decided to reconsider his intended step. The issue of the Liberal Manifesto at a date somewhat earlier than that originally indicated, is believed by some to be an additional proof that Marquis Ito is not about to leave office for the present at all events, the evident presumption being that the existence of the coalition with the Liberal Party depends upon his remaining in the Cabinet. To us it seems, however, that, even though he should resign—which, as we have stated, seems improbable—care would be taken to preserve intact the new relations between the Cabinet and the Liberal Party. If Count Matsukata came in, we might expect a coalition not with the Liberals but with the Progressionists. Under present circumstances, however, there seems to be little reason to anticipate his resumption of office. As to the rest of the elder statesmen, not even excluding Count Kuroda and Count Inouye, there is no reason to think that their advent to power would affect the arrangement with the Liberals. From the fact that Count Kuroda held office with Count Okuma some years ago, people seem to believe that should the former become Minister President, he would once more invite the Progressionist leader to accept a portfolio. But Count Kuroda is understood not to be averse to the Liberal alliance. Personally, too, he is at least as friendly with Count Itagaki as with Count Okuma. With regard to Count Inouye, it is true that the Liberals did not behave at all courteously toward him in the sixth session of the Diet. But there is no personal unfriendliness between him and the leaders of the *Jiyu-to*. Moreover, his strong public spirit and his close friendship with Marquis Ito and Count Mutsu, induce us to believe that he will not be unfavourably disposed to the Liberal Alliance. Thus, under present circumstances, whatever may happen there seems to be little likelihood of the political combination just announced being seriously endangered.

As to the attitude of the provincial members of the Liberal Party, there appears to be no necessity to modify the statement we recently made that they are unanimously in favour of an understanding with the Ministry. There are five local Liberal combinations, namely, the *Kwan-to Kai*, the *Kwansai Kai*, the *Tohoku Kai*, the *Hokushin-Hasshu Kai*, and the *Tokai-Juissu Kai*. Of these three have already declared themselves in favour of the policy pursued at head-quarters. The other two are to hold a conference in a few days, and it is well known that they will adopt resolutions to the same effect. Even the Liberals of Echigo, who recently manifested a refractory tendency, are stated to be satisfied with the Manifesto just

published. It is, consequently, believed that the numerical strength of the Liberal Party in the Diet will not be in the least affected by its coalition with the Cabinet.

NOVEMBER 28TH.

Count Inouye's delay in returning to Tokyo excites some impatience in the political world. Arriving in Kobe at midnight on the 24th inst., he proceeded to Kyoto in the afternoon of the following day, accompanied by Governor Utsumi of Osaka and Governor Furusawa of Nara. It is believed that the object of his journey to Kyoto was to confer with Count Matsukata on the political situation. A Kobe telegram, published in the *Nichi Nichi*, states that probably Count Inouye will stay in Kyoto and Kobe for some time, so that his arrival in Tokyo will not be before the end of the present month. The members of his suite, except his police guard, have all returned to the capital.

The monthly periodical (*Toho*) of the *Jiyu-to*, just issued, contains the following note:—"It is the avowed purpose of the Liberal Party to be guided in its conduct by constitutional principles, and to devote itself to the upholding of the constitutional system. In pursuance of that purpose we have just formed an alliance with those in power, in order to solve problems that have been brought into prominence by the recent war with China, thereby placing the country in a state of preparation for any turn that events abroad may take. Should the majority in the Diet refuse to approve our policy, an appeal will be made to the country, and we shall abide by whatever verdict the constituencies may be pleased to pronounce." Commenting on this note, the *Nichi Nichi* remarks that the Cabinet Ministers may not be able at the present moment to admit any necessity for dissolving the House of Representatives in the coming session, but that should the important measures introduced officially be rejected by the Diet, an appeal to the people will be the unavoidable consequence.

The Liberal Party's monthly periodical contains also the following note about the National Unionists:—"The National Unionists are mainly politicians. They are not to be spoken of in the same breath with pick-pocket politicians that perpetually delight to act in a crooked and hypocritical manner, and are even given to womanly jealousy and envy. We had once the pleasure to encounter the National Unionists as political opponents, and we then recognized in them worthy adversaries. Now that no true patriot can be indifferent to the country's urgent call for the carrying out of various measures nationally important in view of the present situation, we are glad to learn that the National Unionists have decided to follow the same policy as ourselves. We call upon all lovers of the country to join in promoting the national interests."

In spite of the above statement, the National Unionist organ, the *Chuo*, continues to deny that any understanding has been effected with the Ministry. At the same time, it studiously avoids discussing the situation. Our impression is that opinions are divided among the members of the Party, and that the section immediately connected with the *Chuo* is disposed to defer declaring for either side as long as possible.

The Imperial News Agency of Tokyo is responsible for a report that Count Kuroda has consented, or is disposed to consent, to succeed Marquis Ito as Premier. He has, it is true, been approached on the subject, but according to our information, there seems to be little hope of his assuming the direction of affairs. The report appears to be a mere conjecture.

NOVEMBER 29TH.

Concerning the result of Viscount Hijikata's recent mission to Marquis Ito at Oiso, by command of the Emperor, contradictory rumours are circulated, some to the effect that the Premier positively declined to reconsider his resignation, and others in the sense that he returned a favourable answer. The best authority states that the Premier, while persist-

ing in his wish to be released from office, was so far touched by the Imperial message that he agreed, as soon as his physical condition should permit, to come back to the capital and wait on His Majesty. Hopes are entertained that he may finally consent to remain at the head of the Cabinet.

Much has already been written about the peculiar situation of the National Unionists. Their official organ, the *Chuo*, continues to deny that they have entered into an alliance with the Cabinet. Strictly speaking, our contemporary is no doubt right in contradicting the rumour. But there seems to be no doubt that the relations of the National Unionists with those in power are friendly. In view of an easily understood contingency, the National Unionists are probably anxious to preserve their apparent independence as long as possible. That contingency is the coming into power of their leaders in coalition with the Progressionist Party, in which event they might hope for a principal share of the "spoils." But anything of the kind seems at present as extremely improbable. The National Unionists will have to support the present Cabinet in opposition to the Progressionists and their allies.

A singular article in the *Choya Shimbun* throws some light upon the present attitude of the National Unionists. That journal, though not an avowed organ of the Party, is understood to be in strong sympathy with it. The tone of the article is certainly that of a regular organ explaining the situation of its party. It ridicules the fuss made about alleged friendliness on the part of the National Unionists toward the Cabinet. Their attitude, it says, has been friendly to the present Cabinet ever since the time of its organization. Unlike the Progressionists and others, they know how to distinguish policy from personalities. They will be ready to support the Military and Naval Bills in the next Diet, provided that the proposed measures are sufficiently extensive in scope. As to the question of the so-called "Ministerial responsibility," the National Unionists recognise the great unwisdom of sacrificing important national measures on the altar of party squabbles. From these statements we are led to infer that the National Unionists, though not, perhaps, entering into any definite understanding with the Government, will, on the whole, support it in the coming session of the Diet.

The *Fiji Shimpō* writes with apparent confidence on the subject, but the gist of what it says is practically identical with the above, namely, that the National Unionists, while not pledging themselves to any definite alliance with the Government, will vote with it not only against any attempt to condemn it on account of the Liaotung or Korean question, but also in support of its important bills. Hence the *Fiji* concludes that the Cabinet will find itself supported by fully 170 members of the Lower House next session.

There is a rumour that the members of the House of Peers belonging to the association called the *Kenkyū-kai*, who have hitherto been the principal supporters of the Cabinet in the House, are opposed to the Liberal alliance. They are said to be consistent advocates of the theory of the Cabinet's keeping aloof from parties, and to be consequently indignant at what they call the apostasy of the Ministers of State. The rumour adds that this section of the Upper House will declare against the Cabinet in the next session, but such a conjuncture may be regarded as extremely improbable.

Now that the Liberal Party is in alliance with the Cabinet, and the co-operation with the National Unionists is more than probable, there is no apparent reason why the various sections of the Opposition should not combine into a genuine political association. The subject, it is said, will be discussed so soon as the members of the Diet belonging to these sections shall have assembled in Tokyo.

As to the starting of a party organ in Tokyo by the Liberals, it is stated that the *Mezamashi* will be utilized for the purpose under the new name of either the *Tokyo Shimbun* or the

Aikoku, the editor being Mr. Ebara Soroku. The first number is expected to appear on the 15th of December. It is a singular circumstance that the Liberal Party have hitherto been very unfortunate in journalism. They have never succeeded in producing a creditable sheet. In that respect, they are markedly inferior to the Progressionists.

"CENT. PER CENT."

It is plain that if a writer desires to discuss any question fairly on its merits, he will not think of publishing his arguments in a newspaper different from that containing the arguments of his opponent. "Cent. per Cent." is a writer without any consciousness of that elementary principle of honest controversy. He persistently attacks us in the correspondence columns of a local contemporary. Such a breach of the rules of ordinary courtesy and fairplay should disqualify him to be noticed. But for the sake of the subject in question, we refer to his latest letter, reproducing it in order that he may not himself suffer by the disingenuousness that he habitually employs against others:—

The *Japan Daily Mail* publishes this morning an extract from the *Spectator*, commenting upon the greatly increased out-put of gold during the last twenty five years, which the Editor describes as "an interest-paragraph"—"by way of sequel to what we recently wrote on the subject."

It is also a "sequel" and something more, to the oft repeated assertion made in the same columns, of the insufficient and gradually decreasing supply of the yellow metal; one of the strong points of the bimetalists. It is also a "sequel" and something more, to the confident utterances of the great Austrian geologist, upon which, some few months ago, the Editor of the *Japan Mail* wrote a triumphant leading article. The great Austrian geologist said that the supply of gold was finished, it had all been dug out, and it was hopeless to expect any further discoveries. I ventured at the time to ridicule the pretensions of the great Austrian geologist to know what was in the bowels of the earth all the world over, as I laugh now at the ingenious, but so familiar trimming of the Editor of the *Japan Mail*, who has for some little time past been "selling for the fall."

If this means anything, it means that the *Japan Mail*, having for fifteen years been a constant advocate of bimetalism, is now building a bridge of retreat in consideration of the temporary ebb of bimetallic agitation. The *Japan Mail* is doing nothing of the kind. It remains as firm a disciple as ever of the bimetallic doctrines. What it has done of late is simply to note the fact that bimetalism is for the moment a dead issue owing to a return of prosperity in the West and to an unexpected increase in the output of gold. Every one can be a sceptic. Like "Cent. per Cent.," every one can "ridicule the pretensions of great experts." There is nothing to limit such a rôle except the boundaries of a man's own self-conceit. Further, there is always a possibility that chance happenings may justify general scepticism. With such eventualities intelligent bimetalists have nothing to do. For many years they have been faced by the facts of a supply of gold rapidly diminishing in proportion to the growing wants of the world, and of fluctuations in the gold-price of silver so severe that they reduced to mere gambling all transactions between gold countries and silver countries. The former calamity seems now likely to be remedied, but the latter must remain in pernicious operation. The general public, however, knowing little of the logic of the situation and conscious only of its effects, find that the tide of returning prosperity has taken the edge off their appetite for the radical bimetallic remedy, and no longer feel any desire to worry over a difficult problem that now appears to have become purely abstract. We have noted these things as matters of contemporary history. It is unfortunate that the world should be doomed to a fresh access of suffering before it recognises the monometallic error. But "Cent. per Cent." is satisfied. His blind ridicule of an eminent geologist has been vindicated by chance. That is enough for him. We should be surprised if it were not.

"THE NIGHT OF THE GODS."

A committee, including such names as those Mr. W. G. Aston, Mr. Arthur Diosy, Professor R. K. Douglas, Sir W. M. Conway and so forth, has been formed for a purpose that ought to command the sympathy and support of all educated men, namely, the bringing out of the second volume of "The Night of the Gods." We can not do better than reproduce the facts from a circular just issued by the Committee:—

These volumes embody a vast amount of accurately recorded Folklore, Myths, and Symbols, which throw a new light on primitive religious beliefs and their origins; these have been collected from all parts of the world during many years of diligent research and patient industry, and bring into special prominence the mythology of the remoter East, which offers to the student an almost unknown and exceedingly rich harvest of historical knowledge.

The author was a man of wide erudition and versed in many languages, who brought to the investigation of the subject, to which he devoted many years of an active life, a mind trained to administrative work, and the practical insight of of an experienced man of the world.

Only the first volume has been published, but Mr. O'Neill had before his death, after a few days' illness in January last, finished the second volume. As his death has unfortunately left his widow without funds for publishing it, we have formed ourselves into a Committee for the purpose of its publication, our intention being to issue the two volumes provided the funds at the disposal of the Committee enable this to be done without involving the Committee collectively or individually in any liability whatever.

We have taken this step because we believe that the loss of half Mr. O'Neill's book would be a calamity, as it would deprive students of the use of a large portion of the unrivalled collection of Greek, Latin, Celtic, Hindu, Syrian, Semite, Persian, Chinese, Japanese, and American Indian Mythology, Astronomy, and Symbolism collected and focussed by a traveller and scholar so keen-eyed, discriminating, careful, and devoted as Mr. O'Neill. We are convinced that the preservation and transmission to posterity of these researches, will, whether they agree with the author's conclusion or not, be permanently useful to all who wish to set before themselves and others a life-like picture of the hitherto obscure past.

We therefore trust that all who are interested in these studies will give us what help they can, and enable us to make the completed "Night of the Gods" a permanent gift bequeathed to mankind as his own most fitting monument by its distinguished author.

The circular then proceeds to invite subscriptions and donations, the former to be paid to the publisher, David Nutt Esq., 270, 271, Strand, London, the latter to the Hon. Secretary, David Rowe, Esq., 241, Barry Road, Lordship Lane, Dulwich, London. Persons subscribing will be entitled to a copy of the two volumes for £1.16, if the money be immediately paid, whereas the cost will be £2 12s. 6d. if a promise only be given.

THE LATE WAR SCARE.

We learn from the *Rising Sun and Nagasaki Express* that the sensational news recently telegraphed from Hongkong to *The Times*, on the strength of intelligence sent to the *Hongkong Telegraph* from Nagasaki, had been circulating in the latter port for weeks before it found its way southward, and had been regarded by the Nagasaki folks with very little faith. Yet this extraordinary item, sent over the wires, not by the regular correspondent of *The Times* in Hongkong, but a person said to be "specially competent to look below the surface of things," was credited in London and evoked leaders from nearly all the principal English Journals. Our readers may remember that when publishing Reuter's telegram on the subject, we pointed out the inherent improbability, if not impossibility, of the arrangement said to have been concluded between Russia and China with respect to Port Arthur, and declared the story unworthy of a moment's credence. None the less it found journalistic believers in Yokohama, and is still spoken of as an unquestionable fact. So hard is it to check a falsehood once set roaming!

THE LIBERAL MANIFESTO.

The following is a translation of the Manifesto just issued by the Liberal Party:—"It has ever been our Party's aim and endeavour to nourish and perfect Constitutional Government, and consolidate the basis of a system of responsible Cabinets, thereby maintaining the dignity of the Imperial Family and promoting the welfare of the people. Several years have elapsed since the first convocation of the Diet, but the new system has not yet borne perfectly satisfactory fruit, and in consequence various undertakings of urgent national importance have still to be carried out, the Naval and Military defences of the country being also in a state of imperfection. Meanwhile, the foreign relations of the empire underwent such a rapid change that our country was suddenly called upon, in consequence of disturbances in Korea, to engage in hostilities with China. Notwithstanding the insufficiency of our resources and the imperfection of our armament, our arms were victorious, earning for the country the world-wide reputation of a powerful State. These victories, however, have increased the obligations of the Empire. Its foreign intercourse is now beset with perils and difficulties of a serious nature. Under the circumstances, it is matter of the most urgent importance that the Government and the people should be united in administering the affairs of the Country at home and abroad on the basis of a comprehensive and permanent line of policy. Being sincerely unwilling to mar the country's prospects by engaging in petty party contests, our Party decided upon a political programme adapted to the time, and made it public in July of the present year. We then declared that we should not hesitate to co-operate with whatever persons might happen to pursue the same policy as ourselves, and might appear worthy of such co-operation. In other words, we proclaimed our readiness to become the allies of any party, whether in office or out, that might be committed to a policy identical with our own. Confident in the beneficial influence that our disinterested patriotism would have upon the public mind, we approached those in power in a spirit of candour and frankness. These latter, on their part, being fully conscious of the requirements of the situation, were not slow to recognize the sincerity of our Party, nor showed themselves unwilling to adopt the wishes of the people, thus inducing us to recognize their genuine desire of perfecting the constitutional system, strengthening the foundations of the country, and properly managing the general affairs of the State. We have, therefore, decided to pursue hereafter the same policy as those in office, and to co-operate with them in the management of State affairs, hoping thereby to further the progress of the country. Having been the first to advocate the introduction of a constitutional system of government, it is our Party's duty to see to its perfection. A careful survey of the condition of affairs at home and abroad fills our minds with awe and apprehension, making us desirous of devoting ourselves disinterestedly to the service of the country. We have, however, individuality and principles of our own. Of these we are resolved never to make a sacrifice. Being of the same way of thinking with those in power about the general condition of affairs, we do not now hesitate to follow the same path with them, for we are convinced that such a step is fraught with important and far-reaching consequences to the country."

DECLARATION BY COUNT ITAGAKI.

Simultaneously with the issue of the Liberal Party's Manifesto, the following declaration was made public by Count Itagaki, the leader of that party:—

"In discharge of my duties as leader of the Liberal Party, I take the present opportunity of making a declaration about the conduct of my Party, for I believe that such a step is but proper on the part of the chief of a political association. From the very nature of a political party,

whose conduct is governed by the views of the majority of its members, it is not to be wondered at that steps taken by my Party, in its corporate capacity should sometimes be opposed to my sentiments as an individual. But the case is otherwise where important questions of policy are concerned. As to the step just taken by the Liberal Party, namely, its open coalition with the statesmen in power for the purpose of carrying out various measures required in the sequel of the late war, I cannot choose but believe that the party's action will be approved by all patriotic persons taking the trouble of considering the condition of things among the Powers of the world, and the future of their country.

"Society is a conglomeration of men actuated each by his own individual views. It is a device to secure, by means of combination, the common interests and happiness of the individuals of which it is composed. That its members should be stimulated by a proper degree of mutual competition is essential, for otherwise progress would be impossible. But it is at the same time truly important that competition should be tempered by the virtue of honesty. Without the moderating influence of this virtue, competition would degenerate into a rough contest, and improvement into destruction, society itself finally becoming undermined. Without the virtues of honesty and benevolence to soften and restrain the relations between the wise and the foolish, the strong and the weak, governing and the governed, the rich and the poor, society could never be assured of a harmonious existence, even for a single day. The comparative study of the histories of England and France cannot fail to produce on one's mind deep and important impressions. Is not Frenchmen's tendency to pass from one extreme to another the cause of their modern calamities? Democratic reaction against despotism under Louis XIV. and XVI. ended in the opposite extreme of treason and anarchy, which in turn induced the imperialism of Napoleon. After the fall of Napoleon, the tyranny of Louis was followed by a violent and vindictive reaction which again led to a counter revolution. Thus one disturbance was followed by another, involving the fall now of the royal family, then of the aristocracy, and again of the democracy, and always inflicting intolerable miseries upon the people. Is not that an impressive warning for us? In England, on the contrary, although reactions have not been entirely absent from her career, she has been singularly free from extremes. Consequently, neither royalty, nor aristocracy nor democracy has experienced any crushing defeat, and the combined spirit of these different elements had led to the elaboration of a peculiarly smooth system of constitutional government. This may have been a result of accident. None the less, it is possible to derive useful lessons from the course affairs have taken in England.

"Let me illustrate my point by reference to the history of our country immediately preceding the Restoration. The clan of Mito was disturbed by movements and counter-movements of an extremely violent and vindictive kind, which led to the exhaustion of the clan's energies. In the case of the Restoration itself, that important political change was effected comparatively smoothly, and the career of the Imperial Government has been reasonably free from difficulties. The explanation is found in the fact that neither the Tokugawa family nor the different feudal clans were completely crushed, and all thought of revenge was removed from the minds of the people by the issue of the memorable Edict promising that the conduct of State affairs should be in conformity with the wishes of the people. All extremes are, from the nature of things, undesirable. Especially undesirable is unrestrained satiation of human passions, and among human passions the most prone to involve violence is the desire of victory. Our Party, therefore, though not hesitating to resist tyranny at the loss of life itself, ought to know that neither defeat nor victory should be pressed too far, and in a time of prosperity should have capacity to act with magnanimity and moderation. Such are my

ideas about society, and such have been the principles governing my conduct in the past. In making this public avowal of my guiding motives, one of my desires is to call the attention of the public to the necessity of devotion to principles, without which it is impossible to maintain the morality of the political world.

"About 1883, when the Liberal Party was in its worst predicament, my mind already began to be troubled with thoughts of its conduct in the days of its future victory. Visiting Mr. (now Count) Soyeshima Taneomi, I spoke to him as follows:—"I am now denounced as a traitor and chief of a destructive party. But I have such confidence in the general course of events in the world that I entertain little doubt of the establishment of a Legislature in our country. Inferences drawn from the history of other nations make it conceivable that in the event of the opening of a Legislature, the people now oppressed by officialdom will seek to be avenged. Should things come to such a pass, who is to restrain the vindictive passions of the people, and make it possible to effect a smooth transition from the old to the new order? Evidently such a task is not to be expected from men rolling in wealth and blazing with official honours. I make bold to promise to Your Excellency that, should my life be spared till that day, you will find the present traitor transformed into a loyal subject." Afterwards, in the Spring of 1889, perceiving that the opening of the Diet was near at hand, I visited Osaka and delivered a lecture before an assembly of men of my own political views. I told them that, of the statesmen then in power, Count Kuroda appeared inclined to adopt the views of our Party; that though our Party had thus far directed efforts along the path of destruction, the continuance of the same policy when the Diet was about to be opened would impair the smooth conduct of legislative business, and might even lead to worse consequences; and I added that, such being the case, should the Government be found sufficiently devoted to the interests of the country, our party must not hesitate to co-operate with it in the task of laying the foundations of the country's political system. I then came to Tokyo and had several conferences with Count Kuroda. I had previously had some share in bringing about the entrance of Count Goto into the Cabinet. But the object I had in view, namely, co-operation with the Cabinet, having been frustrated on account of the question of Treaty Revision, I took leave of these statesmen and went back to my home in Tosa. The same views, however, have directed my conduct ever since those days.

"The conduct of our Liberal Party is not the result of mere accident. Men that devote their lives to the country should be disinterested, open hearted, and free from all petty considerations. In all cases they should be guided by their principles, neither stooping to power nor crushed by adversity, neither struggling for fame nor showing greed for riches; but always continuing constant, honest, moderate, and pure-hearted. Such has been the ideal always kept in view by the members of the Liberal Party. And such being their ideal, they did not hesitate even to sacrifice their lives and property for the sake of the principles of liberty and freedom and for the introduction of a constitutional system of Government as the only means by which the people might be united in the interests of the country. Thus their object has been, not to obtain honours or rewards, but simply to bring about the establishment of a perfect system of constitutional government, and to secure the permanent well being of the people. From that point of view, the establishment of the Diet must be regarded as the satisfaction of our wishes. Further, considering the fact that the Diet has been the means of uniting the people during the recent war, it may safely be concluded that the system, for the introduction of which we have toiled so hard, answers our purpose sufficiently well. Now, the recent war has revolutionized Japan's relations with the Powers of the world. The nation finds itself charged with grave responsibilities relating to measures dictated by the altered circumstances of the country. Hence our Party having decided to co-operate with

whomsoever should agree with us on the subject of these national measures, the statesmen in power, moved by our sincerity, have expressed their willingness to move hand in hand with us. I have no doubt that this step on the part of the Liberal Party is justified alike by reference to the state of affairs abroad and by consideration of the country's needs at the present important juncture.

"Let me assure the members of the Liberal Party that, in view of our frank and open-hearted attitude toward those in power, the latter may doubtless be relied on to meet us in a corresponding spirit of candour and will promote the consummation of our principles and ideals. I earnestly hope that, in view of the present important juncture in the country's history, our fellow Liberals will prove true to their uniquely consistent conduct during the past twenty years."

THE LIBERAL MANIFESTO AND THE PRESS.

Two holidays having succeeded the issue of the Liberal Manifesto, many of the metropolitan papers have not yet had an opportunity to comment on the document, as for instance, the *Kokumin*, the *Mainichi*, the *Hochi*, the *Kokkai*, the *Chuo*, and the *Fiji*. Among those that have discussed it may be mentioned the *Nichi Nichi*, the *Yomiuri*, the *Nippon*, and the *Choya*. With the exception of the *Nichi Nichi*, these journals criticise the Liberal Manifesto in an unfavourable tone. On the whole, instead of looking at the broadest and most important aspect of the question, namely, its influence on the introduction of party government, these journals are disposed to treat it as though it were only an event of passing moment. They confine themselves to the task of finding fault with the language of the Manifesto.

The *Nichi Nichi* praises the Manifesto and Count Itagaki's declaration as clear in meaning and manly in tone. It also expresses satisfaction at the Liberal Party's disinterested devotion to the interests of the country and their freedom from all spirit of revenge. Having reproduced the substance of the Manifesto, our contemporary proceeds as follows:—"What we have thus far quoted will suffice to show how intensely patriotic the Liberals are and how devoted to the public interest. Their straight-forward manliness forms a significant contrast to the meanness of party politicians who, notwithstanding their co-operation in the case of some important questions, are still incapable of union into a single permanent combination." The *Nichi Nichi* next reproduces the essential parts of Count Itagaki's Declaration, and concludes in the following strain:—"Considering these statements of Count Itagaki, side by side with the manifesto of the Party, it is easy to see that the present political alliance is not one of those combinations which, being effected for selfish purposes, are formed in the morning and dissolved in the afternoon. For that reason we find an absence of compromising conditions. Honourable combination is what true gentlemen value: combination for the sake of selfish motives is abhorred by them. Like true gentlemen, the Liberals have now frankly declared to all the world their alliance with the Cabinet Ministers for the sake of the urgent needs of the country. It is our earnest hope that this communion of hearts for national purposes between the Cabinet and the Liberal Party may last for ever."

The *Yomiuri Shimbun* gives the Liberals credit for the courage displayed by them in openly proclaiming themselves friends of the Cabinet, and is candid enough to say that the step promises to secure the smooth introduction of a system of responsible cabinets. As to the Manifesto itself, however, our contemporary wonders at the ambiguity of the terms in which it is couched, and blames the Liberals for omitting to state clearly the nature of the policy in which they profess themselves to be in agreement with the statesmen in office. Why have they not been more explicit in the language of their Manifesto? Is it because they think it

unnecessary to point out a policy the details of which are known to their colleagues; or is because, in their eagerness to effect a coalition with the Cabinet, they have not had leisure to think of their policy; or, again, is it because they fear that to reveal their true policy would provoke serious opposition in their own ranks as well as in the circle of officialdom? None of these reasons appears cogent, and our contemporary ends by avowing its utter inability to fathom the motives that suggested such strange silence with regard to vitally important points.

The *Nippon* condemns the Manifesto, calling it a gross attempt to mislead the public as to the real grounds of the alliance. According to the Manifesto, it would appear that the coalition is based on a consensus of views between the Liberals and the Ministers, both recognising the necessity of harmony between the Government and people and perfecting the constitutional system. But are not these purposes exactly what all the political parties desire? Had such things been the real points at issue, our contemporary believes that the Liberals would have acted more consistently by allying themselves with other parties opposed to the Government. The truth is that the Liberals have combined with the Ministry not because of community of ideas on these topics, but because they differed from the other parties in connection with the question of ministerial responsibility about the Liaotung affair. If they really mean that they have suffered themselves to become the supporters of the Cabinet because the latter is in favour of union between the Government and the people and seeks to perfect the system of constitutional Government, then the *Nippon* argues that their manifesto calumniates the other parties, whose opposition to the Cabinet, as they have repeatedly declared, is due precisely to the fact that its conduct seems prejudicial to any such harmony on the part of the nation as well as to the perfecting of the parliamentary system.

The *Choya* thinks the Manifesto too simple and too vague in its explanation of the reasons that have led the Liberals to form an alliance with a clan Government whose downfall had been their war-cry during ten years. The substance of the Manifesto may be reduced to one sentence, namely, that the statesmen in power have been good enough to appreciate the sincerity of the Liberals, and the latter, in return, have consented to support the former. Our contemporary regards this as extremely prejudicial to the reputation of the Liberal Party.

The Progressionist and other Opposition organs have just commented upon the Liberal Manifesto. As might have been expected, they denounce the so-called coalition, calling it unconditional surrender to the Cabinet on the part of the *Fiyu-to*. It will suffice to give the gist of the writings of the *Mainichi* and the *Kokumin*. The *Mainichi* is at a complete loss to discover the meaning of the manifesto. It regards the document as nothing more than a senseless attempt to apologise for unconditional surrender to the Cabinet. The so-called coalition, says the Progressionist organ, is by no means a new departure, for the Liberals have throughout been the supporters of the present Government since its coming into power. Thus the manifesto is simply an open proclamation of what has long existed in fact. The coalition of the Liberals with the Cabinet means their ignominious abandonment of the principle of responsible cabinets, for, so far as the *Mainichi* knows, the Cabinet has not changed its views on the subject, namely, that Ministers under the Japanese Constitution are not responsible to the Diet. Had this pernicious theory been really given up by the Government, not only the Liberals, but the Progressionists and other Opposition parties would have been ready to support those in power. In fine, the Liberals are violently denounced as traitors to the cause of the people and subservient tools of the Government.

The *Kokumin* looks back to the glorious history of the Liberals in 1881-2, and contrasts it with what it chooses to call the present moral death of that Party. In 1881-2, an important

epoch in the history of the growth of popular power in Japan, the Liberals were the bulwarks of popular rights and freedom, and their leader, Mr. (now Count) Itagaki, was revered and even idolized by the nation as an upright, pure, disinterested, and consistent statesman. But where is now that Itagaki, who, when stabbed by a fanatical assassin, cried out, "Itagaki may die, but liberty lives"? Where are those young men of spirit and high aspirations that, but thirteen years ago, vowed uncompromising antagonism to clan government and declared that they would rather die than yield to the clan statesmen? The *Kokumin* recognizes that in the active field of politics combinations of former enemies and separations of friends are common occurrences. But such combinations and separations ought to be founded on well defined political reasons. In the case of the Liberals, our contemporary regrets to say that they have signally failed to assign any reason for their coalition with the existing Cabinet. Hence they must be declared to have made an unconditional surrender to those in power. The Manifesto says that the Liberals will henceforth coöperate with the Cabinet Ministers in the solution of the various important problems now demanding national attention. But the *Kokumin* is unable to discover how these problems are to be solved, and what policy those in power propose to pursue. Nay, more, our contemporary even declares that the Government has no policy of its own, and proceeds to illustrate that bald statement by reference to the conduct of the Cabinet in connection with the Liaotung affair, the Pak incident, and the Korean question generally. The manner in which these problems have been dealt with shows, according to the *Kokumin*, that the Cabinet is totally devoid of any fixed policy in foreign affairs. That it is similarly destitute of a fixed policy in internal affairs, adds its critic, is evident from its vacillating conduct on the subject of the increase of the national armaments. Hence to pretend that the Liberals pursue the same policy as the Cabinet, is simply absurd. The coalition between the Liberals and the Ito Cabinet is a combination not on account of political principles, but on the basis of mere sentiment. That the Liberals have made such a combination proves that they have thrown to the wind their political principles, honour, and, in fact, everything that contributed to make them great in the past. "Their disgraceful conduct on the present occasion," concludes the *Kokumin*, "has completely blotted out their brilliant record of 1881-2. The Liberal party is dead, so is Count Itagaki. Both are morally defunct."

The Nationalist organ, the *Chuo Shimbun*, refrains from making any comment upon the subject. How are we to interpret its reticence? The most probable explanation is that the National Unionists are still undecided about the direction in which to shape their course.

FORMOSAN NEWS.

Peace has not yet been fully restored in Formosa, although Governor Count Kabayama has proclaimed its restoration. A telegram from the Head-quarter Staff, and to Ujina on the 24th instant, reports that a body of insurgents, about six hundred strong, having been discovered in an intrenched position by a reconnoitering party, two companies of infantry were sent against them. How this expedition fared, it is difficult to ascertain from the message. We read, however, that a detachment from Major Kuwahata's command, having proceeded on a reconnoissance about 5 miles along the left bank of the Tamsui river, was surrounded by a large force of insurgents, and had to cut its way through them, with a loss of 3 men killed, 2 wounded and 2 missing, the enemy leaving 30 dead upon the field. Again, on the 17th instant, Major Kawagoye, at the head of two companies, attacked and captured an intrenchment of the rebels at Changwan, the Japanese having 5 men killed and wounded, and the enemy 20 killed. A sum of 2,500 yen was among the spoils on this occasion.

KOREAN NEWS.

NOVEMBER 27TH.

On the day previous to his departure from Sōul, namely, the 15th instant, Count Inouye had a farewell audience with the King. His Majesty is reported to have expressed sincere regret at parting from the Count so soon. On this occasion, the Japanese Ambassador's escort consisted of ten guards under the command of a lieutenant, and the same number of constables under a police sergeant, specially sent from the Court. There was also in attendance a Korean official of the Household, Mr. Kim Shunki. It is reported that, after delivering a message of condolence and sympathy from the Emperor to the King of Korea, Count Inouye did not talk with the King on any political topics. The *Nichi Nichi's* correspondent states, however, his diplomatic experience and great influence over the Koreans were employed by the Count during his short stay in Sōul for the purpose of devising a proper solution of the awkward situation in which the Korean Cabinet finds itself. Another correspondent hints that, what the Count personally saw and learned in Sōul appears to have induced him to modify somewhat the views he originally held about ex-Minister Miura's conduct, as well as the general object of the *émeute* of October 8th. Yet another writer surmises that the results of the conference of the Foreign Ministers held at the Japanese Legation on the 12th instant, led to the sudden departure of Count Inouye for home. But no explanation of this hypothesis is given.

Concerning the above conference, the *Nichi Nichi's* correspondent mentions that it was held at the request of the Representatives of Russia, England, and the United States. In fact, it was attended only by these three diplomats in addition to Minister Komura. The subject discussed was the present political situation in Korea. As to the manner in which the situation should be dealt with, opinions were divided at the conference. Some thought that the disgrace of Cho Gi-yuen, Minister of War, alone would be sufficient; while others insisted that the punishment should be extended to several other personages. All, however, says the same correspondent, agreed in believing that the King was still a sort of prisoner in the hands of the Tai Wōn-kun, and that there was reason even to fear for the safety of His Majesty's person.

The uncertainty of the public mind in Sōul and in the provincial districts is said to be increasing. Proclamations are constantly placarded in the streets of the capital by some unknown malcontents, believed to be agents of the Min faction. The tenor of these proclamations is said to be mysterious and disquieting. Some of those posted in the country districts are intensely hostile to the Japanese. The general apprehensions produced by these street proclamations, are augmented by reports of constant appearances of parties of depredators in remote provincial districts. Some parts of the country are now being harassed by what are called *hasoku* (fire-thieves), probably because it is their custom to pillage villages and set fire to the houses before retreating with their booty. Recently Captain Rito, I.J.I., met with a gang of these robbers on his way back to Sōul from Chol-ju, where he had been drilling a battalion of Korean troops. He was proceeding in a palanquin, in the vicinity of Mok-chōn, when he heard a tumult ahead. Emerging from the palanquin, he perceived that his Korean interpreter, who had been walking in advance of him, was surrounded by a large gang of ruffians. The interpreter fired his pistol in the air to frighten away his assailants. Seeing the Japanese officer rapidly advancing to the spot, some of the robbers walked up to him and demanded his business in travelling through the country. Captain Rito's answer was to fire a pistol, and this seems to have had the desired effect, for the ruffians desisted from further interference and suffered the Japanese officer and his interpreter to pass on. They, however, peremptorily commanded Captain Rito to take a certain circuitous route to Sōul and to keep perfect silence about their mustering in force.

The *Chugai Shogyo Shimpō's* correspondent states that the Korean Minister of Education recently issued a notification, announcing the opening of four primary schools in Sōul, explaining the importance of popular education for the progress of the country, and strongly advising the citizens of the capital to send their children to these schools. The proclamation further mentions that at these schools, boys and girls will be taught Confucian morals, national history, geography and literature, arithmetic, foreign history, and so forth.

The *Hochi's* correspondent reports that the Korean Government has decided upon the establishment of a French school, and that a French instructor has already been engaged. So far as its finances allow, it is said to be the Government's intention to establish schools for instructing Korean youths in German, Russian, and Chinese.

The ceremony of opening the new buildings of the primary school in the Japanese Settlement of Sōul, took place on the 12th instant. Among the Korean guests invited on the occasion, were Mr. Kim Shunki, Vice-Minister of Foreign Affairs, and Mr. Kim Keika, Governor of Sōul. Mr. In Chiko delivered a speech in Japanese on behalf of the Korean guests.

The sudden arrest and almost immediate release of Min Yong-chun, are said to have considerably lowered the prestige of the present Korean Cabinet. As to the cause of his release, various rumours are circulated in Sōul, all unfavourable to those in power. At the time of his apprehension, great consternation was produced among his followers, many of whom at once sought the protection of a certain foreign legation. They are said to be still staying there.

According to a report from the Japanese Consul at Ninsen, the average yield of rice for the whole Kingdom is computed to be 80 per cent. of the crop of a normal year. The harvest has been poorest in Kyōng-kwi-do, in some parts of which, as for instance, Pha-ju, Ko-yang, and so forth, the yield is only from 50 to 60 per cent. of an ordinary year. In Chung-chhōn-do, Wang-hai-do, and Phyoŋ-an-do, the crop has been about that of a normal year; while a more than ordinarily good crop has been obtained in Chol-la-do and Kyōng-sang-do. The decrease of the harvest in Kyōng-kwi-do, is owing to drought in May and June, and to inundations in July and August.

NOVEMBER 29TH.

The following telegrams were published by the *Yomiuri Shimbun's* extra yesterday afternoon:—

"Sōul, November 28th, 7.20 a.m.

"The lately disbanded Palace Guards attacked the Palace this morning just before dawn, and fired into the Palace."

"Sōul, November 28th, 10.15 a.m.

"The disbanded Palace Guards attacked the Palace last night, but were repulsed by the *Kunrentai* troops. The ringleaders of the Palace Guards were Li Hanhin (?) and a certain American missionary. Kan and eleven others have been arrested. The foreign Ministers repaired to the Palace on hearing of the disturbance."

The *Chuo's* extra had the following:—

"Sōul, November 28th, 9 a.m.

"A plot has been discovered, that Li Han-shin, who is staying at the Russian Legation intends to surround the Palace with 300 ruffians. To provide against the threatened danger, the Premier Kin Koshu, in concert with Cho Gi-yen, is collecting troops."

It is singular that the *Chuo's* correspondent makes no mention of the reported attack on the Palace, and it is also inconceivable that he should have been ignorant of the affair had it really taken place. Yet the *Yomiuri's* telegram is very explicit. There seems, however, to be some mistake about the matter. Perhaps the *Yomiuri's* correspondent may have been a little "previous" in sending the news of the actual disturbance. The Li Hanhin mentioned in his telegram as a leader of the Guards that attacked the Palace, is doubtless the same person

whose name is given in the *Chuo's* telegram as Li Han-shin. The latter, we believe, is the correct spelling.

THE JURY SYSTEM.

In the pages of the *Popular Science Monthly* Dr. Crothers discusses the working of the jury system in the United States. Dr. Crothers' point of view is naturally that of a medical man, but he by no means confines his remarks to the medical aspects of the subject. He is in entire agreement with the large class of writers and thinkers that regard the whole jury system of British, Colonial, and American Courts as sadly needing reform, if not demanding its abolition. The following is the gist of the article: It is often maintained that the judgment of 12 impartial and honest men is far more trustworthy in the majority of cases than the opinion of one trained man. But any one acquainted with the history of the working of the jury system is aware that the ideal jury, the body of thoroughly competent and unbiassed men, does not exist. The majority of the men chosen to serve on juries are entirely unaccustomed to weigh evidence, and owing to the unfavourable surroundings and conditions in which they find themselves, are often unable to exercise even common sense. In a noted trial at Hartford, Conn., out of a panel of 100 jurors, twelve men were selected, after searching inquiry. Five of them were farmers, who worked hard in the open air and who were quite unaccustomed to sustained mental effort of any kind. Of the rest of the jury one was a blacksmith, two were mechanics, one a horse-dealer, one a groceryman, one a retired farmer and trader, and the last an ex-railroad man who had no business. Though the case had been discussed in the papers for weeks before the trial, these men all swore that they were unacquainted with its details. For ten days the jurors were confined from 5 to 6 hours a day, listening to arguments bearing on a most subtle question, namely, the mental capacity and motives of the maker of a will. Of course they disagreed. Even if they had reached a unanimous verdict, its wisdom and justice would have been a matter of accident. This jury is typical of hundreds of juries called together every week in the United States. It is a well known fact that the majority of men that serve on juries have no qualification whatever for the task of sifting and weighing evidence. In theory the purpose of selecting a jury is to secure men of honesty, intelligence, and courage to reach unbiassed conclusions in accord with facts. In practice men possessing some defect or weakness that can be taken advantage of by one side or the other are chosen. Each counsel is interested in selecting "men he can handle readily." So that the real qualifications for jurymen would seem to be availability, credulity, ignorance, and the possibility of personal influence by persuasion, flattery, and appeals to some personal bias. It is asserted, and with truth, that the best men evade jury duty. A jury is required to pass judgment on motives and the capacity of mind, to analyse conduct, to determine the bearing and significance of a vast number of isolated facts, to know the application of law to the case under consideration. When making a feeble attempt to do its duty, it is called upon to listen to the passionate appeals of opposing counsel and then is frequently further bewildered by the minute distinctions drawn out by the judge in his summing up. The judge charges the jurors that if they shall find such and such conditions, they are to bring in such and such a verdict, and if opposite conditions another verdict. After hearing this charge they are usually in such a state of hopeless mental confusion that they either arrive at no verdict at all, or what is more common, to make an end of the business, agree to any theory that is propounded by one of their leading members and return a verdict accordingly.

These facts are universally acknowledged, but it does not occur to most people that in a large number of instances the unfavourable hygienic

and other conditions in which jurymen are placed are fruitful sources of haphazard verdicts. Even supposing that men have a fair amount of intelligence and thorough honesty of purpose, they are taken frequently from a life spent in the open air, with an abundance of exercise, and shut up in a close, badly ventilated Court-room, and are obliged to sit in one place for five or six hours during the day. In cases of capital crime they are housed in the same hotel at night and have changed diet, changed sleeping rooms, imperfect exercise, and all this combined with severe mental strain, lasting a week, ten days, or even a fortnight. Intelligent and sound reasoning is impossible to such men under these conditions. It frequently happens that after the first day the jury become quite listless, and are only aroused to life when flattered by Counsel. Every lawyer can tell a number of curious stories of the many devices used to influence juries. It is safe to say that as a rule they do not listen to half of what is said. That has often been proved by watching the surprise they show when the Counsel or the judge alludes to points of evidence been previously discussed or to the testimony of witnesses. The following case, Dr. Crothers tells us, is thoroughly representative of what is constantly occurring in various parts of the United States.

"The case was murder, in which an intricate chain of circumstantial evidence pointed to one of three men as guilty. The jury was composed of five farmers, four mechanics, and three merchants. Nine of them were active muscle workers, living in the open air most of the time, and three were actively engaged in-doors. The trial lasted eleven days. The jury were boarded at a hotel, and had no exercise except walking to and from the hotel to the Court room three times a day. Four of the jury complained of dull headache. On the fourth day five of the jury had attacks of indigestion, with pain and nausea. One had chills on the night of the same day and was given quinine freely. Two men had attacks of what was called rheumatism, consisting of pain and stiffness of the muscles, and a physician was called. Eight suffered from insomnia. All suffered from bad feeling and dizziness while in the Court room."

This may be a very exceptional case, but Dr. Crothers, has nevertheless, furnished abundant evidence to show that, in addition to the evils inherent to the jury system, there exist in the present method of choosing and employing jurors the most insuperable obstacles to its efficient working.

THE "BRITISH TRADE JOURNAL" IN JAPANESE.

The second number of the *British Trade Journal* in Japanese (*Eikoku Shogyo Zasshi*) is lying before us. It is a well translated and well printed reproduction of the English periodical, and is to be issued every three months in Tokyo. Besides the advertisements, which occupy the greater part of the publication and which doubtless are the principal object, the text contains more than twenty pages of closely printed matter dealing with commercial and manufacturing subjects. In the leading article, the editor dwells upon the extremely hopeful position of Japanese commerce. Even without the late war with China, the industrial and commercial development of Japan was destined to be rapid and promising, and the victories obtained by her troops on land and sea have furnished an additional means of introducing her to the world. Whether the unique advertising influences of the war will be turned to full account, depends upon the activity of the Japanese in taking advantage of the present splendid opportunity. In order to play their part with success in the world's struggle for commercial and industrial extension, they must enter on their new career with a spirit of liberality and moderation, and be ready to conform with the customs and principles prevailing among great commercial nations of the West.

BALL AT THE FRENCH LEGATION.

His Excellency the French Minister and Madame Harmand gave a ball at the Legation in Tokyo yesterday. A spacious *salon de danse*, capable of being removed and erected at pleasure, has now been added to the accommodation of the Legation, its ample dimensions well suited to the hospitality for which the Representatives of France in Japan have always been famous. Three French vessels of war and three Russian, including the Flagships of both nationalities, being now in Yokohama, a large number of officers were invited, and their rich uniforms added greatly to the picturesqueness of the scene. Dancing began shortly before ten o'clock, and after an ordinary programme had been rapidly completed, a cotillion was commenced. With exceptionally pretty favours, capital music by the Band of the *Bayard*, and very spirited leading, this, the chief feature of the evening, proved a marked success, and was kept up without flagging until far into the small hours of the morning. There was no set supper, the *buffet* being kept open continuously from half-past eleven. The guests included all the Ministers of State now in the capital, the members of the Foreign Corps Diplomatique and Consulates, a number of Japanese high officials, and the leading residents of all nationalities in the capital. We need scarcely add that nothing was wanting of the graces and skill of arrangement characteristic of French hospitality.

DEATH OF MR. KEITA GOH.

It is with the greatest regret that we announce the death of Mr. Keita Goh, Private Secretary to the Minister of State for Foreign Affairs. Mr. Goh had not enjoyed good health for nearly two years. Last spring he suffered from an attack of typhoid fever, the effects of which he never thoroughly shook off. At the beginning of this month he was confined to his house with influenza, but all anxiety on that account had disappeared when typhoid fever again made its appearance, and in his debilitated condition he offered but a feeble struggle against the disease, succumbing finally at 5.30 o'clock on the afternoon of the 21st instant. Mr. Goh was the son of a wealthy *Samurai* of Nagasaki who devoted a large part of his fortune to providing a modern education for his children and sending them abroad to complete their studies. In 1876, he entered the French School in Kyoto, subsequently proceeding to Tokyo and afterwards to China. He then visited London in the suite of Mr. (afterwards Viscount) Mori, and returning home in 1885, was sent to Belgium at public expense to study science and the French language, acquiring an exceptionally accurate knowledge of the latter and considerable distinction in the former. In 1892 he became Private Secretary to the Minister of State for Foreign Affairs, which office he held at the time of his death. He had received numerous Decorations from Foreign Sovereigns, and in October of the present year the Emperor of Japan bestowed on him the Sixth Class of the Order of the Rising Sun. He died at the early age of 38. Few Japanese officials have ever been so popular among foreigners. His charming manners, his fluent use of the French language, and his unfailing readiness to render kind offices could not but make him beloved. His loss will be severely felt at the Foreign Office, where, in the department of social intercourse, his graceful tact and faultless taste showed to excellent effect. Had his life been spared, a brilliant future certainly lay before him. A few years ago Mr. Goh married the only daughter of the celebrated scholar, Mr. Kanda Kohei. The sympathy of a wide circle of sorrowing friends goes out to his bereaved wife and children.

PEKIN NEWS.

NOVEMBER 20TH.

The 3rd instant, very evil weather in Tokyo, was bright and calm in Peking. In the morning the Japanese residents assembled at the Legation and did obeisance to the pictures of the Emperor and Empress. In the evening, a banquet was given at the Japanese Legation in honour of the auspicious occasion, the guests being the members of the Corps Diplomatique in Peking. All the Foreign Representatives were present. Colonel Denby proposed the health of His Imperial Japanese Majesty, and congratulated the Japanese Minister on his elevation to the peerage. Baron Hayashi replied in English. The Netherlands Minister then proposed the health of the doyen of the Diplomatic Corps, Colonel Denby. The entertainment is said to have been eminently successful.

On the 28th ultimo, the departing British Minister and his wife were entertained at dinner by Baron Hayashi. Besides the principal guests, there were present Sir Robert and Lady Hart, Colonel and Mrs. Denby, the sons and daughters-in-law of these gentlemen, and a few others.

The *Nichi Nichi's* correspondent states that there is a rumour in Peking that Herr von Brandt is returning to China, though for what purpose it is not known.

NOVEMBER 29TH.

The *Kokumin Shimbun's* Peking correspondent states that, true to his prediction, Earl Li, is steadily recovering political ascendancy in the capital. His most powerful enemy, Weng Tung-ho, is said to have given up, or at least suspended, his opposition to the Viceroy. This changed attitude on the part of Weng is ascribed to a discovery made by him since he assumed the direction of the Empire's foreign affairs, namely, that it is one thing to sit at a distance and criticize the conduct of others, and quite another thing to manage affairs with the Representative of foreign Powers. Weng is said to have of late left the control of business of the Tsung-li Yamên in the hands of Earl Li. Concerning the methods of the Earl, the same correspondent mentions an interesting fact. At the conferences with Baron Hayashi on the subject of the Treaty of Commerce and Navigation, the great Chinese statesman is reported to be entering with his own hand all corrections and additions in the draft stipulations, never leaving such work to his secretaries. He also seems to have all the articles of the draft treaty by heart, and the power of memory manifested by him in this and other ways is stated to be subject of wonder and admiration to all attending the conferences.

The *Wan-kuo-kung-pao* (Universal Intelligence) of Peking is said to have published in a recent issue a memorial addressed to the throne by Wang, lately special Envoy to the Court of St. Petersburg. The memorialist urges the importance of introducing reforms in industrial, military, financial, and political spheres. The progressive sentiments prevailing throughout the document are the fruit of Wang's recent travels in Europe. He commences by discussing the urgent necessity of constructing railways, arguing the matter from military, as well as commercial, points of view. In his opinion, three lines should be built first, namely, roads connecting Tientsin with Kwachou (?) on the Yangtse, Hankow with Szechuan, and Shanghai with Canton. Secondly, the question of military reforms should receive immediate attention. On this subject he recommends, first, the sending of a large number of intelligent young men to Europe to study matters relating to arms, ammunition, tactics, and military organization; secondly, the re-modelling of the military system of the Empire after the fashion of European countries; thirdly, the creation of a corps of 40,000 men as a nucleus for the new army; and fourthly, the building of powerful men-of-war. His third contention is that the present system of military and civil service examinations is open to severe criticism, as being entirely out of touch with the times. Wang recommends that the system be modified so as to include modern

science among the topics in which candidates are examined. Fourthly, he points out the paramount importance of establishing colleges for instructing promising youths in the sciences and arts of the Occident. China is not entirely destitute of educational institutions of the kind. She has one in Peking, a few in Tientsin, two in Canton, one each in Fukien, Hu-peh, and Chinkiang. The scope of these should be extended, and new colleges should be established at other principal towns throughout the Empire. Fifthly, financial reforms occupy the attention of the memorialist. The first step that he urges is the issue of paper money to facilitate business transactions. In order to prevent forgeries, he recommends the importation from Russia of a certain kind of paper with designs in the texture. *Après* of the subject of finance, he advises that habits of simplicity and frugality should be enjoined upon the people, and that in future to squander money on the construction of shrines, temples, and other unproductive edifices, should be prohibited. Sixthly, encouragement should be given to commerce and industry. In China, says the memorialist, literature has been respected as a superior calling, while commerce and manufacture have been despised as ignoble. He exposes the fallacy of this view, and calls attention to the importance of encouraging commerce and industry side by side with literature. Special stress is laid upon encouraging the export of tea and silk, and developing vineyards in the provinces of the north-east. Seventhly, the mining industry is considered under a special heading. Wang states that, while in Europe, he was told that half the mineral wealth of the world is in China. But this vast treasure remains still in the bowels of the earth. He recommends that Occidentals should be allowed to work the mines, on condition that, if the undertaking prove profitable, the privilege be repurchasable by the Chinese Government. In this way the profits may be secured to China, while the losses would be borne by foreigners. Eighthly and lastly, Wang urges the appointment of a single responsible Minister of Foreign Affairs. The present collegiate system at the Tsung-li Yamén relieves every one of responsibility for the foreign affairs of the country, the consequences being extremely prejudicial to the interests of the Empire. Reorganization of the Foreign Office in Peking in the sense recommended is declared to be a matter of supreme importance. He also advises the appointment of a separate and able Minister to each of the European countries. The present system of accrediting one Minister to several Courts at once, is, in his opinion, productive of various evil results, the principal among which is that other Courts where the Minister does not happen to be residing, Chinese diplomats have to be contented with a position inferior to that accorded to the representatives of "such petty states as Turkey, Greece, and Japan."

As to the Mahomedan rebellion in Kansuh, the Japanese correspondents agree that things are rapidly assuming a very serious aspect. Five battalions of Imperial troops have joined the rebels, and Viceroy Yang, of Kansuh, is reported to have committed suicide. The whole province is now believed to be in the occupation of the insurgents.

CHINA NEWS.

NOVEMBER 23RD.

The Rev. Gilbert Reid, whose recent appointment as the missionary member of the Szechuan Commission led to some controversy, has made his mark in China. Mr. Reid's direct *raison d'être* in China is the commonly heard reproach that Christian Missionaries obtain access to the lower classes only. His purpose is to reach the literati and the higher officials, and he seems to have been remarkably successful, for already he has made the acquaintance of sixteen prominent members of the Administration and has established communications with 58 out of the 60 chief men in the Government. He has been received by Prince Kung, by Weng Tung-ho, who is regarded as the most powerful member of the Government after

Prince Kung, and with Sun Chia-nai, of whom he speaks as "probably supreme of all the high officials in virtue and integrity." Mr. Reid is an excellent Chinese scholar, and is able to carry on social intercourse successfully. He sent to each of the twelve leading censors a letter covering a carefully prepared document on the needs of China; he then called on them in Chinese garb and finally he invited them to dinner. Four times they came to share his hospitality and listen to his words of wisdom. Not the least interesting fact is his financial management. He has a stipend of \$60 a month, out of which he managed to contribute \$295 to the funds of his mission during the first year of work; he moreover earned for the mission \$425.52 by newspaper work, and his total expenditure for the year, including his own salary, was \$935.30. He takes his meals with his Chinese teacher at a cost of ten cents per diem, and at the end of the year he had a credit balance of \$1,350.

The choice of a site for the Japanese settlement at Soochow has not yet been definitely made. The Japanese commissioners want one place and the Chinese local authorities offer them another. The question has been referred to the Governments of the two countries.

Measures to centralize the Chinese administration are in progress. The telegraph has already accomplished much in that direction. Railways would accomplish more. The latest steps are the transfer of the directorship of the North-China Railway at Tientsin to Government officials, and the transfer of the control of the Kiangnan Arsenal from the Viceroy of the Liangkiang to the Grand Council of War in Peking.

A serious military *émeute* in *posse* was checked at Kiukiang in the early days of November by the exertions of Taotai Chêng. Orders had been received to disband three-tenths of the garrison, but the soldiers objected. They proceeded, in the first place, to visit all the *yaméns* in the city, carrying joss-sticks in their hands. That was in the nature of a peaceful protest against the contemplated measure. The Taotai thereupon promised to petition for a postponement of the disbanding on the unusual pretext that a strong force of troops was required to guard the missionary chapels during the winter. But the soldiers, learning subsequently, that the original order was about to be carried out, seized a Colonel and were about to tear him in pieces when happily the Taotai appeared upon the scene and induced them to desist by pledging himself to intervene on their behalf. Military discipline is virtually an unknown quantity in China.

The members of the American Chêngtu Commission, instead of riding in official chairs on the way to Szechuan, are travelling in common mat litters, and are said to have been very inadequately received and lodged by the local officials *en route*.

NOVEMBER 27TH.

Our readers are aware that a newspaper was recently started in Peking, and that its contents were found to be not only admirably progressive in spirit, but also remarkably outspoken. Some mystery attached at first to the origin of this new and interesting departure, but the facts are now clearly established. The *Wan-kuo-kung-pao*, or "Universal Foreign Intelligence," was conceived and inaugurated by a new club, of which the leading spirit is a Hanlin named Kang Chang-su, a native of Canton, who, some years ago, fell under official displeasure owing to the heretical character of his commentaries on the classics, especially the Confucian Analects. Denounced at that time to the Throne and his writings placed under a ban, Kang now finds himself in favour, owing to the sudden development of progressive ideas in the sequel of the late war. Associated with him in the new club are many men of note—Yuan Shihkai, the well known ex-Minister to Korea; a Secretary of the Grand Council; a grand-nephew of the Imperial Tutor Weng; son of the late Marquis Tsêng; and nephew of Prince Li; the eldest son of the Viceroy of Nanking, and some fifteen others of high literary rank, or belonging to great official families. Among the honorary

members are such men as Wang, recently special envoy to Russia, one or two eminent Generals and so forth. The Viceroy Chang Chih-tung has given to the club a sum of Tls. 5,000, the second of the Imperial Tutors has given it a house rent free, and the Senior Imperial Tutor, President of the Board of Revenue, intends to procure for it an annual allowance from the Board, and has ordered printing machinery for bringing out the books by means of which the Club hopes to diffuse a knowledge of Western civilization and literature among the Chinese. It looks to be a very hopeful movement, but genuine reform in China can scarcely be expected so long as the present dynasty reigns.

The execution of the "Butterfly," "Long Finger Nails," and three other ringleaders of the Whasang assassins, took place at Foochow on the 7th November. Two executioners performed the work of decapitation, and so great was their celerity and accuracy that from the time the first sword was lifted until the fall of the fifth head, the interval was only twenty-two seconds.

The steamer *Nanking* was wrecked on the morning of November 14th while attempting to make the northern entrance of the Chefoo harbour. She missed the channel and struck a reef just before a northerly gale began to blow. The crew were all saved, but the ship became a total wreck. It is said that, having lost two of her propeller blades, she had sought permission to enter Port Arthur, but the Japanese refusing, she made for Chefoo. It is scarcely credible that any such refusal was given.

The neighbourhood of Hangchow seems to be in an unquiet condition. There is talk of Vegetarian bands organizing in various places with the intention of attacking the Christians.

The policy of disbanding troops all over the Empire is producing serious trouble. The men naturally demand some bonus to enable them to reach their homes, but in few cases is any attention paid to the demand. In Kiukiang there is a strong apprehension that the soldiers may sack the city unless they get what they ask. They profess unwillingness to injure foreigners, but the Kolao Hui, always ready to join in any disturbance, have put out placards against everybody in general and foreigners and officials in particular.

The officials at Wenchow are again displaying their contempt for treaty obligations. It may be remembered that, some time ago, they employed physical force to compel a man to sign a document promising that no more Christian services should be held in his house. After his release from confinement, he returned home and the services were re-commenced. He was again arrested and thrown into prison, no attention being paid to his perfectly valid excuse that he had let his house to the mission by which the services were performed. The remonstrances of the British Consul seem unavailing.

There is a rumour that official permission has been obtained by a Chinese syndicate to work the petroleum deposits in Szechuan and Hupeh.

It is feared at Newchwang that in the interval between the Japanese evacuation and the Chinese re-occupation, life and property will not be safe. The Chinese officials are foolishly unwilling to resume charge of the place until the Japanese have entirely taken their departure. H.M.S. *Rattler*, however, has "docked" there for the winter.

The Rev. James Stewart, rector of Stukeley, in Hants, has died from the shock of hearing that his daughter was murdered at Whasang.

The presentation of prizes to successful exhibitors at a competitive exhibition of carved objects in Uyeno Park, Tokyo, took place on the 27th inst. in the presence of Viscount Enomoto, Messrs. Kuki Ryuichi, Mayeda Kenjiro, and several others. Messrs. Namikawa Sosuke, Kano Natsuo, Murata Ichiya, and Fumiya Takijiro, Miss Sakurai Ito-ko, and the Tsukiji Type Foundry received silver medals.

THE LIBERAL SPIRIT OF COMMERCE.

Mr. Consul-General Jernigan writes in the following strain in his Trade Report, as epitomized by United States' Journals:—

Prior to the treaty there were 25 Chinese ports at which Western ships could call, but only 15 ports were open to the call of Japanese ships.

"To this larger number," says the report, "three new ports have been added by the terms of the treaty—Chungking, Soochow, and Hangchow—making in all 28 open to commerce, and giving to Western nations, having the 'favoured-nation clause' in their treaties with China, the equal right, with Japan, to enter the new ports with their ships, and to Japan, now having the 'favoured-nation clause' in the treaty with China, the right to enter with her ships all of the 28 open ports."

While the merchants of Europe and America were free to trade in the interior of China, Japanese merchants were confined to the open ports. The imports of Japanese merchants were subjected to heavy imposts in passing into the interior, while the goods of Western merchants had simply to pay transit dues amounting to one-half of the sum levied by the Customs. But there is one provision of the treaty which exempts the merchandise of Western merchants from an additional charge, for, although free to carry goods in the interior on the payment of comparatively small import duties, they were required to pay heavy transit dues when they desired to store goods in the interior. This inconvenience the new treaty removes.

Consul-General Jernigan calls attention to the fact that the most important provision of the new treaty is that which makes it free to carry on manufacturing industries. He says:—"This provision virtually opens China to new enterprises, and the kindred provision relating to the free import of machinery, may be accepted as fully explanatory of the article contained in the commercial treaty between China and Western nations being the first definite statement as to machinery, which, in the past, has been imported under the name of commodities. Only a few years ago, when cotton gins were sent from Japan to Shanghai, the Customs authorities objected, on the ground that China did not allow foreigners to engage in manufacturing industries in the interior, and, therefore, the importation of machinery for manufacturing purposes could not be permitted. About this question there can be no more doubt, and machinery, as well as other merchandise, can be imported."

It is noticeable that in the settlement of the difficulties between Japan and China "the liberal spirit of commerce was recognised as a potential and essential factor in the friendship of nations." Mr. Jernigan states that a decided opening has been made in the opposing wall of Chinese conservatism, and that in consequence a widening market may be expected for Western productions.

It must be confessed that Japan has very little reason to be satisfied with the appreciation extended to her efforts in the general cause of trade. Had she consulted her own interests only she would certainly have refrained from inserting in the Shimonoseki Treaty a clause securing for all nations the privilege of carrying on manufacturing industries in China. So long as such industries could not be started, China constituted a huge market lying at Japan's very doors and virtually open to Japan only, for it is manifest that with all the outer nations on equal terms, Japan would enjoy immense advantages in offering her own manufactures to the Middle Kingdom. But from the moment that it became possible for Europeans or Americans to organize and carry on industrial enterprises in China, from that moment Japan must find herself exposed to keen, if not invincible, competition. Careless of that consideration, however, she stipulated for the general liberty in question, the result being that almost immediately half a dozen foreign companies were started in Shanghai for the purpose of spinning cotton yarns, which meant, of course, that the cotton-manufacturing industry in Japan was to receive a heavy set back in its infancy. Nor did Japan obtain even the poor solace of public recognition. In the prospectus of the first manufacturing enterprise started in Shanghai—the Ewo Cotton Mill—instead of acknowledging that the enterprise had been rendered possible by Japan's action in the Shimonoseki Treaty, the framers of the document went out of their way to declare that they owed the privilege to the exertions of the British Representative in Peking. On what grounds they made such an allegation remains to us a complete enigma, but assuredly it was not calculated to show that Japanese liberality was appreciated. In the same way we have men like Herr von Brandt

composing brochures and penning articles to prove that Japan's selfish aim is to crush all Occidental trade in the Orient and monopolize the whole market for herself. We do not think that any German publicist has a valid title to upbraid other nations for want of commercial liberality, neither can we detect many traces of the spirit of free competition in the crusade that Herr von Brandt and Mr. Hesse-Wartegg have sought to organize against Japan. At any rate, if in the commercial treaty that she is now on the eve of negotiating with China, Japan originally entertained any idea of securing further trade privileges for all nations, we should imagine that her recent experiences will induce her to pause.

FUNERAL OF MR. GOH.

The funeral of Mr. Keita Goh took place on the 22nd instant, the cortege leaving the residence of the deceased within the compound of the Foreign Office and proceeding to the temple Seisho-ji, near Atago-yama. Owing to an unfortunate oversight, notice was not given to foreigners, and thus numbers of persons who would most readily have attended, were prevented either by want of information or by a feeling of doubt as to the desire of the relatives. The Japanese attendance, however, was very large, and the display of flowers sent by sympathising friends was striking and beautiful.

We take this opportunity of supplementing our previously published brief notice of the deceased gentleman's career. Mr. Goh was descended from the little colony of Chinese scholars that took refuge in Japan after the fall of the Ming dynasty. He represented the ninth generation. Losing his father at the early age of three, he was brought up by his mother, who survives him. In Nagasaki and afterwards in Kyoto, he studied French and other subjects, his fellow-students being now Professors in the Imperial University or legal luminaries. Sent in 1875 to study in Peking, he acted, ten years later, as interpreter for Count Ito during the negotiations that ended in the Tientsin Treaty, and after his return to Japan, was sent to Belgium to study law. It would be difficult to find in the ranks of officialdom, a more competent and highly educated man.

A MISSIONARY ON JAPAN.

At the recent meeting of the Church Congress in Norwich, the Rev. George Ensor read a paper on "Missions to the Japanese." We take this *résumé* of it from the *London and China Express*:—

After dealing at length on the various creeds held in that country, he asked what had all the creeds of Japan in their separate or conspiring streams of philanthropy done for the ignorant aborigines of the northern isle of Yezo. He had conversed with its inhabitants twenty years ago, and at that date through all their land no Buddhist shrine nor Confucian temple received the strange worshippers, nor did the State creed of Shinto ever dream of condescending from its dignity to their need. No priest instructed, and no teacher taught them. The vaunted mission spirit of Buddhism found there no encouragement of royal Asoka to encourage, or lucrative revenue to enrich. To-day the language of the Ainu was studied in the libraries of European learning through the pages of Mr. Bachelor, the representative of the Church Missionary Society. But better, infinitely far, than the classification of its declensions was the inclusion of those who employed it within the gates of the Christian Church. In the year 1891, only nine had been baptised of these strange savage people; last year 400 were ranked under the banner of the King of Grace. But it might be submitted that after all, Christianity might exercise but superficial influence over the people of Japan. It might be contended that the desire of culture, and a sensitiveness to the public opinion of the great people of the Occident, might have stimulated Japan to adopt the livery of a creed associated with the prestige of the dominant races of the world. It might be urged that the late war gave ghastly disclosure of the savage character and condition of the Japanese. It might be contended that the tale of rapine and massacre told in the annals of that campaign threw lurid and significant lustre on the unregenerate temperament of that people. Admitting, for argumentative purposes, that the tale with all its horror be absolutely true, what did it all prove? It showed that the Japanese army and people, with yet but a most limited percentage of Christians within them, too few to exercise but a minimum of restrictive and tempering influence, were guilty of crimes that found most adequate and respectable parallels in the Franco-German war of 1870. But even in a field so unfavourable for their exhibition, there did appear in the late war illustrations of the sanctifying and softening influence of the Christian

faith. It was delightful to mark the readiness with which Japanese soldiers received copies of God's Word on their departure from their country for the front. One of the lady workers of the Church Missionary Society received a letter from four of these soldiers, saying that the four met daily for the reading of the sacred book.

It is a great pity that Christian missionaries so often display want of accuracy in discussing the affairs of the nations among which they work. One Bishop Corfe is enough to discredit the Christian Creed in the eyes of the whole Japanese nation. Of course, we do not dream of comparing the spirit that animates Bishop Corfe with that displayed by Mr. Ensor. The latter is evidently a kindly, large-hearted man. But why does he not inform himself thoroughly before he speaks? No man acknowledging the most elementary dictates of justice could allude to the late war as having given "ghastly disclosure of the savage character and condition of the Japanese," or could talk of "the tale of rapine and massacre told in the annals of that campaign" as proving the "unregenerative temperament of the people." Once only in the whole course of the war did the Japanese troops behave cruelly, and on that occasion the fact that they were maddened by terrible provocation is established by the kindly demeanour of the very same men in previous fights. As for rapine, there was never a serious charge of the kind. Under any circumstances, conceding the worst about Port Arthur, it is surely most unfair that the otherwise uniformly irreproachable conduct of the Japanese forces should be effaced by one solitary excess perpetrated under the pressure of strong provocation. Mr. Ensor does not intend to commit such an injustice, we are confident. But his method of stating the case is unfortunate, and nothing could be less judicious than his suggestion that whatever clemency and self-control the Japanese soldiers displayed during the war were due to the "sanctifying and softening influence of the Christian faith." That is certainly not the way to make Christianity popular in Japan, for every Japanese Buddhist, knowing that he follows a creed not less charitable and careful of life than Christianity, can not but be deeply offended by Mr. Ensor's suggestion.

THE TOKYO FINE ARTS SCHOOL.

We are pleased to learn from the *Journal Officiel de l'Exposition* that the Tokyo Fine Arts School has, at the Thirteenth General Exposition at Bordeaux, obtained what the French call *un diplôme d'honneur*. As this distinction is the highest that can be gained, and has not been awarded to any other institution of the same kind, we congratulate the Minister of Education as also the Director of the Fine Arts School, Mr. Okakura Kakuzo, on this noteworthy success. The jury, containing members of many different nationalities, has no doubt highly appreciated the effective organization given by this country to instruction in the fine arts, and we trust that the Imperial Diet in its approaching session will not curtail the appropriations necessary for the preservation and further development of the national art of Japan.

CHAMPAGNE.

Considering the huge silver prices that we in the East have to pay for our champagne, the following paragraph from a home paper contains matter that is at once intelligible and aggravating:—

Bad news comes from the champagne district. The grape gatherers are dejected, and did not keep their annual festival with as much gaiety as usual. The cause of the depression is attributed to the indifferent vine harvest. Mildew, frost, and then the long drought, damaged the grapes. In some districts, however, notably Ay, the *récolté* is better than in others, but there is a second cause of trouble to the people of the Champenois country who live by the vine. The sales of their produce are effected with a good deal of difficulty, owing to the fact that wine merchants have too much champagne in stock, and cannot get it off their hands quickly enough to warrant fresh purchases. During the ten years from 1882 to 1892 the average number of bottles in the shops and cellars of the dealers in champagne wine amounted to 70,000,000. In 1893 this figure was increased to 86,000,000. Last year the number amounted to 184,000,000. In 1894 the export trade also declined, only 16,000,000 bottles being sent abroad, as against an average of 18,000,000 for eleven years

SIR NICHOLAS O'CONOR.

SIR NICHOLAS O'CONOR has achieved the exceedingly difficult feat of leaving the East amid a chorus of approval. Not often has any British Representative to the Chinese Court added such a page to his record. Generally Her Majesty's Minister has become an object of detraction and censure before he takes his departure from Peking, and if any voices are raised in his defence at the last hour, they are those of personal friends. At one time it seemed as though Sir NICHOLAS O'CONOR'S fate would be no exception to the common rule. The local politicians, whose exclusion from the control of the British Administration alone holds England back from the Empire of the world, began to be very busy with his name a few months ago. But the high qualities that he displayed in times of exceptional difficulty imposed silence upon those that have no language but abuse, and elicited hearty praise from all sober observers. It would not be difficult, we imagine, for the British Representative in China, even though he did not possess the capacities of Sir NICHOLAS O'CONOR, to win the support of his nationals. He need only devote a few months in every year to personal intercourse with them. The average Britisher wants to see his Minister, wants to shake hands with him, and, above all, wants to be tactfully deluded into the pleasant fiction that the Legation thunder-bolts are all forged at the open ports. It is so to a great extent in Japan also, though the conditions existing here render Ministerial seclusion more difficult, and therefore more offensive, than in China. No more striking example could be adduced than the case of the late Mr. FRASER. A truer-hearted gentleman, an abler official, and a more earnest toiler in his country's interests, never presided at any Legation. But because a singularly reserved disposition led him to shun society, he became the victim of coarse and unjust slanders. Sir NICHOLAS O'CONOR found little leisure to visit his nationals in the settlements. No British Representative in China will ever find time to foster his own popularity in that manner until the era of railways dawns for the big, unwieldy Empire. But he did not fail to utilize every means of supplying the deficiency, so that a marked feature of his career in Peking was the supply of materials for intelligently judging it that he managed to place within reach of his nationals at the open ports. His removal from Peking is emphatically a loss to the East, and we sincerely trust that in choosing his successor full account will be taken of the large problems likely to come up for solution in the course of the next few years. There is a measure of assurance in the fact of his transfer from Peking direct to St. Petersburg, since his new post will probably afford opportunities for utilizing to the best purpose

the special knowledge that he carries from the Orient, and we may therefore infer that Her Majesty's Government intends to keep close watch over the contingencies likely to arise out of the present situation in the Far East.

THE AGREEMENT BETWEEN THE LIBERALS AND THE CABINET.

THE *Tokyo Asahi Shimbun* professes to be in a position to give the text of an agreement said to have been concluded between the Cabinet and the Liberal Party. The document runs thus:—

Art. I.—The Liberal Party will support the present Cabinet to the best of their ability in the approaching session of the Diet, and should it happen that the "Responsibility Party" (*i.e.* the politicians claiming that the Ministry ought to resign on account of the Korean *coup d'état*), obtaining a majority, offer serious obstacles to the passage of Government measures, the Government shall recognise its responsibility and dissolve the House of Representatives.

Art. II.—In the general elections after the dissolution, the Government shall openly support the Liberal candidates.

Art. III.—Should the Liberals nevertheless fail to find themselves in a majority in the new House, the Government, recognising its responsibility, shall resign, thus establishing the precedent of party cabinets.

Art. IV.—After the resignation of the Cabinet, Marquis Ito will enter the Liberal Party, and will assist that Party in measures of administrative reform.

The *Asahi* declares, without any reservation, that the above agreement has been concluded between the Ministry and the Liberals. It adds that the covenant meets with very little opposition in the Cabinet, and that Marquis SAIGO, though formerly leader of the National Unionists, is an assenting party. We find some difficulty in believing that the Ministry have pledged themselves to any hard and fast conditions, especially to a distinct promise that the system of party cabinets shall be recognised by them in certain eventualities. At the same time, it is beyond all question that the combination now openly formed between the Government and the Liberals means nothing less than a Ministerial recognition of the principle of party government, and that, for all practical purposes, the system may now be said to have come into existence. It is not surprising, human nature being what it is—that the Progressionists and the other sections of the Opposition should throw a great many ugly epithets at the heads of the Liberals under such circumstances. There exists only one intelligible issue between the Government and the politicians not in power, namely, the question of party cabinets. Many as are the sections composing the Opposition, their lines of demarcation are ultimately personal, and were the problem of party cabinets removed from the field, there would remain nothing to fight about until new programmes could be evolved. The Liberals have now succeeded in introducing the much desired, but greatly overrated, system, and have succeeded, at the same time, in obtaining results infinitely advantageous to their own credit and strength. For instead of following the destructive policy that constitutes the unique

weapon of the rest of the Opposition—a policy plainly most mischievous to the nation's best interests at present—they have accomplished their object by amicable agreement with the Cabinet, and under circumstances that bring their patriotism into strong prominence. For it is impossible to deny that every sound principle of patriotism dictates union between the people and the Administration at this juncture of the country's career, and that men subserving the needs of the empire to a problem of domestic policy in such a time as the present, must be either deficient in patriotism or conspicuously wanting in the sagacity of statecraft. Moreover, the Liberals by their opportune measure of conciliation, have virtually drawn into their camp several of the most experienced and talented statesmen of the empire, thus securing for their Party the elements without which it could never have been a practical candidate for administrative responsibility. Such success could not fail to rouse sentiments of fierce envy and disappointment in the breasts of politicians whom this arrangement relegates to a limbo of long powerlessness. Hence we find the organs of the extreme wing of the Opposition casting in the teeth of the Liberals reproaches too illogical to be dictated by anything short of blind anger. They call the Liberals servile tools of those in power, taunt them with having made an unconditional surrender, sneer at them as morally defunct, and revile them for leaguering themselves with clan statesmen. Considering that the Liberals have attained the sole result for which they fought so long, the notion of twitting them with unconditional surrender, or indeed surrender of any kind, is pure silliness. And considering that every statesman in Japan is a "clan statesman," not excluding Counts ITAGAKI and OKUMA themselves, any reproach attached to that term is childish. If the organs of the Opposition desire to be understood as seeking to banish perpetually from the administration all the men that have made modern Japan, they can only expect to be laughed at. If they entertain no such mad project, then their talk about "clan statesmen" must be merely the froth of senseless anger. Japan has often been said to be a country of surprises for foreign observers. Perhaps it is. But for one thing experience has taught us to look in every Japanese emergency—compromise. By compromise a score of seemingly lost situations have been saved during the past fifteen years, and by compromise an easy bridge is now thrown across a chasm that threatened to widen for many coming days between the Government and the people. This consummation completes the quincunx of great *Meiji* issues. In the centre stands the promulgation of the Constitution, and on the four corners, the resumption of specie payments, the revision of the Treaties, the war with China, and the introduction of party cabinets.

JAPANESE CASE SUFFIXES.

ANDERSON, in the "Pictorial Arts of Japan," London, 1886, says: "The most favoured opinion on the origin of the Japanese refers them to the same parent stock as the Chinese and the Koreans." This view is apparently countenanced by ethnological data as well as by the geographical relations of Korea and parts of the Chinese coast south of Japan. Moreover, Mr. ASTON's comparison of the Korean and Japanese languages has demonstrated that the two tongues resemble each other closely enough to justify the conclusion that they come from a common source. "Here," says ANDERSON, the "supporting arguments stop and other difficulties confront us." ANDERSON also says that a Japanese author, about A.D. 1800, suggested that the Japanese were a colony of the Hiung Nu. That is a bold suggestion, because the Hiung Nu were only known to the Chinese as the ruling power in Tartary from the third century before CHRIST, and the current tradition of the MIKADO'S dynasty reaches back to the seventh century before CHRIST. The whole argument is not presented by Mr. ANDERSON, who has done so much to illustrate the æsthetic triumphs of the Japanese. The philological proof is stronger than he supposed. In comparing the languages of the main-land with Japanese, Mr. ASTON stopped with Korean. There is a like resemblance between Japanese and each of the Tartar languages. For instance, the Japanese plural in *nado* is *teul* in Korean, *nar* and *ner* in Mongol, and *lar* in Turkish. The palace of Beglar Beg is the palace of the Beg of the Begs, a title of the SULTAN. Beg is the Chinese *pek*, a feudal title equivalent to Earl in feudal Europe. Here we have precisely the same plural in use all the way from Tokyo to Constantinople. The Turkish language has case suffixes like the other languages occupying Tartary, Korea, and Japan. It places the verb at the end of the sentence, and its syntactical rules all show that it belongs to the same great Asiatic family with which these languages are associated and of which they are the chief members.

HOFFMANN counts six cases only in the declension of Japanese nouns. The student may, however, with advantage regard the cases of nouns in Japanese as nominative, genitive, dative, terminative, accusative, ablative, instrumental, locative, and comitative. That number will be sufficient. He must have a nominative because *ba* and *ga* follow the noun. *Ba* has now become *wa*. It is the Mongol nominative *ber*. It is the demonstrative *彼 pi*, just as *ga* is the demonstrative *其 git*, the *qui*, "who" of Latin. A relative pronoun is never anything but a transformed demonstrative, and this is true also of interrogative pronouns, as *quis*?

The genitive *no* is also Mongol. It is

connective in the Japanese *otoko no ko*, "male child." It is possessive in *hito no me*, "eye of men." In modern Mongol, spoken North of the Great Wall the genitive is *nei* or *in*. In books it is *un*. Without doubt it is a transformed demonstrative, and may be identified with *so*, *sore*, *ano*, *nani*, *dare*, etc. These pronouns, by ready interchange of *n*, *d*, *t*, *s*, with each other, have but one root, of which they are the modern forms. In modern Europe *der*, *die*, *das*, *this*, *that*, are some of the recent western forms of the same primæval demonstrative. The dative takes *ni*, as in *nanji nizeni wo ataberu* (modern, *atayeru*) "to give money to you." Here *wo* is the sign of the accusative. It is the Mongol *i* which is used in the same way. The terminative tense is formed by *be* (*ye*), *ni*, and *made*. The ablative is formed by *yori* and *kara*. The comitative tense is marked by *to* or *tomoni* or *totomo*, "with, in company with." The instrumental is expressed by *yori*, *motte*, and *ni yorite*. Among these case particles, verbs are mixed. Thus *yoriru* "approach, lean upon," if used in the manner of the instrumental, takes the participial suffix *te* and follows *ni* "upon," which is a locative. The language is still in the agglutinative stage, and struggles against increase in the number of cases. *Motte*, our "bear," and the Latin *fero*, becomes causative with the added syllable *se*, as in *motase* "make to carry, lean upon, rest against." The same root is also to lift in *motage*, "raise up." This special force is given to the root *mot* by adding *ge*. Evidently if the same root means "lift, carry, and take" it is the putting forth of the hand that is the original from which these senses are derived. This is the same verb we have in *mitto*, "to send," for example. The root is the same. The people that migrated over the continent had one vocabulary at first. We find the same roots used in forming grammatical laws which are peculiar to each nation. Japanese is much older than Latin. It belongs to the mesozoic age, so to speak, if we suppose primæval speech to be eozoic, the Chinese language to be paleozoic, and the Indo-European to be neozoic. There is no advantage in denying that the roots (eozoic) in Latin (neozoic) are one with the Japanese (mesozoic). The Japanese race came from the continent at a certain date after wandering in Asia, as the Mongols wander now. The wandering habit of life broke up all special love for monosyllabism. Agricultural nations reveal a tendency to use changes of tone to mark new meanings in roots. The polysyllabic structure of Japanese shows that the nation was nomad for a very long time before it was agricultural.

It is necessary to state this principle here, because the case suffixes are in several instances Tartar. The ablative *yori* "from" is in Mongol *ese*, *asa*, *eche*, "from." In Manchu it is *chi*. In Welsh it is *oddi*,

and in Chinese 自 *dzi*, "[from." In Welsh and Chinese it precedes its noun. On this fact may be based an argument to show that, long ago, somewhere in northern Asia the Japanese for a long period lived as wandering shepherds like the Tartars now. They betray in case particles an early generic connection with Tartar races. They would not have had the same mode of declining nouns unless they led the same nomadic life. In some way not yet fully explained nomadic life led to the postponement of the verb. Every case suffix is a verb, and so the transposition of the verb caused by change of residence being both Japanese and Tartar, these races must have been neighbours. What are nations now were tribes long ago, and ethnology and philology both point to original unity.

For every phenomenon there is a cause. The letter *h* is dropped in France and in England because speakers of French conquered England in the 11th century. This was the cause of the weakening of *h* in England. The Romans used *tus* as a case particle for the ablative in adverbs because their ancestors were once in Asia. For this suffix is the same with those mentioned above. The ablative in Sanscrit is *āt* in the masculine and *ayah* in the feminine. In Persian *āz* is "from," and it precedes the noun just as *oddi* in Welsh and 自 *tsi* in Chinese precede the noun. Thus the same word is a preposition in Chinese, Persian, and Celtic, all of which races are agricultural, and a postposition in Latin, Sanscrit, the Tartar languages, Korean, and Japanese, which races are, or probably were, nomadic in their mode of life. It becomes clear in this way that the case suffixes in Japanese are originally verbs, and the verb took its place after the accusative at the end of the sentence through the action of causes springing out of nomadic life. The chief cause is rhetorical. Nomads listen to story tellers. Sentences are formed with the gerund construction. The indicative mood is avoided till the end arrives; neither the tellers of the tale nor the listeners are at all eager to finish their calm interest in the narrative. The postponement of the indicative under the action of such causes led to the postponement of the verb in Tartar and Japanese syntax, as the result of the peculiar life of Tartary and Siberia. It took place in former times when the climate there was warmer than it now is. In the primæval period the verb could stand nowhere but between the actor and the object of the action. This syntax suits the market and the ordinary business of the family. But for long conferences, religious, political, and romantic, another syntax was felt to be convenient. It is that of the Tartar and Dravidian nations, and the Koreans and Japanese have not yet been able to free themselves from this rhetorical bondage.

JOSEPH EDKINS.

SHINTO SHRINES AND PRIESTS (SHINKWAN).

THAT Shinto is not a religion in the strict sense of the term is generally agreed, even the disciples of the cult themselves admitting it. The conclusion is at once arrived at when we observe that the tenets of Shinto are practically devoid of that essential feature of all religions, the doctrine of a future life. The Shintoists themselves regard the matter from a different standpoint. In their eyes religion is synonymous with Buddhism, which they despise as an institution established chiefly for imposing upon the weak minds of the vulgar. To them religion is a humbug, and of course they deem it a desecration to degrade their own cult to such a rank. They claim for Shinto nothing more than that it is a special mode of duly reverencing the divine ancestors and other illustrious personages of the realm, and for perpetuating their memory. By the common people, however, Shinto is regarded in the light of a religion, though differing more or less from their idea of Buddhism. This by the way, however. The purpose of our article is not to discuss abstruse theological points, but to give some facts relating to Shinto.

The gradation of shrines may be first dealt with. Shrines are divided into four official grades, viz., State shrines (*kanpei-sha*), provincial shrines (*kokuhei-sha*), prefectural shrines (*fuken-sha*), and district and divisional shrines (*go-son-sha*). State and provincial shrines are in turn subdivided, the former into three and the latter into two classes. State shrines are chiefly dedicated to the so-called divine ancestors, that is to say, to the mythical beings said to have flourished in the Age of the Gods (*Findai*), a few also being dedicated to certain Emperors, courtiers, or imperial vassals of distinction. To the last category belong KUSUNOKI MASASHIGE, HIDEYOSHI, IYEVASU, and others. It will thus be seen that the more remote, and consequently the more mythical, the personages, the greater the veneration in which they are ostensibly held. Judged from the pantheistical tendency of the Japanese people, it might be expected that a large number of Emperors would have been deified. But such is not the case. Of the 128 Emperors that have sat on the throne of Japan, only two, OJIN and KWAMMU, are sanctified, and even of these two the apotheosis of the latter did not take place until this year, and may be referred to a wholly accidental cause.

Between a State shrine of the first grade and a divisional shrine, there is of course a vast difference in standing, but it does not necessarily follow that the deity worshipped in the one is of greater importance than the deity worshipped in the other. Very frequently

both are dedicated to the same *kami*, the distinction of rank being due simply to the repute in which the shrine is held, or to its locality, or to some other independent causes. Consequently, a deity apotheosized in one place in a State shrine of great magnificence may be worshipped as a comparatively insignificant being in another. The *Daijinguo* at Ise is the shrine of the highest importance in Japan, but a *Daijinguo* under the alias of *Myojin* is to be found in almost every nook and corner throughout the country. The number of deities is immense: statisticians do not enumerate them, nor would there be any profit in doing so. But the deities, or rather the shrines, that enjoy any considerable measure of popularity, are comparatively few, not more than ten in all. They are the *Daijinguo* (Ise), the *Taisha* (Izumo), the *Hachimangoo* (Kyoto), the *Temmangoo* (Hakata), the *Inari* (Kyoto), the *Kasuga* (Nara), the *Atago* (Kyoto), the *Kompira* or *Kotohira* (Sanuki), the *Suitengoo* (Tokyo), and the *Suwa* (Shinano). Branch shrines of these eleven are found in great abundance, one or two existing in the pettiest local division. With the exception of the first three, the shrines are all named from the places where they are situated. The *Hachimangoo* is dedicated to the Emperor OJIN, and the *Temmangoo* to SUGIWARA MICHIZANE, but all the others commemorate prehistoric worthies known to Shinto or Japanese scholars only. The majority of even the well-educated classes are entirely ignorant about these Shrines, though of course they are obliged to know something of the greatest Japanese deity, *Amaterasuomi-Kami*. As to the common people, they confidently believe that *Nasuga*, *Atago*, and so forth are all names of deities; they even believe that foxes are really worshipped in the *Inari-jinsha*. Inari-yama, where stands the first and most important shrine of *Inari*, is a famous haunt of foxes, and these animals thus came to be considered ministering servants of the deity *Inari*. Foxes, then, being a necessary accompaniment of *Inari*, the common people, by process of synecdoche, were led to regard them, especially white foxes, as supernatural beings to which shrines are specially dedicated. Even greater confusion exists in other cases; that, for example, of the *Suitengoo*. No one can tell who is worshipped there, though the Shrine is one of the most popular and highly venerated in the empire.

A word may be said about the income of shrines. This, as might be expected, differs considerably. The Great Shrine of Ise naturally stands at the head. Its total income is believed to be some 40,000 *yen* annually. Next come the *Kompira* of Sanuki and the *Taisha* (or *Oyashiro*) of Izumo, each enjoying about half of the above income. The income is derived from offerings of coin and the sale of amulets (*ofuda*). The above are all State shrines,

but there are others that possess no less income, though very much inferior in rank. *Suitengoo* in Tokyo is a good example. The Though a shrine of no definite official grade, its popularity is such that its net takings are said to exceed 10,000 *yen* a year. A peculiar feature of this shrine is that it is the private property of Count ARIMA, ex-Lord of Kurume, and stands in the precincts of his residence in Kakigara-cho. It is believed that the income his lordship enjoys from this sacred source is more than enough to defray all his ordinary expenses.

The special functions assigned by the common people to the above-mentioned shrines are various. For example, the *Suitengoo* is believed to give protection against shipwreck and every evil incidental to water; against burglary, and even against the perils of parturition. The *Kompira* also represents a deity guaranteeing men against shipwreck. Sailors are for the most part devout believers in these two shrines. Then the *Inari* has power to secure efficacy for prayer, while the *Taisha* presides over wedlock. The total number of shrines in Japan amounts to 193,476, of which about seven parts are ungraded, that is to say, shrines which from various causes are excluded from the pale of official classification. The *Shinkwan* (Shinto priests) total 14,766, being thus at the rate of one for every 13 shrines. With Buddhism the case is different, the temples and priests aggregating respectively 108,000 and 55,000 in round numbers, that is to say at the rate of about one priest to two temples. The comparative paucity of *Shinto* priests is explained by the fact that a shrine requires the service of its ministering priest once or twice a year only, and thus one priest can undertake the service at quite a number of shrines. As shrines are officially graded, so are priests; namely, into *Chokunin*, *Sonin*, and *Hannin*. Only the head of the "holy officials" ministering at the Great Shrine of Ise is a *Chokunin*, a rank held by Vice-Ministers of State, Chiefs of Bureau, and local Governors in general. The presiding officials at State and provincial shrines come next in rank, while the *Shinkwan* of subordinate shrines are lowest. A certain official stipend is allowed to priests of *Chokunin* and *Sonin* rank. It varies from 100 to 33 *yen* per month. But as they are permitted to appropriate more or less of the income of the shrines with which they are connected, the actual amount accruing to most of them is at least double of the fixed salary. *Shinkwan* are appointed both by examination and nomination. Sons of priests, whose forefathers held the post for ten generations consecutively, are eligible without any examination. A candidate not boasting such a genealogy has to be examined in certain specified subjects relating to Japanese history, rites and ceremonies, and so forth. The examination is held every year both at the Home Department and in prefectural offices.

THE PSYCHOLOGY OF WOMAN.

IN a recent number of the *Popular Science Monthly* appears an article by Professor G. T. W. PATRICK, University of Iowa, which gives the results of modern anthropological researches bearing on the psychological peculiarities of woman. The writer has confined himself to points on which investigators agree, and claims that the facts given are established beyond dispute. We give a short *résumé* of Professor PATRICK'S essay.

Various theories are held concerning woman's peculiarities. It has been said that she is a stunted or inferior man and represents arrested development. Again, it has been asserted that she is a grown-up child; that she belongs to the child type. While accepting the latter theory, others have maintained that the child type is in truth the race type, and represents greater perfection than is attained by man, whose natural characteristic is senility. Finally, it has been said that throughout the whole animal world, where artificial circumstances have not interfered with nature, the female is superior to the male in size and vitality, and more truly represents the essential qualities of the species.

Psychology is now studied in connection with physiology. Although in such a discussion as this, the peculiarity of the female nervous system is a subject meriting more attention than any other physical peculiarity, as a basis for the physiological and psychological difference between man and woman, the following additional facts may be stated. Woman, among all civilised races, is shorter and lighter than man, except in America, where at the age of 13 or 14 girls are both taller and heavier than boys of a corresponding age. Her height relative to that of man is as 16 to 17, and her weight as 9 to 10. Her form is more rounded and graceful, less bony and angular, having relatively more fat and less muscle. Owing to peculiarity of structure, woman is less erect than man. The greater length of the first finger as compared with the third, common among women, is rare in men. It is said to give grace to the hand and to be an instance of higher evolution, not being found among apes or savages. As shown by the dynamometer, women's strength is at the most not more than two-thirds of that of man. Woman's lung capacity in proportion to her size is much less than that of man, and the amount of carbonic acid expired is relatively less. There is great difference in the blood: that of women containing a larger percentage of water and a lower specific gravity. As compared with man, woman is anæmic. The pulse-beat is from 8 to 12 per minute faster than that of man.

The following differences have reference to birth, death, and disease. Statistics show that in Europe and America 105 boys are born to every 100 girls. The

proportion in other countries is said to be about the same. The excessive mortality of males, however, begins with birth and continues throughout the greater part of life. Notwithstanding the decimation of women incident to the child-bearing period of their lives, they are found, whenever a computation is made, to be considerably in excess of men. This is not the result of accident, but is due to the greater power that women possess of resisting disease when encountered, or to an entire absence of liability. Women endure surgical operations better than men, and recover more easily from the effect of wounds. They grow old less rapidly and live to a greater age. Among centenarians there are twice as many women as men. Women retain the use of their limbs longer; their hair becomes gray later, they suffer less from what is called crabbed old age; their sight, hearing, and memory are better in their declining years than those of men; in fact in every way they are more hardy than men and possess a larger reserve of vitality. A mass of evidence collected by European anthropologists shows that all kinds of variation from the normal type, monstrosities and the like, are much less common in women than in men.

The long disputed questions about woman's brain have been partially solved. Woman's brain is of less absolute weight than man's, but that is of little importance. Relative to the weight of the body there is nearly perfect equality between the sexes, the difference, if any, being in favour of women. But as a test of mental capacity the relative size of different parts of the brain has to be considered. The lower centres as compared with the hemispheres are larger in the female brain. The frontal region and the occipital lobe are larger and the parietal lobe smaller than that of men. It is now considered that the size of the parietal region is second to none in importance in testing intellectual capacity.

The above facts go far to support the theory of the infantile character of woman. A large proportion of her physical characteristics are also infantile traits. The rounded form, larger proportion of fat, percentage of water in the blood, rapid pulse-beat, and the preponderance of the lower brain centres—all these are distinctively infantile marks.

To come to psychical differences, comparing average men with average women, contrary to the general notion, statistics collected by Italian and English investigators go to show that woman's sensibility is less keen than that of man. In touch, taste, sight, hearing and sensitiveness to pain, her susceptibility is said to be not so refined and delicate as that of man. But Professor PATRICK questions the soundness of this opinion. American investigations go to show that women have a finer sense of taste than men, but that men are superior in delicacy of smell. Yet tea

and wine tasters are almost always men. HAVELOCK ELLIS, who has studied this subject thoroughly, holds with GALTON that on the whole women have less sensibility than men and that it is their greater affectability or nervous irritability that has given rise to the popular notion of their finer sensibility. In colour-blindness, however, there is a marked difference in favour of women. Three and a half per cent. of men are colour-blind, while not more than four-tenths of one per cent. of women are thus defective. None of the popular explanations of the difference are at all adequate.

Accurate observation and experiments go to show that men are superior to women in manual dexterity. To cite one case only, in the cigar and cigarette trades in English manufacturing centres, large numbers of women are employed, but are set to the coarse and lower grades of work, men being required to make the finer grades of cigars and to fold the narrow margins of the cigarette papers.

Coming to purely mental differences, in perception woman is quicker than man. She has a rapid unreasoned perception. But her perception of details is less accurate than that of man and she is more liable to be biassed by her feelings and wishes. Hence women as a rule make poor critics. Men are fond of the abstract and women of the concrete. The different mental habits of the sexes may be shown by requiring 50 men and 50 women to write as rapidly as possible 100 words without time for thought. In the women's list will be found more concrete terms than abstract, words relating to a whole rather than a part, the particular rather than the general, and association in space rather than in time. In respect to memory repeated tests show that girls are superior to boys. In reasoning of the quick associative kind women are superior, but in slow deductive and inductive reasoning they are inferior to men. They lack logical feeling; inconsistency does not shock them. Analysis is distasteful to them. Hence the plodding analytical work of science has been mostly performed by men. In language women are more apt than men. Girls learn to speak earlier than boys. An uneducated woman expresses herself more intelligibly than an uneducated man.

Women are more alike than men, more normal as it were. They are conservative in their instincts, are not easily persuaded to relinquish traditional methods and opinions. Women are much more excitable than men; their nervous tissue responds rapidly to every stimulus and their emotions are less easily concealed than those of men. Sympathy, pity, and charity are stronger in women than in men, and women are on the whole more generous. In morals there are a few well-marked distinctions. Male criminals are in excess

of female by about six to one. But certain forms of crime, such as poisoning and infanticide, are more common among women than among men, and when they do become criminals women are often more cruel and depraved than men, specially when one of their own sex becomes an object of hatred. Their altruism is stronger, but their veracity is far inferior to that of man. Deception and ruse have become a habit of thought and speech with civilized women. She is more religious than man. Faith is natural to her and often leads to credulity.

Many of the peculiarities we have been considering seem to support the theory of women's representing arrested development, but it must not be overlooked that in some respects, such as, for instance, her moral qualities, woman represents a higher evolution than the male sex can boast of. In humanity, philanthropy, conscientiousness, fidelity, self-sacrifice, modesty, and patience, as well as in her lesser disposition to crime, woman is further from the savage than man. The same may be said of such mental qualities as grace and refinement. It is perhaps correct to say that woman's purely intellectual development when compared to that of man has been retarded.

The advocates of the theory of woman's arrested development lay great stress on the proofs of the truth of the theory furnished by feminine taste in the matter of dress. The origin of dress, as is well known, was the desire to adorn the person not to protect it. The savage spent time and money and underwent a large amount of physical discomfort for the sake of display and adornment. Bright coloured feathers, glossy skins of animals, beads, shells, and shining stones, nose rings, and earrings figured largely in the dress of our ancestors. The hair was left uncut and tied in fantastic shapes. No feeling of inconvenience was allowed to interfere with the consistent following of the one principle of adornment. Dress in those early days, in addition to its function of enhancing personal charms, acted as an evidence of the wealth of the wearer. In the course of evolution, as far as man is concerned, dress has steadily advanced from display to utility. But in the case of women hardly any development has taken place. In their head dress, their flowing robes, their long hair, their love of striking colours, feathers, bright stones, and shells, they resemble their savage ancestors. Even mutilation of the body or distortion is still common among certain classes of women, such as piercing the ears, constriction of the waist, and pinching of the feet. A survival of the primitive custom of leaving parts of the body exposed for the sake of display is seen in ladies' evening dress. Another case of retardment of development in women is seen in the tendency to make dress a symbol of the wealth of the wearer

or the wearer's family. Among men it is quite impossible to judge of a man's wealth by his attire, but the same cannot be said of his wife and daughters.

Professor PATRICK thus sums up the results of his inquiry:—"The matter, in fact, reduces itself probably to this: that woman, like the child, represents the race type, while man represents those variable qualities by which mankind adapts itself to its surroundings. Every woman is, as it were, a composite picture of the race, never much worse nor much better than all. Man is, as it were, nature's experiment, modified to reflect, if possible, the varying conditions of his environment. If superiority consists in adaptation to present environment, then man is superior; if it consists in the possession of those underlying qualities which are essential to the race—past, present, and future—then woman is superior. . . . May it not be that woman, representative of the past and future of humanity, whose qualities are concentration, passivity, calmness, and reserve of force, and upon whom, more than upon man, rest the burdens and responsibilities of the generations, is too sacred too be jostled roughly in the struggle for existence, and that she deserves from men a reverent exemption from some of the duties for which his restless and active nature adapts him?"

MARQUIS ITO.

THE *London and China Express* editorially discusses Marquis ITO's position with more insight than is usually displayed by Western journals with regard to Japanese affairs. Having referred to the odium that has fallen on LI HUNG-CHANG, our contemporary says:—

But in the exact degree that Li's shield is blurred, that of the Japanese Premier should shine out more brilliantly. For all the disasters have redounded to the glory of Japan; and precisely in so far as Li is blamed should Ito be glorified. So far from that being the case, however, he is said to be, at present, one of the most unpopular men in the country. Unstable and unreflecting, the popular mind has chosen to overlook the great sum of success, and to hold him responsible for the disappointment involved in the retrocession of Liaotung; condemning him, in fact, for an act of wisdom and courage greater, perhaps, than the conduct of the campaign. As a patriot, Ito will probably be hurt; if he were a philosopher he would pursue his way with contempt for the traditionally uncertain breeze. If he is not murdered *more Japonico*, he will probably live to see it blow another way; like the Duke of Wellington, who, being escorted home one day by a cheering crowd, turned and pointed to the windows of Apsley House which the crowd had smashed a few days before.

We think that the London journal is misinformed when it describes Marquis ITO as "at present one of the most unpopular men in the country." It may fairly be stated, we believe, that the bulk of the nation recognise Marquis ITO's great services, and are more than content that he should remain at the head of the Administration. But there stand always opposed to him a powerful combination of politicians, headed by the Progressionists, who seek every possible means of discredit-

ing him, not for his own sake, nor because they consider that the nation's interests are unsafe in his hands, but because they regard him as the leader of the Imperial interpreters of the Constitution; that is to say, the leader of the statesmen whose reading of the Constitution is that it holds the Ministers of the CROWN responsible to the CROWN only, and does not recognise that they owe any responsibility to the Diet. In a word, all the advocates of party cabinets stand opposed to Marquis ITO. Their sole aim is to pull him down, and they watch eagerly for an opportunity to effect their purpose. By these politicians an outcry was raised about the retrocession of the Liaotung Peninsula. Any close reader of their various utterances on the subject must have perceived how carefully they avoided suggesting that Japan might have defied the three European Powers and retained her territorial acquisitions in Manchuria in despite of Russia, Germany, and France. That was not their contention by any means. They were too astute not to perceive that armed opposition to a combination of three great Western Powers would have meant annihilation for Japan. Their point was simply that Japan's compulsory surrender of all the territories actually conquered by her armies, having come upon the nation with cruel bitterness in the very hour of victory, must, in the nature of things, have brought some discredit on the statesmen in power, and they sought to utilize popular disappointment as a means of driving these statesmen out of office. In that they failed, for the Liberals and the National Unionists having refused to endorse their contention, they found themselves powerless to raise any national echo of their own comparatively feeble outcry. But even before failure was absolutely assured, a new weapon offered itself in the shape of the Korean *coup d'état*. There they seemed to stand on more solid ground, since the Cabinet that had appointed Viscount MIURA might fairly be held in some degree accountable for his egregious blunders. But once again the Opposition have been foiled by the attitude of the Liberals. These latter enjoy exceptional access to the true inwardness of Korean politics, one of their most eminent leaders, Mr. HOSHI TORU, having spent many months in the Korean capital and been an actual witness of the events of October the 8th. Acting on the information thus acquired, they have not only stood aloof from the Opposition's agitation, but have even made open declaration of a resolve to coöperate with the ITO Cabinet. Thus the most serious and strenuous efforts of the Opposition to foment popular agitation against the Ministry have failed, and under such circumstances it can not be just to allege that Marquis ITO is "one of the most unpopular men in the country." If the true sentiment of the people could be sounded,

there would be found, we think, only one cause of umbrage against Marquis ITO, namely, the fact that he was himself the dispenser of honours in which he largely shared. It is fresh in the memory of our readers how strongly he protested against his own promotion to the rank of Marquis, and how nearly a Cabinet crisis was precipitated by the incident. Yet we doubt whether the nation has ever been fully persuaded that the distinction thus received by the Premier—a distinction most richly deserved—really owed nothing to the Marquis' initiative. There lingers in many people's minds a sentimental objection to the whole affair. But it is a paltry matter after all, not destined to remain long in the thoughts of the nation. A trustworthy index to Marquis ITO's popularity is the present attitude of the Liberal Party toward his Cabinet. If he remains in office, he will find himself the first Japanese Prime Minister that ever faced the Lower House with an overwhelming majority of supporters among the members. It was undoubtedly his intention to retire from the Cabinet immediately after the conclusion of peace with China. The Liaotung question deferred the execution of that design, and compelled him to continue in power until this new and threatening problem was solved. Then when the LI-HAYASHI Convention was signed and China had paid the price agreed upon for the rendition of the Peninsula, he would certainly have consummated his project of resignation had not the attitude of the Liberal Party brought him face to face with an incalculably important problem of domestic politics. Assuredly, had he been able to resign immediately after the ratification of the Shimonoseki Treaty, he would best have consulted his own personal interests. That opportunity lost, there remains no conceivable reason why he should now go out of office. On the contrary, nothing seems more fitting than that, as head of the Administration, he should direct and control the crowning of the constitutional edifice whose foundations he himself prepared.

BASEBALL.

U.S.S. "OLYMPIA" V. YOKOHAMA.

A game of Baseball was played on Saturday afternoon between a team from the U.S.S. *Olympia* and a shore nine, the "battery" being, however, composed of men from the U.S.S. *Baltimore*. The Navy at the outset took a decided lead, and playing better together, won by an innings and eight runs, although at one time it seemed as if the Yokohama team would hold its own. Edwards distinguished himself by his fine batting powers, making two clean home runs. The following are the scores:—

"Olympia." Pos. Runs. Out.				Yokohama. Pos. Runs. Out.			
Mr. Fenelon	c	4	1	Mr. Guthrie	p	3	1
Mr. Standley	rb	3	2	Mr. Bain	3b	0	3
Mr. Monaghan	2b	3	1	Mr. Ellis	rb	1	3

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

THE PROSPECTS OF POSITIVISM.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your correspondent J.C.H. is little aware how unfortunately he exposes the failure of Positivism to gain any hold on the minds of even the intelligent public. The writer of your article on the "Doctrine of Immortality" rashly assumed that he knew something about Positivism. Your correspondent writes to show into what grievous errors he had fallen, and asserts that "a more general acquaintance with the substance and method of Positive doctrine" would have saved him from his mistakes. No doubt it would, but it is just this "more general acquaintance with their doctrines" that the poor Positivists sigh for in vain. The public mind is so lamentably indifferent to them, and when it does get hold of something, that *something* turns out to be a misconception after all. And yet it is this system which, in the grandiloquent words of your correspondent, "aims at replacing the decaying theological props of religion by a foundation of demonstrated scientific truth." Well, it hardly seems equal to the task at present, but perhaps the decaying theological props of religions will last us for a little longer.

Yours,
NIL DESPERANDUM.

Tokyo, November 21, 1895.

JAPAN AND AUSTRALIA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—My mission to Japan and the Far East as a Commissioner of the South Australian Government, and as the representative of producers and manufacturers in South Australia, is, of course, entirely unconnected with politics. Anything, therefore, that I may advance in this letter is entirely on my own responsibility.

But the letter of your Australian Correspondent in your issue of to-day, and fugitive paragraphs and extracts which I have seen in newspapers published in Japan, impose upon me the duty of asking you to allow me to say a few words on the subject.

Great Britain has properly allowed the self-governing colonies to decide whether they will accept this treaty which comes into force in 1899; but they must arrive at a decision within two years of the date when it was signed by the high contracting powers.

At the present time all the Parliaments of Australia are in session and each is occupied with the "burning question" of the hour. There is no probability of either of the Parliaments seriously discussing the Treaty question during the current sessions. The Premier of South Australia has invited the Premiers of the other colonies to meet in conference in the recess and this will no doubt secure the postponement of parliamentary debate until next year. In the meantime, questions will be asked in Parliament, answers will be given by Ministers—not many of them, it is to be hoped, so wide of the mark as that of the Hon. J. H. Want, the Attorney General of New South Wales, who said the Japanese who went to Honolulu went as slaves—articles will be written on party lines in newspapers, and many absurd things will be said in foolish speeches made by uninformed men. This is to be expected.

It is, of course, idle to conceal that the most popular political cry in Australia is: "Australia for the Australians." But that cry is not the expression of racial conceit or colour antipathy merely or chiefly. It is mainly economic. It is the vehement assertion by the working-men in possession that they do not want in their country any manual toilers who will reduce their rate of wages, or lengthen their hours of labour. They are afraid that Asiatics will do this, and, like Phineas in "Uncle Tom's Cabin," they stretch out both hands and cry to the lower wage-earning race: "Friend, thee isn't wanted here."

For my own part I have been and am in favour of South Australia accepting the treaty, and I am confident that all the Colonies would be wise to avail themselves of its provisions. My experiences and the information I have gathered since I have been in Japan confirm my conviction.

Australia contains an area of about 3,000,000 square miles, and has only about 3,250,000 white inhabitants. It possesses over 120,000,000 sheep, millions of cattle, and hundreds of thousands of horses. It is essentially a producing country of gold, silver, copper, tin, lead, wool, wheat, meat (alive, frozen or canned), tallow, wines, brandy,

oil, fruits, &c. All its surplus products are exported. It is in need of markets. It can purchase back the manufactures from its staples.

Japan is a densely peopled country, with a people who possess great manufacturing skill, who with a low rate of wages—which is still a "living wage" as my inspection of many manufactures conclusively proves—is in want of staples, and is able to compete successfully with nations older in this form of civilization.

Common sense and community of interests alike suggest that Australia in the South Pacific Ocean and Japan in the North Pacific Ocean are both of them destined to play an important part in the history of the Eastern Hemisphere,—should join hands and cultivate the friendliest reciprocity.

His Excellency the Minister of Commerce and Agriculture has given me a copy of the Report of the Foreign Trade of Japan during 1894. I have taken out the following figures relating to the major imports. The three chief ports, Yokohama, Kobe, and Nagasaki, in 1894 imported 15,000,000 cattie of flour, nearly £750,000's worth of general provisions, nearly 1,000,000 cattie of hides, 700,000 cattie of hoofs, 1,500,000 cattie of leather, 2,500,000 cattie of lead, 1,500,000 cattie of wool, 170,000 cattie of soap, 140,000 cattie of tallow, &c. These are all products of Australia.

Then Japan has for Australia rice, tea, matches, silk, cotton, and woollen-fabrics, porcelain matings, lacquer ware, artistic curios, &c. Here is the bases of trade for both with mutual advantage. The manufacture of wool offers a splendid investment to Japanese capitalists and would furnish remunerative work for a very large number of operators. Japan wants, also, a better breed of cattle and horses. Australia can supply both. Two nations having such profitable avenues for trade should cultivate each other. All the Chambers of Commerce in Australia are in favour of the Treaty. All the chief producers desire it. It is to be hoped that a majority in the Parliaments will vote for its adoption.

If through dread of cheap labour and dislike of alien races Australia excludes herself from manufacturing nations, like a pot-bound plant it will wither from the roots upwards.

I said these things in effect before I left Australia. I write them here in Japan, and I shall repeat them with the accent of a proved conviction when I return to Australia.

I am, &c.,

J. LANGDON PARSONS,
Imperial Hotel, Tokyo, Nov. 21st, 1895.

A FEW WORDS IN CONCLUSION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I wish, in the first place, to thank you for the undue amount of space accorded me in your columns lately, and to apologize to the public generally for appearing before them so often. And further, since there seemed but little probability of bringing matters to any sort of systematic order worthy the theme at issue, I commend your wisdom and justice in calling a halt. Justice to you demands that I add also that I have not the slightest doubt as to the correctness of your statement in regard to Mr. "Secularian" not having changed his name. My last criticism was from an entirely different point of view. It is further due Mr. "Secularian" that, though the coincidence of both men writing from the same place, in the same style and raising the same point of objection, led me to suppose they were only one man under two names, I release him from the supposition. I am sorry I must still remain at sea as to which one he is. Although you do it through no sort of disrespect, I must confess I don't very well like to be styled a "Champion." It conveys the imagery of the bully in the carnal combats rather than a follower of the meek and lowly Nazarene. I only mean to "contend earnestly for the faith once for all delivered to the saints." Whether you are correct in saying I am not in harmony with writers on prophecy generally, I shall not take space to consider. I would warn all against following me or any one also in this matter. There is a book in the world, however, commonly called the Bible that is quite an old book and makes great pretensions as to its origin and mission that is worthy a thorough investigation as to its contents. If I have stimulated a single soul unto this end I am amply repaid; for I am sure no one can sit down with this book with an earnest desire to know its contents and a willingness to give it a fair trial upon himself, but what will be benefited when he is through. This book originated somewhere; let us suppose with bad men, but it is all against bad men, they would hardly have written thus against themselves; then we will say it came from the Devil, but it is equally against him; then it is the production of good men but only men; this cannot be, for they say it came

from God and good men cannot lie; therefore—but I leave others to work out the conclusion.

Most respectfully yours, J. M. McCaleb.
12, Tsukiji, Tokyo, November 23rd, 1895.

RACING.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I see that the Committee of the N.R.C. have published a programme of what they consider should be followed at the next Spring Meeting, which differs considerably from previous ones and should produce some interesting racing. The most prominent class in this programme appears to be the Australian horses, and of these there should be fourteen, with the five to arrive, but it is very doubtful if more than 9 or 10 will face the starter at the next meeting. The thorough-bred horse will now be able to race on the Negishi course with the half-bred, and therefore it is very necessary that the scale of weights should be properly adjusted so as to be more in keeping with the difference made at home for age, thereby bringing young and old nearer together; for at the present weights the young horses have no chance.

This no doubt will be gone into by the new committee at the beginning of the year when the programme is definitely decided upon by them; that now published can, of course, only be a skeleton one. The Queen's Plate weights, which were sanctioned by the Jockey Club some time ago were, for two miles:—

Age.	In May.	In Oct.
3 Years	7.11	8. 8
4 Years	9. 7	9. 7
5 Years	10. 0	9.11
6 and Aged	10. 2	9.11

The weights suggested about the same time by experienced men in England were:—

A three-year-old should give a two-year-old—
Over five furlongs, in the Spring 2st.
Over six furlongs, in June 2st.
Over six furlongs, in Autumn A few lbs. less.

A four-year-old should give a three-year-old—
Over one mile, in the Spring 23lbs.
Over a mile-and-a-half, in Autumn 20lbs.

Older horses over both these courses should carry 5lbs. to 7lbs. more than the four-year-olds.

The Australians are not likely to figure much in the programme after a meeting or so on account of the price, the difficulty of obtaining them, and the apparent unevenness of the animals sent; therefore every encouragement should be given to owners to prevent them parting with the above mentioned country-bred horses for non-racing purposes, as is so often done now, just as they are getting strong and useful, for these and the China ponies will have to keep up the racing here.

Yours, etc., T.
25th November, 1895.

SUNDAY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It seems proper that I should say something in acknowledgement of the suggestions rendered by your correspondent to me in the *Mail* of the 21st. In my last letter to you, I observed the Sunday problem from a chiefly material point of view, seeing man as a physical man. I did so, not indeed because the physical man was the most important on its virtue, but, because the physical man goes always a long way toward moulding the moral and intellectual character in him.

It seems almost idle now-a-days to insist on keeping Sunday strictly, as the devout, but narrow-minded and ignorant, people tell us to do. The practical question is whether we should still pretend to do so. To pretend to do so and not do it is only to familiarize the people with deception—it has no effect other than to weaken their moral character. Again, if in Christian countries, museums and galleries, etc., were closed on Sundays, it would be, no doubt, a great loss in the intellectual education of the labouring masses, who constitute by far the greatest part of humanity. Thus speaking morally and intellectually, the throwing over of bigotry about Sunday seems most desirable.

It was neither my intention nor desire to speak lightly of meditating and worshipping, as your correspondent charged me. From the standpoint of one who considers it proper to sacrifice a whole day in meditating and worshipping, his conclusion was, of course, very natural. His objection to my saying that the whole of Sunday was too valuable to be spent in worshipping and meditation, lies on his own misunderstanding. I meant merely that the whole day can be more advantageously spent than in devoting one's self totally and exclusively to worshipping and medi-

tation. It is not the question whether there was a more valuable thing to do than worshipping and meditation. If he truly believes there is no better way to spend the whole Sunday than in exclusively worshipping and meditating, he falls in blunder of self-contradiction in stating that "I should not limit the keeping of Sunday to worshipping and meditation."

Keeping the Sabbath was probably a part of Christ's religion, as your correspondent stated. On that ground he pertinently asks: "Why should it not be of ours?" Does he not recognize that society is constantly changing? A religion which exists within society, can not but obey the rule of the social evolution. It has to be interpreted according to the needs and circumstances of society. It has no earthly use otherwise. Although keeping the Sabbath was a part of Christ's religion, why should it be of ours merely on that account? Pure religion, as I conceive, does not include such a thing as the keeping Sunday as Sabbath. There is no reason why we should dress in a certain way, just because Christ did so dress himself ages ago.

If your correspondent desires to keep Sunday strictly, it would be perfectly well; by no means, have I any objection to offer, provided that he does not disturb others who may wish to attend the church in the morning and visit a museum or an art gallery or attend dancing in the afternoon. Worshipping in the morning and dancing in the afternoon are perfectly harmonious to the true spirit of religion.

I return thanks for the kind suggestions of your correspondent, and if his opinion differs from mine I wish he would not be loath to say so clearly and show us his ground.

Yours truly, SHO SHINOMICHI.
Tokyo, November 24th, 1895.

A PERSONAL EXPLANATION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Mr. McCaleb's rejoinder which appeared in your issue of the 19th inst. has so little in it that calls for reply from me, that I think I should have let pass his latest exhibition of word-twisting had it not been for the editorial comment appearing in the same issue. I must say that, after the display Mr. McCaleb has given of his complete untrustworthiness in the matter of quotation or the attribution of meanings, I am somewhat surprised that the charge he brings against me should have been credited without reference to what I actually did say, which certainly cannot bear the offensive meaning Mr. McCaleb is pleased to read into it, and which you have emphasized editorially.

Mr. McCaleb had said that anonymity was to him a "reason of suspicion" that "the writer is either ashamed of his position or lacking in a due degree of sincerity in believing what he claims." I contested the reasonableness of such a view, and pointed out in effect that the imputation of insincerity might with far greater plausibility be retorted on the other side, as "the writer who attacks what he believes to be established error gains nothing save the satisfaction that he is performing a simple duty in the general search for Truth." I then asked, "Is it exactly the same with Mr. McCaleb? Presumably he is a salaried defender of the Christian religion, and naturally desires that his Mission Board and the world generally should know how energetically he is performing his commission." Mr. McCaleb, with his constitutional incapacity to deal straightforwardly with quotations, leaves out the word "presumably," substitutes "mission" for "commission," and twists the sentence from its interrogative sense into a positive accusation. I think, Sir, that you will admit, on reference to the context of my letter, that the remark was a perfectly fair retort to the implied accusation of insincerity by my opponent, as it went to show that if imputations of this sort were to be thrown about, they were likely to apply with far greater force to Mr. McCaleb's side than to the writer's. Mr. McCaleb proceeds to inform us that he has never yet received a salary for preaching the gospel; that he "came to this country without a pledge or a promise save from Him who says, 'Seek ye first the Kingdom of God and his righteousness and all these things shall be added unto you,' and that this 'promise has been made remarkably sure.'" The words "all these things" must by the grammatical construction refer to "salary" in the preceding sentence, which it would further appear from the sentence following has been made "remarkably sure." What Mr. McCaleb means, therefore, by this process of denial and affirmation in the same breath I cannot say. The ordinary straightforward meaning to be attached to Mr. McCaleb's assertion that he had never yet received a salary for preaching the gospel would be that he

was working here on his own means, and if this be correct, he is quite justified in urging it as proof that he is not in a position to be swayed by conscious or unconscious motives of self-interest. I must altogether demur, however, to the implication conveyed both in Mr. McCaleb's letter and in the editorial columns that there is anything disgraceful in receiving a salary of sustenance for performing religious or any other propagandist work in which a man may be engaged, so long as he is sincere, though of course there is always the danger of conscious or unconscious bias thereby induced. "The labourer is worthy of his hire," and if people at home like to spend money in sending one of their number to propagate their religion, there is nothing wrong either in the giving or the receipt of such money. The trouble in the present instance arose from the imputation of motives by Mr. McCaleb, against which the retort made, showing that the charge would with greater plausibility lie on the other side, was, it seems to me, perfectly justifiable. But as you have stated—under what I believe to be a mistaken idea of what I did say—that in the circumstances of the case set forth by Mr. McCaleb he has just cause of complaint, and has a right to ask for the name of the correspondent in question, it seems that I cannot but meet such an editorial remark by dropping the *nom de plume* of "Secularian" and appending my name to this letter, as I have not the slightest desire to evade full personal responsibility for anything I have written.

Yours truly, ROBERT YOUNG.
Kobe, November 21st, 1895.

AN EXPLANATION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have been informed that some Swiss newspapers containing an account of a lecture on the Eastern question, which I have held at Zurich last spring, have found their way to Tokyo. These accounts most justly aroused the ire of all true lovers of the Island Empire, for they contain somewhat unmeasured expressions and sweeping condemnations in regard to Japanese merchants and industrials in general.

I myself felt very much annoyed, and in consequence of my personal remonstrance both newspapers in question published on the second day after my lecture rectifications which, unfortunately, seem not to have found their way to Tokyo.

In order to put matters right, I herewith beg to enclose a copy of the *Zurich Post* of May 9th containing this rectification with the most respectful request to publish the appended translation in your most esteemed paper. A similar, though shorter, notice also appeared the same day in the *Zuricher Zeitung*:—

TRANSLATION.

In regard to our account of the lecture of Herr von Hesse-Wartegg before the Commercial Association, we (the Editor) add, that this account gives approximately the sentences of the lecturer, and that these sentences of course refer to the ways of a portion only of Japanese merchants dealing with Europeans. Some of them in their naively Eastern views, may not even consider imitating European goods and trade marks as anything wrong. Regarded as a nation, Herr von Hesse-Wartegg characterizes the Japanese in his articles similarly to his fellow travellers as thoroughly courteous, hospitable, intelligent, and chivalrous, standing on a far higher level of culture and intelligence than the Chinese.

These words approach much closer my true sentiments in regard to the highest civilized and most advanced nation of the East. True, I have described the competition of Japan on the Eastern markets as dangerous to European trade, but is it not in itself the highest possible compliment to characterize this most ancient race with the most recent European culture as a dangerous rival of the Industrial Great Powers of Europe?

I venture to hope that this letter will to some extent dispel the unfavourable impressions created by unauthorized and incomplete newspaper Reports, for nothing could be further from my mind than to throw indiscriminate blame at a nation for which I entertain great and well founded admiration.

I am, Sir, most respectfully yours,
ERNEST VON HESSE-WARTEGG.
Lucerne, Switzerland, October 11th, 1895.

THE PSYCHOLOGY OF WOMEN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—With other readers, I am much indebted for the summary given in to-day's *Mail* of Prof. Patrick's article in the *Popular Science Monthly* on the Psychology of Woman. Allow me to refer briefly to one particular, wherein a somewhat remarkable exception to a general rule appears to exist in Japan.

Among the differences between the sexes in various parts of the world, it is stated that, in

numbers, women "are found, whenever a computation is made, to be considerably in excess of men." Undoubtedly this is true in Europe and America. In the United States, migration from the Eastern States to the newer country in the West, on account of the larger number of men who leave the old settlements to go westward, causes a disproportion; the great excess of women in New England, for example, being contrasted with a possible temporary excess of men in portions of the Pacific States and Territories. Utah has managed to avoid this, by its hold upon women under the influence of Mormon ideas; making plurality of wives a part of the religion of the people, until lately this has been surrendered on grounds of political expediency.

Chamberlain, in his well-known book, "Things Japanese," under the head of Population, cites the official statistics of this empire for 1889, to the effect that, at the close of that year, the population of Japan consisted of 20,246,336 men and 19,825,684 women; being more than 400,000 fewer women than men. Without acquaintance with the statistics of China, India, Peru, &c. I have not met with such an account of the population of any other country. Only a speculative attempt at an explanation of this state of things is, so far as I know, possible; I will not occupy space with farther allusion to it now.

With regard to Professor Patrick's conclusions, while ready to accept many of them, one may hesitate on some points; especially as to the distinction proposed which marks the feminine mental (as well as bodily) constitution as *infantile*. Another view of sexual difference appears to me to be more conformable to nature. Naturalists, within recent time, have come to recognize more and more, amongst animals, and even amongst plants, the predominance in the female sex of vigour and endurance in all that belongs to nutrition and reproduction; as distinguished in animals from motor activity, and, in birds, at least, ornamentation. The facts quoted from Professor Patrick agree well with this, as applied to men and women; and, along with them, we have the greater intellectual robustness of men, compared with the more abundant emotional warmth of women.

I refrain from amplifying these suggestions; but must be permitted to adhere still to Tennyson's holding in the Princess:

For woman is not undeveloped man,
But diverse.

Yet in the long years liker must they grow;
The man be more of woman, she of man;
He gain in sweetness and in moral height;
Nor lose the wrestling thews that throw the world;
She mental breadth, nor fail in childward care,
Nor lose the childlike in the larger mind;
Till at the last she sets herself to man,
Like perfect music unto noble words.

H. HARTSHORNE.

Tokyo, November 24th, 1895.

CONCERNING THE LANGUAGE OF JAPAN.

In connection with the discussion now going on over the question of possible changes in the Japanese language made desirable or necessary to fit it to express the life of the people of Japan in the new career upon which the people have entered, the following extracts from the opening chapter of a forthcoming book, "An Introductory Course in Japanese," by Professor Clay MacCauley, of Tokyo, are of interest, especially in the glimpses they give of the changes that have taken place time and again in the language in past centuries to adapt it to new conditions in the national life. Whether or not Professor MacCauley's speculations concerning the merging of the present written language into the Colloquial, the latter expanded by the enlarging experience of the people, and, by this absorption of the written language, more refined and yet more enriched, are well grounded, events must decide. Whether or not the Japanese syllabary, independently of Chinese ideographs, can be made to meet the demands of the growing language is also a question that time only can really answer. Meanwhile, however, intelligent discussion of these problems is of deep interest and is worthy of note.

Professor MacCauley says: The signs of the times, as the present writer sees them, indicate the rise of colloquial Japanese to the dignity of being distinctively the language of Japan. The signs of the times also point to the polite form of the dialect of Tokyo as the instrument of chief effect in shaping

the development of the Colloquial towards its culmination as the literary, scientific, official, as well as popular, language of the whole people. Indeed, the Tokyo dialect is already so much the standard of the Japanese spoken language, that, in using it, a speaker can be understood by ordinarily educated persons in any part of the empire; a fact not true of the user of any other of the many dialects of the people. Besides, the Tokyo dialect is now the standard language of instruction in thousands of the public schools, the medium for debate in Parliament, the means of communication from the lecture platform and in the columns of the popular newspapers, magazines, and books with which daily the printing press teems. Within one generation, that is since the Imperial Restoration of 1868, this greater revolution, this change in the expression of the Japanese intellectual life, has been begun and has been directed into the course it will in all probability take.

The Japanese language at the present time seems to be passing through a period very like through which the English language passed in the Fifteenth Century, soon after the "Wars of the Roses," and the strengthening of the power of England's king by the establishment of the royal House of Tudor.

In the fall of the Shogunate and the accompanying arousing of the people from their feudal lethargy; in the breaking down of the barriers erected about the empire; in the restoration of the Emperor to a real sovereignty; and in the removal of the Imperial throne to Tokyo,—a general national transformation was initiated. In the course of this change language has been radically affected. As, before the wars of Lancaster and York, among the numerous dialects of England, that of Kent and Surrey had a slight lead and, over them all, Latin reigned as the language of the clergy and the learned, so, in Japan, before the Restoration, the dialect of Kyoto had a little precedence over the other dialects of the people, and the Chinese language controlled whatever literature the priests and scholars put forth. The parallel seems to have followed the further progress of events in both countries. By the victory of the Tudor House in England the power of the nobles decreased. The barons were deprived of their armed retainers. Commerce began to be of great importance. The artisans' guilds were weakened. Trade and traders grew in popular esteem and increased in wealth. The Caxton printing press, the first in England, was then set up. Its publications were distributed throughout the kingdom, becoming thereby the main channels for Modern English, of which the Midland, or London, colloquial was the fountain-head. The full parallel has not yet been drawn, but, in large part, England's Fifteenth Century history has been repeated in Japan, in the present age of Meiji. Events look prophetic of a substantial repetition in Japan of the remaining events of the English Renaissance. As Latin fell into disuse in England, except as a treasury of words for service in the maturing colloquial there, so has Chinese fallen in Japan. As the dialect of Kent gave way to that of London, so has the dialect of Kyoto yielded to the colloquial of Tokyo. The rest will probably come to pass in good time. The matured Tokyo colloquial seems destined to become the dominant force directing the language,—literary, scientific, official, and social—of Great Japan, in a not very distant future.

A glance at linguistic history in Japan.—As far as is known, the Japanese people of prehistoric times were not a writing people. They used a language of course, but they had no means of communication with one another other than that of spoken speech. Certainly, there are no remains of written Japanese dating earlier than at some time late in the first seven Christian centuries. Tradition reports, that at about the opening of the Christian era, under the Emperor Sujin's reign, a regular intercourse between Japan and Korea began; that, as Chinese literature had already become widely known in Korea, many Korean immigrants into Japan, and Japanese travellers returning from Korea, brought with them a knowledge of Chinese writing. Japanese tradition affirms positively, that towards the close of the Third Century, the Emperor Ojin's son was placed under the care of a Chinese tutor and was taught the Chinese Classics. About a hundred years afterwards, at the opening of the Fifth Century, it is claimed that national records were made by a body of historiographers, adepts in Chinese writing. As the Sixth Century opened, large numbers of scholars,—men of science, teachers of literature, physicians, and the like,—came into Japan from Korea and took important positions under the Government. So far as there was any literature in Japan then, they were its creators and guides. No attempt was made to express in writing the language of the country.

It was at the middle of the Sixth Century that

Buddhism gained a permanent position in Japan. With its priests came in full energy the varied influence of Chinese civilization. The life of the Japanese people rapidly changed under the working of the new forces. Chinese literature and the Buddhist creed set in motion a radical national transformation. In art and in industry, the people were advanced to a position never before reached by them. Before long there were Imperial officers appointed especially to care for education. Public schools were opened. At Kyoto, a university was organized. The topics of the course of education, however, were in the main those of China, taught in the language of China. Education did not have for its object much beyond the training of candidates for public office. Culture meant, chiefly, knowledge of the Chinese Classics. But, through the extended education, a large number of the Japanese people became skilled writers of Chinese.

Then it was that a new movement in writing was made, which, in time, became an influence of very great importance in the development of the Japanese language. In the Seventh and Eighth Centuries, numbers of writers attempted to express the meanings of Japanese words by the use of synonymous Chinese characters, arranged sometimes in the Chinese, sometimes in the Japanese, order of speech. With Chinese ideographs so manipulated, the two great repositories of ancient Japanese historical tradition, the *Kojiki*, 712 A.D., and the *Nihongi*, 720 A.D., were composed. But the task of giving Chinese equivalents for Japanese words was a labour of immense difficulty. So then, as the needs of literary expression rapidly became greater, Japanese writers gradually began to use the Chinese ideographs, without much reference to their Chinese meanings. They used them chiefly for their phonetic values. The *Manyoshu*, a collection of poems appearing about the middle of the Eighth Century, shows the way over which the transition that was made from the old Chinese writing, to writing by means of what are now known as the *Kana* syllabaries, passed. In the *Manyoshu* the Chinese characters were written in full, but, in the main, their phonetic values for rendering the Japanese words were considered.

But this device for expressing the Japanese language did not last long. The work of writing down the selected Chinese ideographs was too difficult for common use. Gradually, consequently, only the main strokes of the ideographs were copied. At length only simple remnants of the original Chinese characters were left, to be written as representatives of Japanese syllables. In this way, at last, the first Japanese syllabary came into being, the *Katakana*, the remnants of forty-seven Chinese square characters, which had been chosen as the signs with which to represent Japanese sounds and words. The *Katakana* is said to have been perfected in 757 A.D., by a scholar and statesman of the Nara Era, Kibi-no-Makibi. The other syllabary, the *Hiragana*, is said to have been perfected by the marvellous priest Kobo Daishi, in 834 A.D., soon after the opening of the new age for Japan which followed the transfer of the Imperial throne from Nara to Kyoto, in 794 A.D. The *Hiragana* consists of abbreviations of quite a large number of cursive forms of Chinese characters. The *Hiragana* syllabics are not so simple to read and not so easy to write as the syllabics of the *Katakana*, but, as the cursive Chinese ideographs had become the scholarly script of the Japanese in the Seventh and Eighth centuries, the prestige of these ideographs was transmitted to the *Kana* formed from them. That prestige has remained to the present day, making the *Hiragana* much more popular than the simpler *Katakana*, when *Kana* syllabaries are needed in writing the Japanese language.

When the Tenth Century opened, the Japanese people thus had, at last, been provided in the two syllabaries with fairly adequate instruments for writing their own language. But, strangely, even then the homage yet paid to Chinese learning prevented the adoption of the syllabaries as the national means for literary expression. Many writers, like whom are some men even of the present day, ambitious to be esteemed scholars in eminence, continued to use Chinese ideographs and Chinese words. The *Kana* were accepted chiefly by women, and were relegated by men to a secondary place in literature. As it turned out, however, through the Tenth, and during the first part of the Eleventh Centuries, while the Kyoto Court was becoming degenerate through luxury and effeminacy, a succession of female writers, with the *Kana*, appeared, whose works, for example the *Genji Monogatari* of Murasaki Shikibu, and the *Makura no Soshi* of Sei Shonagon, were of such excellence that they are now valued as standards for the study of pure Japanese. These works embody the native language, spoken by the refined

and Court circles of the time in which they were written. Especially is the *Genji Monogatari* a classic of the Japanese cultured colloquial used at the close of the Tenth Century.

But the promise then made for the *Kana* and for the spoken language of Japan did not reach fulfilment. A great political revolution occurred in the Twelfth Century, which, for hundreds of years afterwards, almost wholly put a stop to the development of literature; which, certainly, effectually checked the growth of any literature in the language and writing of the people. Japan became a battle-field for great clans, struggling for supremacy under the Emperor. With the military ascendancy everywhere, letters, as a popular accomplishment, decayed. What literature came into being was created and directed almost exclusively by priests who were then, and, for a long time afterwards, the only guardians of learning and letters in the empire. Whatever of general or popular interest had been aroused in letters during the preceding three centuries died away. The people were burdened with the overhanging tasks of war. Literature remained in the care of the priests. But the studies of the priests were chiefly in Chinese. They added Chinese words and phrases, in large numbers, to the language as written. They neglected the colloquial of the country more and more. In fact, they made of Japanese literature, what has been styled an "almost unreadable chaos of mixed Chinese and Japanese."

It was in this way, and during this period of civil wars, that the gulf, which in after centuries lay, and down to the present day has lain, between the so-called "Written Language" and the popular speech or "Colloquial," was opened. This separation between the two forms of expression grew wider as the centuries passed. The colloquial, for literary use, became increasingly neglected and degraded. The language, as written, grew more and more an alien thing to the warriors and to the peasants, who constituted an enormous majority of the population of the war-stricken empire.

No change for the better for Japanese literature took place until towards the close of the Seventeenth Century. A hundred years previously the whole empire had lapsed into a state almost anarchic. Feudal Germany was not more completely disintegrated. But, with the close of the Sixteenth Century, arose the mighty Tokugawa Shogunate, under which political recovery speedily took place. Then, following the political prosperity, under the fifth of the Tokugawa Shoguns, a period of literary revival and achievement was started so vigorous and rich in its way, that it is now called the golden age of Japanese literature,—the age of Genroku (1688-1703). That revival was not so much a revival of Japanese literature and the furtherance in literature of the popular language, as the study of the profound and admirable Chinese literature of the Confucian School of the *Sing* dynasty; a dynasty which had fallen before the Mongol Kublai, in the Thirteenth Century.

The two events of the Seventeenth and Eighteenth Centuries, however, which most bore upon the course of affairs leading up to the present political and social condition of the Japanese people, were the achievements of the school of historians gathered under the patronage of the Prince of Mito, grandson of Iyeyasu, and the complete amalgamation, at last, of Chinese words and Japanese linguistic forms into a standard literary language. The influence of the historical school of Mito, though a revival and popularization of the ancient records, of Japanese imperialism, of the Shinto religion, and of the old Japanese literature, was to prepare the way for the complete breaking up of the Shogunate in the present century. The further effect of the work of the writers coming forward in the literary revival,—especially the novelists—was to do away wholly with foreign forms of expression in literature, and to make a really representative, or standard, Japanese literary language. In the Fourteenth Century, Urabe Kenkō, author of *Tsurezuregusa*, "Weeds of Idleness," had produced for literature, in the form first spoken of, a work which yet remains a classic of almost pure old Japanese. It was a work in which Chinese words were, in fact, set into Japanese forms of speech, without violence to the Japanese modes of expression. At the close of the Eighteenth Century, the novelist Bakin, chief among many writers whose works were widely read and exercised a powerful popular influence, perfected this endeavour to make a wholly successful incorporation of Chinese words into the Japanese sentence. At about the same time the old Japanese Classics underwent a radical critical investigation and comment, under the study of such men as Kamo Mabuchi, Motoori Nobunaga, Hida Harumitsu, and others. These scholars did great service in helping onward the elaboration of what has long been

known as the Standard Written Language of Japan.

Thus it came about, that at the opening of the Modern Era in Japan there was in existence, recognized at last, a standard Written Language. It was a language which in form was purely Japanese. The Chinese elements in it did not affect its idioms or construction. Its Chinese constituents had become, just what the Greek and Latin elements are in English, merely parts of the vocabulary. Its Chinese words were presented, it is true, in their Chinese forms, that is, as ideographs, but they were regarded only as imported words; they took position and underwent inflection by the use of Japanese particles, like any Japanese words. They contributed only their meanings to the Japanese sentence. There was still, at the opening of the present era, some literature for the Japanese people written in the Chinese language. Official documents, specially, were modelled after Chinese documents and were largely charged with Chinese idioms. But, this notwithstanding, Japanese literature at the opening of the present era, was almost as a whole embodied in a language distinguished by the dominance in it of Japanese forms over all the materials of which the sentences were composed.

But, during the past thirty and more years, the whole language of the country has been undergoing notable changes.

The Written Language, has, so far, not been much changed except by enlargement of vocabulary. Many new Chinese terms have been added to it to meet some needs arising from the incoming civilization of the West; many European words have been incorporated into the written speech. The Chinese words have been appropriated in their Chinese forms; the European words have been put into writing, as far as their sound can be reproduced, by means of the syllabaries, the *Katakana* syllabics being as a rule used for this purpose. A farther important recent change in the Written Language has been a steady increase of the use of the *Kana* syllabics, placed alongside the Chinese ideographs, to give to the less educated readers either the proper pronunciation or the Japanese meanings of the ideographs.

But the linguistic change of greatest moment in the new era of Japan is, not so much one that is taking place in the "Written Language," so named, as one operating on the language of common speech. The Written Language and the Colloquial were separated centuries ago. The latter was excluded from service in honoured literature, and gradually lost its earlier grace and excellence. The former became more and more the luxury of the Court writers and of the learned classes. It gradually became refined almost wholly beyond the use or comprehension of any but a very small number of the people. The Present Era, however, is, above all else, the era of the whole people. It is a portion of the growing democracy of the New Age which is advancing around the world. Feudal aristocracy is gone now in Japan, as in the West. A new era with new needs has come to the East as well as to Europe and America. The people have become the heirs of all that once was the privilege of only king and noble. Law-making and its administration, science, art, commerce, general industry, and the like, have been taken in charge by the people. Education and literature are conducted for every one now, not for the privileged few. These being the facts characteristic of the New Age, a necessity has for years been increasingly felt in Japan for the simplification and the popularization of language embodied in written form. The Japanese language written in its present form is an aristocratic appurtenance. Existing side by side with the language spoken by a people but lately released from serfdom, and now inspired by the free individualism of the Present Age, it is glaringly out of place, unless it may be so modified as to be adapted to the wants of the new times.

It is the judgment of the writer that this necessary modification has already begun, and is to be carried far forward in a future not very distant. The Japanese Colloquial has already made its rising power felt in literary expression. For more than the decade past, all newspapers, whose object has been to gain circulation among the former lower millions of the empire, have been compelled to put their reading matter, in large measure, in Colloquial phrasing; to print the Colloquial extensively in the *Kana*; and to interpret their appropriated Chinese ideographs by means of *Kana* as side syllabics. With the use of moveable type and printing presses, many books in fiction, science, biography, travel, etc., have, for some time, now been printed in the spoken language. Moreover, the numerous varieties of the *Hiragana* syllabics,—once over four hundred,—have been reduced, as metal type, to comparatively few standard characters. In the common schools of the country,

now more than twenty-five thousand in number, attended by more than three millions of children, also in the thousands of private schools as well as in the Middle and Higher Middle institutions, the students are studying numerous branches of modern science. These are yearly becoming too much busied with their studies to pay proper attention to the forms of the ideographs of the standard Written Language. Besides, they receive whatever instruction they get in the cultivated, expanding Colloquial. The commercial and industrial growth of the nation has associated with it many societies, in all which business discussions are carried on in the Colloquial. In many of these societies, reports of business and other papers are rendered in the language of common speech. The lecture platform is the place whence, daily, thousands of addresses to the people, in a refined Colloquial are made. The number of the lecturers who change their addresses from the original Colloquial into the Written Style before publication, is steadily decreasing. And of the highest importance is the fact, that the speeches and debates taking place in the Houses of Parliament, also reports of the proceedings of the courts of the country, now appear in print and are put upon record, practically as they were spoken. The Government's official notices, although still put forth in the Written Style, have in the country districts *Kana* translations laid along their margins. In yet other ways the fact is made clear, that the contemned and neglected Colloquial has, by the necessities of the times, become a decided force in Japanese literature.

No insurmountable obstacle to a yet farther advance of the Colloquial to the dignity of being the language of Japan, seems to be in the way. Rather is it likely that democratic Japan will, as time goes by, put aside most that is distinctive of its medieval Written Language, along with other of its aristocratic, feudal legacies, and elaborate for both literature and for oral intercourse one language,—the Tokyo Colloquial, refined, adorned, and dignified with much that is worth saving from the discarded written speech of the past, and enriched with new verbal creations, and appropriations from other languages fit to express the growing needs of the new life of the people.

Further, a simplification of the language seems to be a necessary consequence of the development of the Present Era. The great majority of the people, even now, have not time for a mastery of the large number of Chinese ideographs which have been incorporated into the Written Language along with the adopted Chinese words. Much less will the great majority of the people have leisure sufficient for this work in the near future. Many Chinese ideographs will, of course, for a long time remain in all writing and print, but the present prospect is, that for the Japanese people as such, the *Kana* will more and more become the main body of their language as written. Compared with a generation ago, the books, magazines, newspapers, pamphlets, &c., to-day printed wholly in the *Kana*, or in *Kana* mixed with Chinese ideographs having *Kana* side translations and transliterations, are enormously great in number and excellent in literary worth. Many educationists are beginning to recognize the fact that school pupils can not become proficient writers of a really serviceable list of Chinese ideographs and at the same time master the curriculum of studies necessary for them to gain more than an elementary acquaintance with the modern sciences and industries. One or the other effort must at length give way. It is hardly probable that the learning of ideographs will push aside the modern educational curriculum. Especially is this not probable, since a simple syllabary is at hand which can easily be so modified as to express all that is necessary or desirable in the literature of modern science, art, industry, politics, religion, and philosophy.

To some persons, this opinion may seem far from predicting the course events will take, but those who are familiar with the facts, know that the domain of the *Kana* is daily widening, and that no insuperable difficulty lies in the way to making *Kana* the instrument for embodying in writing the whole intellectual life of the people. Conservative impulse; fancy for a greater show of learning; the love of artistic grace which has long made the writing of Chinese ideographs one of the fine arts in Japan; and the ability to write the ideographs which scholars of mature years now possess,—chiefly these are especially strong reasons for resistance to the prospective acceptance of the *Kana* as the instrument for writing Japanese. But even these reasons will scarcely be able to withstand long the necessities accompanying the maturing of modern civilization in the country. Economy of time for the student, and for the man of business; economy of capital and labour in the printing office which now must carry thousands of founts of type for unnecessary Chinese ideographs; the de-

mands of the lower classes for information and literary diversion which they can not gain from books offered to them made up of ideographs they can not understand; these, and other reasons, will in all probability secure, as time goes on, a recognition of the excellence of the *Kana*,—will go a long way towards making the *Kana* at last the one vehicle for Japan's written and printed thought.

IN H.B.M. COURT FOR JAPAN.

Before R. A. MOWAT, Esq., Judge, and a Jury.
WEDNESDAY, November 27th, 1895.

HENRY CLARE V. THE NORTHERN PACIFIC STEAMSHIP COMPANY.

This was a claim for \$1,500 brought by Henry Clare, a late employé of the stevedoring firm of Messrs. Helm Bros., against the Northern Pacific Steamship Company for damages alleged to be sustained by him through falling through a hatchway of the Company's steamship *Victoria*, the same being left open at an hour when it should have been, he claimed, closed.

Mr. A. B. Walford appeared for the plaintiff, Mr. J. F. Lowder representing the defendant Company.

The following jury was sworn:—Messrs. G. K. Dinsdale, Jas. Radigan, John Walter, Geo. Watt, and Jas. Dodds. The rest of the jurymen summoned and in attendance were then discharged.

Mr. Lowder applied for leave to amend paragraphs 2 and 3 in the answer filed. In the 2nd paragraph the amendment was to strike out all the words following "or others," and substituting "as it was in use for the stowage of a deck load of coal and sacks." In the 3rd paragraph the amendment was to substitute for "necessarily," "in the usual and ordinary course of things."

Mr. Walford had no objection to the amendments, and the same were granted.

Mr. Walford—May it please the Court and gentlemen of the jury, this action is a claim for damages for injuries which plaintiff claims were caused through the negligence of the defendant Company. The petition of the plaintiff states first the nature and circumstances of the accident and the particulars of the claim. The answer which the defendants file denies liability. Having read the petition and answer, Counsel said that the general nature of the issues would be apparent to the jury. From the statements made in the petition it would appear that the safety and convenience of the passengers were held by the defendants' company as a secondary consideration—the passengers' promenade deck was actually used for the stowage of deck cargo, and had beside a coal-bunker hole in the starboard side. The promenade deck, he would explain, was the after portion of the upper deck of the *Victoria*. He made the statement so that the jury should understand that the deck was in fact the main thoroughfare which any person would use in passing along the deck to the officers' stairway. About the centre of the promenade deck was the hatchway which was left open—this was forward of the captain's cabin, and any person wishing to go forward of the promenade deck and right by the hatch, assuming that they did not fall into it. The deck, as the answer now affirms, could not be used as a promenade, it being hampered by sacks of coal. But it was necessary, the defendants' state, that they should keep the deck open for the use of the ship, and therefore a line of sacks was laid down as a pathway between the coal, the sacks of coal being piled up on each side. There was then a path over the sacks: that pathway was directly in line with the hatchway.

At this point plans of the starboard side of the *Victoria* were produced by Mr. Lowder, and put in subject to proof, the other side having no objection.

Mr. Walford continuing said that from point A on the plan, the hatchway, the line of sacks was marked as running along, and continued to the fore part of the ship. This was the position on the night of the 27th July. That night was dark, and there was no guard and no light near the hatchway, though it lay in the main pathway of the ship. Half-a-dozen persons might have fallen through the open hatch and no one would have known that they had disappeared. That was not the state of things one would expect to find on a passenger ship. The question of the security of passengers was dealt with by Anderson on Torts, and Counsel cited a passage in which the obligations of steamship owners in respect to passengers, their security, etc., was laid down. Fortunately, he continued, on passenger ships coming to this port, the duty to passengers was clearly recognized. Plaintiff, however, was not a passenger, but on going aboard the ship it was only

reasonable for him to suppose that ordinary precautions had been taken on board to prevent accidents; in fact, he could not expect to find more dangers than lie in the ordinary line of travel. The promenade deck was a most unusual place, at any rate, to find a hatchway. Cargo was generally taken aboard over the sides of the ships, and coal in ports situate in the sides of the ship. No one could be expected to find a coal hatchway in the promenade deck. For these two reasons, therefore, it was very necessary that the hatchway should have been particularly guarded. If you ask me why the hatchway was uncovered at that time of night, to p.m., I can not tell you. The defendants first said in their answer that it was "necessarily" so as they were taking in coal; but when we discovered that no coal had been taken on board that day, and in fact none was taken on board till the next morning, they amended their answer. I suppose they will tell you that it is customary to leave hatchways open on the passengers' promenade deck at night, and people are aware of such a useful custom. I am going to bring evidence to show that Messrs. Helm Bros., were engaging in lightering cargo to the ship. At eight o'clock Clare relieved another man and went off to the ship. Clare had never been on the ship before, and had no idea of the hatchway. The man he relieved did not warn him. When this man left the ship he noticed that the hatchway was open, unlighted, and unguarded. But it was no business of his to mention the fact to any one, and he himself gave the hatchway a wide berth. Plaintiff went on board the *Victoria* at ten o'clock at night for the purpose of seeing if the officers would receive any more cargo that night. The ship was advertised to sail at 10 o'clock next morning, but this line is not particular for an hour or so. Clare went aboard the ship and at the gangway he saw the quarter-master. He asked him where the Chief Officer was, and was told that he was to be found forward. He proceeded in that direction, and when he got in line with the officers' stairway he heard voices, so he went below. Here he found a man named Smith, a stevedore, and of him he inquired whether any more cargo was to be taken on board that night. Smith replied that he did not know and referred Clare to the Chief Officer. Clare returned to the deck by the officers' stairway. He turned round to continue his search, expecting, as was customary, to find the officers of the ship around the hatches. The deck was in total darkness when Clare stepped on to the pathway of sacks. This pathway was quite level and he proceeded to walk along it. Taking one extra step forward he stepped into the hatchway and fell. Fortunately he did not fall right through. His right side struck heavily on the iron combing, and one leg fell down the hole, the other across the opening. He lay there for a few moments until he recovered from the dazed condition consequent on his fall and the fright which the accident had caused him. Then he pulled himself up and clung to the side of the ship. Having recovered somewhat he managed to get back to the quarter-master, whom he told of the accident that had befallen him. The quarter-master at this point directed further aft to the Chief Officer, who was sitting down talking to some lady passengers. On the Chief Officer coming forward Clare made his complaint, and asked him why no light had been placed at the hatchway. The Chief Officer said that he had no light to put there. Then Clare asked him why he had left the hatch open, and the Officer replied that he had men working below. That was no reason, for if the hatch was required to be opened for purposes of ventilation, then a grating should have been placed over it. At all events the hatchway should have been guarded and lighted. Counsel then gave a sketch of the evidence which plaintiff would give relating to his subsequent steps in the matter: as to his making a claim for damages, etc., his illness, and subsequent discharge by Messrs. Helm Bros. from their employ. The reason for his discharge from their service they explained by saying that Messrs. Dodwell, Carlill, had threatened to take away their work from Messrs. Helm unless Clare was dismissed.

Mr. Lowder—Do you mean to prove this?

Mr. Walford—I shall not call Helm, but that is the statement made. Continuing, Mr. Walford said that the jury would observe the damages asked for were not placed at a fanciful figure. The plaintiff had had to incur medical and legal expenses, he had suffered the loss of a month's salary—but these were small matters. He asked for compensation for personal injuries sustained. He had had to endure much suffering, and was still in a semi-invalid state. These things were not easily calculable nor did they offer themselves for computation. But he asked the jury to place themselves in Mr. Clare's position, laid up in bed, grievously wounded, living on milk and a weak diet, suffering intense pain, going about since in a semi-invalid state. They

had not only to consider the pain and suffering endured, but all the circumstances of the case, including the whole conduct of the defendants round about the case. If the jury deemed that his presentation of the case was correct, then they would be acting quite right if they added something to the damages as a punishment for the defendants. If the case were proved, as he hoped to prove it, then they would have strong reasons to mark their disapproval of the conduct of the defendants. They would be asked to find that the defendants had been guilty of negligence of the grossest kind, having left a trap open into which some one must have fallen. Secondly, if they found that the defendants had been guilty of negligence of the grossest kind, it followed that the defence set up is not a truthful defence, and that again entitles us to compensation, while the fact must not be lost sight of that the defendants had put the plaintiff to every possible inconvenience and expense in bringing his suit. He would refer the Court to *Indermorne v. Dames*, *Heaven v. Pender*, and *Thomas v. Quartermain*. The case came thoroughly within *Indermorne* and *Dames*.

Henry Clare, the plaintiff in the action, sworn, deposed—I have for many years been engaged in shipping matters. In July I was in the employ of Messrs. Helm Bros. Mr. Heldt is also in their employ. It is necessary for us, in the discharge of our duties to go on ships in the harbour to consult with the officers: we superintend the delivery of cargo on ships. On the 27th July the defendant's ship *Victoria* was in harbour. She was receiving cargo for an outward voyage. She was advertised to sail on Sunday morning, July 25th, at ten o'clock. About ten o'clock on the Saturday night I went on board. I was superintending the delivery of cargo from Helm's lighters then laying alongside the ship. I went aboard the ship to see how the cargo was being delivered, and to ask the Chief Officer if he would take more cargo that night. I had never been on board the ship before. I went up the gangway and at the top I found a quarter-master. I asked him where the Chief Officer was. He said, "Forward," pointing in that direction. As I proceeded forward I heard a voice coming from the main deck, below. Thinking that the Chief Officer might be below I went down the officer's stairway to that deck. There I encountered Mr. Smith, a stevedore. I asked Mr. Smith about sending more cargo off that night. He said he did not know, and advised me to see the Chief Officer. With that I came on deck again. I turned to the left to go forward, on the starboard side. I got on to some coal sacks lying flat, and walked forward on the sacks. All of a sudden I stepped into an opening, and came down with a crash on to my right side on the iron combings on the fore part of the hatch. I put out my hands, as I felt myself falling, to save myself. The blow knocked me breathless for the time. One leg was down the opening, the other across the hatch on the after combing; one arm over the forward combing. I was frightened lest my strength should give way altogether; as it was failing and I should fall through. I had no breath to call out. After a minute or two I crawled up and clutched the stanchion of the ship's rail to pull myself up. I leaned over the rail to recover. I felt blood running down my side, and I placed a handkerchief there to stop the flow. I remained leaning over the rail for a couple of minutes to recover strength. It was a dark night, and cloudy. I saw no light at all about the hatchway; there was no guard round it and the deck was not lighted so far as I could see. I have never seen a coal-bunker hatch in such a position on the deck before, nor any hatch at all on the promenade deck of a ship. Cargo hatchways are to be found amidships. Passenger ships, in my experience, are coaled through the sides. Coal-bunkers generally run to the flooring of the stoke-holes, some twenty to thirty feet. The usual protection for open hatchways at night is a guard and lamp; the lamp being generally fastened to the guard. Stanchions are placed at the four corners of the hatch, with cross bars running round. Coal-bunkers are open when the ship is coaling, and if it is required to keep them open for any other purpose, they are covered with a wooden grating. The ship was not receiving coal when I went aboard. When I recovered strength to walk aft I did so. I told the quarter-master what had happened. With this the Chief Officer, who had been sitting aft with some ladies, came forward, and I informed him of the accident. He was in uniform. I asked him why he had the coal-bunker hatches off, and then said that I had fallen down there. He said that he had men working down there. Then I said, why don't you put a lamp there? He said he had no lamps in the ship. I then turned to Smith, who was standing close by and asked him to take me ashore, as

I was suffering much pain. As I was leaving the ship the Chief Officer told the quartermaster to put the hatch on the coal-bunker. The Chief Officer then decided not to take any more cargo on board that night. I went ashore in Smith's launch. We landed at the *hatoba*, and there I met the ship's doctor and a gentleman from the office of Messrs. Dodwell, Carlill. I told the doctor what had happened. I said I was going up to Wright's Hotel to get some brandy. Then he said we had better all go there. We went, and on arriving at the hotel I showed the Doctor my blood-stained shirt and wound. He said that I had received a nasty blow, and it was a wonder that I had not broken my ribs. After another rest, I went and knocked off my men at the *hatoba*. Then I went home to bed. Next morning when I awoke, I felt sore, sick, and in pain. I had to get out, however, to attend to shipping the balance of the cargo. The balance of the cargo was shipped off by nine o'clock that morning. Then I went round to Messrs. Dodwell, Carlill's offices; defendant's managers, to lodge a complaint before the ship sailed. Mr. Thomson said he was very sorry, and asked where the light was. I said that there was no light. He said he would go abroad and see about the matter, and advised me to see Dr. Munro, and get a certificate from him. Any claim that I had against the company I was to send in, and he would forward it to the proper quarter. I then went again to the *hatoba* to be present in the event of any dispute about the cargo. I remained there till the steamer sailed, about 5 o'clock. In the meantime I called on Dr. Munro. I saw him about 12.30. He stripped me, sounded me, and advised me to get home to bed as quickly as I could. I told him I would do so, but I wished to see the *Victoria* sail first. My employer being sick, I was responsible for the cargo. I was feeling very sick and in great pain: this increased during the day. After I had seen the steamer sail, I went home and to bed. I stayed actually in bed for 15 or 16 days, and was confined to the house for one month. I was under medical treatment all the time. I should not have gone to work then, but my employer sent for me. I took nothing but milk all the time I was laid up. I was feeling pain across the side and round the shoulder blades. I had never suffered before from such a pain. I have never been treated before for any affection of the lungs or liver; I have always enjoyed good health before. The doctor came to see me often. I have felt pain ever since the accident. I have not been the same man since. I feel pains still down the right side extending to the thigh, and over the lung: I suffer more especially in wet weather. I sent in my claim to Messrs. Dodwell, Carlill, on the 6th August. [The claim was here put in as well as the reply of defendants.] The claim was for \$1,000 and medical and other expenses. I sent in the medical certificate of Dr. Munro, certifying to the nature of the wound received.

The certificate was handed up to the Bench, and upon reading it, His Honour said the Latin name of the wound was sufficiently bad enough.—(Laughter.)

Witness, continuing—The reply of the defendants agents was as follows:—

We beg to advise you that you were not on board the steamer *Victoria* in our employment, and, therefore, it will be necessary for you to represent the matter through the firm or individual by whom you were employed, then stating why you were on board. It is quite true that you advised the writer (Geo. Syme Thomson) on the morning of the 28th that you had had an accident on board the *Victoria*, and that you required further medical assistance, although you had been examined by the doctor of the ship, and on enquiries being made on board no person was aware of anything having happened.

Upon this I sought legal advice. I received no salary during the month I was laid up. My salary was \$85 a month. Dr. Munro's bill for attendance upon me during this period was \$36; the apothecary's account for medicine during that time was \$11.65. I am not now in Messrs. Helm's employ. I was dismissed by them at the end of October, having notice to leave at the beginning of the month.

Mr. Lowder objected to any question being put as to the reason of plaintiff's dismissal.

His Honour thought that it was a fair enough question.

Mr. Lowder—The evidence of the employer would be the very best evidence.

Mr. Walford—I do not intend calling Mr. Helm.

His Honour (to Mr. Lowder)—Do you press the objection?

Mr. Lowder—I do, very strongly.

His Honour (to Witness)—Did your master give you a reason for dismissing you?

Witness—He did, he said that he had nothing personally against me.

His Honour—I think I will allow the question, but I will take note of the objection.

Mr. Lowder—Thank you, Sir.

His Honour (to Plaintiff)—Well, what was the reason your master assigned for dismissing you?

Witness—He said, if you bring this case into Court, Mr. Thomson does not wish you to have anything more to do with any ships or cargo of his, and I must discharge you. If I don't discharge you, Thomson will take his business away from me, and their business is a third of my business, and that is what I can't afford to lose. I thanked him, and left.

Mr. Walford—That concludes my examination of the witness.

Mr. Lowder—My cross-examination will take some time, and as it is past twelve o'clock, I think we had better adjourn for lunch.

The Court then adjourned till half-past one o'clock.

Upon resuming,

Mr. Lowder opened his cross-examination by inquiring the age of plaintiff.

Plaintiff said—I am in my fortieth year. I first went to sea in my eleventh year. I first went to sea as a boy in one of Her Majesty's training ships. I was at sea for ten years regularly, in various capacities. I had arrived at the position of Second Officer when I left off going to sea. I left the sea when I was about twenty-three years. Since then I have been more or less engaged in the shipping business, and have been on ships of all kinds. This is my present calling, or was before I was discharged. I am intimately acquainted with ships. I have not been on board the *Victoria* since the accident; I had never been on her before that. I knew she had a promenade deck. By turning up *Lloyd's Register* I learnt that she is a promenade-decked ship. I can not say how long the deck was. *Lloyd's Register* did not give me the length of the promenade deck. I do not know of any ships that carry passengers and no cargo. I should say that it is unusual for the promenade deck of a ship carrying passengers to be blocked on the eve of her departure from port. I should say it would be unreasonable for the promenade deck to be blocked on such a night, or at such a time. It did not occur to me that a deck blocked with coal-bags was not for the time being available as a promenade. I had to go forward for business and had to go over the coal. I do not think it was silly of me to go forward. I had business to attend along the decks. I came up the officers' staircase on the starboard side, turned to my left and went forward in an ordinary manner. I walked on top of the bags of coal. I could not see any passage between the coal. I stepped into the hatchway and struck the combing. I can not remember what side of the hatch I struck. I walked over the coal, not down a narrow passage. I do not know the height of the combing. I did not stumble against the combing. I can't say how many bags thick the coal lay on the deck. I stepped up on to the coal-bags from the deck. The deck was clear at the head of the officers' stairway. How high I had to step on to the coal I could not say. I stepped from the top of the coal into the hatchway. It was dark and I did not see the hatchway, so I cannot give any idea of its size. I cannot say whether the model in Court represents the coal-bunker hatchway. Assuming the model is correct in measurement, I should say that had there been a light I should have seen it. It was perfectly dark on deck in the direction in which I was proceeding. I was feeling my way along with my feet. It was not my business, a stranger on board the ship, to ask for a light. A light ought to have been there. I did not notice any light of 16-candle power shining out of three port-holes in the officers' stairway. I was in perfect darkness. The gangway up the ship's side was lighted. There was a hatchway in the vicinity of the gangway, but I saw only a quartermaster at the gangway. I do not recognise the Chief Officer in Court. I recognise Mr. Brown, the stevedore. I did not see either at the hatchway. I should deny that they were there; I should deny that they were leaning over the rail, or that I spoke to them there. I did not lean over the rail with them either. The quartermaster with whom I spoke was on the gangway. In my letter of claim to the agents I said that I fell down the coal bunker hatch: I did not go to the bottom, but I fell into the hatchway. I do not say that I fell to the bottom when I said I fell down the hatch. A letter was written by Messrs. Helm Bros. at my request, to the steamer's agents, in which they use the expression "fell down the hatch."

His Honour did not see that this was very material. Did Mr. Lowder wish to suggest that the plaintiff did not fall to the bottom?

Mr. Lowder—The suggestion arising out of my cross-examination is that he gave one account of the accident immediately after it is alleged to have occurred, but gave another account of it

when making out his petition. That is the point I wish to make to the jury.

Cross-examination continued—I consider that the statement contained in my petition is a fair description of the state of the deck on the night of the accident. A stevedore was on board the ship to stow the cargo and my duty was to deliver the cargo into the ship. The stevedore took the cargo from the lighter. I went off on board the ship in a steam-launch, and from that went up the gangway. I asked the Chief Officer of the ship whether he would take any more cargo that night. I did not see Mr. Brown, the stevedore, on board the ship. I did not know he was there. I spoke to Mr. Smith about the cargo. I walked along the *hatoba* the next day when the British Minister was welcomed. I was feeling excruciating pains at the time. I have never had an accident of this kind before. I received £20 from a public company for a shock received in a railway accident. I received this without any action being brought. I recovered from the shock of that accident in a couple of days. Had I been able to see the hatch I could have avoided stepping into it. I did not see anyone working at the hatch opposite the gangway. I asked the quartermaster for the whereabouts of the Chief Officer. I imagined I had fallen into a coal-bunker hatch from coal being upon the deck. I imagine that Mr. Thomson would send my claim along to Hongkong.

Re-examined—There might be a reflection from the light in the port-hole of the officers' gangway. But this could not light the deck. Nautically speaking, all such lights should be screened, as they dazzle the eye-sight.

To His Honour—I am out of employment now. I have no employment in view, nor has any been offered me.

Neil Gordon Munro, M.B., C.M., Edin., sworn, deposed—I remember the plaintiff coming to me on the 28th July last. He had a large bruise on the right memur, from the fourth to the eighth ribs, and another on the front of the left thigh. The bigger one was larger than the palm of my hand, 4½ inches. I think such a bruise could have been caused through falling down on to a sharp iron bar. Plaintiff complained of weakness and shock from the blow, but principally of pain. He complained of pain of the bruise and pain internally also. I advised him to rest, the force of the blow having been sufficient to cause some internal injury, although there was no external fracture. I advised him to go to bed. I saw him the next day. He still complained of pain. His stomach was very bad, and he had a slight tenderness over the stomach. I found on examining him the day after, inflammation of the capsule of the liver. That is caused nearly always by external injury or by spread of inflammation of the abdominal organs. These symptoms would undoubtedly arise from a blow received from a fall. Inflammation of the capsule of the liver is rather a painful complaint. Plaintiff complained of pain in the right shoulder blade, a reflex pain. The plaintiff was confined to his bed for about two weeks. He was in the house for nearly a month. I had to put him on milk diet. He was in pain all the time for the first week or two. After this he continued to complain of pain, though it decreased. It occurs periodically when the weather changes. I tested his lungs also, and found some symptoms, but I do not attach any importance to it. Any disease of the internal organs might possibly be caused by a blow. The other day I tested his lungs and found them rough, but I would not connect it with the accident. His liver is now all right. He still complains of pain; and it is quite possible that the result of the blow is to make him more susceptible of weather changes. I have attended him once before for a slight influenza cold. I examined him yesterday. He is complaining of an occasional want of movement of his right leg, but I think it would not be easy to establish any connection between this symptom and a blow. He was not quite so robust when he left the house after his accident as he was before.

To the Court—I do not think he is quite so well as he was before, but I really could not give you an opinion on the point.

William Smith, in the employ of Messrs. Martin & Co., as head foreman of stevedores, sworn, deposed—The night of the 28th July was very dark. I was working on the *Victoria* on that night. I was on the deck after dark. I know the position of the coal bunker hatch on the starboard side. Some ships have coal bunkers on the deck. I do not know much about passenger ships, so I cannot say whether it is usual to have coal bunker hatches on deck. When the *Victoria* arrived there were sacks of coal strewn about the deck. She had them on the deck when she left port. There was a pathway left between the coal bags. It went a few paces forward of the aft hatch. This path led to the ship's rails. The

width of the passage was about two to three feet. It was wider nearer the hatch. The pathway along the rail was about two feet. The bags were piled up from four to five deep. I think when I was on the ship between seven and eight o'clock there was no light or guard around the hatch. There was only the combing around. There was only a dead-light on the deck, that in the stairway. The combing is about twelve to fourteen feet in height and a sack of coal would be about the same. The dead-light in the port-hole was about four feet away. You could see through the port-hole. The light would not strike the hatch: it would throw a light on the rail. I was on board again about half-past nine or ten o'clock. I did not go forward again to see the hatch. The ship was not receiving coal between the hours of eight and eleven.

Mr. Lowder—We admit there was no coaling going on at the time.

Witness continuing—The ship took in coal next day. I could see the hatch between seven and eight o'clock quite well; there was sufficient light then. I saw the plaintiff on the main deck that night. He asked me if any more cargo was required, and I told him he had better see the Chief Officer. I saw him next near the gangway on the upper deck. He came from forward, and said he had fallen into the hatch. He held his side as if he had been hurt. The quartermaster was standing by at the time. There was no other light on the deck forward save that in the stairway and the one on the gangway. I did not see the Chief Officer come up. I don't remember seeing him, after Clare had complained of the accident. Clare and I went ashore together. At the English *hatoba* we met Dr. Freeman, of the *Victoria*, and another. I saw Clare open his shirt in Wright's Hotel, and I saw the red bruise on the side. I do not remember seeing blood.

Cross-examined by Mr. Lowder—I saw the light in the officer's stairway. I do not know whether there were any galley lights about.

Charles Heldt, foreman in the employ of Messrs. Helm Bros., sworn, deposed—I superintend all the business afloat. I have to keep in touch with the officers of the ship. I remember the *Victoria* being in harbour of the 27th July. I keep going backwards and forwards between the ships and the shore in the lighters. I know the position of the coal-bunker hole on the *Victoria*. It is not the usual place for such a bunker hole. I have been connected with ships for 40 years. I have only seen a bunker-hole in a similar position on one other ship. Sacks of coal were piled up on the deck when the ship came into port. Any one coming along the deck had to pass along a passage left between the coal and the rail. Then the officers' stair-case was reached. Then a narrow passage runs along, followed by a passage over the coal, two bags high. I was there by day, and also by night and do not remember any passages other than those mentioned. Any man knowing the ship would walk along the side of the rail rather than encounter the hatchway. The bags were a little higher than the combings of the hatchway. The bags were highest amidships, and sloped down. Walking along on the coals a man would come to the hatch. I left the ship the first time just as it was getting dark at a quarter past eight. The hatchway was then open. There was no guard and no light hanging up. There was no light except in the officers' stairway. The light was above my head, and would be thrown straight out to the rail, and was about fourteen inches wide. If it was higher it would throw a reflection on the deck. The hatchway is about two or three steps forward of the light. I did not notice whether it cast any light on the deck, having no occasion to observe it. The hatchway was dangerous through not being closed. The night was dark and cloudy. I was relieved by Mr. Clare that night. When I want to find the chief officer I either go to his room or to the quartermaster. He might be found at either of the cargo hatches. There were two cargo hatches forward of the coal bunker. I did not see any coal taken in that day. Clare came ashore and told me of his accident. I went aboard the ship again that night, but I could not say whether there were any lights near the hatch or not.

Cross-examined by Mr. Lowder—I passed the hatch at eleven o'clock and gave it a wide berth, passing along the rail. I took good care not to go anywhere near to it. I did not notice any lights coming from the galley or the engine-room after dark.

Mr. Wallford said this completed the evidence for the plaintiff.

Mr. Lowder said when the case was opened, and his learned friend sat down, the impression left on the minds of the Court and jury was that here was a passenger ship with a promenade deck; that the plaintiff walked along this ship's deck without meeting any obstacles until he came

to the hole down which he fell, fell into, or slipped, and so met with his accident. The statements elicited in cross-examination, however, show that this deck was occupied by a deck-load of coals, and that it was impossible to get forward unless one climbed over the coal. Therefore it was no longer a promenade deck, and plaintiff met with his accident through climbing over the coal. My case is this: that the plan lying before you, though not drawn to scale, is to all intents and purposes, correct. That there were three bright electric lights of 16-candle power each, in the passengers' stairway, also that there were more lights in the engine-room, 17 all told, and that the lights shone through the sky-light. I will also bring evidence to show that the port-holes of the stairway were open, not closed; also that there were galley lights hung up, and that their concentrated effect was such as to throw a distinct light on the hatchway where the accident is said to have taken place. I shall call two witnesses to prove that an experiment was made with all these lights on board the ship on the 14th of this month, when it was judged that the atmospheric density was about the same as on the night in question, and that the hatch was then seen distinctly. They were induced to make this experiment in order to prove that they could see with the aid of those lights the position of the hatch most distinctly. Counsel then referred to other evidence he intended bringing in rebuttal of the plaintiff's evidence in regard to what took place on board the *Victoria* on the night of the 27th July. He said that he would prove that 50 to 60 people passed the hatchway on that particular night, yet none fell in save one person, and that was the plaintiff. He would first seek to demonstrate that the plaintiff was not on board the steamer by invitation but by permission; that duty did not call him on board, as he could have obtained the information he wanted elsewhere. He would then ask the jury to answer the question as to whether the plaintiff did step into the hatchway, and would bring evidence to prove the state the deck was in at the time and the structure of the combing around the hatchway. He would show them that in order that plaintiff should fall down the hole it would be necessary for him to climb up on to the coal. Then they would have to answer the question whether plaintiff was in the vicinity of the hatchway by invitation or his own accord. He would bring evidence to prove that plaintiff was not directed to go forward as he stated he was. The legal contentions in the case would be illustrated by *Mason and Langford, Walker* against the *Midland Railway Co.*, *Cant v. Olyett*, *Balch v. Smith*, *Ivy v. Hedges*, *Gautred v. Edges*. He would next contend that the risk was usual, and that against such risk plaintiff's common experience should have induced him to be on his guard. He had been connected with ships all his life, and he ought to have known that on board every ship were pitfalls. He should surely have taken greater care on such a dark night. In support of this proposition he should cite *Wilkinson and Perry*, a dark staircase case. The next point he would make was that defendants owed no duty to plaintiff to keep a cover on the hatch—*O'Neil v. Everest*. Then he would ask them to find whether it was a duty from defendant to plaintiff to answer the paragraph in his petition alleging wrongful negligence on their part. He should contend that plaintiff had notice of almost prohibition of passage, through the coal being on deck. Other cases in point were then noted as to be cited when Counsel would address the Court in his final speech, and he concluded by saying that if the jury found that they could not discover that on the part of the defendants there had been an absence of reasonable and sufficient care, then the verdict must be in their favour.

Alexander Gove, Chief Officer of the steamship *Victoria*, sworn, deposed—I was on board the ship on the night of the 27th July. The plan in the Court is fairly correct; the hatch in front of the gangway ought to be farther aft. There were two lights in the passengers' gangway and two in the smoking-room; they were 16-candle electric lights. They would show forward right through two port-holes in the house over the stairway. There was an electric light also at the gangway, showing forward. In the engine room there were 17 lights. All would be showing through the sky-lights: the flaps of the sky-lights were up. The next light is in the officers' stairway, next to this come two in the galley. These would show through the skylight. The top of the skylight is about 12 feet from the deck. The house over the officers' stairway is ten feet from the deck. The lights would be reflected, as it were, round about the hatch. These were all the lights that would be seen. The distance from the passengers' stairway to the corner of the engine-room was 82 feet. From the same point to

the hatch would be 115 feet. The passage between the rail and the coal was piled four bags high, about four feet, no higher than the height of the rail. Any one walking on the coal would strike his head on the skids of the boats. The coal was stowed neatly, four bags high all along. There was a clean deck left along the passages between the coal, and there is no truth in the statement that two bags of coal were placed along the passages bringing them level with the combings of the hatchway. To get on to the coal one would have had to climb four feet—that is the reason why a passage way was left. This was not the first time we had carried a deck cargo of coal on a voyage such as that we were starting. The passages are always left in this manner, and people have never complained of the coal before. The model of the hatchway in Court is correct. It is three feet square and fifteen inches from the deck. I considered the deck was sufficiently well lighted for anyone passing along to see and notice the hatch. I recollect this because that night I went along to the Second Engineer and had a light put up to light up the forward part of the wheel-house, to light the hatches there. I had taken notice of the coal bunker hatch and seen that it was sufficiently lighted. After the plaintiff had complained of his accident, I went forward, thinking something had gone wrong with the lights. I saw everything was all right, so I left the hatchway as it was before, with the hatch off. I gave no order to the quartermaster to go forward and put a cover on the hatch. If I had given such an order I should have told the quartermaster to tell the bosun to order the sailors to put the cover on. I should not ask the quartermaster to do it.

To the Court—I did not tell the plaintiff that I had men working under the hatch. I had no such conversation with him.

Witness, continuing—There were two other lights that could have been turned on outside the officers' stairway, but they throw too much light on the deck and are seldom used. They would throw light aft. The diameter of the port-holes in the officers' stairway is about 16 inches. They are about 5 ft. from the deck. They were open.

The Court then adjourned till 10.30 to-morrow.

THURSDAY, November 28th, 1895.

The hearing of the case was resumed at 10.30 o'clock this morning.

The Chief Officer of the *Victoria* again entered the box, and was examined by Mr. Lowder. He said—The port side of the *Victoria* was heaped with coal, as was the starboard side. Everything was in the same condition as to lights, coal, stowage of coal, hatches, and passages through the coal: everything was exactly the same. The sacks were laid on the flat sides, and packed in square blocks. The sacks consisted of straw matting. They formed a regular rampart, or bulwark, or barricade straight up and down. We were working cargo at No. 4 hatch and at No. 2. The coal was taken on board at Moji, and there stowed on deck. We stopped at Kobe, and were there at night time. We had many passengers on board, forty or fifty steerage, and some cabin passengers. We must have been working cargo at night in Kobe. Many people came off from the shore at Kobe at night, and no accidents took place. The lighting of the deck was exactly the same as on the night of the 27th July. Four gangs were working the four hatches on the night of the 27th July. There must have been fully 100 coolies aboard. They frequently passed and repassed the coal-bunker hatch, but no accident was reported. There were other men beside the coolies on board that night; the foremen of the stevedores and the office people. Up till 10 o'clock that night no loose coal had been put on board. There might have been a few stray pieces of loose coal lying on the alleyways. Not any quantity, as the passages were swept. The coal-bunker hatch was left open as we were expecting coal alongside at any minute. It was a very common thing for the hatch to be open. On the night of the 14th November I made an experiment with the same lights as were lighted on the night of the accident. It was dark and clear as on the night of the 27th July. Any one coming along the deck could see by the reflection from the lights the position of the hatch, and whether it was open or not.

His Honour—Were there any coal sacks there then?

Witness—No, Sir. The presence of coal sacks would not have made any difference in the light falling on the hatch. The inside of the hatch is painted white, the outside brown. Intersecting the hatch diagonally was a guy attached to the funnel. It was a wire guy. This guy was made fast to the covering board of the hatch, at the level of the deck. This guy passed across the

hatch. The guy would be about six inches or a foot above the combing at the outside corner, and three feet six inches at the opposite corner; over the top of the combing. I cannot see how the plaintiff got into the position described in his evidence. I do not see how he could get into that position without coming into contact with the guy. If he threw his arms out he must have encountered the guy. I cannot see how he could get one leg over the after part of the combing, as the coal was piled up to the after part of the hatch; it was four sacks high there. He must have fallen right on to the guy if he had walked on the top of the coal. If he had approached down the middle passage he might possibly have fallen, still in throwing out his arm he must have touched the guy. He was bound to touch it. It is quite the correct thing to have coal-bunker hatches on the spar deck of steamers. The German mail hatches are similar to ours, though her combings are not so high as ours, and so is the P. & O. *Malacca*, now in harbour. I have been in other vessels with similar hatches. The reason for having this kind of hatch is this; in bad weather it would be impossible to take in coal through the sides. All ships that I have been on have either a round hole or a square hatch through which the coal is shot through the upper deck down to the bunkers. I saw the plaintiff arrive on board the ship at 10 o'clock on the night of the 27th July. I was close to the gangway, in uniform. The quarter-master was sitting at the fore corner of the hatch on the starboard side tallying silk. Plaintiff did not speak to the quarter-master. He did not speak to me. He spoke to Mr. Brown, the stevedore. Brown was alongside me. There was plenty of light to enable plaintiff to see us distinctly. He never asked me, after the accident, whether I would take any more cargo in that night.

Cross-examined by Mr. Walford—I never saw the plaintiff before the night of the 27th July. I was the right person to ask about bringing cargo on board. After the accident I went and looked at the hatch. Clare simply told me that he had fallen down the hatch. I did not believe that the man had fallen down at all. If he had fallen down the hatch he would not have been able to get up again without assistance. He told me he had hurt himself, but I did not think he had hurt himself. His hand was held to his side certainly. I said that he ought to be very careful when he went aboard a strange ship. That was the only remark that passed between us. Helm's lighters were alongside the ship, and we worked cargo all night. We were taking cargo in and stowing it. The coal was not piled up in a slanting position against the deck house. There was a flat top to the coal everywhere as nicely as it could be stowed. The coal did not slant anywhere, nor did they form steps. A man could not possibly walk on the top of the coal without striking his head on the boat skids; there were three boats and six skids. There was a break at the hatch, and no boat there. The skids are about seven feet from the deck. The hatch would come between the second and third boats. There would be a skid on a line with the after part of the officer's stairway. If there had been two sacks of coal he could not have got on them without hitting his head.

Mr. Walford thought that it would be very possible to avoid hitting his head. It was a matter of opinion.

His Honour—That is a fair comment on the evidence.

Witness continuing—The coal was piled to the height of the ship's rail. The passages between were made at Moji. I always took the passage when I passed along. Coal bunker hatches are usually placed in the upper deck. I do not call the part of the deck where the hatch was placed, the promenade deck. We do not like to see the passengers so far forward on the deck as this hatch. Our upper deck runs from stem to stern, and the passengers are supposed only to use a portion of the deck set apart for them. The hatch was not in the part of the deck that the passengers were supposed to use. The *Australian* on which I have served had hatches of a similar kind. All vessels have always side-ports for coaling. We often coal over the top of the ship; and we did so this voyage because our ship was deep with cargo. I saw Mr. Thomson on board the ship on the 28th July. He did not ask me about the accident.

Arthur Thomas Brown, sworn, deposed—I am a stevedore for Messrs. Martin & Co. I have seen plaintiff before the night of the 27th July. On that night I saw him come on board the *Victoria*. I was leaning over the starboard rail at the after gangway. The chief officer was also there. The quarter-master, was near, tallying silk. He was sitting on the hatchway. Plaintiff spoke to me: I do not remember his speaking to the quarter-master or the Chief Officer. It was light enough for him to see the Chief Officer and to speak to him if he wished.

He could not help noticing the two stripes on the Chief Officer's arm. I passed the coal bunker hatch on the night of July 25th, very often. I passed along both passages, whichever I was nearest to. The passages were clear of coal. I could see the hatch distinctly going forward, from the reflection of the light. I could see it distinctly as I passed it. There was sufficient light to see whether the cover was on or off. The inside of the combing was coloured light. Anyone who could use his eyes would notice the hatch. In my opinion anyone who fell into the hatchway must have been very careless, and not looking to see where he was going. The coal was stowed breast high. It was the same height on both sides. I think plaintiff knew in whose employ I was. As far as I can remember, he asked me if we could take in all the silk that night. I told him I thought we could manage it all that night.

Cross-examined by Mr. Walford—I first heard of Mr. Clare's accident three weeks after, when I met him. I did not express surprise to him to hear that he had been on board the *Victoria*. I was not in the hold when Clare came aboard. I could not very well pass over the coals, and I never passed over them. They did not slope down anywhere, and were breast high.

Frank Harry Tovey, Third Engineer of the *Victoria*, sworn, deposed—I was acting as Second Engineer on the night of the 27th July. I remember receiving an order from the Chief Officer that night, to put a light in the forward bracket of the wheel-house. In doing so I passed by the starboard coal bunker hatch. The cover was off at the time. There was sufficient light to enable any one passing to see whether the cover was on or off. There was no brilliant light, but sufficient to enable one to see there was a hatch there. The deck load of coal was four bags deep; the same height all over. There was no loose coal, or coal in sacks in the passage marked on the plan. I walked on the deck; there was nothing between the deck and the sole of my boot. Next morning I passed through the passage, and it was then in the same condition. It did not occur to me that the hatch was insufficiently lighted for strangers coming on board. It is always lit in exactly the same way as it was that night.

Cross-examined by Mr. Walford—Owing to the Second Engineer being ill he was left at *Victoria* that voyage. It was my duty to attend to the electric lights. There was nothing wrong with them that night.

The Chief Officer was recalled to prove that the quarter-master who was working at the after hatch on the night of the 27th July was not on the ship now. He left the ship at *Tacoma*, that voyage.

Antonié Jose Correa, sworn, deposed—I am in the service of the Agents of the defendant Company at Yokohama. I was on the *Victoria* on the night in question. I went on board after dinner and remained on board till ten o'clock. I passed the coal bunker hatch on the starboard side. I had no difficulty in passing along. I walked along on the side of the ship, the rail-passage. I did not take any notice of the hatch when I passed. There was no danger in it to me. I cannot say whether it was open or closed.

Cross-examined—I know the *Victoria* quite well.

To the Court—I went on board when she arrived in the morning.

The Court then adjourned till half-past one o'clock.

Upon resuming, Mr. Geo. Syme Thomson was called and sworn. He deposed—I represent Messrs. Dodwell, Carill & Co., in Yokohama. I have no power to act for the defendants otherwise than as agent. On the 4th November I caused a letter to be written by Mr. Lowder to the Counsel for the plaintiff. I saw plaintiff on the 28th July. He informed me that the ship's doctor had seen him, and that the doctor had not examined him properly. He said he was a poor man and wanted further medical assistance. I then told him to go to Dr. Munro, and get that gentleman to write to me upon the extent of his injuries. This was to be at my own expense individually. Before that he had suggested my inspecting the injuries he had sustained, and that was the reason I sent him to Dr. Munro. Plaintiff said that he thought he had a claim on the Company. I told him that was a different matter, but if he had a claim on the Company and it was a just one, he should be fairly dealt with. I mentioned I had no power in such a case without reference to the proper authorities. Then he sent in his claim. I referred the claim to Hongkong, and as a result I offered \$400 as full settlement without prejudice, in no way admitting liability. That was not accepted. This offer was made a week after the petition was filed, November 4th.

The letter was put in, and read as follow:—

A. B. Walford, Esq.

4th November, 1895.

Dear Sir,

CLARE V. THE N.P.S.S. CO.

In reply to your letter of the 2nd, I am instructed to say that Monday, the 13th inst., will be a convenient day for the trial of this action.

As regards the plaintiff's assumption that the defendant company are a partnership, and your consequent request that as they have not appeared individually you may be furnished with the names of the members of the partnership, I have to say that Messrs. Dodwell, Carill, and Company, who are the agents of the Company in Yokohama, and by whom I am instructed, are not in possession of the information asked for. They are defending the action as agents; and the only reason why the petition was not objected to for want of jurisdiction in Her Majesty's Court for Japan to entertain it, was that in the case of the plaintiff they were unwilling to take advantage of a technicality, which would have the effect of depriving him of a local remedy for an alleged injury of which there is a possibility of the defendants being found liable. You may assure your client that Messrs. Dodwell, Carill & Co., as agents for the defendants, hold themselves responsible for the payment of all damages and costs he may succeed in recovering against the defendants.

Yours truly,

J. F. LOWDER.

Mr. Lowder then read the following extract from plaintiff's testimony of the previous day:—"He said, if you take this case into Court, Mr. Thomson does not wish you to have anything more to do with any ships or cargo of his and I must discharge you. If I don't discharge you, Thomson will take his business away from me, and then business is a third of my business, and that is what I can't afford to lose. I thanked him, and left." Is that a correct statement, assuming you spoke to Mr. Helm.

Witness—That is not an accurate statement, assuming that I spoke to Helm.

Cross-examined by Mr. Walford—I told Mr. Helm that I would not have Mr. Clare go on board our steamers in future, or have anything to do with our steamers. I said nothing about his remaining in Helm's service. I wrote to Hongkong about his claim when next we were writing, and the answer was much delayed.

Re-examined by Mr. Lowder—I had had several conversations after Mr. Helm's return to work, that I should require his permission to speak about, but the result of them was that it made me come to the conclusion that it was not advisable for me to have Mr. Clare going on board our steamers.

Mr. Lowder—That is my case.

Plaintiff, recalled by the Court, said—I went forward by the starboard side to the officer's stairway. Coals were piled up on each side of a passage way leading to the stairway from the gangway. Going forward I found no passage way, and I got up on to the coal. I could not say how far the coal extended forward, but the coal began well aft near the gangway.

Mr. Lowder, in addressing the Jury, said that he should not have taken the trouble to occupy their time with the evidence just given by Mr. Thomson had he not considered it necessary to remove from their minds any prejudice that might have been conveyed to them in the opening remarks of his learned friend who appeared on the other side—that plaintiff had been unfairly treated by the defendant Company, and that he had been driven by them to the great cost of bringing a lawsuit. The evidence just given proved that it was precisely the other way about, that the defendant had been driven to defend the suit, although as agents they had no obligation to appear in a suit brought against the principals. But defendants did not wish to take advantage of a technicality against the plaintiff. Also it had been gathered that the defendants had offered the plaintiff a solatium of \$400, which he might have received without the Company admitting any legal liability. Of course, in making this offer it must be clearly understood, there was not any liability admitted by the Company. Their offer was rejected and the case proceeded. The evidence just tendered would, he felt confident, lead the jury to the conclusion that the plaintiff had been very fairly dealt with by the defendant Company, and that they did not come into Court to evade any of their liabilities. In fact they were driven into Court by the plaintiff; it was not the defendants that had driven the plaintiff there. Proceeding, Counsel said that he was willing to admit that plaintiff went on board the ship on business that affected both defendants and plaintiffs.

His Honour—Common business.

Mr. Lowder—Yes, from the evidence, common business.

His Honour—I believe it was so.

Mr. Lowder—That business, I now contend, might have been concluded at the top of the gangway of the ship. At the head of the gangway plaintiff met Brown, the stevedore, and the Chief Officer. He went on board the ship to ask a question as to whether any more cargo would be received on board that night, and the Chief Officer was the person who could give the information that plaintiff required—whether he would ship any more silk on board that night.

His Honour—Was it silk?

Mr. Lowder—Helm's lighters were conveying the cargo to the ship, and plaintiff was in their

employ. The business that plaintiff had in hand when he boarded the ship was with the Chief Officer, and the application plaintiff had to make was to be made to him. Now the evidence of Brown was that both he and the Chief Officer were standing near the gangway when plaintiff came on board, but that plaintiff, although there was quite sufficient light to enable him to see the Chief Officer, did not speak to him nor ask him a question. Instead, according to the defendants' evidence, he asked Brown as to whether any more cargo would be taken on board that night. According to plaintiff's own statement he saw the quartermaster at the gangway and was told by him to go forward. He asked the jury, on the evidence given for the defendants, to answer the question, whether in their opinion the business plaintiff had in hand could not have been transacted and finished at the top of the gangway? Plaintiff was doubtless justified in going on board the ship, but as the business on which he came could have been finished at the top of the gangway, Counsel held that he was not justified in going forward along the deck. Whether the business of the plaintiff could have been concluded where he (counsel) suggested it could have been, was a question for the jury to decide. Then the question arose, was the business upon which the plaintiff went to the ship concluded? The Chief Officer denied that the question as to more cargo being received was put to him by the plaintiff, and therefore, as he was the only man who could give the information required, plaintiff must have left the ship without concluding his business. The question then arose, how important that business was in his own mind? The next question was, did the plaintiff step into the hatchway and sustain the injury that he says he did. In his (Counsel's) mind he did not think it possible that the accident could have occurred as plaintiff says it did. When he told the Chief Officer of his accident he said that he "fell down" the hatch, when speaking to the agent of the company he said "fell down," and when a letter was written to the company by his employers, at his request, they wrote that he had fallen down the hatch; yet when he prepared his petition for the Court he describes the accident as having occurred through his "stepping into" the hole. If plaintiff's own evidence is to be believed he climbed up on to the coal and then tumbled in. There was, therefore, some amount of deliberation about the matter. In plaintiff's last piece of evidence he says that there was coal piled up from the gangway, leaving a passage in between. The defendants' evidence showed that the coal stopped with the engine room. If the plaintiff's recollection of such a simple fact as this is not to be relied upon, then I ask you whether you can place more credence on other parts of his evidence? He seems to have suffered from peculiar eyesight that night, for he observed coal where no coal was, and going further forward did not see a hatchway that by any ordinary person could easily be seen. If, then, you believe the evidence the defendants have placed before you, and you are not satisfied that plaintiff has made out his case, the argument need go no further. The next point I am coming to is a point at law, was plaintiff in the vicinity of the hatch by invitation or permission. If there is a duty owing to a person who, being on certain premises by permission, meets with an accident, those duties only extend to such a part of the premises to which customers have need of access for the prosecution of their business. This is the principle of law laid down in a case I shall shortly cite. If plaintiff had no need of access to the place where the accident is alleged to have taken place, then no obligation exists on the part of the defendants to protect him from the accident he met with. He says that the deck was dark. If that was so then the question I submit to you is, it would be unreasonable to suppose that anyone invited him to go on in the dark; and if he did do so, he went on at his own risk. The mere fact of the coal being there raises the presumption whether such obstacle was not sufficient to act as a warning to him that if he did go over it he might stumble, that he might stumble at every step and be very likely to meet with an even worse accident than that which did befall him. The question is, are defendants liable? and I ask you to find that they are not, because plaintiff was not invited to go where he did. In support of this contention, Counsel quoted from the judgment delivered in *Walker against the Midland Railway Company*, where the proprietors of the hotel were not held responsible for plaintiff's husband opening a door leading into a dark passage, in mistake for a closet, proceeding down the passage for 17 yards, and then falling down a lift-shaft, whereby he was killed, the ground taken being that he was not invited to go there, and the place was not in use by the visitors to the hotel. The case

of *Mason and Langford* was also cited. Proceeding, Mr. Lowder said these cases related to the question, was plaintiff there by invitation or permission; if by permission there was little or no obligation held towards the plaintiff by the defendants. If he was there by invitation, then their duty was simply to exercise ordinary care, not extreme care, but usual care. The fourth general question to be answered was, was the risk run by plaintiff an unusual risk, I submit that it was not. I submit to you that if falling down the stairs of a house is an ordinary accident, then falling down the open hatchway of a ship is quite an ordinary risk, and one which ordinary experience would induce one to shun, just as one shunned falling down a household staircase. I submit that in this case there was no unusual covert danger. Having quoted the case of *Indermorne and Danes*, which went on appeal to the House of Lords, Counsel asked the jury to find whether they considered that the hatchway on the *Victoria* on the night of the 27th July presented an unusual covert danger, or was it one of the usual dangers to be met with on board ship. He hoped the jury would not be led to attach too great importance to the word "trap" used by the Counsel on the other side, and he quoted a decision bearing on the meaning of the word in its legal sense. The next question submitted was, could the plaintiff, by using ordinary care and caution, avoid the accident? And after this, the general question, had the plaintiff on this point made out his case, had he proved it to the satisfaction of the jury? Plaintiff himself had proved notice of warning, because he said he could not go forward without climbing on to the coal. The evidence as to the sufficiency of the lights had been overwhelming; there was quite sufficient to enable anyone to see the hatch. The witnesses Smith and Heldt, though it must be acknowledged that they were acquainted with the ship, said they could see the hatch and noticed no cover over it. There was sufficient light according to other witnesses for them to see the hatch. Then they had the evidence that the coal had been taken on deck at Moji, after which the ship proceeded to Kobe, and scores of people passed the hatch, backwards and forwards, and none ever fell in. Now we pass to the question, was there then any contributory negligence on the part of plaintiff himself. Could he have avoided stepping into the hatchway? Every other person seemed to have been able to avoid falling into it, and there is only one conclusion to draw, that plaintiff did not exercise that same care and skill. Summing up the whole argument, the questions that the jury had to answer were—was there joint interest in the business between the plaintiff and the defendants when plaintiff was on the spot; was he there by invitation; also was there lack of reasonable care displayed by defendants, and was there reasonable care on the part of the plaintiff. All these questions would have to be answered in favour of the plaintiff before they found for him.

His Honour—And damages? What have you to say about them Mr. Lowder?

Mr. Lowder—In regard to damages, gentlemen of the jury, the plaintiff claims for various things, and puts in a doctor's bill for \$38, loss of a month's salary \$85, chemist's bill \$11, or say something like \$150. In my opinion the offer that was made to plaintiff by the defendant was a very liberal one; he was not entitled to it, and I hope you will remember that it is he who has put the defendants to the expense of defending this action at law, though really they need not have answered his petition at all.

Mr. A. B. Walford then rose to close the pleadings for his client. He said that with regard to the question of damages that Mr. Lowder had finished his remarks with, the offer of the defendants was made after they had compelled plaintiff to bring the action, and after the petition was filed. However reasonable such an offer may have been before the action was commenced, it was too late and quite inadequate now. The jury would, if they believed his client, find a fair compensation for the pain and suffering he had endured and for the hardships to which he had been put. It was totally unreasonable to expect that plaintiff could wait from the 28th July till the 28th Sept., before receiving an answer to his request: two months was an unreasonably long delay. It was to be regretted that there were some discrepancies in the case. It was, however, a common experience to find that two persons when asked to describe an event that both had witnessed, could not give the same relation of it. But we always try to think that when men enter the witness box and take the oath they speak the truth about the matters demanded of them, according to their best belief at the time. I hope I shall be able to show that the evidence given in this case does

not vary in any material respect. Whether Clare questioned Brown or the quartermaster first was not material in the circumstances of the case. It was not very material whether there was a pathway between the coal from the gangway to the officers' stairway, whether there was a path through the middle, or along the side by the rail. These are matters in which two people differ. It is not very material whether plaintiff recognised the Chief Officer standing near the gangway when he came up, or whether he asked the Chief Officer personally whether he would receive any more cargo that night. He came aboard for that purpose, and somehow gained the information he wanted. He did not know the Chief Officer by sight, and only recognised him after the accident by the two bands on his sleeve. It would be very natural under the circumstances of the accident that he should not remember seeing the quartermaster tallying at the hatch. Counsel then pointed out that the original answer filed in the case by the defendants, bore out the statements of Clare as to the coal on the deck and the absence of passages.

Mr. Lowder said the answer was filed before he had had an opportunity of seeing the *Victoria's* officers. When they came in and he learnt further particulars, he amended his answer accordingly.

Mr. Walford continuing said that it was quite immaterial whether plaintiff used the expression "fell down" or "stepped into." It was a mere inaccuracy of expression in his mouth and meant the same thing. It did not affect his claim. He told the defendants' officers of the nature of his injuries, which the doctor had subsequently described to them. He asked the Jury to obliterate all these small discrepancies from their minds as they really were of no consequence whatever. There were some matters, however, of great importance that he desired to draw their attention to. As to the reason why plaintiff went forward on to the coal after coming out of the officers' stairway, he did not agree with the suggestion of his learned friend. It was quite clear that plaintiff came on board to ask him about receiving more cargo that night. He put a question of this kind to Brown, and then left him to go elsewhere, this is the defendants' story. Plaintiff says he saw Smith on the lower deck, who advised him to go and see the Chief Officer, and it was after he had left Smith and was engaged in seeking the Chief Officer somewhere else, that the accident happened. He went aboard on business to see the Chief Officer. There is no other reason suggested.

His Honour—I think that is admitted.

Mr. Lowder—But the business could have concluded at the head of the gangway.

Mr. Walford—And I say that he also went forward for the same purpose. There is unfortunately a conflict as to whom plaintiff first spoke, but this is immaterial and not important. It is also immaterial whether Clare obtained the information about the cargo from the Chief Officer. He was much agitated after his fall, and got the information somewhere, it may have been from Smith. He knew before he left the ship that no more cargo was required and so released his men. He at any rate accomplished his object. Turning to the question of lights, Counsel said that lights proceeding from the stairways, galley and engine room, though they might cast a reflection around, were clearly insufficient for lighting up the deck. Indeed the lights shining through the port holes were obstacles if anything to a stranger going alone the deck. All the evidence in regard to the lights had been given by the officers on by men who had been on the ship before. They knew where the hatch was situated and took care to avoid it. If Clare had known that it lay in his path he might have avoided it as well. It would have been far more necessary, too, to place a light where the coal began than to reflect a light on to the vicinity of the hatch, Clare, he contended, did what he thought was right, when he went forward in search of the Chief Officer. No man had to foresee the negligence of another man, and Clare had no right to foresee that there would be no light at the hatchway. There was nothing analogous between this case and the cases quoted by his learned friend. A ship's coal-bunker hatchway with its cover off, could not be compared with a staircase in a house. Everyone knew that there was a staircase in the house, but no one knew where a ship's coal bunker would be placed. Knowing where the staircase was, people were naturally on their guard, but the case was different with an unlighted unguarded hatchway. Passing on to another point in the case, Counsel said the other side had not suggested that plaintiff was a trespasser. Even if he had been a trespasser he would have had right of action, because the deck of a ship was a private thoroughfare; persons had a qualified right of way over the decks of

ships. Addison and Pollock on Torts were then quoted, and Counsel argued from them that plaintiff occupied the position and had the rights of a licence. If he was on the ship on joint business he must have a right of action, and this, he contended, carried him right through in his search for the Chief Officer. Having cited *Indermorne* and *Dames*, Counsel said that plaintiff had no opportunity of knowing the existence of the danger, and that he quite conceived it possible for plaintiff to have fallen as he described, notwithstanding the guy stretching diagonally across the hatch. He asked the Jury for a finding on a question of fact, that Clare was not able, coming out of a brilliantly lighted place—the officers' stairway—on to deck where no light was, to see any pathway leading forward. He took what appeared to him the right way forward, slipped into the hole and fell and met with the injuries he complained of. Counsel asked the jury further to find that the hatchway was not lighted and imperfectly guarded; that the deck was not lighted save by light reflected from lights from port-holes or from below the level of the deck; that the plaintiff went forward in the ship on business in which both the defendants and himself were interested, and that the plaintiff had cause against the defendants.

His Honour said that he would sum up to the Jury at 11 o'clock the next day, and the Court adjourned.

H.I.M. the Czarina has given birth to a daughter, and both are doing well.

November 18.

The religious racial movement in Turkey is growing beyond the control of the officials, and the Christians everywhere in Armenia are in the greatest danger.

There have been massacres in Kharput and the number of victims is said to be eight hundred.

The buildings belonging to the American Mission has been burned down, but the missionaries have escaped.

November 19.

The massacres continue at various points in Asia Minor.

The Armenian agent in Constantinople has wired to London imploring for help to end the carnage which is going on.

There has been a great Arab rising at Yemen, where forty-five thousand Arabs armed with Martini-Henry rifles have defeated the Turks three times.

(FROM TONKIN PAPERS.)

Paris, November 5.

The programme of the Cabinet, read in Parliament, announces that the Southern Railway inquiry will be re-opened. Measures in favour of labour and the creation of a Colonial army are also announced. The Cabinet will remain faithful to foreign alliances. The assistance of the Right and the Collectivists is rejected.

The reception accorded by Parliament to this programme was reserved, except on the part of the Radicals.

Paris, November 9.

Complete accord exists amongst the Powers as to the attitude to be observed with regard to Turkey and the Armenian affair.

France will advance the departure of the squadron paying the annual visit to the Levant.

(FROM THE "SIAM OBSERVER.")

London, November 5.

M. Bourgeois, the new French Premier, made a statement as to the policy of his Administration in the Chamber on Monday. His programme includes:—

The imposition of an income tax; succession duties on a sliding scale; maintenance of France's foreign alliances, which had, he said, restored the balance of power in Europe; the creation of a Colonial army; military and naval reforms.

(FROM JAPANESE PAPERS.)

Shimonoseki, Nov. 26.

The *Atago Kan* passed here towards the east this morning.

Söul, Nov. 25.

The Cabinet have agreed to persuade the Tai Wön-kun to withdraw from the Palace. Affairs now wear an extraordinary aspect.

Hakodate, Nov. 25.

The sailing ship *Soriu Maru* was wrecked off Reibun on the 14th inst., while returning from Saghalien. Twenty-six of her crew were drowned.

Kelung, November 24.

Vice-Governor-General Viscount Takashima, of Formosa, left here for Kobe to-day at 5.30 p.m. by the *Yokohama Maru*.

Söul, November 26.

Mr. Komura, Japanese Minister, and other Representatives proceeded to the Palace to-day.

Kyoto, November 26.

Count Inouye arrived here last night, and put up at the Yoshitomi Hotel. He had an interview with Count Matsukata. Count Inouye will leave for Tokyo to-morrow.

Kobe, November 26.

The suite of Count Inouye have left for Tokyo, but the Count will return here from Kyoto and then go on to the capital.

Osaka, November 26.

The election of an M.P. for the first district of the City, takes place on the 28th inst., and a severe contest is expected between Messrs. Omiwa Chobei and Tanaka Ichibei. The latter is expected to win.

Söul, November 26.

The Foreign Representatives held a conference at the U.S. Legation yesterday.

Hiroshima, November 26.

The *Mikawa Maru* and *Asagao Maru* arrived at Nishima last night with some of the Guards.

Shimonoseki, November 26.

The *Ninsen Maru*, with a detachment of the Guards, passed here towards the east this morning.

Söul, Nov. 26.

Cho Gi-yen, Minister of War, and Ken Ei-chin, Superintendent General of the Metropolitan Police, have been dismissed, their positions being given to Li Do-sai and Kyo Shin respectively.

A Royal Ordinance has been issued to the effect that the dethroned and murdered Queen is restored to her former position, and the Royal Ordinance dated August 22nd is annulled.

The King has also issued an Ordinance that the officers and soldiers of the Palace Guards were not guilty of causing the late disturbance.

Mr. Komura, Japanese Minister, and other Representatives proceeded to the Palace to-day.

Söul, November 27.

The King personally interviewed the officers and men of the Palace Guards, and told them they are guiltless, and encouraged them to be more loyal. The soldiers are now more contented.

The present reforms were effected by the Korean Government on its own initiative. On the night of the 25th inst. the King asked all the Foreign Representatives to be present at the Palace on the 26th. When the latter proceeded to the Palace on the appointed day, the King told them of the reforms, and the Foreign Representatives seem satisfied with the promise of a strict enforcement of the reform measures. It is understood that measures for the best settlement of the Söul disturbance have been partly arranged in the above scheme of reforms.

The Tai Wön-kun is still at the Palace. The

reforms are said to have been chiefly planned by Gyo In-chu. The newly appointed Minister of War is now staying in his native place, and Gyo is acting as War Minister.

The punishment of Cho Gi-yen and Ken Ei-chiu does not go beyond their dismissal, and they have not been arrested. Cho is staying outside the castle, and Ken at his own residence.

Li Shu-kai, a military inspector, was arrested this morning.

Li Do-sai, the new Minister of War, is the man who was exiled to a distant island in connection with the disturbance of 1884, and since became Governor of Choll-la-do, which position he lost some time ago. Kyo Shin, the new Superintendent General of the Metropolitan Police, is an ex-Governor of Shin-ju.

Fusan, Nov. 27.

The Russian ironclad *Vladimir Monomach* and two other men-of-war arrived here yesterday, and will leave for Nagasaki to-morrow.

Aomori, November 27.

The Nippon Yusen Kaisha's agency will be opened here on the 1st prox.

Fukushima, November 27.

The Fukushima Liberals have agreed to accept the manifesto of the *Fiyu-to* issued in connection with the coalition with the Cabinet.

Söul, November 27.

The Tai Wön-kun will leave the Palace and proceed to his own residence.

Cho, Minister of War, has been dismissed for his carelessness, in not knowing of the escape of Gu Han-zen and Li To-ko, Commanders of the *Kunrentai*.

Ken, Superintendent of the Metropolitan Police, has been dismissed for having neglected to arrest criminals connected with the Söul disturbance.

Hiroshima, November 27.

Colonel Kusunose, Major Umayabara, and Captain Rito, who have been detained at the Gendarmery Office, were to-day removed to the Military Prison.

The *Sakata Maru*, *Ninsen Maru*, and *So-koku Maru* have arrived from Formosa.

Söul, November 28.

At 2 o'clock last night a portion of the Royal Guards belonging to the late Palace Guards attacked the Palace, but were driven back by another portion of the Guards belonging to the late *Kunrentai*. Li Do-ketsu, ex-Commander of the garrison at Phyang-yang, and two other officers, five soldiers, and four assassins provided with swords were arrested.

The late Palace Guards divided into two parts, and a company attacked the police office near the Eastern Gate, and wounded a few constables. The other party proceeded to the Palace direct. They intended to enter the Palace through the Keishunmon Gate. About ten men, who crossed the fence, were arrested. The soldiers belonging to the *Kunrentai* discovered the plot before it was put into execution. Despite thorough knowledge of the plot the commander feigned as if he were associated with the plotters, and promised to take part in the attack. The conspirators discharged three shots as a signal, but the *Kunrentai* soldiers did not answer, and instead suddenly attacked the rebels, who were soon defeated.

Before commencing the attack upon the Palace two soldiers belonging to the Royal Guards visited the Japanese Legation, and presented a letter, in which it was stated that as they intended to effect some reforms they requested that no Japanese guards be ordered out to put down the disturbance. Mr. Komura, Japanese Minister, refused the request, and promptly proceeded to the Palace. The gate was not opened then, and he was not admitted till about one hour after. He immediately interviewed the King.

The cause of the disturbance has not yet been ascertained, but it is not likely to have any connection with the ex-Minister of War.

Later.

It is said the object of the attack was to murder Kim Ko-shu, Yu Kitsu-ei, and others, the plot being arranged by Li Do-ketsu.

Kyoto, Nov. 28.

Marquis Yamagata arrived here yesterday

from Tokyo, and had an interview with Count Inouye. The Marquis at once left for Tokyo.

Ujina, November 28.

The *Taiwan Maru*, which left Takow on the 16th inst. and the arrival of which has been delayed for some days, entered Nishima to-day with 143 officers and men of the Guards and 130 horses.

Söul, November 28.

The Japanese guards had no connection with the disturbance. They did not proceed to protect the Palace during the attack, as they were not called on to render assistance.

The name of the American missionary connected with the disturbance is Andervit (?).

Osaka, November 29.

The parliamentary election in the First District of this city has resulted in the return of Mr. Tanaka Ichibei, who obtained 200 votes against Mr. Omiwa Chobei's 147.

Nagasaki, November 29.

The British cruiser *Caroline* has arrived here from Shanghai.

Söul, Nov. 29.

A conference of various Foreign Representatives was held to-day in connection with the new disturbance.

The fact that three foreigners were connected with the riot is not established.

The death of the Queen has been officially announced, and a Royal ordinance has been issued to the effect that a State funeral will take place; and that Koreans shall wear mourning for one year.

Two or three other Americans took part in the disturbance besides Underwood, the ring-leader of the disturbance.

The wife of Underwood is a doctor, and she made frequent visits to the Palace to see the Queen while the latter was still alive.

Underwood is a schemer, and is equally notorious with Mr. Okamoto Ryunosuke, a Japanese now under arrest at Hiroshima in connection with the former Söul disturbance.

The disturbance of yesterday morning occurred between 1.30 and 3 o'clock.

Hiroshima, Nov. 29.

It is said that a Court Martial will be opened in a week to examine the officers connected with the Söul disturbance.

BISSET & CO'S SHARE REPORT.

Yokohama, November 25th, 1895.

Our to-day's wire from Hongkong reads as follows:—H. & S. Banks 185 per cent. premium Sellers; Hongkong Lands \$68.50 Buyers; China Fines \$89 Sellers; H. & W. Docks 141 per cent. premium; H. & K. Wharfs \$48.50 Sellers, Douglases \$66 Buyers; H. C. & M. Steamboats \$36 Sales; Punjoms \$5 Sales; Raubs \$4 Buyers; Balmorals \$2.52 Buyers; Nationals \$29 Sellers; Indo-Chinas \$58 Sellers; Straits \$25.50 Sellers; Unions \$197.50 Sales and Traders \$73 Sales. It will be noted H. & W. Docks have risen from 137 per cent. premium, whereas H. & K. Wharfs, which were not offering under \$50 on the 22nd, current have resumed their old quotation of \$48.50. In other stocks no great material change is apparent, but from the above quotations, it must be admitted that the tone of the market is firmer, although rates have not maintained their nominal quotations of a fortnight past.

Locally, business has been brisker, and sales of Iron Works have again been effected at \$120, ex the dividend to be due on the 30th current; Club Hotels have changed ownership at \$55, and at this rate a small lot might be had; Brett & Co—Shares have been parted with at \$3; Oriental Hotels have been placed at \$115; H. & K. Wharfs have been done locally at \$48 and H. C. & M. Steamboats have found a purchaser locally at \$36. Yokohama E. & I. Works are still in demand, as also Japan Breweries and Grand Hotels at quotations.

Yokohama, 27th November.

Yokohama Engine & Iron Works have again been placed, and \$125 and \$130 have been paid for them, ex the dividend to be due on the 30th instant. More shares might be wanted. Club Hotels have also changed hands, at \$55, but at this rate shares are not offering. Oriental Hotels Founders' Shares are in demand, and \$125 might be paid.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets every Monday and Thursday at the Club Hotel from 5 p.m. to 11 p.m.

The Tokyo Chess Club meets at the Tokyo Hotel every Friday from 1 p.m. to 7 p.m.

SOLUTION OF PROBLEM No. 204.

As notified last issue, this is withheld for a week; to give solvers a chance of correcting their ideas upon the fresh diagram.

PROBLEM No. 206.

By H. F. L. MEYER.

BLACK.

WHITE.

White to play and mate in three moves.

HONGKONG CHESS CLUB.

We are glad to note from our Hongkong exchanges that the season has opened well with an inter-club match between "City and Suburbs." We give some clippings which may interest our readers. If only Hongkong were nearer to us there might be a chance of some match-play between our Japan Clubs and those of China, but correspondence-games at such a distance would be a source of weariness in the extreme in these *fin-de-siècle* days:—

The first inter-club match of the Hongkong Chess Club was played recently in the Club Room, Hongkong Hotel. There was a large attendance of members, with a few visitors, who found most of the games interesting. Amongst the visitors was Madame de Kontski, who played several games against the Hon. Secretary of the Club, Mr. H. E. Pollock. Madame de Kontski is a very strong player, with the true chess instinct, and Mr. Pollock found her a worthy opponent.

The evening's match was between teams representing the City and the Suburbs. It was thought that the teams divided fairly the strength of the Club, but the result of the play would seem to indicate the invigorating mental effects of extramural residence, the Suburbs winning substantially by 10 games to 4.

A pleasing feature of the match was the appearance of a number of Parsee gentlemen, who will make a good showing in the international contest. Chess being, according to tradition, a Persian or Indian game, it is most appropriate that they should come to the front in this manner.

28—B takes P	28—P to K 6
29—Q to B 4	29—R to Q 7
30—R takes R	30—P takes R
31—R to Q sq.	31—R takes P ch.
32—K to B sq.	32—Q to B 3
33—Q to Q 3	33—B to R 3 (g)

Resigns.

- (a) A variation of the Stonewall development. Better would have been to get rid of the Kt at K 5 with 9. P to K B 3.
- (b) Black gained a move by the manoeuvre of attacking the Knight first instead of playing P to K B 4 at once.
- (c) If 14. Q P takes P, Black could have forced an open file easier with 14.....P to K Kt 4, at an opportune moment. Herr Mieses treated the opening well in taking off the Kt at K 5, in order to get a king's side attack, although he remained with bishops of different colour.
- (d) In conformity with the plan.
- (e) Quite safe, the B at Kt 2 being sufficient protection.
- (f) To prevent 25. P to B 6, B takes P; 26. Q to R 6 ch, &c.
- (g) A brilliant final attack, a fine game altogether on the part of Herr Mieses.

The age of the oldest of the competitors was separated from the age of the youngest by a gap of more than 40 years. Bird, the sole sexagenarian, is 64; Steinitz is 59, Blackburne 58, Tschigorin 45, Pollock 36, Von Bardeleben 34, Tarrasch 33, Marco 32, Mieses 30, Janowsky, Lasker, Teichmann, 27, Walbrodt 24, and Pillsbury 23.

Gunsberg speaks of Tschigorin as possessing a power of application and concentration unequalled by any other player. This strength is his weakness, as it stands to reason that the effort which such play requires cannot be sustained, even by the strongest chess constitution, day by day for four weeks. Lasker, while he has not the power of endurance and intensity of application of the Russian, has a much clearer sight of the board, a sound business-like judgment of position, and a fine appreciation of opening or developing strategy. Some of his victories were achieved by very fine play of that character. Pillsbury rather combines some of the qualities of both players. He can play for position like Lasker, and he can hold on grimly to an attack like Tschigorin.

Of Steinitz as he appeared at play, the *Chess Player's Chronicle* gives the following word picture:—"He is in the corner close to the window, surrounded by a crowd. He does not like it, and he takes no trouble to conceal the fact. He has a young opponent who is making an unexpected stand. It is the old champion's turn to play. He takes up his card, and, putting it close to his eyes, calculates how much time he may safely allow himself for the next five or six moves. Then his head makes a dive for the clock. He has ample margin. A gentleman passes between the table and the light. Herr Steinitz sniffs. On 20 occasions, at least, he has asked people to go round the other way. Another spectator stops, and his shadow falls right across the board. The chess master sighs, and with an injured air proceeds to pile up chairs across the public way. Then he sets to work again. He does not give one the impression that he is thinking out combination after combination. Perhaps his expressionless face has something to do with it, otherwise the massive forehead speaks clearly of the brain-power behind. His opponents always appear to be using up their powers to no advantage. At first they press him closely, but attack after attack fails, and, like a lion, Herr Steinitz waits his time. His method is made up of the agglomeration of small advantages."

CHESS IN TASMANIA.

A match was recently played by telegraph between Hobart and Launceston, the former team winning. We give one of the games.

GAME No. 397.

THE BISHOP'S OPENING.

WHITE.		BLACK.	
Mr. Toplis (H).		Mr. F. Powell (R).	
1—P to K 4		1—P to K 4	
2—B to B 4		2—B to B 4	

- 3—Kt to K B 3
4—Castles
5—P to Q Kt 4
6—P to Q B 3
7—P to Q 4
8—P takes P
9—P to K 5
10—B to Q R 3 (c)
11—Q to Kt 3
12—Kt takes B (e)
13—R to K sq. ch.
14—B to K 7 ch.
15—B takes B P mate.
- 3—P to Q 3
4—Kt to K B 3
5—B takes Kt P (a)
6—B to B 4 (b)
7—P takes P
8—B to Kt 3
9—P takes P
10—B takes P (d)
11—Q to Q 2
12—P takes Kt (f)
13—K to Q sq.
14—K to K sq. (g)

NOTES.

- (a) Black would do better to decline the gambit. By accepting it he gives White a good attack on the lines of the Evans.
(b) Too accommodating. The Bishop should be played to Rook's fourth. Then, if 7 Q to R 4 ch, 7 P to Q B 3, and Black is tolerably comfortable.
(c) The correct move. Black must not be allowed to castle.
(d) Black has no good move at this point. A similar position occurs in a weak defence to the Evans, and a comparison of the positions is an instructive study.
(e) 12 Kt to Kt 5 also leads to a win for White. The text move, however, is stronger.
(f) Of course, if 12 Q takes Kt, 13 B takes P ch, K to Q sq.; 14 R to Q sq. &c.
(g) Black might have made a longer fight by giving up his Queen for Rook and Bishop.

GAME No. 398.

A short and lively rally:—

- WHITE.
1—P to K 4
2—P to K B 4
3—Kt to K B 3
4—B to B 4
5—Castles
6—Kt to Q B 3
7—P to K R 3 (b)
8—Kt takes P
9—B to B 7 mate.
- BLACK.
1—P to K 4
2—Kt to Q B 3
3—P to Q 3
4—P to K B 3 (a)
5—Kt to K 2 (a)
6—B to Kt 5
7—B to R 4
8—B takes Q

- (a) Of course inferior, or such combinations as White here makes would be impossible.
(b) It is necessary first to drive the Bishop. If Kt takes P at once, the reply is Kt takes Kt.

LATEST COMMERCIAL.

IMPORTS.

A very quiet week again. Beyond a moderate enquiry for Yarn, nothing much has been done—Shirtings, Fancies, and Woollens all in the “doldrums” again. Quotations unchanged but week.

COTTON PIECE GOODS.

Grey Shirtings—8 1/2 lb, 36 yds, 39 inches	\$2.30	to 2.90
Grey Shirtings—6 1/2 lb, 36 yds, 45 inches	2.75	to 3.35
E. Cloth—7 1/2 lb, 24 yards, 32 inches	1.70	to 2.00
Indigo Shirtings—12 yards, 44 inches	1.90	to 2.40
Prints—Assorted, 24 yards, 30 inches	2.00	to 3.75
Cotton—Italians and Satteens Black, 32 inches	0.16	to 0.22
Velvets—Black, 35 yards, 22 inches	7.75	to 9.75
Victoria Lawns, 12 yards, 12 3/4 inches	0.75	to 0.90
Turkey Reds—2.0 to 2.4 lb, 24/25 yards, 30 inches	1.60	to 1.75
Turkey Reds—2.8 to 3 lb, 24/25 yards, 30 inches	1.85	to 2.10
Turkey Reds—3.8 to 4 lb, 24/25 yards, 32 inches	2.35	to 2.65
Turkey Reds—4.8 to 5 lb, 24/25 yards, 32 inches	2.90	to 3.40

WOOLLENS.

Flannel.....	\$0.30	to 0.47 1/2
Italian Cloth, 30 yards, 32 inches best	0.35	to 0.41
Italian Cloth, 30 yards, 32 inches Medium	0.30	to 0.32 1/2
Italian Cloth, 30 yards, 32 inches Common	0.26	to 0.27 1/2

No. 168, Bombay	—

MEALS.

Dull and unprofitable, dealers holding off. Quotations nominally unchanged, except for Wire Nails and Tin Plates: both of which are decidedly lower.

Flat Bars, 1/2 inch	\$3.25	to 3.30
Flat Bars, 1 inch	3.20	to 3.25
Round and square up to 1/2 inch	3.20	to 3.30
Iron Plates, assorted	3.50	to 3.65
Sheet Iron	4.30	to 4.50
Galvanized Iron sheets	9.00	to 9.50
Wire Nails, assorted	5.50	to 5.90
Tin Plates, per box	5.60	to 5.90
Pig Iron, No. 3	1.60	to 1.65

KEROSENE.

Market very strong, with no sellers at quotations. The fire in the Baku district tends to raise the price of Oil, and buyers find out (too late) that they have missed their opportunity.

American	Nom. \$2.50
Russian	Nom. 2.50
Langkat	Nom. 2.30

SUGAR.

Brown—Market active with small supplies: and prices show a fresh advance. White—Ordinary sympathises with Brown, and for Refined a better tone is apparent, large sales having been made with prices in favour of Importers.

Brown Takao	—
Brown Manila	\$4.70 to 5.00
Brown Daitong (New)	4.00 to 4.10
Brown Canton	3.90 to 4.50
White Java and Penang	6.80 to 7.00
White Refined	6.25 to 9.50

EXPORTS.

RAW SILK.

Dull market and small trade. Prices are reduced, but even then quotations are more or less nominal and better terms could be obtained. Stock increasing and is now 17,500 piculs.

QUOTATIONS.—(NEW SILK.)

Filatures—Extra 9/11, 10/12 den.	Nom \$930 to 940
Filatures—Extra 13/15, 14/16 deniers	900 to 910
Filatures—No. 1, 10/13 deniers	900 to 910
Filatures—No. 1, 13/15, 14/16 den.	850 to 860
Filatures—No. 1, 10/14 deniers	860 to 870
Filatures—No. 1, 13/16, 14/17 den.	830 to 840
Filatures—No. 2, 10/15 deniers	830 to 850
Filatures—No. 2, 11/18 deniers	810 to 820

Re-reels—No. 2, 14/18 deniers	750 to 770
Re-reels—No. 2, 14/18 deniers	730 to 740
Re-reels—No. 3, 14/20 deniers	710 to 720
Kakedas—Extra	Nom.
Kakedas—No. 1	820 to 830
Kakedas—No. 1	790 to 800
Kakedas—No. 2	760 to 770
Kakedas—No. 2	740 to 750

WASTE SILK.

Some business doing as prices decline. But the trade is far from general, and holders are not moving nearly as fast as they would like to do.

QUOTATIONS.—(NEW WASTE.)

Noshi—Filature, Best	\$125 to 130
Noshi—Filature, Good	115 to 120
Noshi—Oshu, Best	120 to 125
Noshi—Oshu, Good	110 to 115
Noshi—Oshu, Medium	100 to 105
Noshi—Shinshu, Best	75 to 80
Noshi—Shinshu, Good	65 to 70
Noshi—Bushu, Best	130 to 135
Noshi—Bushu, Good	120 to 125
Noshi—Bushu, Medium	110 to 115
Noshi—Joshu, Good	65 to 70
Noshi—Joshu, Fair	55 to 60
Kibiso—Filature, Best	100 to 105
Kibiso—Filature, Seconds	90 to 95

TEA.

Rather more done at last quotations, including a further shipment to the Straits. But there is

nothing worthy of note in the trade which is more or less comatose.

	PER PICUL.
Choicest	\$30 to \$32
Choice	28 to 29
Finest	26 to 27
Fine	24 to 25
Good Medium	22 to 23
Medium	20 to 21
Good Common	18 to 19
Common	16 to 17

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea, spoonful of Ointment was worth a fowl and any quantity of peas and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout World.
May 1st, 1890.

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY AND SATURDAY.

Annual Subscription, post free, 25s., in the United Kingdom. Ditto, 29s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dineto, London.

"MONEY" is a fearless critic and exposé of all shams, frauds, and swindles.

"MONEY" is the Journal for Investors, Speculators and Business men.

"MONEY" is a thoroughly up-to-date Record of all Financial and Business Matters.

YOKOHAMA: SATURDAY, DEC. 7TH, 1895.

MARRIAGE.

At Port Said, on the 3rd inst., EDWARD G. FRYER, of Beirut, Syria, to ANNA S. FRENCH, of the Methodist Episcopal Mission, Nagasaki, Japan.

DEATHS.

On the 26th ultimo, at Walthamstow, England, MARY, relict of the late C. GILLET, in her 78th year. (By Telegram.)

At San Francisco, on the 2nd instant, D. C. STONE. (By cable.)

SUMMARY OF NEWS.

NOTIFICATIONS have been issued by the War and Naval Departments to the effect that no

presents or subscriptions to the Army and Navy will be received after the 10th inst.

MARQUIS ITO still remains at Oiso, under medical care.

PRINCE WI-WA, now in Tokyo, is paying keen attention to military studies.

MR. IIDA SABURO, President of the Hyogo Prefecture Assembly, is dead.

THE University sports passed off satisfactorily last Saturday. The weather was bitterly cold.

THERE is still no news of the steamer *Strath-nevis*, that left Tacoma on the 8th of Oct. last.

THE British schooner *Arctic* is to be sold by order of H.B.M. Court, to pay the wages of the crew.

H.I.H. PRINCESS KUNI YOSHI-KO gave birth to a daughter on the 23rd ult., and the little Princess was named Yuki-ko.

MAJOR-GENERAL SATO, who formerly declined to accept the Mayoralty of Hiroshima, has now consented to fill the post.

THE marriage arranged between the daughter of Marquis Yamagata and the son of Mr. Funakoshi took place on the 1st inst.

SOME residents at Hakodate and Ezashi have agreed to construct a railway between the two towns at the estimated cost of yen 1,200,000.

AN electric railway is projected between Suzuhawa and Omiya *via* Yoshiwara in Suruga Province, at an estimated cost of yen 2,500,000.

THE Nippon Yusen Kaisha's chartered steamers *Anger Head*, *Port Adelaide*, and *Ingo*, are to be released on the 5th, 7th, and 13th inst. respectively.

THE Authorities have decided to connect Etoro, Chishima, telegraphically with Nemuro, and the estimates are to be submitted to the next session of the Imperial Diet.

MR. HATTORI TETSU, with the support of the Japanese residents at Fusan and Ninsen, intends to start a newspaper at Fusan. The paper is to be printed in Korean characters.

COUNTS KURODA and Inouye will, it is said, be promoted to the rank of Marquis; Viscount Takashina to Count, and Major-General Kawamura to Baron in two or three days.

THE sale of a political novel, "Japan after the War," just issued, was prohibited by the Authorities a few days ago. The author of the work is Mr. Suyehiro Shigeyasu.

A JAPANESE coolie was arrested this week on suspicion of committing an armed burglary at Ishikawa, Yokohama. He has since confessed to another burglary with violence at Honmoku.

PRIVATE theatricals are announced both in Tokyo and Yokohama. In the capital "Kind to a fault," and "He's a lunatic" will be played; in Yokohama "Plot and Passion" is to be presented.

A SUBTERRANEAN chamber, measuring 12 feet square and 6 feet deep, has been discovered at Uraga, Miura District, Kanagawa Prefecture, and part of three human skeletons, some swords, and eighteen copper images have been found there.

SEVENTY-ONE Japanese fishing vessels engaged in the Saghalien fisheries this year. They included 2 steamers, 21 sailing vessels built in accordance with foreign principles, 47 Japanese sailing ships, and one boat. Fish caught totalled

yen 330,000 in value; the expenditure amounted to yen 202,000, leaving a profit of yen 128,000.

H.I.M. THE EMPEROR attended the disbanding of the reserve troops of the Imperial Guards, and dismissal of the time expired men, which took place on the Aoyama Parade ground on the 30th ult.

THE Yokohama Commercial School is in such a satisfactory condition, the number of students gradually increasing, that the present premises are insufficient for the needs of the pupils. New school buildings will be constructed at a cost of over yen 20,000.

REUTER telegraphs:—There have been fresh massacres at Aintab Marask, a town in Syria some sixty miles to the North of Aleppo. The Sultan has appointed a Special Commission to report day and night upon the result of the measures adopted to restore order in Anatolia (Asia Minor). The insurgents have defeated the Turks in Crete. The situation in Asia Minor is improving. The French Chamber has voted unanimously credits for increasing their Consulates in China. The Italian Budget shows a surplus of eight million *lire*, and there has been no increase of taxation or of the national debt. Sir Philip Currie, British Ambassador to Turkey, has returned to Constantinople. A state of anarchy prevails in Central Albania, where the Chiefs are defying the authority of the Porte. A telegram from the correspondent of *The Times* at Sebastopol states that the Russian Fleet in the Black Sea has been recommissioned, and that the troops at Odessa are ready for active service. There are fifty foreign men-of-war assembled in the Levant, of which eighteen are British. The situation in Turkey generally is improving, affairs in Asia Minor are quiet, and there is a better feeling on all the Bourses. The Porte has consented to the doubling of the foreign guardships at Constantinople. A detachment of Foot Guards is going to Ashantee. The French Minister for Foreign Affairs has announced in the Chamber that Madagascar henceforth is a French possession. After an excited debate the Chamber approved of this by a majority of three hundred and sixty-seven votes. The Sultan is still unyielding, and the position reveals a critical state of affairs.

THERE is not much to be said about the Import trade. Yarns continue in moderate demand, the market hardening somewhat, but Cotton and Woollen Piece-goods of all descriptions are difficult to move. The Metal market is very quiet, and quotations are more or less nominal, Wire Nails being parted with for less money. The Kerosene trade is very much at a standstill. Early arrivals here cannot be large, and sellers now command their own figures, but in the absence of business quotations are entirely nominal. The Sugar market is strong, prices for all kinds being on the rise, and a good trade continues. After a spell of quiet in the Silk trade, concessions were made by holders that enabled buyers to go into the market, and a fair amount of business has been put through during the week. Buying, however, was far from general, and the chances are in favour of an attempt to again put up prices on the strength of recent transactions, and another period of inactivity intervene. The Waste Silk trade continues dull, and the approach of the New Year has induced a desire on the part of large holders to be moving. The Tea trade is quiet, with prices unchanged for the small amount of leaf on offer. Further export by Chinese has been made to the Straits, on a small scale, but the season is practically at an end. Exchange has fluctuated little during the week. The latest move in silver was a slight rise, but no alteration took place in the rates of exchange.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The political situation and the Korean affair have been the principal topics of discussion in the vernacular press during the week. The situation remains undecided. Rumours of contradictory tendencies continue to be published by the papers, the impression produced by perusing these endless stories being one of utter bewilderment. Instead of helping to a correct understanding of the position of affairs, these rumours are decidedly calculated to make confusion worse confounded. Papers of the highest standing, like the *Fiji* and the *Nichi Nichi*, wisely refuse to lend their columns to the ventilation of the worthless stories daily concocted at the offices of a score or more news agencies in Tokyo. But as to the rest, they exercise little discretion in the choice of news, political news especially, supplied by these establishments. Many of them usually make things still worse by publishing in addition whatever their reporters may be pleased to evolve from their imagination on a slender basis of questionable information obtained from sources still more questionable. The sum total of the trustworthy intelligence obtainable from these rumours is that the situation is undecided and that some time may elapse before anything definite will become known.

The *Nichi Nichi's* article on the situation, saying very frank things about the Premier, has already been reproduced independently. More than any other utterance it seems to have induced a large section of the public to conclude that there is but slender hope of Marquis Ito's re-considering his intended resignation. Had there been any good chance of the Premier's remaining in office, the *Nichi Nichi*, so think some people, would not have written in such an outspoken manner; for of all the statesmen in power, Marquis Ito has always been most respectfully spoken of by that paper. Such at least is the inference drawn from the article by the Progressionist organ, the *Mainichi Shimbun*. Commenting on the uncertainty of the present situation, the *Mainichi* remarks that the deadlock is owing entirely to the difficulty of finding a suitable successor to Marquis Ito. With regard to the *Nichi Nichi's* strong exhortation to the members of the present Cabinet to settle the question among themselves, the Progressionist organ observes that the plain meaning underlying that exhortation is that such a successor should be found for the post of Premier as shall not require any reorganization of the Cabinet. According to the *Mainichi's* idea, the younger disciples of Marquis Ito, who form a powerful coterie in official circles, and who are understood to be represented by the *Nichi Nichi*, are now exerting themselves to secure a change in the personnel of the Minister President in such a manner that the Cabinet shall remain in all other respects the same; that they shall be able to continue to exercise great, though indirect, influence over the conduct of national affairs, and that they shall in this manner have an opportunity to raise their official status and increase their personal weight. In short, these young politicians are represented to be using those now in Ministerial positions merely as trustees to hold office until they themselves shall think fit to enter upon the enjoyment of their heritage. Regarding the situation from this selfish point of view, the organ of this powerful coterie of young officials, says the *Mainichi*, is taking much pains to persuade the present Ministers of State to hold together and choose a successor to Marquis Ito from among themselves. It is no wonder that, thinking in this way, the Progressionist organ should strongly criticise the *Nichi Nichi's* article. The *Mainichi* is indignant that young officials should think that no other men of sufficient qualification to undertake the carrying on of the administration can be found. It is customary, says that journal, for official apologists to attach undue importance to personal weight, but they seem to forget that weight is easily acquired as the

natural result of occupying a high official position. While the great Okubo was in the Cabinet, none of the statesmen said to possess weight now had any consequence. "And, indeed," avers our contemporary, "Marquis Saigo is known to have made the following observation:—'The death of Okubo threw us into great consternation. But necessity left us no choice, and we soon found that we could get on tolerably well without him.' Is it real ability that has raised the present Ministers to their exalted positions? When Marquis Saigo led the National Unionists, did he distinguish himself from other politicians by any conspicuous display of intelligence? The final fall of the clan system is already in sight. The new and the old elements are struggling with each other. But now that the establishment of the Diet has given the people an opportunity to assert themselves, it is impossible to form a strong Cabinet except on the basis of the people's support and confidence. Politicians are merely dreaming, therefore, that continue to be dazzled by the fading halo of the clan statesmen. The spirit of the times is decidedly against the continued exercise of power by the old elements. The final victory of the new generation over the old is but a question of time."

The position of the younger politicians in the Government engages the attention of the *Kokumin Shimbun* also. It remarks that a prevailing evil in the Government is that young administrative officials are allowed to exercise great influence in State affairs of the highest importance. Not infrequently the conduct of business in a department of State is entirely in the hands of a few secretaries, and it is even reported that some subordinate officials exercise vast influence in the Cabinet. Rumour alleges that sometimes the policy of the Government is secretly settled between a few of the Ministers and these younger officials, and that the rest of the Cabinet are contented with a report from what may be called the inner Council. These young officials are noticed to be busying themselves in connection with the question of a change of Minister President. The evil, says the *Kokumin*, has reached an intolerable point, and something must be done to keep these presumptuous officials within the proper bounds of their functions.

In connection with the supposed change of Minister President, the *Kokumin* propounds a curious theory. In its opinion, the statesmen actually in power ought to hold themselves aloof from the question of succession to the Premiership, leaving the settlement of the problem to the statesmen that are out of the Cabinet, as Counts Inouye and Matsukata, Marquis Yamagata, and Viscount Takashima; and they ought, further, to follow the example of their chief and tender their resignation. The Minister President, in our contemporary's opinion, is the representative of the whole Cabinet, and consequently when he resigns, the rest of the Ministers ought to adopt the same course.

This extraordinary doctrine is traversed by the *Nichi Nichi*. The Premier, says our contemporary, is desirous of retiring from office, but he has not yet tendered his resignation. Meanwhile, the situation is discussed in various ways, the articles on the subject being, for the most part, wide of the mark. Then referring specially to the *Kokumin's* writings, the *Nichi Nichi* remarks that, with the solitary exception of France, there is no country in the world where the Cabinet is bound to resign when its chief retires. Such is certainly not the practice followed in Prussia, whose constitutional system is very similar to that of Japan. Even in England, the practice does not obtain. When Mr. Gladstone retired, for instance, the Cabinet remained unchanged. Supposing for argument's sake that such a practice were common in Europe, the Japanese Constitution is positively against it. According to the Constitution, the Ministers are held directly responsible to the Emperor and the Emperor only. In this respect there is no difference between the Minister President

and other Ministers of State; they stand exactly on the same plane. Consequently, the Ministers of State are not bound to identify themselves so completely with the Premier as to resign when he resigns. It is also absurd to maintain, as the *Kokumin* does, that when the Premier has tendered his resignation, the question of finding a successor should be settled, not by the other Ministers, but by some statesmen out of office. When Count Matsukata resigned in the summer of 1893, a number of statesmen out of office did indeed settle the question, but on that occasion, those in power were incapable of deciding the matter among themselves and the statesmen out of office were specially ordered by the Emperor to assume the task. That is an altogether exceptional case, and does not apply to the present state of affairs. Our contemporary has also something to say about the *Mainichi's* remark that the Cabinet, in order to be strong, must stand on the basis of popular support. If they mean to be responsible for what they say, the Progressionist organs, says the *Nichi Nichi*, ought not to deliver themselves in that fashion, until their Party shall have obtained a majority in the Diet. Having scarcely one-fourth of the Diet definitely on their side, they are without any right to demand that the Cabinet should be supported by the majority in the Diet.

Many of the articles on the Korean question have already been noticed under special headings. But one or two since published may be briefly reviewed. The *Nippon* thinks that the time has not yet arrived to despair of reform in Korea. It is a little too early to speak or think of the annexation or partition of Korea. But if the work of reform is to be continued, Japan is the country most fitted to be entrusted with the task; and the Power most unsuited for the purpose is Russia. Let Russia once have things her own way in the peninsula, and the *Nippon* has no doubt that she will at once proceed to annex the country. Under such circumstances, our contemporary declares that Japan should continue her task of regenerating the peninsular kingdom. The Russians are also strongly censured for their supposed opposition to the reformatory efforts of Japan in Korea.

The *Nichi Nichi* is not yet in a position to make any definite observations upon the affair of the 28th ultimo, for it has not yet received any letter from its correspondent in Seoul. But judging from what it has thus far been able to learn, our contemporary thinks it tolerably safe to say that the disturbance was an act of revenge by the party turned out of power through the *coup d'état* of October 8th, and that a few Americans were connected with it. As to the real cause of the disturbance, however, the *Nichi Nichi* declares that it is very difficult to find out the truth. By some persons, the affair is ascribed to foreign instigation. If Colonel Cockerill is to be believed, continues our contemporary, it seems to be untrue that a large number of Koreans took refuge in the Russian Legation. There may have been one or two Korean refugees there, but the bulk of the refugees seem to have found asylum in the American Legation. The *Nichi Nichi* is perfectly aware that the American Minister was not to blame for allowing these men to remain in his Legation, but if it be true that some Americans assisted the conspirators, and if those conspirators be the refugees in his Legation, he cannot be held entirely free from blame. The *Nichi Nichi* further regards it as singular that, if the conspiracy were known to the Korean Cabinet beforehand, it was allowed to develop into an overt act. Was it the Seoul Government's object to let the conspirators strike the blow, so that there might be an opportunity of crushing the Cabinet's foes effectively? Our contemporary then goes on to point out the absurdity of the journals that call upon the Japanese Government to take diplomatic action against Russia and the United States. So far as Russia is concerned, the *Nichi Nichi* believes that her subjects in Seoul did not participate in the

recent disturbance. Not so fortunate seem to have been the Americans, and it may be presumed that the Washington Government will not fail to take due steps. Meanwhile, the proper course for the Japanese Government is to keep quiet and offer advice to the Korean Cabinet about the manner in which the situation is dealt with. As to those contending that the Japanese Cabinet ought to resign, so that its successor may have a free hand in conducting diplomatic negotiations with Russia and America, they are reminded that it having been clearly established that the Cabinet was not in any way connected with the affair of October the 8th, there is no occasion for its resignation, even though it were necessary—which is not the case—to carry on such negotiations with the above two Western countries. In conclusion, the *Nichi Nichi* repeats what it stated in a former article, that the state of affairs in the peninsula demands a speedy and final settlement of the Korean question, and that although it does not advocate a Russian alliance, it is confident that Japan and Russia, one of these days, will together take the initiative in the solution of the problem.

The general foreign policy of the country, the increase of its armaments, treaty revision, and the city improvement scheme in Tokyo, have been the other questions discussed during the week.

EDITORIAL NOTES.

THE RECENT OUTRAGES AT MOILIM.

THE *China Mail* is informed that the claims of the Basel Mission for the destruction of that mission's property at Moilim, near Swatow, have been settled in full by the Chinese Government. Some months ago, it will be remembered, shortly after the massacre at Hwasang, the report was wired to the *China Mail* that the Moilim mission station had been attacked and looted by a band of rebels, who had overrun the district and put the officials and soldiery to flight. Fortunately, the Rev. Mr. Kammerer and his wife and family had been warned, in common with the other German missionaries working in this district, to come down to Hongkong, otherwise there might have been loss of life. As soon as the outrage became known, German cruisers were despatched with all possible speed to Swatow, the German Government and the German officials in China set to work in a business-like way, and the result has been a speedy settlement of all claims, the pacification of the disturbed district, and the return of the missionaries to their posts. Nearly a month ago, the German Consul at Swatow (Mr. Streich), accompanied by the Rev. G. Reusch, Hongkong, and the Rev. J. Leonhardt, Nyenhangli, visited Moilim, and found that the actual damage was not so serious as at first reported by the Chinese. The estimate made was \$994, and a cheque for that amount was received from the Chinese on Friday last. Mr. Reusch reports that the people of Moilim were not concerned in the incipient rebellion. The rebels were "outsiders," who have since dispersed, after looting some rich Chinese houses. A reward of \$500 has been offered for the arrest of the leader. Mr. and Mrs. Kammerer left Hongkong the other day for Moilim.

THE COMING PERFORMANCE.

As will be seen from our advertising columns, our local amateurs have another piece almost ready for presentation. Unlike their recent attempts, the present play is more ambitious, being, so far as we remember, a very powerful drama from the pen of that admirable dramatic author, Tom Taylor. We congratulate the management on their choice, and feel sure that the more or less historical characters of *Fouché*, the Minister of Police; *Demarets*, Head of the Secret Department; *de Neuville*, the Royalist; *de Cevennes*, the fop, and last, though not least, the beautiful *Marie de Fontanges*, all of whom are entrusted to old friends, will be properly rendered. We also hear of at least two new appearances (one a fair

débutante), of new scenery, and new dresses. Altogether, we may look forward to a dramatic treat, and feel sure that a bumper house will reward our amateurs for all their pains, and help to build up a fund which is to be devoted to new scenery and theatrical properties for future use.

ACCIDENT ON THE "SAGHALIEN."

AN unfortunate accident, says the *Hiogo News*, happened on board the M.M. *Saghalien* shortly before her departure hence on Monday morning. The Rev. John A. Hyke, an American Missionary bound for Shanghai, was standing on the deck watching the intake of cargo when something in one of the slings carried away. The falling block caught the Rev. gentleman in the back and knocked him on to the Pier. He was speedily conveyed to the Hospital, and it is hoped that nothing more serious than a shock has occurred. But to an elderly and rather portly gentleman such a shock is sufficiently serious, and he may be detained for some days.

HONOURING A BRAVE POLICEMAN.

A SHORT time ago, says the *Hongkong Daily Press*, a policeman (of the military police) at Canton was wounded by a kidnapper, and died from his injuries on the 14th Nov. All the shops in the ward to which he belonged, the ward consisting of seven streets, contributed towards the cost of his funeral, which was on a grand scale for a man of his social standing, and each shop sent a man to join the procession following the coffin, which was carried several times round the streets of the ward. The father of the dead man, the girl he rescued, and the mother of the girl, attended in mourning. The mother of the deceased received a present of \$400 from the ward, all the shops contributing. The circumstances of this case are altogether unusual. Two policemen attacked four armed kidnappers, and the deceased, though mortally wounded, secured his man. The action of the ward also deserves mention. The representative of the ward insisted on the arrested kidnapper being photographed to make sure that he did not succeed in purchasing his release and the substitution of some other man at the execution, as is often done.

THE EFFECTS OF A GREAT DROUGHT.

As a result of the great drought in New South Wales, the atmosphere in Sydney is recently stated to have been so obscured by smoke from countless bush fires that only a dull reddish light came from the sun, and incoming ships had the greatest difficulty in sighting the entrance to Port Jackson. On the Blue Mountains Bush there were fires in every direction. Dante's Glen, one of the sights of the mountain health-resorts, has been completely ruined by fires. In the Hunter district the fires have been terrible, and a mail-coach was fired that attempted to run the gauntlet of a flames. The whole south coast district seems to have been aflame.

THE M.M. COMPANY AND ADEN.

A PARIS journal states that the Minister of the Colonies has succeeded in inducing the Messageries Maritimes to change its port of call from Aden to Jibouti, the French port on the African coast. According to this information, from the beginning of this month (December) only one of the M.M. steamers will continue to call at Aden out of the five which previously called there. If this statement is true, it is pointed out that the new regulation may have far-reaching consequences, and proves once more the revived activity of France abroad. Jibouti, it is said, is a much larger port and much easier of access than Obok, and has, besides, the superiority over the English port of Aden of being sheltered from the winter monsoons, which render navigation in the Red Sea so difficult.

MESSRS. LANE, CRAWFORD AND CO.'S EXHIBITION.

THE exhibition of toys and goods suitable for Christmas presents, usually made by Messrs. Lane, Crawford & Co.—the Whiteley's of the Far East as they have aptly been termed—is this year more replete than ever with novelties,

and will well repay a visit from every member of this community. Mechanical toys, the product of a scientific age, abound: but to many a wee body in petticoats the dolls will afford the greatest attraction, so fair, tall and stately, or short and homely, but altogether companionable are they. For the boys many an array of tin soldiers and other martial toys are waiting for the order to march and take up position on the parade ground or battle-field of the theatre-royal-back-nursery. To the tastes of children of a larger growth will be found the large stock of new leather goods—these are of exceptional worth and offer a tempting selection. For the hosts of other good things on view we reiterate the firm's invitation to our readers, to speedily pay them a visit, for all wishes and desires are to be accommodated.

PROMOTIONS AND DECORATIONS.

LIEUT.-GENERAL YAMAZAWA and Major-Generals Nagayama and Kawamura were yesterday promoted to the rank of Baron. Major-General Kawamura was also decorated with the Third Class of the Order of the Golden Kite and the Second Class of the Order of the Sacred Treasure, Lieut.-General Yamazawa receiving the Order of the Double Rising Sun. Lieut.-General Viscount Takashima received an annual pension of yen 740. Major-General Hishijima and Sakai had decorations of the Fourth Class of the Golden Kite conferred on them, and Major-Generals Tamura and Okubo received the Medium Cordon of the Rising Sun. Mr. Sannomiya, Grand Master of Ceremonies, was decorated with the First Class of the Order of the Sacred Treasure, and Mr. Nagasaki, Private Secretary of the Minister of the Imperial Household, the Third Class of the Order of the Rising Sun.

AN INGENUOUS THIEF.

A YOUNG Japanese named Takagi Yasukichi, was arrested by the police on Monday afternoon with a quantity of white sugar, about 40lb., on his person. The ingenuity displayed by Takagi, in any other path of life, might have led to something substantial. His *modus operandi* was as follows:—In an old coat he had sewn four long bags, lengthwise, over which he wore another coat. Every morning when the coolies went off to work on a ship in harbour, he attached himself to the gang, and under pretence of work went into dark corners where he would broach bags of sugar or anything else that could be conveniently removed. Then with unblushing effrontery he would leave the vessel and boldly walk through the Customs compound, and so on to the habitat of a receiver of stolen-goods.

THE "COPTIC'S" LAST VOYAGE.

THE O. & O. *Coptic* made no report as to cholera being on board when she arrived at San Francisco on the 12th November, though as she came from "infected ports," she was put into short quarantine on arrival. The *Coptic* made a wonderful run from Honolulu, reaching San Francisco from there in six days and two hours. She was sixteen days out from Yokohama. She reached Honolulu on November 5th, and left there November 6th. She spoke the United States cruiser *Olympia* bound for Yokohama in latitude 31.55 north, longitude 172.19 east.

IMPORTANT TO SHIPMASTERS.

WE are informed that the Nagasaki Dock is now free from Government control. Applications for its use may be made by letter or telegraph, and will receive immediate attention.

THE JAPAN RED CROSS SOCIETY AND FOREIGN ARMIES.

THE following note appears in the *Official Gazette* of Tuesday:—"Hearing that the armies of France and Spain, now campaigning in Madagascar and Cuba respectively, are suffering from sickness on account of uncongenial climate, the Red Cross Society of Japan, in view of the fact that these two countries are

signatories of the Geneva Convention, and as a mark of sympathy with the suffering armies, has forwarded to them separately, through the medium of their respective Ministers, a certain quantity of black tea produced in Japan."

THE PANAMA AND NICARAGUA CANALS.

A HOME paper, referring to the present condition of these works, prints the following:—"A special meeting of the Incorporated Chamber of Commerce of Liverpool was held at Liverpool on Thursday (Oct. 10), when Mr. A. R. Colquhoun, M.I.C.E., delivered an address on "The Prospects of the Nicaragua Canal." Mr. Charles McArthur presided. The chairman stated that Mr. Colquhoun had just returned from a special mission on which he had been sent by *The Times* to Central America to inquire into the respective merits of the Panama and Nicaragua Canals. Mr. Colquhoun stated that of all the schemes for interoceanic communication that Nicaragua Canal was the only one at present in practical existence. The Panama scheme was, he said, *in extremis*. The Nicaragua Canal Company was formed a few years ago, and in 1893 the financial panic in the United States stopped the work. The Company then wanted money and applied to the United States Government, and there was now a Bill which had passed the Senate by which the U.S. Government would give a guarantee on the whole work, and retain an interest of seven-tenths of the whole stock, and, amongst other rights, have the right of appointing ten directors out of fifteen. That Bill would go before the House of Representatives early in the next Congress and probably pass. The Canal being then under the control of the United States, it was, he said, most important that this country should see that the waterway was neutralised. The Nicaragua Canal was, Mr. Colquhoun said, indisputably the very best of the interoceanic projects in Central America. It was immensely favoured by nature: by utilising the huge inland sea of Lake Nicaragua and the river San Juan, the distance between the Atlantic and Pacific, 169 miles, was covered by making an artificial canal of only about 16 miles. The passage of the Canal was estimated to occupy 28 hours. The cost was put down at 20 millions sterling; but he considered that estimate too low, and was of opinion that 30 millions would be nearer the mark. He calculated that about the year 1905, assuming that the Canal would be commenced next year, there would be seven million tons of goods passing through it. An effect of the Canal would be increased facilities of trade with South-western China, which offered the finest possible market for English goods. He believed that the Canal would render greater service to the new world than the Suez Canal does to the old; that it will bring Japan, China, Australasia, and part of Malaysia nearer to the Atlantic cities of the United States than they are now to England; that it would benefit America in an infinitely greater degree than it would Europe, which would only use the Canal for trade to the Pacific littorals and the South Sea Islands; and that it would stimulate the shipbuilding trade, and develop the naval power of the United States. The Canal, Mr. Colquhoun stated, would enable America to offer the most serious rivalry to Britain's commercial supremacy that she has yet encountered. A special meeting of the Chamber was afterwards held, when Mr. Colquhoun gave an address regarding Indo-China. Referring to the preceding statement by Mr. Colquhoun that the Panama scheme is *in extremis* a different story is told by Sir Henry W. Tyler in a letter to *The Times* from Panama. Sir Henry says that the original proposal has been abandoned and that it is at present proposed to construct two large dams, one on the rock, 570 yards long and 165 yards wide at the base, and 38 yards high, across the Upper Charges river before the Obisco runs into it, and the second, with rock sides, 473 yards long, 220 yards wide at the base, and 27 yards high, across the bed of the Lower Charges river after it is joined by the Obisco. Two large lakes are thus to be formed, the upper lake for supplying the higher and

especially the southern portions of the Canal with water, and the lower lake mainly for purposes of the Canal navigation. There are to be ten locks so as to enable the Canal to surmount a summit of 160 feet above sea level. The object of these altered proposals is to employ the waters of the Charges river as a useful ally in providing water at all seasons for a Canal passing over higher levels, in place of attempting to divert its channel. Sir Henry says that there does not seem to be any insuperable difficulty in doing this, all that is required being six years of time and £20,000,000 sterling. Fifteen miles of the Canal from the Atlantic end at Colon and four miles from the Pacific at Panama are practically complete, except that some additional dredging will be required, the depth on the Colon sections, it is stated, varying from 23 to 28 feet, except at a bar formed near the Atlantic mouth at Mindi. Sir Henry Tyler is convinced that if the present proposals are carried out the work can be made a success, and the estimate of £20,000,000, he says, appears to be a fair one. He adds that the financial combinations connected with the new Company in France are no doubt sufficiently powerful to provide the necessary funds if they are convinced that the work can be completed for such a sum."

A CANINE RAILWAY TRAVELLER.

THE following story is thoroughly Australian. There is no country in the world where dogs and horses are so worshipped as in Australia. Bob's history was extracted from an Adelaide paper and sent to the *Spectator* a few months ago:—

"It is but seldom that we feel called upon to record the death of a member of the canine family, but the demise of 'Bob,' the well-known railway dog, will be mourned by many of our rising youth, and evoke a sigh from the travelling public and railway employés, among whom 'Bob' was a great favourite. It was customary for 'Bob' whilst spending a few days in the city to pay frequent visits to Mr. Evan's butcher shop in Hindley Street for meals. On Monday afternoon he was given his third meal by Mr. F. J. Preston, an employé of Mr. Evans, when shortly afterwards, about 3.10 p.m., he barked at a passing dog, and then, with a pitiful whine, fell dead. He was about seventeen years of age, and had only a few days ago returned from a trip to Broken Hill. Mr. L. M. Tier has claimed the body of the dog, and Mr. Nathan, in accordance with a promise made some months ago, will stuff it. A correspondent some time ago wrote the following interesting particulars about 'Bob's' life:—"There is only one privileged individual in the province permitted at all times to use the Government railways without payment, and, further, without a pass. Even the late Chairman Smith has been asked for his ticket, and the importunate porter would take no excuse; but 'franked' on all lines, and on engine, in van, or carriage alike, the one constant traveller, who acts as though he believed the railways were made for him, is our hero. You may meet him to-day on the Serviceton line, and next week at Oodnadatic. He is well known in the Adelaide Station, and his friendly salute is often heard from the open window of a carriage on the Port line, as he enjoys a suburban trip. He is always welcome in the porters'-room, but his favourite place is on a Yankee engine; the big whistle and belching smokestack seem to have an irresistible attraction for him. His acquaintances on all lines are numerous and he often engages in such lengthy salutations that the train by which he has been travelling starts without him; but he is never left behind, as he has a perfect knowledge of how to mount a train in motion. He is not particular as to how far he goes in any given direction. He has set out for a hundred-mile trip, but suddenly changed his mind and also his engine at a roadside station, and come straight back again. He lives on the fat of the land, and he is not particular from whom he accepts his dinner. All the members of the staff contribute willingly to his needs, and he reciprocates those good offices by refusing to reply to any appeals from the ordinary public. It is very clearly established that his sympathies are with the waymen, though he is not on the committee of the mission."

"I had the honour of the acquaintance of 'Bob,' the Railway dog, and I must say that he was one of Nature's canine gentlemen (writes Hugh Kalyptus), always self possessed, dignified without hauteur, friendly without being familiar, and courteous, inasmuch as he would always rise when addressed, pay attention to what was said to him, and never treat any one superciliously, as I have seen many bipeds do. 'Bob' made no difference between fustian and broadcloth. He was what I call a well-balanced Democrat, making no invidious distinctions, but treating all classes with courtesy, born of a correctly cast character. I have seldom seen a man with a more marked character than 'Bob.' Although a notability, he never seemed conscious of it, but would walk the platform of a station anywhere between here and the end of

the railway system in a calm self-contained style, like a person who had travelled much, accepting the greetings of his various friends as with the air of an equal, and it mattered not to him whether a lord, a statesman, or a mere member of the mob patted his head, he wagged his tail and walked on his wise way. 'Bob' had a capital memory, and woe betide the person who treated him discourteously—he would cut him dead the next time. On one occasion an official employed on one of the stations of the Northern line, being a little lax in the liver, had the presumption to kick 'Bob' out of his way as he lay sunning himself on the platform waiting for a train. 'Bob' never got out at that station again. He cut the station and its official dead; and, if he had a legacy to leave, it would not be the man's name that would be mentioned in 'Bob's' will. I remember once in the course of a several-hundred-mile bicycle trip I struck a wayside station, and was entertained by 'Bob' with all the cordiality with which a gentlemanly dog of confirmed character greets one whom he knows to be a firm friend of his race. He took a great interest in my faithful 'Tyler' bicycle, and, sitting down at my side, sedately watched every detail of the cleaning up, oiling, and other incidental operations. The work appeared to secure his approval, and he gravely walked round the machine three times, examining all the parts, and, as nearly as a dog could, said 'That's all right; she'll do now,' and he politely accompanied me to the ticket-office, watched the booking process, and saw the bicycle safely disposed of in the van. I thought it very kind and attentive of him; he had evidently often seen the engine in the same light.

MESSRS. GOODENOUGH AND CO.

THE last few days of Messrs. Goodenough & Co.'s clearance sale are announced, and should be freely taken advantage of by those wishing to obtain books, and leather and fancy goods at low figures. The percentages given vary from between 50 to 25 per cent., and bargains are on view on every hand in the spacious store.

THE L.C.C. AND THE MUSIC HALLS.

A LONDON telegram, under date October 25th, says:—The London County Council, by the casting vote of the Chairman, has reimposed the old restrictions upon the Palace Theatre of Varieties, but has removed by a majority of 17 the restrictions placed upon the Empire Music Hall, where a similar entertainment is given.

CAPTAIN LANG.

CAPTAIN W. M. Lang, R.N., has been begged to undertake the reorganisation of the Chinese Navy, and we understand that he will undertake it at the request of Lord Salisbury, if the very fullest powers are secured to him, but on no other terms.—*N.-C. Daily News*.

THE DISAPPEARING "MEXICAN."

MEXICAN dollars, says the *Daily Press*, are rapidly disappearing from the Hongkong currency. In a collection of 161 dollars in silver made by a shroff in the ordinary course of business, and which may be taken as a fair sample, the number of the different coins was found to be as follows:—British dollars 51, yen 108, Mexicans 2, total \$161.

THE DUKE OF ORLEANS.

ACCORDING to a London telegram appearing in the Australian press, the Duke of Orleans, head of the French Royalist party, has been made co-respondent in a divorce suit, Woolston v. Woolston, which is before the Divorce Court in London.

THE NEW JAPANESE CABLE SHIPS.

CAPTAIN ALLEN, with Chief-Engineers Mino and Kataoka, and a full complement of officers and men, are leaving by the P. & O. *Ancona* next week for England, says the *Hiogo News*, to take delivery of the new cable-laying steamer and to bring her out to this country.

COURT MOURNING.

AN extra of the *Official Gazette* published yesterday states that mourning will be observed at the Japanese Imperial Palace during the seven days, commencing the 5th inst., for the death of the Queen of Korea.

DEATH OF MR. EUGENE FIELD.

MR. EUGENE FIELD, the well-known American poet, journalist, and essayist, died at his residence in Chicago on Nov. 4, from heart failure.

THE "NICHU NICHU" ON THE SITUATION.

The *Nichi Nichi* strongly criticises the delay in solving the deadlock occasioned by Marquis Ito's intended resignation. As to the probable reasons of the step contemplated by the Premier, our contemporary writes as follows:—"Why does the Marquis desire to leave office? Is it on account of sickness? We have not yet heard it stated that he is afflicted with any malady sufficiently important to incapacitate him for discharging his official functions. His sense of public duty as the first Minister of the Empire ought to prevent him from retiring on account of a slight indisposition. Does he think that some responsibility dictates resignation? The Premier, we have no doubt, must be confident that, in all matters relating to the recent war he followed the course conscientiously believed by him to be best for the country. It is true that the choice of a Minister to the Korean Court did not bring any credit to him. But if that fault be fairly chargeable against him, he has no right to resign at his own convenience. Or again, does he think that the present is the best opportunity for him to leave office? It is true that a body of political friends has been gained for the Cabinet, but the management of these new friends cannot for the present be entrusted to other persons. Moreover, the Diet has already been convened for its ninth session. Can this, then, be called a good opportunity for the Premier's resignation. The only other adducible reason is that his resignation at this juncture might have the beneficial result of moderating the hostile attitude of the Opposition parties, thereby promoting the easy passage of various important measures in the coming session. But to expect any such result would be to weave a rope out of sand. Further, is it not already clear that both the Liberals and the National Unionists will not lend their aid to frustrate measures of paramount national importance at the present juncture? Another circumstance that ought to be remembered is that, should the Marquis retire now, the political connections of the statesman appointed his successor might necessitate changes in the *personnel* of the majority of the Ministers, and consequently reverse the relations with political parties. Marquis Ito is a man of sound judgment and profound intelligence, and must have some good reason for resigning." But we fail to discover any such reason." The *Nichi Nichi* then quotes a passage from an article in which it discussed the organization of the Cabinet by Marquis Ito in the summer of 1892. The passage runs as follows:—"Men say that Count Ito is apt to evade responsibility in connection with any difficult question. We shall not pronounce an opinion as to the justice or injustice of that allegation. But all that know him assert that, notwithstanding his conspicuous ability to shape far-seeing schemes and policies, the Count is prone to become tired before attaining the end of a journey. That is a grievous fault in a statesman charged with the supreme direction of affairs. Will he be able to combat his fatal propensity during the life of the present Cabinet? In welcoming him to office, we cannot but offer him this piece of advice." On the evening of the same day that this article appeared, the editor called on the Premier at the Imperial Hotel, when, judging from the Count's conversation, he (the editor) had the satisfaction of concluding that his advice had not been needed. And since that time neither repeated crises in domestic politics nor grave diplomatic complications have deterred the Premier from devoting his whole energies to the direction of affairs. His uninterrupted application to public duties has doubtless injured his health, but the *Nichi Nichi* was entirely unprepared for his resignation at a time when the programme of domestic and foreign policy planned by him is just in sight of being satisfactorily carried out. Our contemporary has no hesitation in saying that Marquis Ito is now acting in a very erroneous manner. It would not lament his intended resignation so profoundly, were Japan rich in statesmen fit for the post of

Minister President. But just at present there is a dearth of such statesmen. The *Nichi Nichi* does not mean to say that the Japanese Cabinet should be governed by parties, yet, at the same time, it would not disapprove the appointment to the Premiership of a statesman having the support of a majority in both Houses of the Diet. From that point of view neither Count Okuma, nor Count Itagaki, nor Viscount Shinagawa are qualified for the post. In conclusion, our contemporary advises the Ministers of State to persuade the Premier, if possible, to reconsider his resignation, and if there be no hope of that, to consider the question of finding a suitable successor. There is no necessity that a change of Minister President should be followed by changes in the rest of the Cabinet. At all events, the affair should be settled without loss of time.

THE SHARE MARKET.

An extraordinary appreciation has of late taken place in Shares throughout the country. The market remained comparatively stationary during the first half of the month of November, but a general upward tendency began to manifest itself from about the 20th, and since then the movement has gone on so rapidly that fears of a violent depreciation are now entertained. The following table will give an idea of the situation:—

	Paid up.	Closing price Nov. 28th. Yen.	Closing price Nov. 1st. Yen.	Appre- ciation. Yen.
War Bonds.....(100)		104.30	102.20...	2.10
Ryomo Railway..(50)		80.40 (2nd)	80.80...	5.60
Sanyo Railway...(30)		63.20.....	54.40...	8.80
Kansai Railway..(47)		77.30.....	68.80...	8.50
Do. (Newshares)..(47)		74.80.....	61.10...	13.70
Kyushu Railway..(41)		73.43.....	63.30...	10.10
Do. (Newshares)..(13)		35.70.....	30.40...	5.30
Kobu Railway...(45)		148.00.....	141.00...	7.00
Tanko Railway...(50)		104.00.....	102.30...	2.50
Sangu Railway...(50)		96.00.....	77.00...	19.00
Kawagoye R'way(50)		74.00.....	71.00...	3.00
Hantan Railway..(50)		59.00.....	54.40...	4.60
Bo-So Railway...(50)		63.40.....	59.70...	3.70
Nippon Yusen Kai- sha	(50)	106.40.....	93.20...	13.20
Tsu-un Kaisha...(40)		35.50 (2nd)	32.80...	2.70
Tokyo Tramway (50)		325.00 (5th)	295.00...	30.00
Teikoku Shogyo Ginko.....	(20)	44.90.....	44.10...	.80
Tokyo Dento Kaisha	(45)	74.50 (8th)	62.50...	12.00
Hokkaido Seima..(50)		61.80.....	57.50...	4.30
Nippon Orimono(50)		53.30.....	47.70...	5.60
Tokyo Spinning..(50)		68.00.....	65.10...	2.90
Shimozuke Spin- ning	(35)	37.50 (3rd)	34.00...	3.50
Kanagafuchi Spinning	(50)	73.60.....	68.10...	5.50
Tokyo Bourse...(25)		60.80.....	60.20...	.60
Tokyo Stock Ex- change	(50)	700.50.....	463.50...	237.00

The above figures refer to Tokyo. Even more extraordinary is the Osaka record. The following table shows the rates of appreciation in that city:—

	Closing price Nov. 28th. Yen.	Closing price Nov. 1st. Yen.	Appreciation. Yen.
Sanyo Railway.....	65.50	54.45	11.05
Kansai Railway.....	79.05	69.70	9.35
Kyushu Railway.....	74.70	63.90	10.80
Chikuhō Railway.....	108.55	99.40	9.15
Teikoku Shogyo Ginko..	46.80	44.80	2.00

Especially noteworthy has been the appreciation of the shares of the Osaka Stock Exchange, which, quoted at a little over 400 *yen* at the beginning of the month, rose on the 28th to the extraordinary value of 840 *yen*. A later telegram states that, on the 29th ultimo, they were quoted as high as 1,000 *yen*, the closing price for the day being 980 *yen*. According to the *Chugai Shogyo Shimpō*, from which we take these statistics, the present upward movement originated in Osaka and from thence spread to the capital. This accounts for the difference in the quotations between Tokyo and Osaka, as shown in the following table:—

	Tokyo closing price. Nov. 28th. Yen.	Osaka closing price. Nov. 28th. Yen.	Difference. Yen.
Sanyo Railway.....	62.20	65.50	2.30
Kansai Railway.....	77.30	79.05	1.75
Kyushu Railway.....	73.40	74.70	1.30
Teikoku Shogyo Ginko...	44.90	46.80	1.90

Is the movement healthy, what causes have combined to bring it about, and how long and how far will it continue—such are the questions asked by everybody. On this topic, the *Shogyo* writes as follows:—"Various causes have combined to bring about such a state of things in the share market. Among remote causes may be mentioned, (1) a general anticipation that the transfer of the indemnity from London to Tokyo must produce a plethora of money in the market; (2) a general supposition that industries of all sorts will become more and more profitable; (3) a belief that the different diplomatic questions having been almost settled, the market will for some time be free from political disturbances; and (4) the fact that the extremely hopeful state of the shares of new companies has reacted upon the shares of the old. Of the immediate causes, we may mention two, namely: (1) large purchases of some particular shares for speculative purposes, not only leading to appreciation of these shares, but, at the same time, powerfully affecting the quotation for others; and (2) increased facilities in obtaining advances of money which have enabled speculators to effect large purchases. But various as the minor causes may have been, the abnormal fluctuation is principally the result of speculative operations by stock-jobbers, who have skilfully taken advantage of the general tendency to a boom." Holding the above view, our contemporary is confident that a violent reaction is inevitable.

THE TOKYO CHAMBER OF COMMERCE.

The commercial section of the Tokyo Chamber of Commerce held a conference on the 2nd inst. from 5 p.m. There were present Messrs. Shibusawa Eiichi, Oku Saburobei, Amenomiyama Ryotaro, Ota Nobuyoshi, Kobayashi Kihei, Kato Tokuzo, Ginbayashi Tsunao, and a few others. The subject of discussion was the report of a special committee appointed to investigate the question of direct trade with foreign countries, at the request of the Minister of Agriculture and Commerce. The report is said to have been adopted at the meeting. It embraced various interesting topics, but only the barest headings under two of the subjects are mentioned by the vernacular press, namely, the causes that retard the development of direct foreign trade, and the measures that should be carried out for the promotion of such trade. The causes that impede the development of direct foreign trade are enumerated as follow:—

- 1st.—Imperfection of the credit system.
- 2ndly.—The high rates of interest in Japan as compared with those ruling in the west.
- 3rdly.—The ignorance of the Japanese merchants engaged in direct trade as to the condition of commerce abroad.
- 4thly.—Want of uniformity in the quality of Japanese manufactures and frequent deterioration of manufacturing processes.

The measures to be carried out for the promotion of the growth of direct foreign trade are as follow:—

- 1st.—An increase in the number of Consulates, and the exercise of more care in the appointment of Consuls.
- 2ndly.—The establishment of a greater number of banks so as to increase financial facilities.
- 3rdly.—The education of men so that they shall be well acquainted with the conditions of commerce in foreign countries.
- 4thly.—Extension of the Clearing House system.
- 5thly.—The foreign purchases of the Government should be placed, as far as possible, in the hands of Japanese merchants, and the official procedure proscribed on such occasions should be simplified.
- 6thly.—Extension of the steamship service.
- 7thly.—The establishment of commercial museums, so as to enable Japanese merchants to become acquainted with manufactures of all sorts.
- 8thly.—Measures should be adopted to secure uniformity in the quality of manufactures and to prevent the evil of deterioration.

CURRENT TOPICS.

NOVEMBER 30TH.

The situation is to be settled on the return of Marquis Ito to the Capital, but at present the date of that event is uncertain. There seems to be little change in his condition. No faith is to be placed in the rumour that the Premier's hesitation to return to the Capital is caused by his desire to have a conference with Count Inouye before leaving.

As to Count Matsukata, it is reported that, after a visit from Count Inouye, he left Kyoto for his villa at Mikage, where he purposes to stay for some time. The fact that he keeps away from the Capital at this juncture is regarded as a sure proof that, in whatever manner the present political deadlock may be finally settled, there is little chance of the Satsuma-Progressionist combination's coming into power.

Concerning the attitude of the National Unionists, the *Choya* publishes another article. It writes in this strain:—"The Liberals have become a Ministerial party. Though not binding themselves to blindly follow the dictation of those in power in every trifling case, it goes without saying that they will identify themselves on all occasions with the Cabinet in opposition to other parties. Neither is there any doubt that the Progressionists, the Constitutional Reformists, the Ote Club, and the Financial Reformists will combine to attack the Government on the question of Ministerial responsibility. Standing between these hostile camps, the National Unionists alone remain firmly devoted to their own policy. They do not, like the Liberals, surrender to the Cabinet after sacrifice of party principles; neither do they join the combination of parties in Opposition that are so unmindful of the gravity of the present juncture as to devote their whole attention to the question of ministerial responsibility. The National Unionists are now in the position of umpires between the Government and the Opposition. They are masters of the situation. The time has come for them to achieve their long cherished political objects.

Under these circumstances, they ought to be careful in shaping their conduct; they should not abuse their unique position and become the laughing stock of the public. . . . We hope that the National Unionists will remain true to their principles and refrain from taking any hasty and ill-considered step."

DECEMBER 5TH.

Recently a very absurd story made the round of the press in Tokyo and Osaka. It related to alleged secret trips by Marquis Yamagata between the capital and Kyoto, his supposed object being to confer with Count Inouye who was then staying in Kyoto. The simple truth is that no such journeys were made by the Marquis. He has all the while been staying comfortably at home in his residence at Meiji-cho in the suburbs of Tokyo. Why such an absurd story found its way into print is perplexing. A plausible explanation is offered by the *Nichi Nichi*. According to its information, Mr. Tsuzuki Keiroku, Director of the Engineering Bureau in the Home Department, visited Kyoto, arriving there late on the night of the 26th ultimo. He put up at a hotel usually frequented by Marquis Yamagata, but as soon as he reached the hotel, he went out and visited his father-in-law, Count Inouye, with whom he had a long consultation. Early next morning, he left Kyoto for Tokyo, so that he had not even to give his name to the hotel-keeper. Our contemporary thinks that he must have been mistaken by some servants of the hotel for Marquis Yamagata.

Now that Count Inouye is back in the capital, people feel certain that the situation will be settled without much loss of time. Rumours continue to be circulated about the probable outcome, but they are mere suppositions, not worthy of notice. For example, certain newsmongers try to make the public believe that the relations between Marquis Ito and Count Inouye are decidedly strained in consequence of a breach of faith on the part of

the Premier in connection with Korean affairs. Hence, they say, the Count's choice of the over-sea route from Kobe to Yokohama, thus avoiding the chance of meeting the Premier at Oiso. Nothing could well be more far-fetched.

THE LATEST KOREAN TROUBLE
AND THE JAPANESE PRESS.

Some of the Japanese newspapers are very much exercised over a report that certain Occidentals were implicated in the unsuccessful *émeute* of the 27th instant. They take it for granted that the object of the conspirators was to pull down the present Government and avenge the death of the late Queen. Had not the attempt been frustrated by the courage and presence of mind of the Palace Guards (the former *Kunrentai*), some Tokyo papers believe that the conspirators would have perpetrated acts of inhumanity and brutality at least as execrable as those of October 8th. The *Kokumin Shim-bun* is one of the journals that lay special stress upon the participation of Western residents of Seoul. The hard strictures, says our contemporary that the Europeans and Americans pronounced against the Japanese on account of the affair of October 8th, must now be directed against those that then pronounced them. The *Kokumin* goes on in this fashion denouncing the foreign participators in the latest trouble on account of crimes with which they *might* have been connected had their plans succeeded. It then calls upon the home Governments of these foreigners to deal strictly with the delinquents, just as the Japanese Government is doing in the case of its subjects suspected of implication in the disturbance of the 8th of October. In conclusion the Tokyo journal directs attention to the gravity of the situation in Korea since the 27th ultimo, and wonders how the Japanese Government is going to deal with it.

The *Nippon* is angry at the supposed singular indifference of its countrymen about the situation of affairs in the peninsular kingdom. Such was not their attitude last year, when they did not hesitate even to accept war on account of Korea. They are recommended to direct serious attention to Korean affairs, for the situation is distinctly critical.

In another essay, the *Nippon* discusses at some length the conduct of the Russians in Korea. If recent reports from the peninsula may be trusted, some Russians in that country are behaving in a manner calculated to prejudice the peace of the East. Our contemporary regrets this all the more, because, in its opinion, Russia and Japan are destined to be very good friends, and because it entertains a genuine sympathy with the Russian people. The *Nippon* then enters upon a somewhat tedious review of the treatment that Russia has received from some Powers, especially England, in connection with Turkey. Whenever Russia manifested any effective interest in the miserable lot of the oppressed Christians in the Sultan's dominions, England was on the scene to prevent her from carrying out her intentions whatever they may have been. The *Nippon* thinks that her own irritation at this repeated interference and opposition on the part of England ought to enable Russia to appreciate the feelings with which her antagonism to Japan's civilizing efforts in Korea will be felt by the Japanese. Our contemporary hopes that Russia will be governed in her diplomatic relations by the Confucian motto "Never do to others what you would not have others do to you." Moreover, in the case of Turkey, England—continues the *Nippon*—may have good reason to oppose Russia's policy, for the occupation of Constantinople by Russia would imperil the Indian Empire. No such justification exists for Russia in the case of Korea, for it is not Japan's object to "annex the peninsula. Our contemporary fails to understand how Japan's reformatory efforts in Korea can be prejudicial to Russia. If Russia really entertains any suspicion about Japan's Korean policy, she must be astonishingly ignorant of Japan's history and geographical position. The *Nippon* is aware that the con-

duct of the Russians in Seoul may not necessarily represent the ideas entertained in St. Petersburg, but it presumes that they would not wittingly act in opposition to the wishes of their home Government. Should they be allowed to continue the same attitude of hostility to the Japanese, our contemporary fears that the unpleasant feeling created among its nationals by Russia's interference in the matter of Liaotung, will be increased so much that the peace of the East may once more be disturbed. So far as Liaotung is concerned, the *Nippon* believes that, although enraged at Russia's conduct, the Japanese are not implacable, inasmuch as the acquisition of Liaotung was not the principal object of their war with China. But the case is different with Korea. There the Japanese will never tolerate any interference with their reformatory and civilizing efforts. The *Nippon*, therefore, advises the Government in St. Petersburg and the Russians in Seoul to be careful lest they precipitate a disastrous crisis.

The *Kokkai* calls attention to the critical condition of affairs in Korea, and strongly censures the Government's present inaction. The Government is not merely inactive: it is also said to be inclining more and more toward a policy of abstention and neutrality. "It is true," says that journal, "that Korea lies outside the strict limits of Japanese sovereignty, but from the point of view of national interests, the peninsula may be regarded as within our own territory. Our supremacy in Korea once destroyed, it will be difficult for us to maintain our power in other regions. It is not too much to say that the destiny of the Empire is bound up with the solution of the Korean problem. The turn that affairs are taking in Korea cannot but precipitate a crisis in which the problem with have to be solved in a decided way. We do not know the views entertained by the Powers of Europe, especially Russia. But Japan must have ideas of her own and must be prepared to carry them out at whatever hazard." Then alluding to the report that the Representatives of the Foreign Powers in Seoul have asked Japan to undertake the guarding of the Palace and the protection of the Foreign Legations and Consulates, the *Kokkai* urges the Government to accept the responsibility and make sure Japan's position in Korea.

THE KOREAN QUESTION.

Commenting on the latest disturbance in Seoul, the *Nichi Nichi Shim-bun* alludes to the singular coincidence that Count Inouye's departure from Korea has, for the third time, been followed by an *émeute*. It then proceeds in the following strain:—"Japan will not refuse to take upon herself the task of protecting Korea, with the concurrence of the Powers concerned. But to treat Korea as an independent State, and at the same time afford her pecuniary and administrative assistance for an indefinite period, would over-tax Japan's patience. With a royal family, the members of which are perpetually quarrelling among themselves, and with a people of patriotism and public spirit, nobody can foresee when, or whether at all, Korea will be able to give effect to her independence. Japan single-handed has endeavoured to promote the progress of the peninsular kingdom by advice and active assistance by stationing troops there, and by despatching thither functionaries of the highest standing. In short, she has exhausted all the methods suggested by humanity or dictated by necessity. But the only results of her endeavours have been a mere transfer of power from the Mins to the Tai Wön-kun, from the Tai Wön-kun to the Queen, and from the Queen to Ministers of State whose mutual feuds are unending. That is not to be attributed to any want of exertion or zeal on the part of Japan. The whole blame rests on the Korean Court and the Korean people, who are destitute of the qualities essential for ensuring the success of any reformatory programme. The time has now come for Japan to adjust a new policy with regard to Korea. It is all very well

to say that Japan must for ever uphold the independence of the little Kingdom, and afford perpetual assistance to secure the attainment of that end. But being destitute of all the qualities making for independence, the Koreans themselves are bent on bringing their country into a hopeless abyss of degradation and disorganization. When things come to such a pass, Japan will spare no pains to protect her national rights and interests as well as the personal safety of her subjects in the peninsula. Should it appear necessary for the attainment of that purpose, she will not hesitate, paying, of course, due regard to the interests of third parties, to adopt prompt and decided measures. As the first Power to recognize Korean independence, as Korea's deliverer from the yoke of China, and as the possessor of by far the largest number of settlers in the peninsula, Japan is bound by right and interest to watch Korea's destiny with the keenest vigilance and to be on the alert to take any resolute step that the return of events may indicate as advisable. The United States and Russia, too, have always shown themselves zealous for Korean independence. In addition to these two Powers England and France are concerned in the destiny of Korea, the former on account of a comparatively small number of her nationals and the latter in consideration of a few missionaries. Without the concurrence of these Powers, it will be impossible to ensure a complete solution of the Korean problem. The task of taking the initiative devolves upon Japan or Russia, as being the parties most interested in the matter. The removal of this cause of disquiet in the East ought to be effected with the mutual consent of Japan and Russia, the two countries principally responsible for the maintenance of peace in the Orient. Supposing Korea to be incapable of maintaining her independence, the question as to how to deal with her must in all essential points be settled by these two Powers. Both Russia and Japan are sincerely desirous of securing the independence of Korea, but the time has come to consider the problem on the assumption that this mutual wish can not be realized. Not that the question is to be solved in direct connection with the latest disturbance in Söul. But seeing that the recurrence of such disturbances is not favourable to Korean independence, it is to be earnestly hoped that the Government will make no more delay in considering the problem practically. Perhaps the statesmen in St. Petersburg have already made up their minds on this matter. Will it be wise for the statesmen in Tokyo or Oiso to be behind hand?"

This is a remarkable article. We do not, at the moment offer any comment on it, because we are unable to say how far it represents official opinion. But we enter a strong protest against one of the *Nichi Nichi's* assertions, namely, that Japan and Russia are the two Powers chiefly concerned in preserving the peace of the Orient. If our contemporary intends to limit this proposition to the Korean question, we have, indeed, no protest to make. But where the general problem of Eastern tranquillity is concerned, British interests are far more deeply involved than Russian, and any attempt to exclude the British Government would not only be most unjust, but would also ensure failure.

THE "NICHU NICHU SHIMBUN."

The *Nichi Nichi Shimbun* has again been enlarged, this being the third time that an improvement of that nature has been effected since the journal came under its present management. The dimensions have now been increased about three inches both in length and breadth, the actual measurements of the page being 21 by 16 inches. Thus, although the number of pages has been decreased from 10 to 8, the net gain in space is represented, by 12,000 words, the total number of words in each issue being over 100,000. The success of the *Nichi Nichi* under the present management has been so marked that it has now by far the largest circulation of all the great Tokyo dailies.

DILETTANTEISM IN TOKYO.

Collectors of art objects are certainly a race apart. We are told that the sale of Mr. Santo's collection, which has just taken place in Tokyo, realized over twenty thousand yen. The *pièce de résistance* was two pairs of screens painted by the celebrated Okyo. It would be more correct to say "sketched" than "painted," for the peacocks and floral accessories chosen by the great artist for the subject of the decoration, were simply dashed in, with the slightest *souffçon* of colour—so simple and so slight that had the two pairs been combined into one the result would scarcely have accorded with the furniture of any Western salon, however æsthetic. A purchaser developed sufficient ardour to pay 3,770 yen for these screens. We believe that it was Marquis Mayeda, formerly feudal chief of Kaga. It is pleasant to see the wealthier nobles of Japan coming forward to preserve for their country the comparatively small remnant of artistic treasures that have not been swept into the westward-setting tide. But of course the impulse develops some eccentricities. For example, a "connoisseur" paid 40 yen for a little specimen of so-called "*Shiro-Bizen*" ware. The *Bizen* faience of former times, the faience in which we find such admirable examples of modelling, was of two varieties; one, incomparably the finer, of light slate-blue with pipe-clay-like *pâte* and showing the highest technical skill; the other, having russet-red *pâte*, of palpably coarser grain and distinctly inferior workmanship. The former, called *Ao-Bizen* (blue *Bizen*), always rare and deservedly admired, commands great prices; the latter *Aka-Bizen* (red *Bizen*), is comparatively common and sells for a fraction only of the *Ao-Bizen's* figure. Tradition says that *Shiro-Bizen* (white *Bizen*) also existed. We have seen one or two specimens that may have been genuine. Even supposing that they were from the kilns of the 16th or 17th century, they could have no real value except in the eyes of an antiquarian, for they lacked all the qualities that constitute artistic beauty or technical merit. But many collectors suffer from an inexplicable mania: professing to look for "things of beauty," they are at least equally attracted by things that are simply rare or unique. They want to have a specimen such as no one else possesses, though it be absolutely worthless for its own sake. That is about as thorough a perversion of first principles as could be conceived. An old object of art—we exclude the antiquarian or the historical point of view—is valuable, not because of its age, but because it dates from a time when technical skill reached an eminently high level in the production of that particular class of object. No sensible connoisseur should be pleased to learn that his *Kang-hsi* vase of five-coloured porcelain belonged to the *Wan-li* era, for he ought to know that the younger period produced much finer work in that class than the older. The criticism is especially true in Japan. Many, very many, objects of modern Japanese art industry stand on a far higher plane than their prototypes of the 18th or 17th century. Yet the modern work acquires greatly added value in the eyes of many collectors if it be dirtied, discoloured, and otherwise disfigured to simulate an object that it actually surpasses. *Shiro-Bizen* is a case in point. We do not believe that a work of real merit was ever produced in *Shiro-Bizen*. If a score of specimens have survived, they owe their survival to accident, not to excellence. But there is a vast deal of modern *Shiro-Bizen*. Its manufacture is one of the simplest things on record. Given a stone-ware figure, or group of figures, from any kiln, no matter where, and given an intelligent coolie or abigail with a supply of pumice stone: the specimen can very quickly be transformed into antique *Shiro-Bizen*, with a smooth glossy surface and beautifully fine *pâte*. It costs about 3 or 4 yen, and may sell for 40 amid a stimulating *entourage*. Perhaps this is one of Nature's dispensations for preventing the undue accumulation of money in a few hands.

KOREAN AFFAIRS.

The vernacular press is very persistent in declaring that a number of Koreans found refuge within the compound of the Russian Legation after the *coup d'état* of October the 8th. The *Fiji Shimpō* gives the names of the principal among these refugees:—

- I Fwen-chin, formerly Minister of Agriculture and Commerce.
- I Wan-nyou, formerly Minister of Education.
- I Yun-nyon, formerly Chief of Police.
- I Hye-chin, formerly Commander of the Guards.
- I Fun-tak, formerly Colonel of a regiment of the Guards.
- I Tsai-yong, formerly Minister to America.

In addition to the above, the *Fiji* says that there are some twenty others, civil and military officials of rank, and it calls attention to the fact that not a single refugee is concealed in any other foreign Legation. We can not say anything as to the truth or falsehood of this story, but in view of the close friendship formerly existing between the Queen and the wife of the Russian *Chargé d'Affaires*, we find nothing incredible in the hypothesis that men whose lives are in danger at the hands of the Queen's assassins should take refuge in the Russian Legation. To give them a continued asylum there would certainly be an unwarrantable interference with the country's domestic politics, were really an independent State in question, but what code of diplomatic rules is to be applied to a Kingdom like Korea?

There is of course some excitement about the foreigners said to have been implicated in the recent disturbance in Söul. The *Mainichi Shimbun* alleges that the American spoken of as principally concerned was Mr. Underwood, husband of Mrs. Underwood who had attended the Queen regularly. We were not aware that Mrs. Underwood acted in the capacity of physician to Her Majesty, though she certainly had access to the Court. Dr. Annie E. Bunker was the last foreign lady, so far as we know, to be prescribed for the Queen. However that may be, the *Mainichi* gives Mr. Underwood's name, describing him as a keen politician, and adding that two or three other Americans were associated with him. The same journal published a telegram from Söul, dated the 29th ultimo, 1.10 p.m., to the effect that three foreigners were actually seen directing the rioters that attacked the palace. The *Tokyo Asahi* declares that not merely American citizens, but also members of the Russian Legation were implicated. It finds nothing strange so far as the Russians are concerned, since their interest obviously suggests the overthrow of the present administration; but the collusion of Americans demands a special explanation. The *Asahi's* view is that these Americans had ingratiated themselves with the Queen and obtained permission not only to work the mines in Chyonshan-do, which are Crown property, but also to handle all the gold dust collected in the country. After the death of the Queen, however, and the dispersal of her partisans and relatives, the Government perceived the unwisdom of granting such concessions to a foreigner, and to avert the defeat of his valuable expectations, the American stirred the recent *émeute*, hoping to overthrow the Government and put the Bin (Min) family into power. This tale can scarcely be credited side by side with the story that Mr. Underwood was the person.

THE LATEST KOREAN TROUBLE.

There can no longer be any doubt that the Korean capital has been the scene of another political *émeute*. At first the telegrams received in Tokyo presented some perplexing features, but it is now certain that on the morning of the 28th of November an attack was made upon the palace by partisans, apparently, of the Min faction. The affair took place at 1.30 a.m., and the principal actors were the old palace-guards. They were accompanied by a number of Korean adventurers, or hired roughs, the whole making a band several hundreds strong. They divided

into two parties, of which the one approached the palace from the "Shinsei" (Japanese reading) gate, the other from the Hokusho gate. It seems to have been a tumultuous kind of assault, some climbing over the enclosure fences, some breaking in the gates. The alarm was rapidly given, and before the rioters could gain a firm footing within the grounds, they were met by five companies of the new palace guards. Whether anything like a resolute fight ensued, the accounts give no explicit information. It is merely stated that the defence was skilfully conducted; that a Colonel in command of a battalion, two Captains, and five privates, armed with swords, confronted the rioters and took four of them prisoners, the rest being driven out in confusion. Flying apparently in great discomfiture, one band of the rioters made their way to the barracks of the old guard, the remainder dispersing in all directions. Order was thus completely restored. The ringleader in the disturbance is said to have been Li Fwanchin(?), and it is added that no Japanese had any connection whatever with the affair. Rumour has it, however, that a foreigner was concerned.

It is becoming something like a fatality that the moment Count Inouye turns his back upon Korea, troubles break out. This is the third instance. When the Count returned to Tokyo in July, he had been but a short time in Japan before news came of the Pak Yong-ho affair, and he was obliged to hasten back. In September he once more left Sōul, Viscount Miura taking charge of the Japanese Legation. Every one remembers only too well what then occurred. And now we have the third case. Hardly has Count Inouye set foot in Japan when a fresh *émeute* is reported from Sōul. Does it not seem as though he alone were capable of preserving order in the miserable little Kingdom? Never once during his stay there was the public peace disturbed. Conspiracies were hatched, indeed, but some how or other their discovery always preceded their maturity. It is a pity that the administration of Korean affairs can not be placed entirely in Count Inouye's hands. This dark cloud on the horizon of the Orient's tranquillity would then be dispelled.

Yesterday evening the *Chuo Shimbun* published an extra to the following effect:—"The Korean Government, yielding to pressure exercised by the Minister of a certain country, have decided to place the Tai Wōn-kun in confinement, to restore the late Queen to her rank, to give her a public funeral, and to arrest and punish Yu Fongchyon and others, now fugitives in Japan." The telegram adds that seven Russian men-of-war are in Korean waters. One item of this intelligence is obviously incredible, namely, that relating to the arrest and punishment of political refugees in Japan. Whatever pressure might be exercised upon the Korean Government, they could give no pledge of the kind, since their power to carry it out would depend entirely on Japan. For the rest, we have always understood that the Japanese Representative in Sōul is urging the desirability of revoking the decree by which the murdered Queen was deposed, and of giving her a public funeral.

THE TELEPHONE SERVICE.

It is reported that the Government intends to introduce in the next session of the Diet a Bill for connecting some of the principal cities by telephone. The estimated expense is put at 10,000,000 *yen*. To test the practicability of the plan, a staff of experts were despatched along the Tokaido. A few days ago they effected connection between Tokyo and Nagoya, and the experiments conducted by them gave extremely encouraging results. They thence proceeded to Osaka, and the first junction between that place and Tokyo was completed a few hours after midnight on the third instant. The results of the experiments carried on at Osaka have not yet been made known, but it is supposed that they were entirely satisfactory. The staff of experts will next proceed to Kobe, which appears to be the extreme point of telephone connection contemplated by the present scheme.

THE RECENT WAR SCARE.

Early last month this community was tormented by a spurious war scare. Intelligence arrived that Consols in London had fallen from 2 to 3 per cent., and at once a clamour was raised that the doors of Janus had been thrown open and that the world would presently be in arms. There was no apparent reason for such alarm. Neither in Europe nor in Asia could any calm observer detect signs indicating an immediate outbreak of war. For our own part, we deprecated apprehension, and expressed the opinion that the sudden fluctuations in Stock-Exchange quotations was due to a collapse of the South African mining mania. In truth it passed all credence that had the fluctuation been connected with a prospect of immediate war, the consequence alone would have been sent across the wires and the cause left unmentioned. Thus intrinsic evidence as well as extrinsic pointed to the absence of any ground for a war scare. But the agitators by whom the scare had been started became indignant at the notion of their bogey's discredit. They declared, among other things, that a crisis on Change could not depreciate Consols, since good securities always rise in value when bad fall. It is interesting to find such inability to differentiate a general principle from a special case. From the investor's point of view it is certainly true that any incident tending to discredit doubtful stocks, tends also to enhance the credit of established securities. But a much larger question than that of investment is involved in a crisis like that produced recently by the collapse of South-African shares. Thousands of people, having purchased these shares as a pure speculation, were working in differences only, and when the shares fell sharply, it became necessary for these nominal holders to realize a part, if not the whole, of any available securities they possessed in order to cover the widening margin of the shares. Under such circumstances, a fall in the price of Consols is generally the result, these being the form of security most easy to realize. But while this explanation suffices to account for the immediate phenomenon of a sharp fluctuation in the best kind of stocks, it is not by any means impossible that had Europe been pervaded by a stronger sense of general tranquillity, the fluctuation might have been averted or diminished. We know now that it was an alarmist and extravagant view to interpret the fall of Consols in the beginning of last month as an indication of an immediately impending outbreak of war, but the sensationalists may at least plead that Europe was then in a panicky state, and that Southern Africa might have been trusted more readily if Eastern Europe had not been so equivocal. A clever review of the situation is given by Mr. Harold Frederic in a letter addressed to the *New York Times*, dated in London on November 9th:—

Measured by the Bourse thermometer this has been the most depressed, dolefully unhappy week Europe has known for years. London's local record of a sinking market and a scared public is no doubt attributable largely to the coincidence of a collapse in the mining boom. Terrible tales are afloat here to-night of to-day's calamities in the city, which are the worst of the week, and the gloomiest forebodings of the settlement of the tragedies next Tuesday. Undoubtedly, too, Paris is heavily involved in this mining trouble, and with her that purely French institution, the Ottoman Bank at Constantinople. A furious rush to get ready money at any sacrifice of good securities may be held to account for the drop of three points in Consols, that erring barometer of the British situation, but Berlin, Frankfurt, and Vienna are only slightly related to this particular area of cyclonic disturbance, and they have been just as violently shaken.

The truth is, I believe, that though London men think it is Africa or Australia that ails them, it is really apprehension of a European war which started their trouble. Grossly inflated mining values have crumpled cruelly in all directions, but they would not have done so if the panicky notion of foreign embarrassments had not unnerved the market. Business closed here to-day, and on the Continent as well, with everybody's thought turned toward the Guild Hall, where, by a dramatic chance, Lord Salisbury is to make a speech in the very middle of a more critical financial and political situation than any that the Old World has experienced since 1878.

REGULATIONS FOR THE CONTROL OF CHINESE IN FORMOSA.

In the *Nichi Nichi Shimbun* we find a transcript of Regulations just issued by the Commander-in-Chief in Formosa for the control of Chinese immigration to that island. They are to take effect from the 1st of next month (January). We translate them:—

Art. I.—At the following places Chinese subjects coming to Formosa may land:—Keelung, Tamsui, Anping, and Takow.

Art. II.—Any Chinese subject visiting Formosa for purposes of trade or private business, must be provided with a permit or a certificate from a Chinese principal local official, showing his place of registration, his occupation, his age, and his object.

Art. III.—Any Chinese subject visiting Formosa on Chinese official or Governmental business, must be provided with a document in the nature of a pass from the Chinese Government.

Art. IV.—Any persons carrying a permit or a certificate from a Chinese principal local official must undergo an examination at the hands of the Local Officials of the place where he desires to land in Formosa, and must obtain their written permission to land.

Art. V.—For the better preservation of public tranquillity in Formosa, no Chinese subject belonging to the labouring class, or not having a fixed occupation shall be allowed to land.

Art. VI.—With the exception of persons holding a certificate from the local officials of the Governor-General's *Fu* in Formosa, or from a Japanese Consul in China, no Chinese subjects originally resident in Formosa who travel to and fro between that island and China, shall be allowed to land or take up their residence without a permit or a certificate from a Chinese principal local official.

Art. VII.—With the exception of the persons referred to in Articles III. and VI., Chinese subjects that have obtained permission to land in Formosa shall not be entitled to reside in any place other than those enumerated in Art. I., and any one desiring to pass beyond the limits of such places into the interior of Formosa, must apply for a passport to the local officials of the Governor-General's *Fu*.

Art. VIII.—The Regulations shall go into operation from the 1st day of the 1st month of the 29th year of *Meiji* (January 1st, 1896).

THE NIPPON YUSEN KAISHA.

The general meeting of the shareholders of the Nippon Yusen Kaisha took place in the Hall of the Young Men's Christian Association, Tokyo, on the 30th ultimo. Mr. Kondo Rempei, President of the Company, was in the Chair, and there were present 1,179 shareholders, representing 145,607 shares. The report on the business and financial condition of the company during the first half of the present year, read by a clerk, was passed unanimously. Then followed the election of two auditors, to fill vacancies caused by retirement. At the instance of Mr. Iida, of the Household Department, who was present as representative of the Director of the Bureau of Imperial Property, Messrs. Abe Taizo and Arishima Takeo, formerly Director of the Customs at Yokohama, were unanimously chosen. Among other matters discussed, may be mentioned the reduction of the number of Directors from thirteen to eight, which is the actual number, and the despatch of a letter of condolence to the family of the late President Yoshikawa in the name of the whole of the shareholders. What specially deserved attention was the question of opening a European line. In introducing this subject for discussion, President Kondo observed that the extension of steamship lines to Europe, America, and Australia had long been a desire of the company's, but that deficiency of funds and other circumstances had hitherto prevented its consummation. Of course, in opening such lines, the company must be aided by the State, for without such assistance it would be impossible to maintain the service. Mr. Kondo was happy to be able to say that the necessity of extending steamship service to foreign countries is now fully recognized by the nation, and that, consequently, the much needed State subsidy would be forthcoming at no distant date. But the company having now realized large profits by chartering ships to the Government in connec-

tion with the war, he proposed to utilize part of the fund thus obtained for the purpose of immediately opening a line to Europe, one steamer being started from each end per month, and six steamers being used on the line. Mr. Kondo did not state what was the port of destination in Europe. He was confident that the required State assistance would be forthcoming in due course of time. Of the profits accruing from the ships requisitioned by the Government, 2,250,000 yen were to be employed on the new line, as would also be the profits derived from the same source during the current period. The proposal was unanimously approved by the assembly. The financial statement for the period under consideration was as follows:—

INCOME.		Yen.
Freight	2,972,236.815	
Passengers.....	238,484.740	
Ships hired out	29,054.785	
Ferry boat receipts	1,277.510	
Balance of interest	48,578.803	
Miscellaneous receipts	276,122.910	
Navigation Subsidy.....	9,700.000	
Government Subsidy	440,000.000	
Total	4,015,452.564	
EXPENDITURE.		
Office expenses.....	329,870.917	
Traffic expenses	741,514.841	
Ship expenses	2,050,346.562	
Losses on exchange	893.662	
Miscellaneous losses	2,004.885	
Interest on debt, etc.	66,392.014	
Total	3,455,833.281	
Profit	759,629.283	
Brought forward	198,202.915	
Total	957,832.198	
To depreciation of buildings	9,768.753	
To the Reserve fund.....	41,301.065	
Rewards to Directors	7,850.000	
Dividend (10 per cent. per annum).....	440,000.000	
Carried over	458,912.380	
RECEIPTS FROM SHIPS REQUISITIONED BY THE GOVERNMENT.		
Brought forward	1,378,373.556	
During the present period.....	2,363,921.834	
Total	3,742,295.390	
Reserve fund.....	252,397.963	
Extra Dividend (5 yen per share)....	880,000.000	
Rewards to Directors & Auditors....	58,000.000	
Rewards to other servants of the Co.	300,000.000	
Extra Reserve	2,251.897.427	

THE JAPANESE GOVERNMENT AND THE ARMSTRONG COMPANY.

The *Hochi Shimbun* says that Lord Armstrong and Company of England have entered into a provisional contract with the Japanese Government for the establishment of a steel foundry in Japan on the following terms:—

1st.—The material shall for the present be imported from England.

2ndly.—Of the workmen to be employed, 20 per cent. shall be brought from England and 80 per cent. shall be Japanese.

3rdly.—When a new arm is invented in England, it shall be manufactured at the works in Japan.

4thly.—For a stated number of years, the Japanese Government shall give a fixed subsidy to the Company.

5thly.—On the expiration of the period during which the Company receives a subsidy, the works shall be sold to the Japanese Government.

The *Hochi* further states that a bill relating to the subsidy will be submitted to the Diet next session. We need scarcely observe that this piece of intelligence, in so far as it ascribes any definite action to the Government, must be erroneous. The Ministers of State are not in a position to make any such agreement without the previous consent of the Diet. It is possible, however, that some *pourparlers* may have taken place in the sense indicated. The measure suggested would be most judicious on Japan's part.

THE RECENT KOREAN DISTURBANCE AND FOREIGN PARTICIPATORS IN IT.

Concerning the circumstances leading to the disturbance of the 28th ultimo, and the alleged participation of some foreigners, the *Fiji Shimpō* has obtained the following information from certain individuals that came to Tokyo, leaving Korea at different dates between the *coup d'état* of October 8th and the incident of November 28th:—The fall of the Min faction, in consequence of the political revolution effected by the Tai Wōn-kun on the 8th of October, caused grief and disappointment not only to Min Yon-chun and his relatives, but also to various other persons. In proportion as the combination led by Kim Koshu and Yu Kitsu-ei increased in unity and strength, men outside that combination gradually lost influence in the Cabinet. Even the clever An Kei-ju felt himself so insecure that he had to resign. Under these circumstances, with the exception of the faction led by Cho Gi-yen, who entered the Cabinet shortly after the *émeute* of the 8th October, all the political cabals, Pak's partisans inclusive, were discontented with the Cabinet. But the party most bitterly hostile to those in power were the men that had fled with their lives to the Legations of Russia and the United States. Bent upon schemes of revenge, these persons solicited the assistance of the Russian and American Representatives. That was the reason why the two Ministers began to interfere in the domestic affairs of Korea. As to such a departure by the American *Chargé d'Affaires* from the traditional policy of his government, it appears that he acted at the instance of his nationals in the employ of the Korean Government, especially General W. McE. Dye and Colonel F. J. H. Nienstead, military instructors of the old Palace Guards. These officers enjoyed the confidence of the Queen, and were allowed to live in the Palace. In spite of their boast to Her Majesty that whatever force might be brought against the Palace, the troops trained by them would be able to disperse the assailants without any difficulty, they had the mortification of witnessing the utter discomfiture of their men by the *Kunren-tai* soldiers on the 8th of October. To add to their disappointment, when the amalgamation of the Palace Guards and the *Kunren-tai* troops was afterward effected, it was discovered that the former, namely, the troops drilled by the Americans, were far inferior in military training to the *Kunren-tai*. In consequence of these circumstances, they were at one time in danger even of being dismissed by the Korean Government. They escaped that fate, however, and were allowed to remain in the Korean service in the capacity of Military Advisers. But they received very cold treatment from the Government, and longed for the return of the Min to power. They found a strong coadjutor in the person of their countryman, General Le Gendre, who was Adviser to the Household Department in the days when the late Queen was at the zenith of her power. The General had been in China and Japan since the Formosan affair of 1874. At first he went to Korea in the interests of Li Hung-chang, but subsequently he adroitly assumed the rôle of a Japanese partisan. Finally, however, appreciating the influence of the Queen, he ingratiated himself with Her Majesty, and consequently lost credit with the Korean Government at the *émeute* of October 8th. He was also greatly disturbed on account of the very doubtful fate of the mining privileges that he had been instrumental in obtaining from the Korean Court. Under these circumstances, he joined General Dye and Colonel Nienstead in scheming for the restoration of the Min. These Americans were not the only parties concerned in the attempt to restore the Min; the Russians were equally interested in so desirable a consummation. Simultaneously with the escape of certain Min partisans to the American Legation, whither they were conducted by Americans, Li Hanshin, Li Gakukin, and a few others took refuge at the Russian Legation. The refugees in

these two Legations communicated with each other, and induced the Russian and American Ministers to bring pressure to bear upon the Korean Cabinet to punish the parties responsible for the incidents of October 8th. This led to the resignation of Cho Gi-yen and the Metropolitan Police Inspector-General, as well as to the retirement of the Tai Wōn-kun. As for the *Kunren-tai* troops, they were declared to be free from blame, but their officers, Wu Hanzen and Li Toko, as well as several individuals not connected with the troops, namely Li Denkwai and eight others, were arrested. This conduct on the part of the Cabinet caused much discontent among the factions out of power, and the state of affairs thus produced in Sōul seems to have been considered by the refugees in the foreign Legations as a unique opportunity for carrying out their scheme.

The *Fiji* does not vouch for the correctness of the above story, but states that the facts contained in it may serve to explain in some measure the connection that certain Americans had with the recent disturbance.

THE APPROACHING CELEBRATION IN TOKYO.

It has already been announced that a ceremonial on a large scale will be held in Tokyo at Shokonsha, Kudan, from the 15th to the 19th instant. The *Asahi Shimbun* says that on the 15th the spoils taken in the war will be exposed; on the 16th, the Emperor will visit the Shrine at 10 a.m., and the Empress at 11 a.m.; the Naval Band will play, and there will be fireworks and various other performances; on the 17th the Military Band will play, and there will be horse racing, fencing, and fire-works; on the 18th the programme will be wrestling, and day and night fire-works; and on the 19th there will be a *No* performance. The number of dead, of the Military and Naval services, on whose account masses will be said, is 1,500, those of the Guards Corps that lost their lives not being included. The visit of the Emperor and Empress to the Shrine will be a most unusual event.

AMATEUR THEATRICALS IN TOKYO.

We are glad to be able to report that the residents of Tokyo and Yokohama may look forward to a performance of amateur theatricals in Tokyo. As was the case last year, several of the leading ladies in the capital are interesting themselves keenly in the preparations, and excellent casts having been arranged and good pieces selected, success may be confidently predicted. The proceeds are to be devoted to charity. We invite attention to the fact that the 19th and 20th of December are the days chosen for the performance.

JUDGE THURMAN.

Many of our readers will read with regret the following paragraph:—

Ex-Senator Allen G. Thurman fell from a sofa in his library last Friday and suffered injuries which have become very serious. He cannot possibly recover. On Tuesday he was so much better that he wished to go to the polls to vote, but on the advice of his physician he did not. On Wednesday he was much worse, and yesterday he fell into a stupor from which it is altogether likely he will never recover. His son, Allen W. Thurman, said at noon that there was little hope that he will live more than a few days, and death may occur at any time.

All at 11 o'clock the condition of Judge Thurman was somewhat improved. The members of the family have retired, leaving the distinguished patient in the care of his nurse. Dr. Whittaker, his physician, saw him at 10 o'clock, and will not call again to-night unless sent for. He does not now think there is immediate danger of death. Judge Thurman is sleeping quietly. His pulse is regular, but weak. His condition is that of collapse, and the physician says it is altogether improbable that he will survive long.

No bones were broken by the fall, and the only wound noticeable is a slight abrasion over the hip bone. In a young person the accident would have been trivial.

THE YOUNG MEN'S CHRISTIAN ASSOCIATION OF TOKYO.

The Young Men's Christian Association of Tokyo is doing excellent educational work not only by means of English classes taught in the evening but by frequent lecture meetings at which addresses on religious, scientific, and literary subjects are delivered by the foremost men in the respective departments. Last Saturday evening a lecture meeting was held specially in connection with the English classes and for the benefit of the students of the English language. The speakers were Professor Chappell, of the Awoyama Seminary, and Mr. Henry Satoh, one of the best English scholars in Japan. Professor Chappell spoke on the Advantages of the Knowledge of English. He alluded to the large and ever increasing percentage of the world's population using the English language, and dwelt upon the wealth of thought embodied in English literature, not omitting, at the same time, to mention the fact that by studying English the student obtains access not only to the choicest thoughts of the English-using thinkers but also to those of all countries of the world, modern and ancient. He also called attention to the prevalent tendency among Japanese students of English to be contented with merely gaining a general idea of the contents of works, ignoring the garb in which the thoughts are dressed, without a thorough mastery of which it is impossible to understand those thoughts in their proper light. The lecturer also offered some other excellent suggestions and advice, but we fear very much that the number of those among his youthful audience who could follow him sufficiently well to profit by his address was extremely small. Popular as is the study of English in this country, the standard of thoroughness has not kept pace with the rapid dissemination of a knowledge of that language. Indeed, it is a recognized fact that the standard has positively fallen. That is a necessary consequence of the changes that have taken place in the educational system, changes in themselves good and inevitable, but affecting very seriously the position of English literature in Japan. Formerly, from the moment a student entered the middle school till he graduated from the University, his education was conducted almost wholly in English; the text books used were entirely English; lectures were delivered in English, and a large number of the instructors and Professors were either English or American. Thus he could not but become tolerably proficient in the use of English and acquainted with some of the best British or American authors. But during the last ten years, a complete change has taken place. Instruction is now given entirely in the Japanese language, the text books are in the mother tongue, and the instructors are all Japanese, with the exception of a few in the University and some of the principal Colleges. As for English, it is still retained in the curriculum, but its place is merely secondary, only a few hours per week being set apart for its study. English has thus become a purely linguistic study, and the consequence has been marked deterioration in the general proficiency of the students. From personal experience, we should think that, fifteen years ago, Professor Chappell's excellent speech would have been understood fairly well by at least one-half of the audience, but in the present instance the number understanding it could probably be counted on the fingers of one hand. We of course exclude the officers of the Association and a few invited guests.

Mr. Satoh's speech, as might have been expected, was a complete success. From the beginning to the end, the audience was kept in good humour. He judiciously interspersed his address with witty and piquant personal anecdotes and illustrations. Of the many valuable hints and counsels given by him, we may mention the more important. He strongly denounced the universal tendency among Japanese boys to attempt to read difficult books. It not infrequently happened that a boy who had just

finished his third Reader set himself to attack Macaulay's essays or even Carlyle's works. Mr. Satoh ridiculed this most pernicious conceit on the part of Japanese students of English. He also pointed out the common mistake of ignoring the value of the so-called *hensoku* style of translation, in which every word of the original is faithfully rendered into Japanese. This method of literal translation necessarily involved violence to the purity of the Japanese language. Imperfect as it was, however, Mr. Satoh regarded it as the only method by which the meaning of English sentences could be correctly conveyed to the student in the early stages of his progress. The lecturer had something to say about the manner in which grammar is taught and studied. Ordinary Japanese students had a fairly good knowledge of English grammar, but paid little attention to the practical application of their knowledge. That was as much their own fault as their teachers'. On the subject of practice, students were strongly recommended to form the habit of thinking in English as far as possible. They were also advised to talk to themselves as a means of training. We may quote one more point mentioned by Mr. Satoh, namely, that in every school the lowest class in English is entrusted to the care of inferior instructors. That he strongly criticized as a serious mistake. The bad habits of reading and pronunciation acquired by beginners under incompetent instructors, were very difficult to correct afterwards. Consequently, beginners should be placed in charge of the very best teachers.

THE SAN FRANCISCO MURDER.

Although Durrant has been found guilty of the murder of Miss Blanche Lamont, under the circumstances recently described in our leading columns, the pronouncing of sentence was deferred until November 22nd, in consideration of a plea advanced by Durrant's counsel that he purposed moving for a new trial and needed time to prepare the affidavits. Some sensation was subsequently caused by an announcement in the San Francisco *Examiner* that, during the trial, one of the jurors had visited Emmanuel Church, where the murder took place, and made investigations on his own account. That, of course, would have invalidated the finding of the jury. But the juror, Mr. Horace Smyth, declared publicly that he had not done anything of the kind. It seems not unlikely, however, that his verdict was admittedly influenced by a point not raised in court—namely, that Durrant could not have effected the alleged repairs of the gas fittings in the interval of two or three minutes while King was playing the piano. Durrant swore that the playing of the piano had commenced when he began his work on the burners, and that when he finished and entered the library, King was still playing. King, on the other hand, swore that he played for only two or three minutes. The *Examiner* published an interview with Juror Smyth, in which the latter was represented as explaining this discrepancy in full, and adding that he had himself gone to the church and practically tested the time needed for doing the repairs. Mr. Smyth, as we have said, denies having gone to the church, but does not say whether the time question influenced him, and an objection may possibly be raised on that score. It is now alleged, with apparent confidence, that Miss Minnie Williams, whose murder also took place in Emmanuel Church, possessed some knowledge of Blanche Lamont's fate, and was consequently put out of the way by Durrant. But such a theory seems quite untenable. If Minnie Williams had the smallest suspicion of Durrant's murderous doings, it is out of the question that she should have accompanied him to the church, as she was seen to do. Apparently there is at present no intention of undertaking judicial proceedings in the case of Miss Williams. If Durrant is finally condemned for murdering Miss Lamont, the facts of his having been seen to enter Emmanuel Church in company with Miss Williams just before the time of her assassination, and of

her purse having afterwards been found in his pocket, will be considered a sufficient explanation of her tragic end. He has only one life to give, though he may have taken two. Meanwhile, he retains his wonderfully calm demeanour. It is related that on the day when sentence should have been pronounced, in the natural order of things, he "smiled kindly and quietly to those he recognised in Court, spoke with his father and his counsel, and for the rest remained as passive as ever."

"THE TIMES" ON THE PARIS EXHIBITION OF 1900.

If an article in *The Times* on the above subject is to be taken as an indication of the State of public feeling, the Western world is growing wearied of giant exhibitions. Hitherto they have been worked on an ascending scale of magnificence, and it is asserted that as Paris eclipsed herself in 1889 and Chicago eclipsed Paris in 1893, Paris is resolved to eclipse Chicago in 1900. Since by far the most attractive feature of these Exhibitions is, not the number and variety of the exhibits, but the lighter entertainments provided for the motley crowds that attend them, and since the French are unrivalled in the art of inventing and gracefully carrying out new and fascinating methods of amusing the public, they will have little difficulty in beating all the great spectacles of the kind the world has ever witnessed. *The Times* speaks of the Exhibition as an impending incubus little less onerous than an impending war. The original object of such displays has been entirely obscured by an alien element of public amusement. "Sir Henry Cole," says *The Times*, "the originator of the first Great Exhibition, very soon found that industrial exhibitions pure and simple were unremunerative. Sir Philip Owen made them pay by grafting on them a large element of incidental entertainment. The graft has now entirely overshadowed the parent tree. 'The industrial exhibits,' says Sir Henry Trueman Wood, speaking of the French Exhibition of 1889, 'were there of course. They were the ostensible object of the whole organization. Really their chief use was to lend an air of respectability to what without them would, have been a raree-show of the highest class. 'The play's the thing,' might have been the motto of the last French Exhibition, and still more of the 'World's Fair at Chicago.' . . . The open secret of the whole affair was the love of amusement native in man. A whole section of the great park was devoted to amusements pure and simple. There was hardly a savage people whose habits were not illustrated for the benefit of visitors."

This is nothing new; the shows of the middle ages began in business and ended in amusement. But the thing worth noting is that in modern times, while in no way differing from the ancients in their love of pleasure, men's minds are so impressed with the importance of business that they prefer forms of pleasure that have a business air given to them. In visiting an Exhibition men persuade themselves that their chief object is to study art and industry, while in reality they only aim at enjoying themselves. *The Times* concludes its observations on this subject by recommending that the French should neglect the industrial element altogether and devote themselves to the task of providing entertainments for the world of character and dimensions that shall surpass all hitherto attained. The would result in an Exhibition worthy of the end of the century which witnessed the birth of the institution, and would be a preparation for further pushing of the logic of the situation to the point of the abandonment of exhibitions, altogether, which, *The Times* considers, would be by no means a subject for regret.

The number of visitors admitted to the Tokyo Library during November last was 5,245, by whom 2,016 foreign and 30,299 Japanese and Chinese works were inspected.—*Official Gazette*.

DANCE ON BOARD THE "ISLY."

The officers of the French ship *Isly* gave a dance on the 30th ult. Boats were waiting to take off the guests from the English *Hatoba* at 1.30 p.m., and from the Railway Canal an hour later. The shore guests were limited, for the most part, to young ladies, only a very small modicum of chaperons being invited, and these, as far as possible, dancing ladies. The ship was converted into a most comfortable ball-room by skilful use of canvas and bunting, and refreshments were served in the principal mess-room below. The ladies—who numbered about twenty, only two residents of Yokohama and and some seventeen or eighteen from Tokyo being present—were conducted on arrival into a charmingly arranged cloak-room, where each received a bouquet of roses tied with a streamer on which the name of the ship was embroidered in gold. Dancing commenced shortly before two o'clock and continued, with very brief intervals, until six, by which time a programme of twelve dances with four extras had been completed. The sea was a little rough at the time of putting off from the shore, but the boats returned over perfectly calm water in full moonlight. Nothing could have been better devised or more hospitable than all the arrangements, and the dance will long remain a delightful reminiscence of the *Isly's* visit to Yokohama.

TIR FÉDÉRAL DE WINTERTHUR SUISSE.

4 au 11 Août, 1895.

Nombre de cèles (targets) 200
Distance..... 300 mètres.
Nombre de cartouches brûlées... 1,528,388

Les dix premières coupes en argent ont été gagnées en moyenne en 24 minutes (100 bull's eyes, ou 4 cartons—bull's eyes—en moins d'une minute).

Le tir rapide avec les nouvelles armes à répétition a donné comme résultat 24 coups dont 23 touchés en quarante secondes.

Nombre de visiteurs arrivés par les "Railways," a atteint le chiffre de 206,877 personnes.

Le plus fort transport a été celui du dimanche 4 Août 40,052 personnes.

Aucun accident à déplorer pendant toute la durée du tir.

La valeur des prix offerts a atteint la jolie somme de francs 196,739.58.

Couronnes et prix distribués aux plus adroits tireurs:—

Couronnes de laurier	72
Couronnes de chêne	165
Médailles argent	4,677
Médailles d'or	41
Coupes en argent	482
Montres en argent	919
Montres en or	384

Les armes employées étaient les anciennes armes Vetteili du calibre 10m/m. 4, avec lesquelles il a été brûlé que 48,440 cartouches, et les nouvelles armes à répétition modèle 1889, du calibre 7m/m. 5, avec lesquelles il a été dépense 1,479,948 cartouches.

Les descendants de Guillaume Tell ont à cœur de maintenir leur réputation de tireurs en pratiquant le tir à la cible avec les armes les plus perfectionnées, car la Suisse est la première nation qui depuis 1855, a adopté l'unification de calibre et le plus réduit 10m. 4. La première qui ait armé ses troupes de fusils à répétition du calibre 10m/m. 4 depuis 1868, et la première enfin qui ait adopté, depuis 1889, un fusil à répétition du calibre réduit 7m/m. 5 calibre, qui ne doit être abaissé plus bas, sinon on dépasse le but, comme dans la chanson, et les hommes blessés par des balles de calibre inférieurs, ne seront pas mit hors de combat.

Quant aux charges de cavalerie les balles d'un calibre inférieur à 7m/m. 5, seront sans grands effets, ce que démontreront les prochaines guerres?—*Communiqué.*

ATTEMPTED ROBBERY WITH VIOLENCE.

A daring attempt at robbery with violence took place on Friday morning, between three o'clock and half-past at No. 1,504, Nakamura, the house being in the occupation of a woman named Koyanagi Riki. The burglar effected an entrance through the *amado* of the upper storey, and coming to the room where the woman was sleeping, awakened her, and at the same time called for the servant maid to come up. He then ordered the servant maid to obtain the keys of the bureau, at the same time threatening the mistress of the house with a short sword. Having obtained the keys, the burglar took his sword between his teeth and knelt down with the object of opening the drawers. Seeing this, Riki clasped the man round the arms and waist from behind, at the same time calling for help. The man resisted, and in the course of the struggle that ensued, the woman received several wounds, none of which were, however, of a dangerous nature. The first wound was from the left eye downwards, about one inch in length, another was through the left nostril to the bone, and there are some scratches round her nose: she had a slash across both forearms, another across the mouth, and a deep wound on the right biceps. After extricating himself, and inflicting the last wound, the miscreant decamped. Information was at once given to the police who were soon on the spot, and the woman was attended by a doctor, who pronounced that she was in no danger. The burglar is said to be a thin-faced man of a florid complexion, short-cut hair, high nose, small eyes, 5ft. 2in. in height, and 22 or 23 years of age. The locality is very lonesome, and although there are foreign houses on the other side of the hill and some Japanese huts close by, the dwelling itself is isolated, consequently the woman's cries could not be heard.

The Ishikawa Police are to be congratulated upon having effected the arrest of the burglar who broke into the house of Koyanagi Riki on Friday last and wounded her so severely. It would seem that the man, after wounding Riki, rummaged her bureau and escaped with a bundle of silk crape clothes and *obi*, but inadvertently left a patch torn off his *haragaki* during the struggle. The coolie class only wearing garments of this description, inquiries were made, with the result that the man, Suzuki Yoshimichi, was discovered as the perpetrator of the dastardly assault. He was employed on the tank oil reservoir at Hirakuma, where he is well-known. Last night at 9 o'clock the police caught their man at No. 53, Bandaicho, Sancho, the residence of another coolie, named Hagiwara Hamataro, where the sword also was found together with some clothes which he had not yet pawned. It is to be hoped the young man will receive his deserts.

ANOTHER ARMED BURGLARY IN YOKOHAMA.

Information has been given us by the Bluff Police that about 2 o'clock on the morning of the 30th ult., a burglar armed with a drawn sword entered the house of one Ishida Hachiyemon, a carrier by profession, at No. 1,405, Honmoku, Yokohama. After binding Ishida and his wife the man, who, upon identification, turned out to be the cousin of Ishida, obtained *yen* 12.70 in cash and some clothing valued at *yen* 130, with which he decamped. The sword was discovered by the police near the house about 9 o'clock next morning, and the burglar, named Suzuki Yomoshichi, aged 24, was arrested on the night of the 1st inst. in a house at Bandai-cho, Sancho, by the Ishikawa Police, who were on the track of the miscreant, who wantonly wounded the woman Koyanagi Riki. The story of his arrest we have already furnished. When questioned by the police, Suzuki confessed to having robbed his cousin, but so far has made no statement relative to the other attempted robbery

with violence, although there is presumptive evidence that he is the perpetrator of both crimes. The clothes pawned by him belonged to Ishida, and not Koyanagi Riki, the statement that they belonged to her being incorrect, as he obtained no booty at Ishikawa, presuming he is the same man.

THE "EVANDALE'S" CARGO.

THE arrival of the chartered steamer *Evandale* is anxiously expected in Yokohama. The following items regarding her cargo may prove of interest. San Francisco, remarks a newspaper of that city, is not as big as New York or Boston, or Philadelphia, but she occasionally reports a large transaction in the commercial line that would be considered worth noting, even in those cities. There was cleared from this port on the 6th November the steamer *Evandale* for Hong-kong with a cargo valued at over \$1,000,000. This is not the first time that such a thing has been recorded in that trade. It has happened two or three times each month of late. The total, of course, includes the specie as well as other produce. More specie has been sent out on other steamers, but it is doubtful if a greater value of produce was ever put aboard a China bound vessel from this port. At least, we cannot call to mind a more valuable cargo of that nature. The produce was valued as follows, to which we append the specie:—

To China	\$209,960
To Japan	88,868
To other markets	4,196
Total	\$303,024
Specie	740,823
Total	\$1,043,847

The cargo included 30,699 bls. flour valued at \$89,529, together with 26,660 lbs. ginseng, valued at \$107,970, and 804,667 lbs. cotton, valued at \$56,322. These three lines of freight account for \$253,831 of the total, leaving less than \$50,000 for a score or more of other articles.

THE MINISTERIAL CRISIS IN FRANCE.

Concerning the recent change of Ministry in France, correspondence from Mr. Harold Frederic in the *New York Times*, dated London Nov. 9th is interesting:—

The French Radical Ministry has not been incontinently thrown out, as Paris expected, perhaps only because the expected so rarely happens there. Although there is no apparent reason why it should not die next week or the week after, it has set sternly to work as if it were to live for ever.

The boldness of its move in seizing control of the civil service, sweeping out old officials on all sides and appointing its own people, seems rather to have taken the Parisian breath away.

The papers cannot keep track of the procession of Prefects, secretaries, directors of departments and the like who are flitting into private life, propelled by the Radical boot. Hardly Washington itself ever witnessed a more peremptory clearing out.

It is certainly a very brave game which is being played, not to say desperate. While offices are being seized and the whole administration is being vigorously radicalized, the air is kept vibrating with reports that not only the Southern Railway scandals are to be probed to the bottom, but new excavations are to be ruthlessly pushed into the old Panama pie and fresh skeletons are to be unearthed. Furthermore, heavy stress is now laid on the Radical doctrine that legislators must have no dealings with finance, and as a spectacular earnest that this means business, Senator Christophle has been pushed out of the direction of the Credit Foncier, and Paris is agog with rumours that other similar sacrifices even more surprising are to follow. This display of fierce energy by a Ministry which represents only a minority in Parliament and could be kicked out to-day as well as not is not mere histrionism either.

It is informed by an extremely shrewd knowledge of the French character and a courageous reliance on the maxim that "history repeats itself." If the Chamber summons nerve to defeat the Ministry the plans are all ready for a prompt dissolution and appeal to the country on the ground that moderate republicanism and conservatism alike mean corruption, bribe-taking, and infamous betrayal of public trusts. Lockroy and Cavaignac are piling up proofs of wholesale venality in the naval and war offices, much more for campaign than for departmental service. They and their colleagues do not try to maintain a difficult balance among the hostile groups in the Chamber, they defy it to put them out, and assume the air of rather welcoming than otherwise the prospect of fighting the thing out before their constituencies.

JAPAN'S CRITICS.

IT may be that psychologists will some day explain why a tendency perpetually exists among a considerable class of European writers in the East to attribute all the actions of the Japanese to motives so very deep and so very wicked that one scarcely knows which is the greater marvel, the exceeding acuteness of the critic or the abominable immorality of the criticized. We ourselves long ago abandoned further attempts to analyse this metaphysical problem, since the only conclusion we could come to was the obviously untenable suspicion that the critics reproduced on paper a likeness of their own depraved fancies. In everyday life it is a sound and almost invariable rule that the habit of attributing evil motives to another springs from the evil heart of the attributor himself, but it were rank heresy to pretend that any such rule can apply to the strikingly astute writers who discern the vices of the Oriental so sharply and describe them so graphically. Be the mainsprings of the criticism ever so abstruse, however, it is sometimes interesting to note the workings, as, for instance, in the case of the recent *coup d'état* in Söul. After the murder of the QUEEN, her royal husband's grim old custodian, who estimates life precisely at the cost of taking it, submitted for his son's signature a document perhaps the most farcical and contemptible ever framed for kingly signature. Therein the SOVEREIGN of the faction-torn peninsula was made to confess that, though long aware of the wickedness of his Consort, and correspondingly desirous of getting rid of her, she really had been too much for him, and only now was he in a position, by the kind aid of a band of cut-throat rioters, to desist from the pernicious courses into which his wicked, though weaker, half had forced him. Such a confession, made *coram populo*, must have rendered any Sovereign ridiculous, and that would not have been an unwelcome result to the TAI WÖN-KUN, for the "Prince-Parent's" reported purpose is, not to fix more tightly on the throne the son now occupying it, but to re-place him by a grandson. To the credit of the KING's manhood it is alleged that he refused thus to introduce himself to his subjects as an uxorious weakling, administering his kingdom in obedience to feminine caprice, and refused further to pronounce his wife guilty of absconding from his side when she had been dragged from it by brutal assassins and deposited, a hacked corpse, in the bottom of a well, for to that supremely absurd judgment also the document would have committed its signatory. The King of KOREA has been forced to face many crises in the course of his wretched reign, and the moral qualities displayed by him have never been such as to prepare the public for the courageous self-assertion he is said to have displayed on this

latest occasion. For the reputation of humanity, however, let us give him all the credit that his friends attribute to him, since it is at least an officially affirmed fact that the monstrous proclamation did not carry his seal. Nevertheless, it went out as his own, and as his own must have been read by his subjects—a Royal Proclamation telling them in plainest terms that never yet was State ruled over by such a shameless weakling. There followed, then, the climax of the farce. The poor puppet was invited to declare himself "Emperor." Content with the inferior title of "King" so long as his masterful wife drove him hither and thither at the beck of her naughty caprices, his exultation at being untied from her petticoats impelled him to soar immediately to the lofty position of "*imperator*." His spouse lying dead in a well, he had recovered manhood and must perforce celebrate the magnificent occasion by dubbing himself "Emperor." Now what does all this indicate? Does it not indicate one of two things: either that the temporary controllers of the situation in Söul devised an admirably subtle programme for humiliating the KING before his people, converting him into a universal object of disdainful ridicule, and depriving him of all warrant to reign; or that they were themselves the clumsiest, least artistic, and most incompetent tyros in statecraft that ever directed a *coup d'état*? If we accept the former explanation, it forces us to the conclusion that some at least of the Söul politicians combine extraordinary subtlety with great daring; if the latter, we arrive at a fact noted by every close observer of the Korean nation, namely, that the conspicuous trait of its so-called "leading men" is absolute lack of all the moral attributes essential to administrative competence. One would certainly suppose that the very last idea occurring to any intelligent observer would be to charge the Japanese with dictating such a proclamation, or suggesting such a burlesque as the KING's assumption of an Imperial title. Yet those are precisely the accusations that Japan's critics preferred against her, and continue to prefer, although it is established that the degradation and dethronement of the murdered QUEEN never had Japanese approval; that HER MAJESTY is now to be posthumously restored to her place of honour at the instance of the Japanese, and that the KING's assumption of the title of Emperor was prevented mainly through Japanese interference. The critics have gone a good deal farther, however. It is not enough that the leading Shanghai newspaper should express astonishment at anyone's denying Viscount MIURA's deliberate complicity in the assassination of the QUEEN. The same paper actually publishes correspondence alleging that the whole *coup d'état* was planned by the Japanese Government;

that Count INOUE, having found his own methods end in failure, purposely returned to Japan in order to leave the field free for recourse to a policy of violence; that Viscount MIURA was selected and sent to carry out that policy, and that the arrest and criminal trial of the Viscount, of the Commandant of the Legation Guards, and of some forty other Japanese officials and civilians, is simply a ruse on Japan's part to blind the world's eyes to her true procedure. Such obviously extravagant attempts to blacken Japan's reputation are to us as unaccountable as the fact that a respectable newspaper lends its columns for their circulation. Is there some special pleasure in caricaturing Japan and trying to prove her politicians and people the wickedest and most unscrupulous of human beings? Are Great Britain's popularity and prestige enhanced in the East by such startling exhibitions of prejudice and unfriendliness on the part of English journals? We do not understand. Some new doctrine of metaphysics must be invented to fit the circumstances.

SHIPS AND ORDERS.

A JAPANESE correspondent, who has not taken the trouble to establish his identity, sends us a communication from which we gather that he is interested in the country's purchases of war-ships, and that he objects strongly to the giving of any orders to French builders. We cannot, of course, afford publicity to such anonymous correspondence, but we take the opportunity of pointing out that all rumours as to orders having been already placed abroad must, in the nature of things, be erroneous. The Japanese Government is not in a position to give any orders whatever until the sanction of the Diet has been received, which cannot be before January. As to the contention that the umbrage caused by France's coalition with Germany and Russia to deprive Japan of the fruits of her victory, should make the nation revolt against purchasing ships in French dockyards, we can appreciate the sentiment, but cannot endorse its wisdom. Japan should procure what she wants wherever it is most cheaply and conveniently procurable. To restrict her own choice of ship-builders because she has been harshly treated by this nation or by that, would be merely to impose a fresh penalty on herself. Certainly Englishmen will not endorse anything of the kind. British manufacturers and industrials do not ask that their rivals should be handicapped by political prejudices: they prefer a fair field and no favour. In impartial competition they are prepared to meet all comers, and if they are honestly worsted, it is our pride to think that their defeat is productive not of resentment but of renewed effort. The Japanese must be well aware that never once since this empire opened its ports to

foreign commerce has British diplomatic interference been exercised in the interests of individual British merchants. Official pressure to promote private business is absolutely opposed to the traditions of the British Government, and though Englishmen in their dealings with foreigners lack the suave persuasiveness, the tact in trifles, and the seemingly gratuitous courtesy that sometimes give victory to their rivals, they have always held their own, and have never owed success save to straight-forward enterprise and the genuine merits of their work. It would be idle to pretend that the same statement applies to other nationals. In China and in Japan diplomatic goodwill has been so often reduced to the level of a commodity exchangeable for commercial or industrial favours, that we can not be in the least surprised if the Japanese and Chinese have learned to think that the withdrawal of their custom from the merchants or mechanics of a particular nation is a legitimate means of resenting diplomatic unfriendliness on the part of that nation's Government. It is a pernicious creed and an unwise. Traded liberty is converted into infamous license when the merchants of a nation sell military implements and munitions to a country actually engaged, or about to engage, in war with their own. But the disgrace there is on the part of the seller, not on that of the buyer. For the latter there should be only one rule—to purchase in the most favourable market. Japan's experience has now been sufficiently extended to enable her to choose confidently between the shipbuilders of the various nations, and she owes it to herself to get the best possible value for her money without attempting to purchase, at the same time, the imaginary sympathy of any nation, or to resent by illegitimate means the unsympathetic action of any Government.

AN OBJECT LESSON.

THE correspondent of the *New York Herald* in Japan has inadvertently furnished one object lesson that must be very entertaining to a shrewd observer like himself. So long as he spoke well of Japan in the columns of the journal he represents, and so long as he advocated her claims to be considered something more than a semi-barbarous Asiatic State, his writings elicited sneers and contemptuous criticism from the "watch-dog" journals of Yokohama. But on his return from Korea he addressed to this journal a letter containing some pretty strong expressions about the news sent to Japan by representatives of Japanese newspapers in Sōul. Indeed, he went so far as to say that "for first-class, downright, thorough-going lying, he had never seen anything to equal the alleged Korean news translated from the vernacular press of Japan during the past eight

weeks." Immediately he became, in the eyes of the "watch-dogs," a witness to be lauded and credited. His writings favourable to the country and its people had never been quoted, but only ridiculed by these Cerberi that stand at the extra-territorial gates. But the very instant that he penned a letter containing a sweeping indictment of Japanese journalistic correspondents, that letter was quoted in full by the growlers, and was declared to have "a sincere ring" about it, while its writer was pronounced to be progressing in his education. Incidents of this kind are prettily suggestive. They have a significance not easy to mistake.

As to the Japanese correspondents, Colonel COCKERILL only echoes what we ourselves have often written, though never in terms quite so uncompromising. It can not be said that Japanese journalism has yet evolved either the correspondent or the reporter as such persons are known in the West. These Sōul correspondents, for example, what class of men are they? With the exception of, perhaps, three at most, they are half-educated lads; youths that have graduated at one of the Middle Schools, and seeing no prospect of getting higher in the educational scale, or being without means of doing so, have adopted any vocation that keeps the wolf from the door. The emoluments they receive for their work in Korea do not exceed 20 *yen* per month plus their expenses. How can it be supposed that such men have access to trustworthy sources of information? None of the Legations is open to them, not even the Legation of their own country. They are obliged to be content with picking up such scraps of news as may be drifted within their reach by interested rumours or the babble of the streets. That they deliberately invent baseless stories, we do not believe. That they elaborate and ornament any items they receive is very probable. We greatly doubt, therefore, whether Colonel COCKERILL'S accusation of "straight lying" is deserved by them. In the matter of wild nonsense and monstrous assertions diametrically opposed to the truth, there is not one of them that can hold a candle to the Korean correspondent of the *North-China Daily News*. Yet no one thinks of charging the latter gentleman with "first-class, downright, thorough-going lying." We conclude merely that he is an exceedingly gullible and silly person, who swallows every fragment of intelligence coming his way without the smallest discrimination, and that, being known as a *gobe-mouche*, mystery-mongers are fond of "filling him up." From Colonel COCKERILL'S point of view, the correspondence forwarded to Tokyo by Japanese reporters may well appear contemptibly wide of the mark. The representative of the *New York Herald*, from the moment that he enters Sōul, finds himself a *persona grata* at the United States Legation, and therefore also at the

Russian Legation, the friendly relations between the two being of the closest character. He can also count on easy and frank intercourse with the officials of Japan, and, indeed, all the intelligent and prominent men in the capital, of whatever nationality, are ready to give him the benefit of their experience. In what light can a correspondent with such opportunities, a trained journalist with such a status, regard a poor, struggling Japanese youth, ignorant of the world, cut off from sources of knowledge, forced to contribute something to the newspaper that employs him, and driven to pick up food for his pen by the highways and byways?

JAPANESE ART PRODUCTIONS.

DR. ERNEST HART, an assiduous and capable exponent of Japanese works of art, read last May, before the Society of Arts, a paper on "Japanese Art Productions." *The British Architect* of Sept. 27th gives the following epitome:—

Fine art industries have made great progress in the last twenty or thirty years. From 1850 to 1875 there was a period of relapse, especially where the encouragement given by Government was indirect. This is shown at the present time in a striking manner by the excellent results of private initiative, whilst the pressure exercised by Government gives results, which if not *nil* are mediocre. As for example, the foundation of the Bijitsu-gakko, or Fine Art School, where the only art trades taught are lacquer work, ivory, casting, &c. The pupils are apprentices, and are modest and sincere, but they have not yet fully justified the high expectations with which the school was started.

We must not omit to mention the great progress in arts of European importation, such as photography, printing, photo-chromo lithography, etching, wood-engraving, &c. By the side, however, of the comparatively slow progress of artistic trades, the industry in common articles has made such immense strides that the European and American markets are being inundated with low-priced goods, while really artistic productions can with difficulty find an entry into Europe, and consequently scarcely obtain at present, fair prices. It is probably because the prices of modern artistic articles are relatively high, while fine old artistic specimens are proportionately very low, that the highest modern Japanese art has not yet had a fair chance. In short, the excessive importation into Europe of cheap modern *camelotterie*, and the low price of beautiful old articles, are the two chief causes of the want of success of Japanese modern art industries in the European markets. Witness, for example, the heavy losses, speaking from a commercial point of view, of the Japanese section at the Chicago Exhibition. The exhibit was one of great beauty, and produced at great cost, but it was found impossible to obtain the prices asked for the exquisite art objects shown, most of which were, therefore, returned to Japan.

The most beautiful modern articles of art industry remain, as a matter of fact, in Japan, and will not come into Europe until they have attained a certain antiquity. In ten years' time old pieces of art work will be worth ten times what they are to-day, and, consequently, works of modern art, which are as yet only looked upon as artisans' work, will begin to be eagerly sought after in Europe, and will attain an immensely higher level of appreciation and of price.

As a last word, I would say, discourage cheapness in Japanese art, discourage grotesqueness, discourage the constant effort which is now being made to palm off modern forgeries by appending to them ancient names. Ask for the best from Japan, and you will get it, for there are there artists, art workmen, and art lovers, who, as of old, lovingly delight to produce perfect work in charming arts.

While there seems to be much truth in this account, there are also some points inviting criticism. For instance, Dr. HART, speaking of the period between 1850 and 1875, implies that the indirect encouragement given by the Government to art was partially responsible for its decadence, and adds that, even at the present time, official aid produces results which, if not *nil*, are mediocre. These two assertions cannot be endorsed. As to the first, Japanese art owed its excellence in pre-Restoration days mainly to the munificent patronage of the feudal chiefs. The artist or the art artisan, if his name was not borne on the roll of some Daimyo's *pension-*

naires, could always be sure of finding ready patronage when he produced any good work, for the rivalry existing among the various fiefs, and the custom of sending to the Shogun's Court presents illustrative of local skill, made the officials of each Daimiate look eagerly for artistic or technical talent among their feudatories. All this gradually ceased as the disturbances culminating in the Restoration acquired force and influence, and after the rendition of the fiefs and the final centralization of the Government in 1873, art ceased for a time to enjoy official patronage or aid of any kind. We are, therefore, quite at a loss to understand what Dr. HART means by the "indirect encouragement given by Government between 1850 and 1875." Probably he is erroneously reported. Not until after 1875 did the Government find leisure or means to make any effort in the cause of art, and the method adopted was to lend capital to a private company, which not only gave direct employment to art artizans, but also made suggestions to local artists and purchased their productions for export abroad. This measure did not prove financially successful, but the causes of its failure were not directly connected with its conception. There can be no doubt that it effected, in great part, the object contemplated by the Government, namely, to open the markets of the West to modern Japanese artworks of the higher types. Had the duty of establishing touch with Europe and America been left entirely to export merchants at the open ports, only the cheapest and crudest art-products would have found their way westward, and since the fall of feudalism had temporarily checked the home demand; artists and art-artizans would have been entirely without a market for progressive efforts. The Government, foreseeing this, acted wisely in lending aid to the *Kosho-gaisha*, which, though it did not itself carry on business for a long term of years, opened routes of incalculable value to others, and furnished standards that remain useful even to the present time. Thus we are entirely at issue with Dr. HART's estimate of the effects of Government aid to art in the decade succeeding the Restoration. As to the Tokyo Art School, again, we think that he is mistaken. He appears to imagine that the curriculum of the school is deficient, whereas, in point of fact, every Japanese art industry is taught there. He appears also to be of the opinion that the School has not justified the expectations formed of it. Well, it certainly has not, in the matter of pictorial art, but that it has well discharged the chief function of an art school by sending out a number of graduates, several of whom give promise of making their mark, is an established fact. After all, however, it is most unfair to measure the Tokyo Art School by the full standard of such an institution's capacities. Its grant from the Treasury is a mere pittance, and it has no

pretensions whatever to be regarded as a national place of education.

There are yet others of Dr. HART's statements that we cannot think consistent with facts. No expert collector could possibly endorse his assertion that "modern artistic articles are relatively high, while fine fine old artistic specimens are proportionately very low." The very opposite is the truth, according to our experience. To no branch of art products does Dr. HART's description apply unless it be to specimens expressly manufactured and doctored to simulate age. Many of these, indeed, are far cheaper than any corresponding example of good modern work, but of course there need be no discussion of such deceptions. Old specimens, comparable either technically or artistically with the finest modern productions, would command four or five times the price of the latter. But no such specimens come into the market, for the simple reason that they do not exist. With few exceptions, the modern art work of Japan stands on an immeasurably higher level than the ancient. Moreover, *pace* Dr. HART, beautiful modern articles of art industry do *not* remain in Japan, and are *not* kept out of the Occidental market until they "attain a certain antiquity." It is true that many fine pieces being purchased by the Imperial Household—which devotes a very large sum annually to encouraging art by acquiring its products—and by noblemen and private gentlemen in Japan, remain at home. But a number, very many times larger, are perpetually exported to Europe and America—especially America—where they pass into the hands of wealthy collectors now fully alive to the really wonderful excellence of Japan's modern art productions. Finally, the financial failure made at the Chicago Exhibition must not be taken as a fair test of modern Japan's capacity. A most unfortunate mistake was perpetrated on that occasion. The Japanese Commissioners seem to have imagined that if the art products of their country were offered at the prices current in Japan, they would be relegated by the public to the rank of decorative furniture. To avoid that contingency they marked the specimens with figures that deterred the great body of purchasers. Thus, a few things only were sold in the Fair, the majority returning to Japan, with the exception of a small proportion which, having been reduced, under various protests, to their proper prices, subsequently found places in museums or great collections. This action on the part of the Commissioners was not entirely without warrant, for among the phenomena of the time there are in truth collectors that derive much guidance from the price of an object. The cheaper it is, the less disposed are they to esteem it, and the more they pay for it, the greater their pride in its acquisition. But to appeal to such buyers is miserably unworthy of

any artist, and for their sake to sacrifice one of the prominent recommendations of Japanese art products, is suicidal foolishness. An artist must wait until the public verdict fixes the prices his productions are entitled to command. It is not for him to proclaim a high estimate of their value. Japan can offer to the world articles of the greatest beauty at prices that defy foreign competition, and in the interests of her own enrichment and progress, she ought to profit by her capacities. Three things above all others are calculated to close the markets of the West to her: the first is the wholesale production of radically inferior objects for export to Europe and America; the second is the manufacture of spurious antiquities, an imposition that ultimately disgusts the most enthusiastic collectors; the third is the factitious raising of prices with special reference to foreign buyers. A tendency to all these vices exists in Japan to-day.

THE CHINESE IN FORMOSA.

GOVERNOR-GENERAL COUNT KABAYAMA'S recently issued regulations for the control of Chinese visiting Formosa suggest the question, what steps does Japan intend to take with respect to the Chinese already settled in Formosa. Will she suffer them to remain there, as subjects of her own, or will she adopt measures to ensure their return to China? That this is a matter of immense importance, no one can doubt. Japan does not wish, and can not afford, to expose her territories to a deluge of Chinese. She is already suffering from a redundant population, increasing at a rate that threatens to outstrip its available means of subsistence, and the problem will be quickly complicated if she permits herself to be inundated by a race like the Chinese, whose low scale of living and insanitary habits render them undesirable adjuncts to any community. The treaty formerly existing between China and Japan did not contain a most-favoured-nation clause. Hence, even when throwing open her whole territory to Western trade and residence under revised treaties, Japan would not have been exposed to any inconvenience from Chinese claims to similar privileges. But when some millions of Chinese become her subjects, and are allowed to live within her dominions, as is now the case with the Formosan Chinese, are they to be differentiated against, and are their privileges of free travel and residence as Japanese subjects to be specially restricted? If so, the Diet must be invited to pass a law on the subject. For in the 22nd Article of the Constitution we find it provided that "Japanese subjects shall have the liberty of abode and of changing the same within the limits of law;" a privilege concerning which the Commentary says:—"After the Restoration, with the abolition of all the

different clans, the liberty of fixing or of changing one's abode has been recognised, and every Japanese subject is now free to fix his residence, either permanently or temporarily, to hire dwelling-places, or to engage in business, at any place within the boundaries of the territory of the Empire." Assuming, even, that a law is duly enacted depriving Japan's Chinese subjects in Formosa of the privileges enjoyed constitutionally by all the rest of her subjects, and thus excluding them from Japan proper, are we justified in believing that the development of Formosa can proceed satisfactorily with a mixed population of Chinese and Japanese, the former greatly preponderating? One must be very sanguine to entertain any such hope. The Chinese have never coalesced with any people among whom they settled. They have invariably remained a race apart, segregating themselves in their own settlements and preserving their own costume, habits of life, and fashions of intercourse. They will not coalesce with the Japanese in Formosa. It is contrary to all experience to expect that the two peoples will combine harmoniously in developing the island's resources. Moreover, the fact that much of the most productive land is already held, and that a major part of the best industries is already monopolized, by the Chinese, will deter Japanese of enterprise and capital from seeking to employ the former or invest the latter in the island. If Formosa is to become what the world now expects it to become, and what Japan is bound to make it, not merely for the sake of the place itself but also for the sake of her own reputation, the Chinese population ought to be eliminated as far as possible. The present is the time for taking such a step. Every month that it is deferred adds to the difficulty. We can see nothing to prevent the Japanese Authorities from having the property of the Chinese duly assessed, and buying them out. The fifth Article of the Shimonoseki Treaty says:—

The inhabitants of the territories ceded to Japan who wish to take up their residence outside the ceded districts, shall be at liberty to sell the real property and retire. For that purpose a period of two years from the date of the exchange of the ratifications of the present Act, shall be granted. At the expiration of that period, those of the inhabitants who shall not have left such territories, shall be deemed to be Japanese subjects.

This article does not secure any right of perpetual residence to the Chinese. It merely provides that Chinese hitherto resident in Formosa shall have liberty to sell their property and remove to their own country within the space of two years; and that persons failing to avail themselves of that liberty, should not be entitled to claim any status other than such as the Japanese Government may choose to confer on them. Hence, if at the expiration of two years, a large number of Chinese be found remaining in Formosa, it will be competent for Japan

to place them on the same footing as ordinary Chinese subjects visiting her dominions under the provisions of the treaty of friendship and commerce now in process of negotiation. In other words, she may order their removal into settlements, and exclude them altogether from access to the interior of the island. We entertain no doubt whatever that two years' experience of the task of governing a mixed population of such incongruous races, and two years of the perpetual complications that must inevitably attend the development of the island under such circumstances, will drive the Japanese Government to take that course when the time comes. But it will then be a course involving much hardship, and certain to bring odium upon the Japanese. It appears to us, therefore, that the most magnanimous and prudent plan would be to assess the property of the Chinese residents at once; to proclaim that any one desirous of selling out at the assessed price, will find a purchaser in the Japanese Government, and to announce, boldly and definitely, that all persons declining to avail themselves of this privilege within two years, will be placed on the footing occupied by Chinese subjects generally within the dominions of Japan. There need be no difficulty in finding money for such a purpose. The thirty million taels just paid by China for the retrocession of Liaotung, could scarcely be better employed. As to the nature of the investment from a national point of view, little doubt can be entertained.

THE RESOURCES OF JAPAN.

A RECENT number of the *Kokumin-no-Tomo* contains an interesting and elaborate article on the above subject. It is well worth careful attention, on account of the valuable statistics it contains with reference to the remarkable development now taking place in every department of the national resources. Promising as is Japan's career as a military power, her growth as a peaceful power, says our contemporary, is still more promising. That she has been able to send out altogether nearly 300,000 troops, and spend over 150 million *yen*, without the loan of a single *sen* from abroad, without the slightest depreciation of her convertible notes, and without any disturbance to the commerce and industries of the land, proves at once the soundness of her public finances and the extent of the country's resources.

The writer then proceeds to review, under separate headings, the progress made by Japan in the fields of commerce and industry. He begins with the growth of population, for, although population is not in itself wealth, it is one of the factors essential to the production of wealth, and its increase has, in this respect, important bearings upon the resources of a country.

The increase of population during the twenty-two years from 1872 (the date of the first official census), to 1893 inclusive, is shown in the following table:—

Year.	Population.	Rate of increase over the preceding year.
1872.....	33,110,825	0%
1876.....	34,338,367	3.7
1880.....	35,929,023	4.6
1884.....	37,451,727	4.2
1887.....	39,069,691	4.3
1891.....	40,718,677	4.2
1893.....	41,388,313	1.6

Thus the increase during this twenty-two year period was more than twenty-five per cent. During the same period, the increase of population in England was a little over twenty per cent., while in France, during the twenty years from 1872 to 1891, it was barely over six per cent.

Japan being in a state of transition from an agricultural to a manufacturing country, it would not be strange were the cultivation of land left comparatively neglected. But in point of fact, considerable improvements have been effected in this field also. The following figures relate to the area of land under rice, barley, and wheat in the respective years named:—

Year.	Area under rice. Cho. ²	Percentage of increase.	Area under barley and wheat. Cho.	Percentage of increase.
1880.....	2,563,460	—	1,432,344	—
1884.....	2,605,720	1.6	1,485,779	3.7
1887.....	2,637,069	1.2	1,591,374	7.1
1891.....	2,757,132	4.5	1,713,655	7.8
1893.....	2,769,478	0.4	1,744,010	1.7

During these fourteen years the area of land under rice increased 8.4 per cent. and that under barley and wheat 21.7 per cent. In order to estimate properly the significance of such increases, it must be borne in mind that land formerly devoted to the cultivation of these cereals has in many districts been converted into mulberry plantations and tea gardens, so that the work of reclamation has really been going on at a much more rapid rate than would appear from the above figures.

The writer in the *Kokumin* then refers to the rise in the value of land as a sign of its improved productive capacity. The statistics quoted by him on this topic are too incomplete to be of any practical value, for he only mentions two isolated cases, namely, in Chiisagata Gun in the Province of Shinano, where a *tan* (about $\frac{1}{4}$ of an acre) of land for the cultivation of mulberry trees, quoted at 30 *yen* in 1885, rose to 60 *yen* in 1895; and in Omuta in the Province of Chikugo, where a *tan* of building ground, valued at 40 *yen* in 1885, rose in the succeeding ten years to 160 *yen*.

The following statistics show the increase in the production of some of the principal agricultural products:—

Year.	Quantity Produced. Koku.	Rate of Increase or Decrease.
1880.....	31,359,326	0%
1884.....	26,349,833	— 18.5
1887.....	39,999,199	+ 51.8
1891.....	38,123,548	— 4.8
1894.....	39,372,254	+ 3.3

¹ A *cho* is equal to about 2 $\frac{1}{2}$ acres.

² *Koku* 5.31 bushels. *Kwanme*=8 $\frac{1}{2}$ lbs. Av.

BARLEY AND WHEAT.

Year.	Quantity Produced. Koku.	Rate of Increase. %
1880	12,503,063	—
1884	13,105,841	+ 4.8
1887	15,823,144	+ 20.4
1891	18,078,373	+ 14.0
1894	19,812,411	+ 9.5

SWEET POTATOES.

Year.	Quantity Produced. Kwamme.	Rate of Increase. %
1880	308,376,789	—
1884	362,086,828	+ 17.4
1887	561,146,176	+ 55.0
1893	567,360,069	+ 1.1

The rate of increase in the production of rice during the fifteen years here tabulated was 25.5 per cent., while that of barley and wheat during the same period was 58.5 per cent. Sweet potatoes increased as much as 84.2 per cent. These figures show that the increase in the production of the staple articles of national food keeps pace with the development of the population.

As to the production of silk cocoons and tea, the following table shows the rate of increase during the fifteen years ending 1894:—

COCOONS.

Year.	Quantity Produced. Koku.	Rate of increase per cent.
1880.....	597,932	—
1883.....	771,239	28.9
1887.....	1,219,060	58.1
1891.....	1,580,240	29.0
1894.....	1,800,747	13.9

TEA.

Year.	Quantity Produced. Kwamme.	Rate of increase. per cent.
1880.....	3,206,361	—
1883.....	4,787,483	49.3
1887.....	7,011,221	46.4
1891.....	7,096,398	1.2
1894.....	7,690,365	8.3

Concerning the figures relating to 1894, it should be noted that they do not include those for three Prefectures from which reports were not received. In fifteen years, the production of cocoons increased by 300.2 per cent., and that of tea by 240.3 per cent.

Passing to manufactures, the principal occupation of the nation in future, the writer gives the following figures as to the number of manufactories and the quantity of steam and water power employed for manufacturing purposes:—

Year.	No. of Manufactories.	Steam. Horse-power.	Water. Horse-power.
1883	84	1,383	365
1892	1,203	28,500	4,772
1893	1,163	31,165	4,142

Year.	Manufactories. per cent.	Steam. per cent.	Water. per cent.
1883.....	—	—	—
1892.....	+132.1	+1,946.0	+1,207.4
1893.....	3.4	9.3	15.2

Thus, during eleven years, the number of factories increased by 1,384.5 per cent. the steam power by 2,226 per cent. and the water power by 2,134.8 per cent. As for the increase since 1893, the writer thinks that it must have been enormous. It should be noticed that the above figures relate only to private undertakings, whereas some important factories are under the control of the Government. Of the development of factories since 1893, the most remarkable feature, perhaps, has been a growing tendency to make use of water power. One example may be cited: a water mill in the city of Kyoto is producing a motor force of 2,000 horse-power.

The tendency to utilize water power promises to increase at a still more rapid rate in the next few years, there being at present a large number of projects for pressing into the service of industry the principal water-falls, lakes, and rivers.

How fast Japan is being converted into a manufacturing country may be seen from the increasing importation of machinery of all sorts—machinery for mining purposes, for paper mills, for printing, for sawing, for tailoring, for spinning, for weaving, and so forth. The amount of money paid by Japan for imported electro-motor apparatus alone during the five years ending 1894, totalled 1,160,000 yen.

The progress of the cotton spinning industry has been very remarkable. The increase of spindles has been as follows:—

Year.	Spindles.	Rate of increase. per cent.
1886	65,420	—
1887	70,220	7.3
1891	353,980	404.4
1894	663,749	87.5

Thus the rate of increase during nine years has been 1,014.6 per cent. It is expected that there will be an increase of about 100,000 spindles during the present year.

The growth of the production of fabrics of all sorts and cotton yarns has been as follows:—

Year.	Fabrics. Tan.*	Yarns. Kwamme.
1883	2,331,860	78,793
1885	8,275,436	—
1887	36,377,394	1,165,073
1891	48,209,974	7,679,938
1893	56,319,059	—
1894	—	14,365,688

That is to say, an increase of 2,415 per cent. in eleven years in the case of woven stuffs, and of 18,230 per cent. in the case of cotton yarns.

The writer next considers the rapid progress made in the manufacture of porcelain, *shippo*, glass ware, umbrellas, matches, and mats. But the figures quoted serve indirectly only for the purpose of illustration, since they relate to the silver value of these articles exported. Statistics on this subject would have been more properly considered under the heading of trade. Somewhat out of place as they are, however, we reproduce them here:—

Year.	Porcelain.	Shippo.	Glass.	Umbrellas.	Matches.	Mats.
Yen.	Yen.	Yen.	Yen.	Yen.	Yen.	Yen.
1885...	695,269...	23,471...	4,700...	1,768...	188,401...	935
1887...	1,311,901...	39,497...	18,871...	26,856...	3,384,206...	36,896
1891...	1,480,412...	59,225...	103,940...	161,504...	8,089,932...	656,123
1894...	1,484,853...	95,803...	238,957...	746,068...	13,843,022...	1,965,493

Iron being one of the principal materials of manufacture, the following figures showing the import of pig iron tell an interesting tale:—

Year.	Quantity Catties.	Rate of increase. %
1872	50,781	—
1876	1,106,609	2,178.3
1880	8,828,834	795.3
1884	9,772,065	10.7
1887	10,890,868	11.5
1891	20,317,914	86.5
1894	61,081,416	200.5

The quantity imported thus increased by 12,023.9 per cent. during twenty-three years.

As to companies and manufactories, their total number at the end of 1893 was

4,152. The dates of their establishment are as follow:—

Date of establishment.	No. of Companies and Manufactories.
1868—1870	44
1871—1875	161
1876—1880	339
1881—1885	689
1886—1890	1,465
1891—1893	1,454
Total	4,152

With the growth of industries, the cost of labour has gradually risen. By way of illustration, the writer quotes the following statistics showing the wages of female hands employed in cotton mills:—

Year.	Average wage per diem. sen.	Rate of Increase per cent.
1889	8.1	—
1890	8.2	1.2
1891	8.3	3.4
1892	8.9	7.2
1893	9.4	5.6
1894	10.2	8.5
1895	10.9	6.7

The rate of increase in seven years has been 37 per cent.

The development of foreign trade next engages the attention of the writer in the *Kokumin*. The following table shows exports and imports since 1872:—

Year.	Exports. Yen.	Imports. Yen.	Total. Yen.	Rate of in- crease %.
1872 ..	17,026,647	26,174,814	43,201,462	—
1876 ..	27,711,527	23,964,678	51,676,206	19.6
1880 ..	28,396,386	36,626,601	65,022,987	25.8
1884 ..	33,871,465	29,672,646	63,544,112	d. 2.3
1887 ..	52,407,681	44,304,251	96,711,932	52.1
1891 ..	79,527,272	62,927,268	142,454,540	47.3
1894 ..	113,246,086	117,481,955	230,728,041	61.9

During twenty-three years, the increase of exports has been 666.1 per cent., that of imports, 448.4 per cent., and that of the total trade, 534 per cent. A noteworthy feature of the foreign trade during recent years, is the gradual increase in the export of manufactured articles. During the five years from 1890 to 1894 inclusive, the export of manufactured articles nearly trebled, and that of half manufactured articles doubled, whereas the export of raw material made but slight increase. On the other hand, the imports of raw material for manufacturing purposes is increasing rapidly.

Another interesting fact about the foreign commerce of the country is a rapid increase in the volume of transactions with Asiatic States, the South Sea Islands, Hawaii, and Australia, as may be seen from the following figures:—

Year.	Asia, South Sea Islands, &c. Yen.	Australia. Yen.
1873	4,786,006	—
1876	4,764,053	—
1880	6,550,603	179,645
1884	7,590,199	246,020
1887	12,183,487	535,082
1891	21,292,883	757,101
1894	32,307,556	1,098,065

The volume of trade with Asia, Hawaii, and the South Sea Islands thus increased during twenty-two years by 675 per cent., and that with Australia during fifteen years by 610 per cent. The increase of Japan's commerce with these countries certainly deserves the attention called to it by the *Kokumin*, since it is especially indicative of the success of Japan's competition with Occidental nations.

The writer next reviews the development made by Japan in facilities of trans-

* 1 Tan=10½ yards.

port and communications. He recalls the serious difficulties experienced by the country in conveying a small expeditionary army to Formosa in 1874, and in striking contrast adduces the fact that during the late war an army nearly thirty times greater than that sent to Formosa was carried and maintained over sea. The following table shows the increase of steam shipping:—

Year.	No. of Steamships.	Tonnage.
1872	96	23,364
1876	159	40,248
1880	210	41,215
1883	390	45,350
1888	524	81,066
1891	607	95,588
1893	680	110,205
1894	461	163,996
1895	517	321,522

The rate of increase during twenty-four years has been 538.5 per cent. in the number, and 1,376.1 per cent. in the tonnage, of steamships. The writer hopes that the day is not far distant when he shall have the pleasure of making a tour round the world in steamers owned and commanded by his countrymen.

Railways have also developed rapidly, as shown in the following table:—

Year.	Mileage open for traffic.
1872	18
1876	64
1880	98
1884	249
1887	593
1891	1,712
1894	2,094
1895 (beginning of October)	2,220

The rate of increase was 12,333.3 per cent. in twenty-four years, and 375.5 per cent. in the last nine years. There being now a railway mania, not many years will elapse before the country is covered from end to end with a network of iron roads.

The following table shows the increase of postal matter:—

Year.	Postal matter, Letters, etc.	Parcels.
1872	2,510,656	—
1876	36,106,866	—
1880	74,590,182	—
1883	107,902,029	—
1888	164,594,650	—
1891	249,199,154	—
1894	370,314,072	1,808,707

An increase of 14,753.5 per cent. during twenty-three years is not a bad record.

The following figures relate to the telegraphic service:—

Year.	No. of Offices.	Length of w. res, etc.	Messages.
1872	29	34	80,639
1876	100	2,214	631,825
1880	195	4,484	2,128,201
1883	312	5,916	2,418,301
1888	250	7,581	2,885,513
1891	435	9,113	4,674,341
1894	719	11,178	7,852,738

Thus, during twenty-three years, the rate of increase was 2,479.3 per cent. in the number of offices, 32,900 per cent. in the length of wires, and 9,738 per cent. in the number of messages transmitted.

The telephone service was but lately introduced and is still in a state of infancy. Yet statistics show that it is coming into more and more extended use:—

Year.	No. of registered users of Telephones.	Length of Wires.
1890	225	258
1894	2,748	1,831

Turning to the condition of the economical world, the writer first gives us the

following table, showing the capital and reserve funds of the various banks:—

Year.	Aggregate capital of Bank of Japan, Specie Bank, and National Banks. Yen.	Reserves of do. Yen.	Capital of private banks. Yen.	Reserves of do. Yen.
1884	52,536,100	3,710,500	19,421,600	—
1887	60,338,851	12,143,376	18,896,061	—
1891	63,201,100	20,896,971	19,796,820	5,459,802
1894	73,166,100	27,432,961	33,895,550	3,455,644

It thus appears that during the past eleven years, the aggregate capital of the Bank of Japan, the Specie Bank, and the National Banks increased by 39.3 per cent. and the reserves of the same by 742.1 per cent. In the case of private banks, the capital increased during the same period by 74.7 per cent. but the reserves decreased considerably, which latter fact is accounted for by the conversion of the reserves into capital. At the end of the present year, the capital of the private banks, including the savings banks, had increased to 58,760,000 yen.

Not only has the capital of banks increased, but the method of monetary transactions has gained greatly in smoothness and convenience, as may be seen from the following statistics relating to bills exchanged at the Tokyo Clearing House (*Tegata Kokansho*):—

Year.	No. of bills.	Value—Yen.
1888	25,289	12,281,948
1891	52,527	67,595,423
1894	172,189	185,597,497

The volume of currency is not necessarily an indication of the wealth of a country. But when the volume increases, as it is doing in this country, in spite of, and simultaneously with, a constant improvement in the credit system, the fact must be taken as a proof of the growth of business transactions. The volume of specie and paper money in circulation has increased as follows:—

Year.	Yen.
1887	199,038,363
1891	248,966,765
1893	283,396,779

The growth in the yield of the principal taxes is considered separately, but for the sake of convenience, figures may be collected into the same table as follows:—

Year.	Customs—Yen.	Tax on Sake—Yen.
1872	1,596,595	16,270
1876	1,958,874	1,911,639
1880	2,636,589	5,511,335
1884	2,547,704	14,068,132
1887	3,763,630	13,697,723
1891	4,723,471	15,560,435
1893	5,881,024	15,730,803
1895	6,300,000	17,386,913

Year.	Tax on Tobacco. Yen.	Income Tax. Yen.
1872	—	—
1876	244,148	—
1880	29,288	—
1884	1,294,315	—
1887	1,244,002	(1888) 1,012,376
1891	1,844,861	1,058,441
1893	1,895,530	(1894) 1,103,402
1895	2,904,422	1,287,535

Thus the customs duties quadrupled in twenty-four years. In the case of the tax on *sake*, a mere comparison of figures at both extremes of the table does not convey a correct idea of the development of the brewing industry, for the rate of taxation underwent several modifications. The latest change occurred in 1882, when the

⁵ Estimated amount. ⁺ This figure refers to the year 1894.

rate was increased to 4 yen per *koku*. Since then the total tax collected shows an increase of 10 per cent. The same observation applies to the tax on tobacco, the rate of which was last modified in 1888. During eight subsequent years, the yield of this tax increased by 14 per cent. As to the income tax, it was first imposed in 1887, and in spite of great defects in the mode of collection, the yield has since increased 20 per cent.

In conclusion, the writer offers a few observations on the present prosperous condition of his country. During the short period from January to the beginning of October of the present year, the following projected investments of money were announced:—

	Yen.
Banks	14,265,000
Railways	59,105,000
Companies	12,251,000

The present commercial and economical activity is sound and healthy, in the writer's opinion, but he apprehends that the tendency may attain such dimensions as to involve a severe crisis.

The essay concludes in the following strain:—"These statistics and statements may be incomplete in many respects, but they are not entirely without value as materials for forming an idea of the present economical position of the country, and for solving the problem whether or not Japan's resources warrant her in entering upon a policy of expansion. Instead of being satisfied with merely contemplating the supposed greatness of our shadow, we must coolly and accurately examine our actual stature by the application of a statistical measure.

. . . In endeavouring to impress our countrymen with a proper sense of their national resources, it is not our desire that they should be satisfied with the present degree of progress. The increased self-confidence that a survey of the country's recent progress cannot fail to foster, should further stimulate the spirit of enterprise and adventure."

LETTERS FROM FORMOSA.

FROM OUR SPECIAL CORRESPONDENT WITH THE JAPANESE ARMY.)

Taiwanfu, Formosa, Nov. 20th.

There is a great deal of discussion regarding the method of escape adopted by Liu Yung-fu, the Black Flag Chief. It is stated by some that he was in the boiler-room of the Douglas steamer *Thales*, and was shovelling coal with a vengeance, when the Japanese made their rigid inspection; that he was disguised as a woman and carried a baby at his breast, and when the Japanese appeared was endeavouring to give it food while the youngster yelled and kicked; that he was concealed in a box covered with coal, placed in one of the bunkers; and again that he did not go in the *Thales* at all but was aboard a junk. These are only a few of the many explanations offered for his mysterious disappearance. Fortunately, I have at hand a letter, which I quote, from one of the leading Chinese of Amoy, who possesses his own method of accounting for Liu's escape. "Liu Yung-fu escaped," he says "from Anping on the 20th of last month by paying the captain nine thousand dollars, whereupon

he was concealed aboard the merchant ship *Thales*. Arriving at Amoy on the 22nd, he came at once to the Ho-sing-ho hotel, where he stayed three days, then, together with his son and about twenty-five officials, he went through Chio-ma by land to Chang Choo-foo, the capital, reaching there on the 27th and quartering at the Ko-sing-quan hotel. The owner discovering the identity of his famous guest, notified all the Yaméns in the city of his arrival, and many leading officials called, but Liu refused to receive them. It seems that Liu's visit to this city was to meet an old friend and supporter, named Chia-chi-mung, a very wealthy man who owns much property in Formosa and formerly spent much time there; for immediately upon arriving a message was sent to this man, who came at once and was received. The two friends had a long conversation regarding the recovery of Formosa and the avenging of the deaths of the Chinese there. After the meeting, Liu left the city for Annam, going overland, and after a few days reached Canton. Five German men-of-war were in Amoy Harbour on September 21st. One of them left and went to Quemoy, which is near Amoy, and after examining the island closely and making careful surveys, placed stakes and flags to mark the boundary of the territory they intended to turn into a settlement. Our Chinese officials, although informed of the proceedings, made no attempt to drive them away, nor would they even protest. The Germans informed us that many of the China ports were going to be besieged by the European countries at once, and that eventually China would be divided up among the foreigners. If this is true what will our nation do? Indeed, China is in great danger! Will not Japan interfere and help us in our trouble?"

On the 14th, H.E. Viscount Takashima, Commander-in-Chief of the Army in Formosa, and Lieutenant-Governor of the island, left Tainanfu with all his staff, and with his departure the Expeditionary Army as a whole ceased to exist. General Nogi's Second Division will remain to garrison the southern part of the island, and so long as active operations are needed at the outposts or occupied stations, their rule will be supreme at such places. At the main towns or cities the Prefects and Sub-prefects have taken charge, and will act so long as there is no call for military interference, but the numerous minor civil officials, who will be eventually distributed over the country, have not been appointed yet, and will not be until all military occupation has ceased.

As soon as the telegraph line is constructed to the South of the Island, i.e. to the South Cape Light, and meteorological information can be obtained speedily, a great boon will be conferred on mariners, and hosts of other interested persons, for then approaching typhoons can be rapidly reported all over the surrounding seas and places by the Observatories at Shanghai and Hongkong. This has been long desired, and urged on the Chinese but, of course, with no result, beyond perhaps derisive wonder.

There seems to be some trouble in the Customs at Anping. This is admittedly from no want of goodwill on the part of the officials, who, on the contrary, the foreign merchants inform me, seem most anxious to do all they possibly can, but as they have adopted the old Chinese tariff and regulations both in Anping and Taipei-fu, which are quite new to them, they seem unable to get the offices into smooth running order.

Taipeifu, Nov. 23rd.

Ocean trips have several times been made with small boats specially constructed for the voyage, but a sail for long distances by ordinary small open fishing boats has not often been recorded. As the Chinese neglected the North Formosa fisheries, the Japanese authorities decided to engage fishermen from Japan and bring them with their boats and tackle to Formosa. Mr. Ota, of Japan, who is interested in placing this profitable resource in the hands of his countrymen, arranged with a leading fisherman who engaged over 60 men with 12 boats. It was the intention to convey these people and

their boats to Formosa on board a transport, but upon learning this, these hardy fishermen made a decided objection, considering the proposition a slight upon their ability as sailors, and requested permission to make the voyage in their own boats. The little fleet of 12 boats, the smallest 25 feet and the largest 40 feet in length, piloted by a veteran fisherman who had been chosen Commander, sailed away from their native village near Shimonoseki on the 13th of October, at 1 p.m. At eight in the evening of the same day they arrived off the island of Tsushima, which is to the westward of Japan. From thence to Okinawa, Loochoo Group, occupied two days and one night, and Yayeyama was reached two days and one night after. From Yayeyama to Kelung, Formosa, their destination, one day and one night, and the 12 boats arrived in harbour together. Thus only five days and three nights were occupied in sailing 800 miles, which for such craft as fishing boats is exceedingly good work. This is the actual sailing time, as stoppages of several days were made at each of the Loochoo islands named, and it was eighteen days from the date of departure in Japan before they arrived at Kelung. Only a common pocket compass and a roughly drawn chart were possessed by the commander, who depended more upon his knowledge of the direction of the currents, which were watched very closely, than observation of anything else. The wind was not feared, although it blew very strongly when nearing Formosa, and the sea was exceedingly rough, but the currents, which run very strongly to the north of Formosa, caused them some apprehension. The little craft were fitted with three masts, carrying sails 3, 6, and 8 to 9 feet wide. When the wind was very strong and the sea rough the small sail only was used, this being set forward, but when the wind was fair and steady every stich was spread. On their arrival they were cordially welcomed by the Japanese, and the Governor presented 200 yen to be distributed among them. Six of the boats remained in Kelung, and the arrival from them of 5,000 pounds of fish at Taipei-fu one day this week, shows that they are not idle and that fish are plentiful. On the arrival of the other six boats at Tamsui, to engage in the fisheries there, the 36 men comprising the crews were publicly thanked and complimented by Mr. Kitamura, of the Civil Department, on behalf of his chief, Mr. Okubo, who was then absent. During his remarks he said: "We in Tamsui were previously informed of your intention to make this trip, and while admiring your courage, we, knowing the roughness of the sea to the north of this island, feared for your safety. But, yesterday, when we saw your boats sailing into the harbour and recognized their familiar form, we cheered your safe arrival. Besides an exhibition of your skill and courage, as a practical illustration of what may be safely accomplished in small boats, your trip is of great value. May your efforts at the Formosa fisheries be as successful as your trip from Japan, which has given your native province reason to be proud of you, and caused all to admire your bravery."

The three-masted ship *Inaho Maru*, which was totally wrecked in Kelung harbour on the 12th was owned by the Yusen Kaisha and chartered by the Government, upon whom the loss will fall. She was of 440 gross tonnage, but was old and of not much value. Her cargo consisted of railway material, a portion of which may be recovered.

On the 19th, upon the invitation of Governor Count Kabayama, the leading Japanese officials, members of the Red Cross Society, War Correspondents, and Chinese connected with the Government, met in the afternoon at the Governor's house to bid farewell to General Takashima, formerly Commander-in-Chief of the troops in Formosa, and to celebrate the advent of peace throughout the island. A speech was made by the Governor, in which he thanked General Takashima for his assistance in Formosa; the Guards Division for their services, having been engaged in the field for five months, during which time they were exposed to much disease; the members of Red Cross Society, who

volunteered for the service and rendered most valuable aid when many of the Army Medical Corps were incapacitated; and the War Correspondents who, although not inured to the privations of a soldier, being attached to the Army, shared its hardships and followed through the dangers of disease and battle to the credit and honour of their profession. On a permanent stage that stands in the compound of the Governor's house, an entertainment was given which lasted from 3.30 in the afternoon until 7.30 at night, consisting of Japanese songs, dances, and four comedies produced by amateur actors, which were followed by a Chinese professional theatrical performance, and closed with Chinese music by a large troupe of "Sing-song" girls, who were engaged for the entertainment of the Chinese guests. Among those present were:—Generals Takashima, Oshima, Murai, Nakamura, and Surgeon-General Ishizaka; Admirals Tsunoda, Tanaka, and Hishima; Colonel Kagiwara, Chief of Gendarmes; Colonel Ijichi, Chief of the Second Division Staff; Colonel Tanabe, *Aide-de-camp* to the Governor General; Colonel Kodama, Chief of Engineering Corps; Mr. Mizuno, Chief of the Civil Department; Mr. Kabayama, D.C.L.; Mr. Okubo, D.C.L.; and many others higher officials; Mr. Li and his assistants, of the Chinese Department, and ten Japanese and one foreign correspondent.

The savages, during the last few weeks, have killed fourteen Chinese and wounded three others in the north-central districts. The bodies were all headless when found with the exception of one.

KOREAN NEWS.

DECEMBER 3RD.

Some of the letters just received by the metropolitan papers from their correspondents in Söul, are dated a few days before the last disturbance. From these letters, it is evident that the people in the Korean Capital were completely ignorant that anything in the nature of a counter-revolution was in immediate prospect. But it seems to have been understood that the political situation was far from settled. The Cabinet was torn with disputes about the punishment of the men implicated in the affair of October 8th. The Premier, Kim Koshu, and the acting Home Minister, Yu Kitsuzei, are represented as having been in favour of bringing Cho, Minister of War, to justice, but Cho, backed by the soldiery and the police, was stubbornly opposed to the arraignment of any of the principal participators in the *émeute*. A neutral section of the Cabinet were attempting to arrange a compromise between the contending factions.

Concerning the selection of a Consort for the King, it is the general opinion in Söul that the choice will ultimately fall upon a relative of Kim Koshu, the Minister President. But the decision not having yet been made public, there is some competition between the different rival political factions to obtain the much coveted distinction. It is feared that the disappointment and chagrin of the unsuccessful parties may place serious obstacles in the path of the smooth conduct of public affairs.

The *Yiji Shimpö* publishes interesting figures about the condition of public finance in Korea. According to the Budget for the coming year, now under consideration by the Cabinet, the estimated revenue is as follows:—

	yen.
Land tax	1,059,595
House tax	210,816
Miscellaneous taxes	17,786
Tax on ginseng	105,000
Customs duties	429,882
Coinage of subsidiary pieces	300,000
Miscellaneous income	100,000

Total.....2,132,079

As to the expenditure, there are three programmes, the respective totals being 4,398,965 yen, 4,336,758 yen, and 4,059,725 yen. According to the last programme, the two Departments of Education and of Agriculture, Commerce, and Public Works would be abolished, and the

affairs at present managed there would be transferred to the Home Department. This scheme, however, being very unpopular among the Korean Ministers, is said to have little chance of being adopted. Perhaps the second draft, with a total of 4,336,758, may be finally chosen. In that event there would be a deficit of 2,204,679 yen. How to meet it is a question apparently unsolvable by the Korean Cabinet.

Here is a story illustrating the financial difficulties of the Korean Government. A provincial garrison in Chol-ju was organized about two months ago, but the officers and men have not received a single *sen* of their salaries from the Central Government. It is stated that they appealed to the local Governor and succeeded in obtaining some provisions from him, but the Governor's stock was soon exhausted, and the troops are now in a very miserable condition, so that many desert rather than remain and starve. Originally it was the intention of the Government to maintain the garrison with money saved by disbanding part of the newly levied troops in Söul. But the disbanding of the latter has not yet been carried out, owing to apprehensions of disturbance by the dismissed soldiers. So the garrison in Chol-ju has to starve.

The *Nippon's* correspondent remarks, with much show of anxiety, that the increasing return of Chinese merchants to Söul is steadily imperiling the commercial supremacy of the Japanese. The encroachment of the Chinese is specially noteworthy in the importation of shirtings.

The *Nichi Nichi's* Ninsen correspondent states that more than 200 Chinese arrived there by the *Sagami Maru* which entered on the 8th ultimo. These were principally itinerant traders bound for the interior of the country. As to the alleged inroads of Chinese merchants in the shirting business, the writer differs from the *Nippon's* correspondent. The Chinese, he says, have imported a considerable quantity of shirtings, but are complaining of a want of demand for the article. That is accounted for by the increasing popularity among the Koreans of cotton goods from the province of Mikawa in Japan, and also by a growing tendency among the people to weave their own wearing apparel from cotton yarns imported from Japan. The Mikawa cotton goods are said to be most in demand in Gensan and its vicinity.

DECEMBER 4TH.

Söul correspondence just published in the *Chuo Shimbun* describes the disturbance of the 28th ult. It is stated that the conspiracy had been known not only to the Korean Cabinet but to some Japanese residents of the Capital for more than ten days beforehand. Its progress had been daily reported to the Cabinet by a certain Korean, who, under the disguise of an enthusiastic follower of the Russian Party, had access to the Russian Legation and was even admitted to the conferences of the conspirators. We may observe here that the *Chuo's* correspondent does not make direct reference to either the Russian Legation or the Russian Minister, but there being no mistake about his meaning, we do not adopt his thin disguise. According to the reports of this Korean spy, the secret conferences at the Russian Legation were attended by the Russian Minister, by Dr. H. N. Allen, Secretary of the American Legation, by General W. McE. Dye, by General Le Gendre, and by a few Koreans who had been staying at the Legation since the *émeute* of October the 8th. Chief among these Koreans was Li Hanshin, ex-Acting Minister of Agriculture, Commerce and Public Works, one of the three favorites of the late Queen. It is also stated that some Court officials and Privy Councillors occasionally attended the conferences. The *Chuo's* correspondent does not seem to know exactly what was discussed at the meetings, but he alleges, with an air of absolute confidence, that the object of the plotters was, on the one hand, to bring strong diplomatic pressure upon the Korean Government to remove the Tai Wön-kun and several Ministers of State that had been connected with the affair of Oct.

8th, and, on the other, to collect a sufficient number of armed supporters from the disbanded Palace Guards who were known to be in a state of intense discontent.

In compliance with the recommendation of the Japanese Minister, the Korean Cabinet resolved to adopt part of the punitive measures demanded by the Foreign Ministers. Accordingly, on the 26th, Cho Giyen, Minister of War, Ken Eichin, Metropolitan Police Inspector General, and other high officials were dismissed from office. At the same time, the Foreign Ministers were invited to the Palace at 2 p.m., and were addressed by the King at some length. In the course of his speech, His Majesty is reported to have declared that having discovered that some officials had exceeded their instructions on the occasion of the affair of Oct. 8th, the Cabinet had been ordered to deal properly with these delinquents; that the reform of abuses in the Court and Cabinet—the conduct of which had been entrusted to the Tai Wön-kun—having been for the most part carried out, His Royal Highness would be requested to retire into private life; and that the whereabouts of the late Queen would be searched for and should she be found, she would be treated with due honour. The Foreign Ministers, says the correspondent, unable to find fault with the King's speech, had to retire reluctantly, and to confess themselves satisfied with what they had heard from the Throne.

Meanwhile, the military part of the conspirators' scheme having been completed, it was decided to carry the plan into execution at midnight on the 27th ultimo. A body of the disbanded Guards, 250 strong, destined to attack the Palace, was placed under the command of Li Dotetsu, formerly commander of the garrison at Ph्यों-yang. Under him were Nan Banri and Li Keiko, also former officers of the Ph्यों-yang garrison. While this body of troops was proceeding, in the dead of night toward the Palace, escorting the leaders of the conspiracy, smaller parties of armed ruffians attacked the police offices and kept the constables engaged, so that they might not be able to hasten to the assistance of the Palace Guards. When the conspirators arrived at the Eastern Gate of the Palace, in full confidence of being joined by the Palace Guards,—for one of the officers of the Guards had pretended to be in sympathy with them—the Gate was flung open and they were suddenly and rigorously fired upon and charged by the Guards (the former *Kunren-tai* troops) so that they fell into great confusion, and fled in all directions, leaving behind them several officers, Li Dotetsu, Nan Banri, Li Keiko and others, prisoners in the hands of the Palace Guards. Among those that fled with their lives, four or five, according to the correspondent, were Occidentals. A reason assigned for the presence of these foreigners is that their assistance would have been needed in dressing the King and the Crown Prince in European clothes to expedite their conveyance from the Palace, which, it seems, was one of the objects of the conspiracy. As to the Chief Korean plotter, Li Hanshin, the *Chuo's* correspondent believes that, having been disowned by the Russian Minister for some public reason, he must have fled to a remote place.

The Japanese Minister repaired to the Palace at 4 a.m., in response to the King's invitation. He was soon followed by the other foreign Ministers. In the afternoon of the same day, Mr. Komura again had audience with the King for some hours. Things were perfectly quiet in Söul when this letter was written, some time on the 28th ult.

A few days previously to the disturbance of the 28th, An Keiju, a former Minister of War, who had been staying of his villa near Ninsen, came up to the Capital, and a great deal of suspicion is said to attach to his movements.

The *Chuo's* correspondent states that the object of the American Missionaries, who were implicated in the recent trouble, was personal and not political. The late Queen, he says, was in secret an enthusiastic believer in Christianity, and her death has been a severe blow to the cause of Christian propagandism, both

morally and financially, for she was a munificent contributor to the Church. The correspondent states that he learned it from a certain American gentleman.

The examination of the prisoners, says the same writer, has elicited facts implicating in a most disagreeable way a certain distinguished person who made a great fuss about the *émeute* of October 8th. He further alleges that this personage has telegraphed to a another "certain person" who is now staying in Japan to come over with all haste. It is not difficult to identify the originals of these allusions.

We (*Japan Mail*) reproduce this story with all reserve.

CHINESE NEWS.

DECEMBER 3RD.

The *North China Daily News* writes thus editorially:—

In a private letter from Söul we are told that Mr. Waeber and the other Foreign Representatives have evidence that leaves it a matter of no doubt that Count Inouye is the real author of the plot which culminated in the murder of the Queen of Korea, and that Viscount Miura was only a scapegoat. Farther, that this is the same plot which was entrusted by Count Inouye to Pak Yong-ho to carry out, while Inouye went for a short trip to Japan, but which at that time miscarried. On both occasions the attempt was made shortly after Count Inouye's departure.

"A private letter from Söul" is poor authority on which to base such a charge. We venture to say that not a man in Japan, whether foreigner or Japanese, believes, or could be persuaded, that Count Inouye was guilty of the villainy attributed to him, and we further venture to say that the story about Mr. Waeber and the other Foreign Representatives' having obtained evidence of Count Inouye's complicity is a pure fiction. Altogether the line taken by the leading Shanghai Journal in this matter is very singular. It seems unable to comprehend that Viscount Miura, though privy to the plot for restoring the Tai Wön-kun to power and driving the Bin faction out of the Government, may have been entirely innocent of any design against the Queen's life. It further alleges that the Japanese Cabinet is now anxious to "whitewash" Viscount Miura. There is not a tittle of evidence to prove anything of the kind. Viscount Miura is undergoing a criminal prosecution, and will receive whatever punishment the Codes prescribe for the crime of which he may be found guilty. We recommend the *North China Daily News* to exercise more judgment with regard to its intelligence from Korea. Ever since the war between Japan and China commenced, our Shanghai contemporary has been rendered a public laughing-stock by its blind insertion of ludicrous items sent by its correspondents in Korea.

An attempt to open coal mines in the Ch'unan district of Chekiang province has been temporarily defeated by an outcry about the stereotyped *flengshui*.

The survey of the proposed line of railway between Shanghai and Soochow has been actually commenced. Perhaps the era of railways is at length about to dawn for China.

The Rev. G. John having just returned from a nineteen days' trip in Tienmen and Kingshan, reports that he found the people everywhere thoroughly friendly. To repeated inquiries as to whether any objection existed to the opening of chapels and the residence of Christian propagandists, the invariable answer was that the doctrine preached being good, no objection could possibly exist. Messrs. John and Bonsey lectured to thousands, had to deal with "immense crowds of people that had never seen a foreigner before," and baptised 101 persons, yet they never experienced the smallest rudeness or obstruction anywhere. They attribute the people's amicable demeanour entirely to the absence of any anti-foreign attitude on the part of officials or literati, and they place on record the conclusion that "whenever and wherever foreigners have trouble in China, it may be taken for granted that the officials, or gentry, or both, are at the bottom of it."

With regard to the Mohammedan rebellion, the *Peking and Tientsin Times* writes:—

Notwithstanding intelligence of an alarmist character, the most authentic information we can gather indicates that this formidable insurrection is slowly evolving into a spent force. Two salient facts, in the midst of much confusing rumour, have come to light. Lan-chow is not only unoccupied by the rebels, in spite of persistent reports to that effect, but a telegram, received from a foreigner within the city, informs us that it is not even seriously threatened, and no particular concern is felt. About Sining, on the other hand, grave fears are entertained. The city appears to be closely invested and a siege in progress, two foreigners—Mr. and Mrs. Ridley—being inside. Even in this extreme western region, however, where the rebels forces appear to be strongest, we are told the Mohammedans are quite willing to come to terms. There is every appearance that the Kansuh Rebellion will prove itself unable to accomplish anything; and, that being the case, the sooner it is ended the better. This in fact is the worst feature of revolution in China. It is not a crisis but a long interlude of chaos. The constant references in the Chinese Classics to alternative periods of order and disorder, of rule and no rule, are true to the facts of Chinese history. So that a rebellion may be capable of setting all government at defiance for two or three miserable generations of bloodshed, rapine, and general waste, in fact,—to use the hackneyed term—"Imbroglia," yet be unable to permanently establish itself. An equilibrium of incompetence is liable to be reached, in which neither party can make good its claim, and the issue is indefinitely postponed. For all we know this would have been the case, but for foreign intervention, with the T'ai-ping Rebellion. Let us be thankful that no such miserable state of things is threatening us at present.

DECEMBER 4TH.

The *Kungping*, while carrying 1,500 soldiers from Tongku (a place on the Peiho a little west of Taku) to Hukon at the entrance of the Poyang Lake, barely escaped the same fate that overtook the *Kungpai*. As her troops were debarking, an explosion of powder took place between decks. Fortunately no harm was done, but it appears that the Authorities, untaught by the *Kungpai* disaster, had shipped a quantity of explosives with the soldiers.

The Mohammedan rebellion seems to have been at length fairly brought under control. Disputes between the insurgents, and the peacefully disposed Moslems have greatly weakened the strength of the uprising, and a very large force of Imperial troops are said to be busily exterminating the Mohammedans of Hsining, burning and razing the mosques. Terror is reported is have fallen on the whole Moslem population.

Intelligence points to steady improvement in the demeanour of Chinese officials toward the Christian missionaries. It is alleged that the great Viceroy Chang Chih-tung has placed some of Mr. T. Richards writings in the hands of certain eminent scholars, with the intention of presenting the books to the Emperor after they have undergone slight alterations. From Wuchang also comes news of a tendency among the officials to associate with the missionaries.

There is a movement in Shanghai to start a voluntary contribution to the support of the British Navy. The idea is based on the fact that Her Majesty's subjects in Shanghai pay no taxes and are yet dependent upon the naval protection of the mother country.

CORRESPONDENCE.

KOREAN AFFAIRS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Permit me to say that the amount of mis-information touching Korean affairs which finds its way into the press of Japan is appalling. In your issue of to-day you quote from the *Fiji Shinpo* the names of six Koreans—members of the late Queen's party—who are enjoying sanctuary in the Russian Legation in Seoul. Of the

names given I recognise four as belonging to ex-Korean Officials who are enjoying the protection of the American Legation in Seoul. I saw these men the day after they entered the American compound. They were there when I left on the 16th of November. So far as I could learn, there were no Korean refugees in the Russian Legation after the *émeute* of October 8th. I heard of one Russian refugee who asked for protection, was denied, and who left the country. His name was Sabbatine. To endeavour to create the impression that the Russian Legation became the favourite resort of the discarded officials of the Korean Government after the revolution of October 8th, merely because the wife of the Russian *Chargé* was a friend of the Queen, is a pretty piece of business, the more so as there is not a particle of truth to base the charge upon. I wish to add that the six Korean refugees in the American Legation compound entered there on the morning of the day when the Queen was murdered, and the villainous Tai Wön-kun seized the palace and usurped power, during the absence of Dr. Allen, *Chargé d'Affaires*. He found these men in the Legation upon his return from the palace—whither he went to gather the facts touching the overthrow of the Government—and he did not turn them out. As an American I endorse his action. Let me add that for first-class, downright, thorough-going lying, I have never seen anything to equal the alleged Korean News translated from the vernacular press of Japan during the past eight weeks.

Respectfully yours,

JOHN A. COCKERILL.

December 2nd, 1895.

A CORRECTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—My attention has just been called to a serious error in the print of my letter in your weekly issue of November 23rd.

I had no thought of charging Mr. Darwin with "erroneous observation." Quite the reverse: I wished to call attention to his "enormous observation," an observation so wide as to demand the respect and credence of many intelligent minds unable to know the facts at first hand.

Yours truly,

SAMUEL C. BARTLETT, JUN.

December 3rd, 1895.

SUPPLEMENTARY CONVENTION BETWEEN JAPAN & GREAT BRITAIN.

Whereas, by the Protocol signed at London, on the 16th day of the 7th month of the 27th year of Meiji, it was agreed between the Government of His Majesty the Emperor of Japan and the Government of Her Britannic Majesty, that the *ad valorem* duties of the Tariff annexed to the aforesaid Protocol should, so far as might be deemed practicable, be converted into specific duties by means of a Supplementary Convention, to be concluded between the two Governments within six months from the date of that Protocol, and

Whereas, this period was extended by subsequent arrangement:

The High Contracting Parties have appointed as their Plenipotentiaries to conclude a Convention for this purpose, that is to say:

His Majesty the Emperor of Japan, Marquis Saionji Kimmochi, Junii, First Class of the Order of the Sacred Treasure, His Imperial Majesty's Minister of State for Education and Acting Minister of State for Foreign Affairs, and Her Britannic Majesty the Queen of the United Kingdom of Great Britain and Ireland, Empress of India, Gerard Augustus Lowther, Her Britannic Majesty's *Chargé d'Affaires*;

Who, having communicated to each other their respective Full Powers, found in good and due form, have agreed upon and concluded the following Articles:—

1.—The Tariff annexed to this Convention shall be substituted for the *ad valorem* Tariff annexed to the aforesaid Protocol of the 16th day of the 7th month of the 27th year of Meiji; it shall be subject to all the stipulations contained in Article I. of that Protocol, in so far as these are applicable, and it shall come into force one month after the exchange of the ratifications of this Convention.

2.—The specific duties established by the Convention shall be subject to triennial readjustment. Such readjustment shall be based on the difference between the average of the two quarterly rates of exchange adopted by the Japanese Customs during the six months ending the 30th day

of the 6th month of the 27th year of Meiji, and the average of the rates of exchange adopted by the Japanese Customs for the four quarters preceding that in which each successive period of three years expires.

The schedule of readjusted duties shall be published by the Japanese Government three months in advance, and shall take effect immediately upon the expiration of the said period.

It is understood between the High Contracting Parties, that the operation of this stipulation shall be subject to the acceptance of a similar arrangement by the other Powers with whom Conventional Tariffs are now being negotiated by Japan.

3.—The quarterly rates of exchange mentioned in the preceding Article are the rates determining the comparative values, as entered in the quarterly tables published by the Japanese Department of Finance, of the present Japanese silver Yen on the one hand, and of the English Pound Sterling on the other.

4.—The present Convention shall have the same duration as the Treaty and Protocol concluded on the 16th day of the 7th month of the 27th year of Meiji, of which it is a complement.

5.—The present Convention shall be ratified, and the ratifications shall be exchanged at Tokyo as soon as possible, and not later than six months from the present date.

Done at Tokyo, in duplicate, this 16th day of the 7th month of the 28th year of Meiji.

[L. S.] MARQUIS SAIONJI.

[L. S.] GERARD AUGUSTUS LOWTHER.

ANNEX (TARIFF).

NO.	ARTICLES.	DUTY.
1	Caoutchouc, manufactures of <i>ad valorem</i> .	10 per cent. Yen
2	Cement, Portland.....100 Cattie.	0.065
3	Cotton yarns, plain or dyed	do. 4.180
	Cotton tissues:—	
4	Drills	Sq. Yard. 0.016
5	Duck	do. 0.053
6	Handkerchiefs in the piece	do. 0.011
7	Prints	do. 0.012
8	Sateens, plain, figured or printed, brocades, Italians and figured shirtings	do. 0.017
9	Shirtings, dyed.....	do. 0.013
10	Shirtings, gray	do. 0.006
11	Shirtings, twilled ...	do. 0.011
12	Shirtings, white or bleached	do. 0.010
13	T-cloths	do. 0.009
14	Turkey red cambrics	do. 0.012
15	Velvets or velveteens	do. 0.041
16	Victoria lawns	do. 0.006
17	All other sorts of pure cotton tissues, and all tissues of cotton mixed with flax, hemp, or other fibre, including wool, the cotton, however, predominating in weight, not specially provided for in this Tariff.....	<i>ad valorem</i> . 10 per cent.
	NOTE.—It is expressly understood that ready-made clothing and other made-up articles are not included under the heading of Cotton Tissues.	
18	Glass, window, ordinary:—	
	(a) Uncoloured and unstained	100 Sq. Ft. 0.302
	(b) Coloured, stained, and ground ...	<i>ad valorem</i> . 10 per cent.
19	Hats, including also hats of felt	do. 10 per cent.
20	Indigo, dry	100 Cattie. 12.953
	Iron and mild steel:—	
21	Pig and ingot	do. 0.083
22	Bar and rod, exceeding $\frac{1}{4}$ inch in diameter	do. 0.261
23	Nails, including spikes, sprigs, tacks, and brads:—	
	(a) Plain	do. 0.573
	(b) Galvanized	<i>ad valorem</i> . 10 per cent.
24	Pipes and tubes	<i>ad valorem</i> . 10 per cent.
25	Plate and sheet.....100 Cattie.	0.296
26	Rails	do. 0.129

27 Screws, bolts and nuts, plain and galvanized.....	<i>ad valorem</i> , 10 per cent.	
28 Sheet, galvanized, both plain and corrugated.....	100 Cattie.	0.740
29 Tinned plates:—		
(a) Ordinary.....	do.	0.691
(b) Crystallized.....	<i>ad valorem</i> , 10 per cent.	
30 Wire, and small rod not exceeding $\frac{1}{2}$ inch in diameter.....	100 Cattie.	0.503
31 Wire, telegraph or galvanized.....	do.	0.256
NOTE.—By the term "mild steel" as used in this Tariff is understood mild steel manufactured by the Siemens, Bessemer, Basic or similar processes, and approximating in value to iron of the same class in this Tariff.		
32 Lead, pig, ingot, and slab.....	do.	0.316
33 Leather:—		
(a) Sole.....	do.	5.690
(b) Other kinds.....	<i>ad valorem</i> , 10 per cent.	
34 Linen yarns, plain or dyed.....	100 cattie.	6.527
Linen tissues:—		
35 Canvas.....	Sq. Yard.	0.047
36 All other sorts.....	<i>ad valorem</i> , 10 per cent.	
NOTE.—It is expressly understood that ready-made clothing and other made-up articles are not included under the heading of Linen tissues.		
37 Mercury or quicksilver.....	100 cattie.	5.048
38 Milk, condensed or desiccated.....	doz. xlb. tins and proportionately for tins of other weights.	0.123
39 Oil, paraffin.....	<i>ad valorem</i> , 10 per cent.	
40 Paint in oil.....	100 Cattie.	1.304
41 Paper, Printing.....	do.	1.163
42 Saltpetre (nitrate of potash).....	do.	0.490
43 Silk faced cotton satins.....	<i>ad valorem</i> , 15 per cent.	
NOTE.—It is expressly understood that all other mixed tissues of cotton and silk, and of wool and silk, where the cotton or wool predominates in weight, are to be classed for duty under Nos. 17 and 61 of this Tariff respectively.		
Steel (other than mild steel):—		
44 Ingot.....	<i>ad valorem</i> , 5 per cent.	
45 Bar, rod, plate, and sheet.....	do.	$7\frac{1}{2}$ per cent.
46 Wire, and small rod not exceeding $\frac{1}{4}$ in. in diameter.....	100 Cattie.	1.819
47 Sugar, refined:—		
(a) No. 15 to No. 20, inclusive, Dutch standard in colour.....	do.	0.748
(b) Above No. 20, Dutch standard in colour.....	do.	0.827
Tin:—		
48 Block, pig, and slab.....	do.	1.992
49 Plates.....	<i>ad valorem</i> , 10 per cent.	
50 Wax; paraffin.....	100 Cattie.	0.544
51 Woollen and worsted yarns, plain or dyed.....	do.	9.169
Woollen and worsted tissues, pure or mixed with other material:—		
52 Alpacas.....	Sq. Yard.	0.075
53 Blanketing and whiped blankets, in plain weave.....	100 Cattie.	7.458
54 Buntings.....	Sq. Yard.	0.031
55 Cloth:—		
(a) Wholly of woollen or worsted yarn, or of woollen and worsted yarns, such as broad, narrow, & army cloth, cassimeres, tweeds and worsted coatings.....	do.	0.093
(b) In part of woollen or worsted yarn and in part of cotton yarn, such as pilot, president, and union cloth.....	do.	0.039
56 Flannels.....	do.	0.044
57 Italian cloth.....	do.	0.029
58 Long cloths.....	do.	0.036
59 Mousseline de laine.....	do.	0.021
60 Serges:—		

(a) Where the warp is worsted and the weft woollen..... do. 0.056

(b) All other kinds *ad valorem*, 10 per cent.

61 All other sorts, pure or mixed with other material, the wool, however, predominating in weight, not specially provided for in this Tariff..... do. 10 per cent.

NOTE.—It is expressly understood that ready-made clothing and other made-up articles are not included under the heading of Woollen and Worsted Tissues.

62 Yarns, all sorts, not specially provided for in this Tariff..... do. 10 per cent.

Zinc:—

63 Block, pig, and slab...100 Cattie. 0.451

64 Sheet..... do. 0.928

WEIGHTS, MEASURES, AND COINS.

The catty mentioned in this Tariff is the Japanese weight. It is equal to 600 grammes of the metric system of weights, or 1.3227 lbs. English avoirdupois weight.

The pound is the English avoirdupois weight. The square yard and square foot are the English Imperial surface measures.

The Yen is the present Japanese silver Yen of 900 fineness and 416 grains in weight.

RULE FOR CALCULATING AD VALOREM DUTIES.

Import duties payable *ad valorem* under this Tariff shall be calculated on the actual cost of the articles at the place of purchase, production, or fabrication, with the addition of the cost of insurance and transportation from the place of purchase, production, or fabrication, to the port of discharge, as well as commission, if any exists.

RULE FOR THE MEASUREMENT OF TISSUES.

In determining the dutiable width of any Tissue the Customs shall discard all fractions of an inch not exceeding half an inch, and shall count as a full inch all fractions exceeding half an inch.

NOTE.—It is understood that selvages shall not be included in the measurement of Tissues.

BASEBALL.

This match was played on Friday afternoon and resulted in an easy win for the Olympia.

ST. ANDREW'S BALL.

Scotsmen the world over, always hold high carnival on St. Andrew's day, and when their chivalry in the cause of the fairer sex impels them to hasten the celebration by a few hours, so that the limits of the Sabbath are not encroached upon, they will begin on St. Andrew's Eve and carry the fun and frolic along just as merrily. The songs, sayings, and sentiments of the motherland came to the lips of the members of the Yokohama St. Andrew's Society just as readily, and their hospitality was just as profuse this year as on previous occasions, even if they did not beat the record, and the ball sped along with more than usual jollity. Over eight hundred and fifty invitations were issued, and nearly all accepted, so that at one time there must have been over seven hundred people within the walls of the Public Hall. Everything had been done to give the greatest possible amount of space, but during the earlier part of the evening a good of crowding was necessarily the order of the dancing. Flags were used freely in the decorations, and red cherry blossoms. Heraldic shields and four splendid antlered heads of deer were suspended on the walls, while the red lion rampant and St. Andrew's silver cross were to be met with everywhere. The stage was laid out as a cherry grove, and cosy nooks, under Japanese thatched roofs, were set up in the corners of the room. Pot plants and palms were grouped tastefully about the dancing and drawing rooms. The ladies entered by a special passage to the

right of the main entrance and then proceed to the large hall from the green-room. The gentlemen were accommodated with a smoking and card room up-stairs as usual. A great and long needed want was met through the erection of permanent lavatories, to which access was had through a special door-way under the staircase. The decorations and general arrangements were superintended by Mr. Ure, the hon. secretary, Mr. Coutts, and other members of the committee; and especial praise must be given to Mrs. Hutchison, who, having been so successful in her share of the decorations last year, volunteered her aid on this occasion and rendered great service.

Dancing commenced at half-past nine o'clock to the strains of the Town Band, the following being the programme:—

MARCH.

1.—Highland Schottische.	21.—Polka.
2.—Polka.	22.—Caledonians.
3.—Waltz.	23.—Waltz.
4.—Caledonians.	24.—Reel.
5.—Waltz.	25.—Lancers.
6.—Highland Schottische.	26.—Highland Schottische.
7.—Lancers.	27.—Waltz.
8.—Waltz.	28.—Waltz.
9.—Reel.	29.—Waltz.
10.—Waltz.	30.—Highland Schottische.

AULD LANG SYNE.

The floor was excellent. Just before the first reel commenced the glass in the great chandelier of the main hall cracked by reason of the great heat, and a few dances later the light had to be turned off here completely. This, though causing a considerable darkening of the room, was in the main a boon, for the temperature fell appreciably, rendering the dancing all the more enjoyable. At midnight supper was put on the table by the Club Hotel; after this dancing was resumed and kept up, through the aid of many "extras" till a late hour this morning. Only one Scotsman appeared in kilts, but we understand his example will be extensively followed next year, so great was the impression produced. After the ladies had gone home, a second supper was discussed by the stewards, the members, and their guests, and the cock had "crawled" and the day lang since dawned are some of them dragged themselves away from the tasting of the "barley breck."

UNIVERSITY ATHLETIC MEETING.

The annual athletic sports of the Teikoku Dai-gaku Undokwai took place on Saturday afternoon last on the playground of the Imperial University. The day was fine, but a strong north wind which swept across the ground made the atmosphere intensely cold, nevertheless the students and their friends entered into the spirit of the affair with great vim. Some foreign ladies and gentlemen were on the ground, but they could scarcely be said to have been enjoying it to the full, in spite of big overcoats, etc. Two records were broken, throwing the Cricket Ball and High jump. There was a large number of spectators, and a band was in attendance. Appended are the details:—

100 YARDS RACE.

Mr. Takata.	Mr. Inouye.
Mr. Ishiware.	

Twelve ran. A good start was effected, but Takata soon forged ahead and eventually won by about 4 yards, dead heat for second place. Time, 10.9 seconds.

THROWING THE CRICKET BALL

Mr. Takata.	Mr. Hirabayashi.
Mr. Osumi.	

Eight entries. This was won by Takata with a throw of 90 yards 2 feet 9 inches, which beat his previous record of 81 yards 2 feet 9 inches for which he was given a special prize last year.

LONG JUMP.

Mr. Shimomura.	Mr. Tomita.
Mr. Midzuno.	

Six entries. This was won with a jump of 16 ft. 2 in. Last year the winner cleared 16 ft. 8 in.

220 YARDS RACE.

Mr. Ishiware, 10 yds.	Inouye Ki, 10 yds.
Mr. Inouye K., 10 yds.	

Twenty entries. About fifteen boys were placed in one line, which prevented the scratch men getting through. Eventually Ishiware won by 2 yards. Time, 27.8.

THROWING THE HAMMER.

Mr. Ota.	Mr. Watanabe Y.
Mr. Ishiware.	

Six entries. This was won with a throw of 88 yards.3 ft.

ONE LEGGED RACE.

Mr. Kawaguchi.	Mr. Atsuki.
Mr. Ando.	

Fifteen entries. The competitors had both legs tied together with their hands pinioned behind

their backs. A great deal of amusement was caused by this, the boys being quite helpless and unable to recover if they tripped and rolled ingloriously on the ground.

HIGH JUMP.

Mr. Ishiwara. | Mr. Enomoto.
Mr. Kamo.

Eight entries. This was the most interesting event of the day, and was won by Ishiwara with a jump of 5 ft. 2 in. which Kamo failed to clear although his jumping was decidedly neater and cleaner than that of the winner, who had great luck in his favour. Last year's best jump was 4 ft. 11 in. This record will be hard to beat.

440 YARDS RACE.

Mr. Takata. | Mr. Kinoshita.
Mr. Oda.

Fourteen entries. This was won somewhat easily by Takata in 1.00½.

POLB JUMP.

Six entries. Mr. Kamo won with a jump of 8 ft. 10 in. which was very much below the record, 9 ft. 8 in.

BOY'S RACE.—Sons of Professors.

Master Fumichi. | Master Hozumi.
Master Yamakawa.

This race took place while the pole jumping was in progress. The winner ran in very good style, and should develop into a sprinter.

MOMBUSHO SCHOOLS RACE.—400 YARDS.

Six started, three representing the First Higher School and three the Industrial School. The three Industrials were outpaced from the start.

GAKUSHI RACE. 220 yards.

Mr. Tomita. | Mr. Okamatsu.
Mr. Ibukiyama.

This was won easily by Tomita. Good race for second place. Time, 31.1.

HALF MILE.

Mr. Kinoshita 20 yds. | Mr. Iki 20 yards.
Mr. Inouye Ki, 20 yds.

Twenty-two entries. Again the scratch men could not get through, and after a good race between the three placed, Kinoshita won, all out, by about a yard. Time, 2.25½.

TUG OF WAR.

This was again won by the Chiu Gakko, the Daigakko boys not pulling with the same union as their opponents. Prize tub of *Kaki*.

PROFESSOR'S RACE.

Mr. Okada. | Mr. Tanakadate.
Mr. Kikuchi.

This was won after a good race by Professor Okada.

OBSTACLE RACE.

Mr. Saigo. | Mr. Miura.
Mr. Ban.

Twenty entries. The race was once round the ground. The boys had first to go through a ladder, then jump a single hurdle, followed by a bullfinch, and over a girder. They then crawled through a net, followed with a handover hand ladder, through hoops and long bags, over a fence, under another large net and finally carry home a bag of rice. Saigo negotiated the course well ahead of the others but almost lost the race through being unable to shoulder the rice bag.

At the conclusion of the Sports, the prizes, which consisted of a lot of useful articles, were presented to the boys.

AUSTRALIA AND JAPAN.

By JOHN PLUMMER, M.J.S.

Sydney, October 29th.

The intelligence of the alleged treaty between China and Russia has proved an unwelcome surprise in Australia, where it is generally regarded as the precursor of serious troubles, for which the colonies are far from being prepared. Australian sympathy has been with Japan from the first, and it was hoped that the new nation would prove the real barrier to Russian ascendancy in the Pacific, but it is now feared that the vast naval and military resources of the Russian Empire will be found irresistible in the long run. But much will, of course, depend on the attitude of Germany and the Triple Alliance, and Australians, naturally enough, are impatient to learn what will be the policy of the great European Powers. The *Sydney Morning Herald*, commenting upon the cabled utterances of the London *Times*, says:—"When the English press, usually so calm and self-contained in discussing foreign policy, receives in this mood an announcement from abroad it means a

considerable change in public feeling. Probably they would not be so sore in England but for the dealing of Russia with the indemnity loan recently raised in Europe by China. The profit of that large transaction was secured by the Czar's Government for the Czar's subjects, though France supplied most of the money required. But the rumour went that the security which Russia got was control of the Chinese Imperial Customs so admirably managed by Sir Robert Hart, and this, it was feared, would imply the hampering of British commerce. These fears, taken with the chagrin of Russia's diplomatic and financial successes, have led to a condition of annoyance in England, from which the new irritation gains much of its energy. There are other causes. English policy in the Far East has been ill-disposed to the southward march of Russia. We took Port Hamilton lest Russia should occupy it as a harbour free from the ice of Vladivostok; we retired from this port on the understanding with China that no other Power should ever get it. One journal in London now advises that the place should be re-occupied. By the construction of railways and the securing of anchorage in Port Arthur, justly regarded as one of the strongest places in the world with a capable defending navy, Russia virtually carries her southern frontier into Japanese waters."

Continuing in the same strain, the *Herald* remarks that:—"There are in these changes two unwelcome features for England. One is that the era of railway construction in China may fall into the hands of Russian contractors and manufacturers; the other, that the naval budget of England will be increased by the greater naval potentiality of Russia. Broad considerations of this nature are apparent, but in the absence of exact particulars as to the terms of the supposed treaty and its consequent disturbance of British interests it is profitless to speculate. The fact remains, however, that the British press, as well as the press abroad, recognises that a serious situation has arisen. The trade of England with the Far East is so important that the risk of interference will not be tolerated calmly. Russia may have attained her objects by means quite unexceptionable. Events just following the Japanese war—such as the apparent leaning of England towards Japan, and the intervention of Russia to reduce the demands of the conquering Power—may have given the Czar's Minister at Peking a diplomatic base on which to work with great effect. But the English people will not accept a condition of things, however created, by which their trade interests will suffer while their expenditure for naval and, perhaps, military defence will be largely increased. Whatever the exact nature of the tension, the instant it becomes a serious business for England it becomes a serious business for us. In case of hostilities the two Empires will make war upon each other wherever opponents can be found, at Vancouver or Sydney or at Port Arthur or Hongkong. We may cherish the agreeable opinion that Russia will find her hands too full to permit of her ships wandering to these coasts, but in time of war the Empire stands together, and we, in common with its other members, would have to take our risk. In this view of the case we may hope that the course of diplomacy will be able to settle whatever matters may be in dispute owing to the new treaty, if treaty there be. If it is not competent for negotiation to settle the question, there is comfort in the reflection that, having regard to Japan's interests in the supremacy of the Far East, and to the transferred relations of the European Powers there, England is by no means likely to have to guard her interests alone. Japan by her treaty with China sought no selfish advantage, but threw open to all the world such privileges as she won. Russia, if not misrepresented in the terms of the new treaty, puts things on a basis so different that the nations having a commerce in the Far East will have to look to their own affairs. However circumstances may decide the present difficulty, it is abundantly evident that the Eastern Question has shifted farther east than ever before. Not in Armenia or on the Bosphorus only, but in Korea and the Japan Seas, the nations are watching one another, arms in hand."

The *Sydney Daily Telegraph*, on the other hand, sees nothing very alarming, so far as Australia is concerned, in the situation. Asking its readers to regard the position calmly, it says:—"As for the wild talk about Australia and Vancouver, it will not bear examination. Russia already possesses a naval port in Vladivostok, some five thousand and odd miles to the northward of Sydney, and some seven thousand miles to the westward of Vancouver, and though Port Arthur is a much more convenient base, it is but a few hundred miles nearer Australia and about the same distance further from Vancouver; and if we could not tolerate a Great Power within a fourth part of the

world's circumference of our shores, our hold upon Australia would be weak indeed. It would even be different if Russia held an important coaling station upon a contiguous island in the Southern Pacific. But she does not hold one, and Australia's interest would only be affected were Russian domination in the Chinese ports to affect our supplies of tea or interfere with the trade we carry on with the treaty ports. That is, we consider, a wholly improbable contingency. Our trade in no wise competes with that of Russia in the Chinese markets, nor for that matter does the Indian trade, and it could only be said of the commercial relations of Great Britain with China, which last year were represented by about nine millions sterling, imports and exports combined, that they would clash with the Russian trade to an insignificant extent. Thus, the ruination predicted is probably a nightmare. The real trouble of this treaty is that it reduces the distance of Russia from Peking by about two-thirds, while it places Korea and Manchuria wholly in the hands of Russia. To Japan it constitutes a serious menace; to China it means subordination; and possibly the effect in India, should hostilities ever arise with Great Britain, might be a material consideration. But what is, and has been, the secret of the unrest displayed by Russia in all modern times? Here is a vast Empire, with territory second only to that owing allegiance to Great Britain, and with a population of 129 millions, yet with all her outlets to the trade of the world, practically at the mercy of other nations. Her enormous coastline on the Arctic Ocean is valueless. Her outlet to the Baltic is icebound for many months in each year, and a fleet can shut her in at any time. Her Black Sea outlet lies under the guns of the Turk, and her ports on the Northern Pacific are icebound in winter, while in the summer much of the interior is impassable. Can she be shut out indefinitely from access to the world's great highway? The point further arises whether, if two contiguous and sovereign nations enter into an agreement of this nature affecting their own territories, the other Powers have the right to interfere. That China has apparently sold her birth-right to a hard and domineering taskmaster is probably true. That Russia will become a much greater Power in the Pacific is evident. But that she will become a more hostile Power as her strength in the Northern Pacific is consolidated is doubtful, for the realisation of her ambition and her needs might well have an opposite effect. We do not view these Russian encroachments upon China with the alarm which they have evidently caused in London. That Russian diplomacy is tortuous must be acknowledged; but, at any rate, they are an advance upon those of China."

It need scarcely be added that of the two papers, the *Herald* most closely represents Australian opinion, which regards the Russian occupation of Port Arthur as a serious danger to Australian interest in the Pacific. One of the New South Wales country papers, the *Maitland Mercury*, the oldest provincial journal in Australasia, thinks there is no reason for serious alarm. Adopting the views lately put forward by the London *Spectator*, to the effect that Russia, with open ports, is more valuable to the power which commands the sea, than is Russia with ice-closed harbours, the *Mercury* says that "the disadvantage of an angry feeling between England and Russia will not be all on the side of England. If we do not trust her, if we do not come to an amicable arrangement, we shall on the other hand 'regard her as unreasonably and dangerously hostile,' and be compelled 'to fortify ourselves against her enmity by favouring every force that would tend to act as a makeweight against her influence.' There is, for example, that Anglo-Japanese alliance possible; there is a re-occupation by England of Port Hamilton at the toe of Korea possible; and however much the Russian may affect to despise the Japanese Power, the junction of Japan and England would discount largely the value of Russia's present insidious move. It is said that the Russian position at Port Arthur is a menace to the Australian trade. But England and Japan in alliance would give England a post of vantage in the island of Formosa, in which Japan has just succeeded in quelling Chinese resistance to her authority. On the whole, therefore, and pending the receipt of further intelligence respecting the Russo-China treaty, we may conclude that Russia gains less by it than she might have secured by honest action, and by friendly compact with England."

A cablegram to the effect that Japanese public feeling was largely in favour of an alliance with Russia has occasioned considerable perplexity in Australia. On this point the Melbourne *Age* remarks that:—"Not the least curious amongst the new developments in the East is the rumour that Japan favours an alliance with Russia. The motive

is not very apparent. Russia was chiefly instrumental in robbing Japan of the fruits of her victory, and she is known to covet Korea. Russia is, in fact, the one serious danger to Japanese interests, so that a Russo-Japanese alliance would be apt to be of the character of the union between the lion and the lamb. The value of a good understanding with Great Britain is to Japan enormous. The English have no territorial ambitions in the Far East. They wish to trade freely with the many millions of the Chinese Empire, and Japan wants to do the same. Russia, on the other hand, seems to have formed ambitious schemes in relation to China as a result of the inadequate resisting powers of the Chinese. Russian diplomatic intervention in China has been incessant since the conclusion of the war, and it looks as if Ministers at St. Petersburg meditated the establishment of a sort of protectorate over the Mongolian Empire. The very fact that *The Times* writes a furious article on the duplicity of the Russian Government in connection with the recent treaty is evidence of the alarm experienced in English commercial circles in relation to the Anglo-Chinese trade. Great Britain is not given, like the French, to "go to war for an idea," but is usually ready enough to fight for the shop, and it must be admitted that there is an ever increasing danger to the peace of the world."

One direct result of the treaty will be the imparting of increased strength to the federation movement in Australia. Mr. Reid has already introduced the Federal Enabling Bill into the New South Wales parliament, and should it be adopted by that body, the other colonies will speedily follow, thus making a united Australia one of the possibilities of the present generation. Major General Hutton, the new South Wales military commandant, declares that the Russian occupation of Port Arthur will make Australian military federation a vital necessity. Lord Brassey, the new Governor of Victoria, has spoken in a similar strain, but the difficulty consist in the want of practical knowledge of other than purely local affairs evinced by many of those entrusted with the work of colonial legislation.

The intelligence that six of the leading Japanese ports, including Tokyo, the Japanese capital, are to be immediately thrown open to the world's trade, has produced a most favourable impression throughout Australia, and greatly encouraged the advocates of a free trade policy. A writer in the *Sydney Daily Telegraph* says:—"The purpose of the Japanese to throw open their chief ports free to the commerce of the world is one that will be hailed with general satisfaction. Those who believe in their hearts that it is a good thing to be allowed to swap a horse for a cow if you think you are a gainer by such a transaction, are in a majority all the world over. Even though it happens that a good many of them think they can profit by preventing others from having this right, and call themselves protectionists, they still want to buy in the cheapest market and sell in the dearest. In practice, almost every protectionist is the most advanced freetrader who could be found on the surface of the globe, so far as his own dealings are concerned, and doesn't pay a farthing more than he can help for anything he purchases. Even the professing protectionists will be glad in most parts of the world that Japan is opening her ports. It will mean a new market for what other countries have to sell. As that is the main consideration with protectionists, and as their policy destroys their own home market, their should be rejoicing among them at the appearance of Japan, enriched by Chinese tael, appearing as a purchaser. Especially in the matter of raw products like wool, of which the Japanese becomes a great and cunning manufacturer, will the difference of his buying make itself felt. And freetraders everywhere will be as glad of the opportunity of buying what they want from Japan as protectionists will be of selling her what they don't want."

At the same time, the possibilities of a rapidly increased trade between Australia and Japan give fresh interest to the probable results of the conference of Australian premiers, to be held early next year, to discuss the provisions of the Anglo-Japanese treaty. There is a growing feeling that, under the changed condition of political affairs in the East, Australia should be extremely cautious in the adoption of any legislation of a character unfriendly to Japan. This feeling is significantly expressed in the following remarks from the *Wagga Wagga Express*, one of the leading provincial journals in New South Wales:—"Japan is no longer the nonentity as far as Europe is concerned; but is a power with all the resources of European civilisation at its command, and with the forty millions Russia has helped her to get represents a standing that all statesmen and politicians of Australia will have to reckon with. If the Japanese are told that their subjects shall not land in Australia, but

will have to be content with the disabilities under which the Chinese at present labour, they will, simply, not stand it, and in such case what can the Australians do? Are they to be like so many little parish councillors fighting amongst themselves, or is it their intention to apply themselves to the grand question, and, like Canada, bring about a federation? Apparently there seems to be little short of an overwhelming power in the newly acquired strength of Japan, and Australians will wake up to the fact that there is a something beyond their burning questions, compared with which local political matters are as a flea-bite. Australians and their parliaments should open their eyes to the fact that their, comparatively, parochial questions are not all the matters of importance which claim their attention when the consideration of their being the makings of a nation is on the tapis. If they do not put their house in order, they may be suddenly confronted with the disabilities of wasted opportunities and neglected chances of welding themselves into a power by which they may even defy Japan."

Sydney, October 30th.

Notwithstanding the official denial of a secret treaty between Russia and China, people here believe that an arrangement of some kind or other has been effected, whereby Russia will practically have the free use of Port Arthur, to the exclusion of other powers. Sir Henry Norman, Governor of Queensland, on being interviewed yesterday, prior to the arrival of the cablegram denying the existence of the alleged treaty, said he had no information on the subject beyond what had appeared in the press. With regard to that, he said that in the first place he did not credit the report that any such treaty had been entered into. In the second place, he thought it unlikely that such a treaty should have been made between two nations like China and Russia. And in the third place, he held that if a treaty had been made, it could not have the same effect as if it had been made between Russia and any European nation. Sir Henry added that he believed fuller information would discredit the statement which had appeared. So far, Sir Henry seems to have been a true prophet. In the evening, he was entertained at the Londoners' Club, Brisbane, when, responding to the toast of his health, he said "he regarded it as an absolute certainty that before all those present were dead, Australia would have to resist an attack. It was impossible, in the present state of the world, for a great, prosperous, and growing country like this, with, comparatively speaking, no army, and no navy, to expect immunity in the event of war. He was sure the manhood of England, Ireland, and Scotland, and especially the manhood of Londoners, would induce them to take up arms to resist any such attack, and that they would not submit tamely. Trained troops were required, and, as a consequence, money must be spent liberally and well. Without England, Australia was powerless; but England, with the colonies united, might possibly stand against the world as she did before. It was not to be supposed that England would be alone in the world. He presumed she would have some friends, particularly the United States. While on a visit to the States, and after a conversation with some leading men there, it had struck him (Sir Henry) that if England and the States were joined together, the world would find the combination a very hard nut to crack. He trusted that there would not be war very soon, but they should be prepared for it." The idea of an alliance between Great Britain and the United States, alluded to by Sir Henry Norman, is beginning to be freely discussed in both countries, and may possibly lead to something practical in the direction indicated.

H.B.M. COURT FOR JAPAN.

Before R. A. MOWAT, Esq., Judge, and a Jury.
Friday, November 29th.

HENRY CLARE V. THE NORTHERN PACIFIC STEAMSHIP COMPANY.

Upon the Court reassembling, His Honour at once proceeded to sum up to the jury. He prefaced his remarks by observing that all cases of negligence, or alleged negligence, were as a rule difficult to decide. It was not so much owing to the circumstances of the case as the application of the law to the facts of the case. He thought that the present case was no exception to the rule. He congratulated all parties concerned in it that the case was placed before a jury for decision, for owing to its peculiar nature it would certainly be more satisfactory to have a verdict from five unbiassed men than the opinion, or conclusion, that one mind would come to. In the case before them, the plaintiff Clare, claimed \$1,500, from defendants as compensation for personal injuries

and pecuniary loss which he alleged was caused by the negligence and unlawful carelessness of the defendants. In this case they had accordingly two grounds upon which to proceed. They had first to ascertain whether the defendants were guilty of negligence, and secondly, what was the amount of damage that the plaintiff had sustained. If, after a careful consideration of the evidence, they decided against the first point, and therefore against the plaintiff, then they need not go further. If they were with him on the first point then they would go on to consider what they should award him, and they would award such compensation as they thought just. They had, consequently, only two points to consider, to find whether or not the defendants were guilty of negligence as alleged in plaintiff's petition, and secondly, if they found that was so, what damages they should award consequent upon that neglect. A third point might arise in connection with this last question, and that was the question of contributory negligence: in other words, whether the plaintiff was not himself to blame. That was really a question for the defence, for the law did not require the plaintiff to prove that he was contributory to the accident, the burden of such proof lay on the defendants. It was, however, hardly possible to exclude this question from the case, as one question involved the other, and would have to be considered in order to arrive at a right conclusion. The defendants, they might find, may have been negligent; but if the plaintiff himself could have avoided the danger through the exercise of reasonable care on his part, then the defendants' negligence would not be the only principal or operative cause. But plaintiff had not to prove that he was negligent. Having further discussed this point, the learned Judge said, that if joint negligence was proved, and the jury found that plaintiff on the one side and defendants on the other were equally negligent, then the plaintiff could not recover. Having made these general remarks, he would pass on to the questions of law that might arise. The basis of the plaintiff's case rested on the obligation or duty of the defendants towards the plaintiff. What then was the duty that the defendants were alleged to have neglected to perform? Here we come to a question of law. I will state it in this way. Shipowners, like the defendants in this case, are bound to keep in a reasonably safe condition, such parts of their vessel as a person being on board on lawful business in which both he and they have an interest may under all circumstances reasonably resort to. It also followed that plaintiff must display a reasonable care himself. The jury would have to say whether the open hatchway here constituted a danger to the plaintiff, whether the defendants did all that was reasonable by having it lighted and properly guarded, and then whether plaintiff was guilty of a want of care in approaching it. These were all questions of fact. Passing on to review the evidence given in the case, His Honour said that there was a good deal of discrepancy in the statements made in the course of the evidence. But then, as Mr. Walford had truly observed, this was to be expected; and again, as Counsel had urged, many of these discrepancies were not material. He would ask them, therefore, to put them out of their minds when considering their finding, and they need not discuss them either in favour or not of some of the conflicting statements being more accurate or fuller than others. For a moment he would again repeat to them the rule of the law given before. Then turning to Mr. Lowder, his Honour asked if he was satisfied with that exposition of the law.

Mr. Lowder—Perfectly.

His Honour—Then I will not say more about that here. I thought that yesterday you urged that plaintiff ought not to have gone beyond the gangway and that the duty owed him by the defendants did not extend beyond that place.

Mr. Lowder—That there was less duty beyond that place.

His Honour—(to the Jury)—It was urged by Counsel for the defence that because plaintiff went on board the *Victoria* and might have observed some one in uniform near the gangway, he was to be expected to know that this was the Chief Officer, and that he ought to have ascertained from him there the information he required in regard to sending off more cargo that night, and that he ought to have gone no further along the deck. He, the Judge, did not so limit the plaintiff. Plaintiff had said that he was engaged in the shipping of the cargo, that he went on board to ascertain whether any more cargo would be taken on board that night, and for that purpose, I take it, he was quite at liberty to go forward to any of the hatches where cargo was being worked. Plaintiff's story is that when he inquired of the quartermaster where the Chief Officer was the quartermaster pointed forward. His Honour therefore thought that it was too narrow a construction of plaintiff's rights

to say that they stopped short at the gangway, when, according to his own evidence, he had obtained none of the information he required. Of course the accident happened further forward, but his Honour thought, that supposing it had not happened and plaintiff had been met at the spot where he said it occurred, his presence there could not reasonably have been objected to, and that he could have gone forward without challenge. He thought that plaintiff was clearly entitled to go where he was at the time in the ordinary discharge of his duty. The case of *Walker v. The Midland Railway Company* was then referred to, and, continuing, his Honour expressed the opinion that he had sufficiently shown from that, that the law sufficiently covered the plaintiff at the place where he was. In fact, in his mind, the plaintiff was perfectly justified in being where he was. He was even prepared to go so far as to say that even if plaintiff had seen the Chief Officer near the gangway and had asked him the questions regarding the cargo, and had received replies, that he would still be entitled to go forward in the discharge of his duty. His Honour did not attach much importance to the point raised by Mr. Lowder in regard to the use of the expression by plaintiff of "fallen down" the hatchway, when describing it to the Chief Officer and others, and to using "stepped into" in the petition to the Court. The correct expression would be perhaps, very nearly fallen down, he fell into and very nearly down the hatchway. The point was immaterial, however. Turning to another suggestion, inferred he thought by Mr. Lowder, that plaintiff had not been hurt at the hatchway at all, the jury must remember that he himself was the only person able to tell them about the accident. The man was unquestionably hurt, and he thought that the jury would find that he was hurt there at the hatch. Turning again to other discrepancies in the evidence, his Honour said the only point that was material was the state of things in and around the hatch on the night of the 27th July. He thought that before a sound conclusion could be reached by the jury, they must make up their minds as to which of the two descriptions was to be accepted. Referring first to the stacks of coal and how they were arranged, plaintiff's story was that there was no passage left between the coal, that it stretched from the deck house to the rail, and that he had perforce to go over the coal in order to get forward. One of plaintiff's witnesses also said that there was no passage there, and that when he passed he had to go along the side of the ship. His Honour then minutely pointed out the difference in the statements of the officers of the ship as to the coal being piled four sacks high all over alike, with a passage through the middle and one at the side, how this was corroborated by Brown, the stow-dore, and the engineer, and that the plaintiff's evidence was different in regard to the piling up the coal, his side claiming that it sloped from the deck house to the rail. The jury must decide which of the two versions was correct, that of the officers, who had seen the coal taken in at Moji, testifying to it being in the same position at Kobe and here, and that the ship left Yokohama with the coal still undisturbed on the deck; and that the plaintiff was a stranger to the ship, and went on board first at night. Now one wants to know why a passage was left in the coal, and the Chief Officer stated that it was left so that they could work coal through the hatch: they required a clear space round the hatch for this, and according to the sketch in Court this space was left. That answer therefore was quite sufficient, and explained why the passage-way was there quite naturally. On the whole, it must be concluded by the jury, he thought, that there was a passage-way left through the coal, although plaintiff, who went on board the ship after dark, failed to perceive it. Having reviewed all the evidence on the point, his Honour said that the question was very important, and he would tell them why. The defendants were under the obligation to light or guard this place, where there was danger. It was for the jury to decide whether the light provided was sufficient. If they believed the ship's account, they had a barricade of coal four feet in height which would confront any person going forward. If they were satisfied that this was so, they would probably come to the conclusion that plaintiff would not require further protection if he had gone along the passage-way, which he said he did not. For anyone going along the passage could not have fallen into the hatchway: he certainly could not have stepped in, for to do so he would have had to turn to the left and lift his foot over a fifteen inch combing, and then supposing he had fallen, he would have encountered the guy. That was the reason for attaching importance to the question as to what was between plaintiff and the hatchway; was there coal or not? Now then, if they adopted the evidence of plaintiff and his witness Heldt,

there was no passage-way, and there was only coal two sacks high between him and the hatchway. Then the jury would have to consider the other question as to whether there was a guard at the hatchway: how was it lighted, and did the defendants, in any way discharge the duty cast on them to provide sufficient light for the place? The evidence as to the lights they had heard. He had little to say on that point. The lights in the passenger's stairway might be ruled out of the case, for if the coal extended from the aft part of the hatch then no light at the passenger's stairway could light up the hatchway. Then as to the engine-room lights, the jury would by their own experience be able to judge as to how much they would count. In regard to the galley lights it was just about the same. It had been pointed out in evidence that these would cast a light over the rail. Then as to the light from the officers' stairway? These were five feet high above the deck inside the house: the coal was said to be stacked up four feet high from the after part of the hatch, and the jury would not expect to find that they threw much light over the hatchway. Of course the people of the ship said that the hatch was, in their opinion, lighted sufficiently well. That might be so. If one knew where a thing was, it was not very difficult to find it. After alluding to the fact that the Chief Officer has caused a light to be hung up at the wheel house, to aid the men working at the hatch near, his Honour said that the Chief Officer's attention had evidently been drawn to the matter of lights, and he had thought that the hatchway did not require any lighting. Another point to which the Judge drew attention was to the statement of the Chief Officer that when plaintiff told him of the accident, he thought that something had gone wrong with the lights, and that if the lights were all right the accident should not have occurred. He therefore went forward to see, and finding that the lights were as he left them he came back. His remark to the plaintiff when told of the accident was: "You ought to be very careful when you come aboard a strange ship." The Chief Officer did not think that plaintiff had fallen through the hatch.

Mr. Walford—He was under the impression that Clare had gone down the path, and therefore did not provide in his mind for the contingency of his having gone over the sacks of coal.

His Honour—That did not occur to him because he regarded the sacks as being four feet high all round. So in his mind it was impossible to get there, and he did not think it possible for him to have fallen from there. The Chief Officer's remark that one should be very careful when going on board a strange ship, embodied a very sound principle, though perhaps was not one that you might have expected him to make if anything had gone wrong with the lights.

Mr. Lowder—It was after making this remark that he went forward.

His Honour—That is the second point I shall have to put before the jury.

Mr. Lowder—The remark was made as a natural sequence of events.

His Honour—Quite so.

Mr. Lowder—I had misunderstood your Honour's intention.

Mr. Walford—There is one point that I raised, that I should like your Honour to mention to the jury, and that is if the passage through the coal was not lighted so far as the plaintiff was concerned it was the same as if it did not exist.

His Honour—Well, it is a question of course whether a man should see a thing.

Mr. Walford—It is a question of lights.

His Honour—The jury will take all the circumstances of the case into consideration. It is to be presumed that when he found the coal that he would naturally expect to find a passage-way, and upon this depends how much attention he was paying to the matter. Accordingly, if the jury thought that there was a passage way through the coal, it was a very extraordinary thing that the man did not see the passage way. Of course he had just come up from below, and his eyes might have been full of light, so that he did not see it, and he proceeded forward before he got himself to rights. After reviewing the evidence given as to the lights, the learned judge said the question which the jury had to answer in regard to it was whether there was sufficient light on deck to enable the plaintiff to see the hatch. The witnesses for the ship, it must be remembered, were familiar with the ship, which plaintiff was not, and the jury were now asked to decide whether there was light sufficient to discover the hatchway, that is assuming that his version as to the quantity of coals around it was the correct one. The jury would next have to consider whether or not his going forward was warranted from a man who had to take, as other men have to, a reasonable care for himself. The

suggestion put forward by the defendants is that upon meeting with the coals, plaintiff should have been brought to a standstill, and that he should have at once considered that was not a place for himself to be. Then it was for the jury to consider whether that circumstance ought to have warned him that he could not proceed along there with safety. There was nothing urgent or pressing in his business, and he might have gone and tried the other side of the ship; he might have gone below on to the main-deck and proceeded forward in the direction he wanted, as well along that deck as along the spar deck.

Mr. Walford thought not so.

His Honour—I think it rather unusual to interrupt a judge so often.

Mr. Walford—I beg your pardon, Sir.

His Honour—I am putting these questions to the jury as they have been raised in the course of argument, and I say that the question they may have to consider is whether he could not have gone down to the main deck. I don't say that he should. I am putting these questions to the jury plainly and dispassionately for them to consider. That was one of the arguments used on one side, and if Mr. Walford had addressed himself to it, which he did not, I should have placed his argument before the jury also. There was every reason why the plaintiff should have taken extra care, to "go slow," and see what he was about. He had laid before the jury, he thought, all that was needful of the evidence, having carefully read over his notes of it, and had recalled to their minds the points he considered essential. The facts of the case were what they had to deal with, and the inferences suggested were the inferences they had been asked to draw. He would therefore leave the case in their hands. Assuming that they believed the plaintiff's story, they would, in considering their verdict, have to decide what damages they would award. They would have to award in that case what they considered to be fair compensation. The claim put in was for a month's salary, a doctor's bill, an apothecary's bill, altogether something like \$130. After that it was hardly a question of estimate, the only practice they had to go upon was their own experience and judgment in the matter. The medical evidence was then reviewed briefly by His Honour, who remarked that plaintiff still complained of pain. It was usually the case in such accidents that these pains continued to go on till a jury's verdict was given. Plaintiff had told them how that he had received compensation for a shock some years ago, and that he recovered within two days. I hope, continued his Honour, that in a few days from now that plaintiff will be feeling as well as he did before the accident. The jury had to hold the balance fairly between the two parties of they found that plaintiff was entitled to compensation. The first point they had to consider was: was there negligence on the part of the defendants, negligence in the sense he had explained to them; secondly, was there negligence on the part of the plaintiff, that is, contributory negligence, such as he had referred to: if there was such contributory negligence then plaintiff could not recover. So if they answered the questions in his favour, the first affirmatively, the secured negatively, they would have to say what damages plaintiff was entitled to.

Mr. Dodds, one of the jury, had not properly understood what his Honour had said about the hatchway? Was it guarded on two sides, or was only one side left unprotected; that is passengers could pass down the passage alongside the hatchway.

His Honour—If the plaintiff had walked along the passage it is difficult to see how he could have got down into the hatchway. He would not raise his foot fifteen inches to step over the combing and then fall in. That would be the only way he could have got in by the passage.

Mr. Dodds thanked his Honour and the jury retired.

At half-past twelve o'clock the jury returned, when the foreman, Mr. G. K. Dinsdale, said:—We find that there was negligence on the part of the defendants, but that there was no negligence on the part of the plaintiff, and damages are awarded as claimed.

Mr. Walford—And the verdict carries costs?

His Honour—Yes. The gentlemen of the jury are thanked for the care and attention they have given to the case, and are discharged.

(IN ADMIRALTY.)

Before R. A. MOWAT, Esq., Judge,
Monday, December 2nd.

A CAUSE OF WAGES AGAINST THE "ARCTIC."

This was a cause of wages instituted by John Kelly, Juan Lucero, and Martin Kjarr, against

the owner of the schooner *Arctic*, whereof J. B. Brown is at present master. The amount of the claim was \$1,063.06, to which \$300 was provisionally added as estimated costs.

Mr. G. H. Scidmore represented the plaintiffs, the nominal defendant (Captain Pyne) appearing in person.

Mr. Scidmore said plaintiffs shipped on board the *Arctic* in April last on a voyage to the North Pacific Ocean, the Behring and Okhotsk seas, for pelagic sealing, the voyage not to exceed a term of ten months and the men to be discharged at Yokohama. The vessel returned to this port on the 31st October, and the men applied for their wages. The master gave them their accounts, but said he could not pay them as unfortunately he had no funds to meet their claims. The suit was accordingly entered in the Court.

George Kircher, Usher and Marshal of the Court, sworn, deposed to arresting the British schooner *Arctic* on a warrant issued by the Court. He proceeded on board on the 13th Nov., read the original warrant to John Kelly, who was on board in charge, and affixed the certificated copy to the main-mast, of which he made due return to the Court. An advertisement was issued and a citation given to all parties concerned in the case, during six days. He took a rough inventory of the articles seized on the vessel.

To the Court—The vessel is still in my custody. The petition was read to the Master, J. B. Brown, on the 15th November, and a copy affixed to the main-mast. On the 25th November, the notice of hearing was given and affixed.

John Kelly, sworn, deposed to signing on the articles of the *Arctic* for 50 yen a month. The articles began on the 6th April, and he went on board the next day. He was still on the articles, for when he applied for his wages, after the vessel's return to port, the captain gave him an account of wages, but said he had no funds. His claim was for \$363.35; less advances of \$11.75, leaving \$338.58 due up to date of filing the petition. The captain paid him his skin-money (\$1 a skin) \$44, but did not pay any of the wages due. The captain said the schooner would have to be sold before the wages could be paid.

To Captain Pyne—For the last seven days I have slept ashore, but I go aboard by day to help pump the vessel out. Before the vessel was arrested, three boats and five guns belonging to Captain Brown were taken away. I do not know where they have been taken to. They were taken ashore during my absence. The chronometer is not aboard, the Captain having claimed it as his property. I had no money advanced to me in Yokohama. I owe Kernan \$167 for board and lodging, which is still due. The advance made at Hakodate is included in the deductions entered in the claim.

Juan Lucero, a Spaniard, sworn, deposed that his claim was for \$197.13. His wages were \$18 (gold) per month. When he applied for his wages the Captain gave an account of them, but did not pay him.

Martin Kjarr, a naturalized American, deposed to shipping for \$40 (gold) per month. When he applied for his wages he could not get them. His claim amounted to \$521.30, at the time the action was filed.

Mr. Scidmore said this was the case for the plaintiffs. He had hoped to have been able to have produced the Captain, but unfortunately he had left town last Tuesday by the American steamer. He now asked that judgment be given in accordance with the prayer of the petition, that unless funds be forthcoming the vessel, its apparel, furniture, and tackle be sold by public auction, etc.

Capt. Pyne said that the Captain of the *Arctic* was the charterer and paid him so much a month for the use of her for a certain time.

His Honour said that he was afraid this did not absolve the owner from paying the wages of the crew. The crew were entitled to recover their wages from the owner, master, or the ship. Judgment would have to be given in favour of the plaintiffs unless the necessary funds were forthcoming.

Capt. Pyne said that if he had had the skins he could have paid everybody. He was not able to pay now.

It was agreed between all parties, on the ground of saving expenses, not to have an appraisal of the ship.

Mr. Scidmore having read the final prayer of the petition,

His Honour gave judgment for the plaintiffs with costs; the ship to be sold by public auction after being advertised for 14 days in one foreign and two Japanese newspapers; the proceeds to be paid into the Registry; and the costs of suit to be a first charge upon the same; the plaintiffs to be discharged from the ship.

CONVENTION BETWEEN CHINA AND JAPAN FOR THE RETROCESSION OF LIAO-TUNG.

SIGNED AT PEKING, NOV. 8TH, 1895.

His Majesty the Emperor of China and His Majesty the Emperor of Japan, desiring to conclude a Convention for the retrocession by Japan of all of the Southern portion of the province of Feng-tien to the Sovereignty of China, have for that purpose named as Their Plenipotentiaries, that is to say:—

His Majesty the Emperor of China, Li Hung-chang, Minister Plenipotentiary, Senior Tutor of the Heir Apparent, Senior Grand Secretary of State and Earl of the First Rank, and His Majesty the Emperor of Japan, Baron Hayashi Tadasu, Shoshū, Grand Cross of the Imperial Order of the Sacred Treasure, Grand Officer of the Imperial Order of the Rising Sun, Minister Plenipotentiary and Envoy Extraordinary; who, after having communicated to each other their Full Powers, which were found to be in good and proper form, have agreed upon the following Articles:—

Article I.—Japan retrocedes to China in perpetuity and full sovereignty the Southern portion of the province of Feng-tien, which was ceded to Japan under Article II. of the Treaty of Shimonoseki on the 23rd day of the 3rd month of the 21st year of Kuang Hsü, corresponding to the 17th day of the 4th month of the 28th year of Meiji, together with all fortifications, arsenals, and public property thereon at the time the retroceded territory is completely evacuated by the Japanese forces in accordance with the provisions of Article III. of this Convention, that is to say, the Southern portion of the province of Feng Tien from the mouth of the River Yalu to the mouth of the River An-ping, thence to Feng Huang Ch'ên, thence to Hai Ch'êng and thence to Ying K'ou; also all cities and towns to the south of this boundary and all islands appertaining or belonging to the province of Feng Tien situated in the eastern portion of the Bay of Liao Tung and in the Northern part of the Yellow Sea.

Article III. of the said Treaty of Shimonoseki is in consequence suppressed, as are also the provisions in the same Treaty with reference to the conclusion of a Convention to regulate frontier intercourse and trade.

Article II.—As compensation for the retrocession of the Southern portion of the province of Feng Tien, the Chinese Government engage to pay to the Japanese Government 30,000,000 Kuping Taels on or before the 30th day of the 9th month of the 21st year of Kuang Hsu, corresponding to the 16th day of the 11th month of the 28th year of Meiji (November 16th, 1895).

Article III.—Within three months from the day on which China shall have paid to Japan the compensatory indemnity of 30,000,000 Kuping Taels provided for in Article II. of this Convention, the retroceded territory shall be completely evacuated by the Japanese forces.

Article IV.—China engages not to punish in any manner nor to allow to be punished those Chinese subjects who have in any manner been compromised in connection with the occupation by the Japanese forces of the retroceded territory.

Article V.—The present Convention is signed in duplicate in the Chinese, Japanese, and English languages. All these texts have the same meaning and intention, but in case of any differences of interpretation between the Chinese and Japanese texts, such differences shall be decided by reference to the English text.

Articles VI.—The present Convention shall be ratified by His Majesty the Emperor of China and His Majesty the Emperor of Japan and the ratifications thereof shall be exchanged at Peking within twenty-one days from the present date.

In witness whereof the respective Plenipotentiaries have signed the same and have affixed thereto the seals of their arms.

Done at Peking this 22nd day of the 9th month of the 21st year of Kuang Hsü, corresponding to the 8th year of Meiji (November 8th, 1895.)

[L.S.] LI HUNG-CHANG,

Minister Plenipotentiary, Senior Tutor of the Heir Apparent, Senior Grand Secretary of State, and Earl of the First Rank.

[L.S.] BARON HAYASHI TADASU,

Shoshū, Grand Cross of the Imperial Order of the Sacred Treasure, Grand Officer of the Imperial Order of the Rising Sun, Minister Plenipotentiary and Envoy Extraordinary.

PROTOCOL.—In view of the insufficiency of time to effect a formal exchange of the ratifications of

the Convention between China and Japan signed this day respecting the retrocession of the Peninsula of Feng Tien, before the date named in the said Convention for certain stipulations thereof to take effect, the Government of His Majesty the Emperor of China and the Government of His Majesty the Emperor of Japan, in order to prevent the possibility of delay in putting into execution the several provisions of the said Convention, have, through their respective Plenipotentiaries, agreed upon the following stipulation:—

The Governments of China and Japan shall within the period of five days after the date of this Protocol, announce to each other through the undersigned, their respective Plenipotentiaries, that the said Convention has received the approval of His Majesty the Emperor of China and His Majesty the Emperor of Japan respectively, and thereupon the said Convention in all its parts, shall come into operation as fully and effectually as if the ratifications thereof had actually been exchanged.

In witness whereof the respective Plenipotentiaries have signed the same and have affixed thereto the seals of their arms.

Done at Peking this 22nd day of the 9th month of the 21st year of Kuang Hsü, corresponding to the 8th day of the 11th month of the 28th year of Meiji (November 8th, 1895).

[L. S.] LI HUNG-CHANG,

Minister Plenipotentiary, Senior Tutor of the Heir Apparent, Senior Grand Secretary of State, and Earl of the First Rank.

[L. S.] BARON HAYASHI TADASU,

Shoshū, Grand Cross of the Imperial Order of the Sacred Treasure, Grand Officer of the Imperial Order of the Rising Sun, Minister Plenipotentiary and Envoy Extraordinary.—*Tientsin and Peking Times.*

CONSULAR TRADE REPORT FOR HIOGO AND OSAKA.

The report by Mr. Consul Enslie on the Foreign Trade of the Hiogo Consular District for 1894 has approached quite heroic dimensions. It extends, with the tables, to well over 100 pages, and under the circumstances we cannot attempt to give the report in full in our usual way. We have, therefore, extracted the most interesting portions from this monument of Consular energy, the portions omitted being more of a detail nature and of extracts from journals in Japan, which have in some instances been already noted. We have taken some liberties also with the order of the subjects so as to group them more together.

The trade for the year under review compares with that of 1893 as follows:—

	1894.	1893.	Difference.
Imports...	£6,601,721	6,411,528	+ 190,193
Exports...	3,133,222	3,316,861	— 183,639
Total ...	9,734,943	9,728,389	+ 6,554

This return is based on instructions under which the Mexican dollar is, for the purpose of trade reports and returns, taken at the approximate average rate ruling during the year; the result is very misleading, as the volume of trade fluctuates month by month from 1 to 3 and \$4,000,000. What the trade for 1894 has been is, however, correctly shown by the following statistics taken from the Customs returns:—

	1894.	1893.	Difference.
Imports...	\$60,870,472	47,755,021	+ 13,115,451
Exports...	29,781,127	25,887,699	+ 3,893,428
Total ...	90,651,599	73,642,720	+ 17,008,879

This return gives a very clear idea of the growth and present volume of trade and shipping in this district and that of Kanagawa (Yokohama). These tables disclose:—1. In 1874 and 1884 the import trade of this district was respectively \$11,000,000 and \$10,400,000 less than that of Yokohama, whereas in 1894 it was \$10,400,000 in excess. In other words, this branch of the trade has increased here more than tenfold during the past twenty years, that of Yokohama threefold. 2. Since 1884 the import trade here has increased upwards of \$50,000,000, that of Yokohama rather more than \$30,000,000. 3. The export trade here has increased sixfold since 1874, that of Yokohama in a rather less ratio. 4. Since 1884 the export trade here has increased fourfold, that of Yokohama in a less degree, notwithstanding a very large and exclusive business in silk and silk manufactures, amounting in 1884, in round figures, to \$55,000,000. 5. The total foreign trade here was more than eightfold that of twenty years ago; in Yokohama the increase was rather more than four times.

Ten years ago the business transacted here was

five-twentieths of the entire foreign trade of Japan, whereas in 1894 it was eight-twentieths. The expansion in the volume of shipping is equally remarkable. In 1884 it was only one-fifth of the entire foreign tonnage of Japan; in the year under review it was one-third.

TRADE GENERALLY.—The returns would seem to show that the war has not in any way injuriously affected trade, the sole reason is that the inevitable effects have not yet been seriously or generally felt. That some branches of business have, however, suffered, is beyond dispute. Osaka has, in this respect, undergone heavy losses: up to the end of June last the increase of the foreign trade of that city was very large, but since then the decline has been very marked. That Hiogo (Kobe) has been more fortunate is to be accounted for by the fact that the foreign trade of Osaka is almost exclusively in the hands of Chinese.

Figures notwithstanding, there can be no doubt that the trade in imports has been seriously affected in consequence of a certain tightness in the money market which has unsettled Japanese trade; the interruption of the ordinary means of communication with the interior by the constant movement of troops has also greatly interfered with business generally. On the other hand, the demand for special goods was great, and foreign ships were extensively chartered and sold, greatly to the benefit of those who desired to dispose of old stock.

IMPORTS.

EXCHANGE.—Commenced under sufficiently favourable conditions as regards stocks and forward contracts, the year had barely opened ere the unwelcome problem of exchange movements once more presented itself. From January till March the record of this restless factor was one of persistent decline, and it is hardly too much to say that the first 4 or 5 months of the year were practically consumed in the efforts of the market to adjust itself to the constantly shifting value of the dollar. When it is remembered how largely "forward" transactions on a sterling basis have become the rule of late, the discouraging effect produced on native buyers by this unlooked-for depreciation can be readily imagined, nor has later experience in the same direction softened the recollection of losses thereby incurred.

While it would be absurd to suppose that foreign importers have entirely escaped the penalties attaching to incessant fluctuations in silver (being as a matter of fact frequently compelled to share the losses of their customers), it is certain that owing to the growing prevalence of gold currency purchases, Japanese have suffered considerably from this cause.

Consisting chiefly of staples such as cotton, rice, and sugar, it is not surprising when the progressive tendency of this district as a consumer of raw products is remembered, that the total increase in the import trade of the year (amounting roughly to \$16,000,000), should be largely accounted for under this branch.

To a country with Japan's distinct proclivities towards development of home industries such a result is almost bound to continue, although it has undoubtedly been materially contributed to during 1894 by the extraordinary disparity in the relation of silver to gold. In connection with this propensity for the extension of manufactures, it is a significant fact that in spite of greatly enhanced cost as compared with previous years, statistics of plant laid down continue to show a steady increase. Cotton—undoubtedly the principal manufacturing staple so far employed—alone shows an enlarged consumption of over 30 per cent., equal to more than \$4,000,000, the only other article occupying a parallel position being rice, the increase in which runs very little short of the same percentage.

ON THE OUTBREAK OF WAR fears of immediate stagnation, however, were soon dispelled by the demand that almost immediately arose for various and numerous articles of import required in connection with hostile operations abroad, a recovery in exchange to the extent of 10 per cent., and early tidings of initial successes gained by the Japanese forces, also contributing individually to the re-establishment of confidence. While it must be admitted that the activity engendered has so far gone a long way towards mitigating the depressing influence of the war in other branches of the import trade, evidence of the existence of such depression has been by no means altogether lacking. Time, moreover, has yet to prove whether the worst is not still to come.

Statistically speaking, the situation of the market compares favourably with former years, and in addition to having proved a valuable safeguard during 1894, the general lightness of stocks may be reasonably expected to exercise a salutary influence in sellers' favour should demand during

the next few months undergo any marked improvement.

RAW COTTON.—The cotton-spinning industry in Japan has continued to extend itself, and the present number of spindles amounts to upwards of 540,000, in addition to which several new mills are in course of construction, whilst still more are being planned. The importation of the raw material has, of course, been enhanced in proportion to the above increase, and the total is much in excess of last year. Bombay cotton again forms the bulk of the import, amounting to 105,700 bales against 87,500 bales during 1893.

With regard to raw cotton, the amount imported in 1884 was, in round figures, 6,000,000 lbs., as against 160,000,000 lbs. in the year under review.

CONCERNING KEROSENE OIL, it is worth noticing that the wells at Yechigo are now turning out about 150,000 gallons monthly. A great change will, in the near future, come over this trade in the Far East when the petroleum wells, already almost exclusively supplying Singapore, get into full working order.

The importation of clocks and watches is rapidly decreasing, and the Japan factories will at an early date, be able to supply the entire demand.

The same may be said of glass and glassware, hats and caps; in fact hats and caps made in Japan are now being exported in steadily increasing quantities.

EXPORTS.

The export trade of this district continues to expand, the statistics showing an increase of four millions as compared with the previous year. Much of the increase is no doubt due to the low price of silver, declining exchange having facilitated operations, which otherwise would not have been possible. On the other hand, however, the market value of goods has usually risen in proportion to each fluctuation in sterling, and the native seller has alone reaped the benefit. The war has had scarcely any appreciable effect upon the homeward export trade as yet. Exports of Japanese produce to China have, however, been seriously affected, and whilst some of this business has passed into Japanese or foreign hands, much, formerly managed exclusively by Chinese, has doubtless been entirely checked.

TEA.—The season opened earlier than usual, and although at first it seemed certain that the crop would be a large one, subsequent unfavourable weather had the effect of curtailing the yield.

Returns obtained by the Department of Agriculture and Commerce show that the tea plantations throughout the country covered, at the close of 1893, 157,847½ acres, and the following is published in the *Official Gazette* as the areas and quantities of the principal districts:—

	Acres.	Lbs. Production.
Shizuoka	28,267	14,207,408
Miyé	11,137	4,796,442
Kioto	7,652	4,494,341
Fukuoka	5,022	3,042,041
Nara	5,105	2,614,717
Gifu	4,382	2,574,175

RICE.—The year cannot be regarded as a very satisfactory one owing to the shortage of the crop in 1893. Total export amounts to only 68,000 tons as against 91,000 last year. The 1894 crop is very large and has been well harvested, but the official report is not yet published. A serious drawback to the export of Japan rice to Europe has been want of uniformity in the quantity and quality sent, and the consequent impossibility of giving any fixed quotation in the market.

COPPER.—The downward tendency of exchange rates, with its occasional fluctuation, has naturally come very much into play with this valuable article, but as a rule a drop in exchange came simultaneously with a decline in copper values at home, and prices on this side have not therefore shown very rapid or wide fluctuations. The export figures keep pace with former years, viz.:—1894, 7,100 tons; 1893, 7,000 tons; 1892, 7,100 tons; 1891, 7,000 tons.

The export to Europe has increased, whilst the exports to India and other countries shows a falling-off. A special feature of the year is that direct exports by Japanese, to Europe as well as to India, show themselves more conspicuously.

CRUDE CAMPHOR.—A material reduction in business as compared with former years is the chief feature, which may be attributed to the ever-growing production of Formosa and also to the gradual improvement in the quality of the latter.

A feature of remark was the formation of a guild amongst the native sellers, with the declared object of establishing a much needed reform in quality by introducing certain new and uniform delivery terms, which came into force in July. Though it can hardly be said that the contemplated reform has shown itself in the quality of subsequent shipments, there is no doubt that the new delivery terms have done away with a great deal of the

trouble and disputes previously existing. It remains to be hoped that, in face of the Formosa competition, the Japanese will before long see the wisdom of improving their quality up to its original standard of many years ago.

VEGETABLE WAX.—The export during 1894 shows a very considerable increase on that of the previous year, amounting to about 40,200 piculs, against about 28,000 piculs in 1893, and prices, in spite of the constant falling of exchange, have rather gone lower than what they opened with at the beginning of the year.

ANTIMONY.—The home markets have been keeping very dull, and in sympathy with them business here has also been very slack at cheap figures.

YARNS.—Preparations for the commencement of an export trade to China were greatly stimulated by the abolition in July last of all export duty on Japanese manufactured yarn, and for a time resulted in shipments to that market being pushed briskly forward. Since the outbreak of the war, however, inquiry from the other side has fallen off almost entirely.

FLOOR MATTING.—The rapid progress made in the manufacture of this article is more and more noticeable each year, the export for 1894 amounting to over 277,000 rolls of 40 yards each, against 227,000 rolls in 1893. The chief demand comes from New York, and the quantity carried to that port by sailing vessels alone amounted to over 170,000 rolls, being an average of over 12,000 rolls per vessel, which shows what an important factor as regards freight this industry has assumed in the trade from this port. New designs of matting are being constantly invented by the Japanese, while the workmen are very ready to execute orders based on patterns received from foreign countries, so that the number of styles now available to the exporter is almost unlimited.

A return shows the export trade of Japan in several of the principal articles of Japan make. As there is in many cases a distinct tendency towards rapid increase, the matter concerns foreign manufacturers considerably. The custom-house statistics for 1894, from which the enclosed table has been compiled, disclose the following exports of Japanese-made manufacture to various foreign countries:—4,718,491 lb. of cotton yarn, valued at \$955,530; 546,091 hemp and cotton floor-cloths, valued at \$1,134,073; 34,861 hats and caps at an average cost of \$1 43c. each; 13,843,022 gross of matches, at 27.5c. per gross; 1,487,392 lb. of washing soap at 18.4c. per lb.; 18,460 pairs of boots and shoes, at an average of 75½c. per pair; 1,960,661 umbrellas of European shape, at an average cost of 33c. each; 2,062,697 bundles of straw plait, at a custom-house value of \$743,399.

BANKING FACILITIES.—In the report on the trade of 1893 it was stated that foreign banking arrangements were entirely insufficient. There is now every prospect of improvement, another institution, the Chartered Bank of India, Australia, and China having opened an agency under one of its own officials. In the interests of the steadily increasing importance of this district, destined to be a very large trading centre, it is, however, recognised as necessary that Kobe should, in its banking arrangements, be independent of other ports.

Boycotting continues to be practised, but with indifferent success, it is said. It is to be hoped that the unwisdom of such combinations will be speedily realised. Quite recently a Japanese was boycotted by a guild because he had sold goods to a firm against which, to quote the expression used by a Japanese newspaper containing this information, with full particulars and names, the association was "waging war."

The Custom House warehouse, shed, and pier accommodation, and the facilities for landing and embarking passengers continue to be in the same extremely unsatisfactory condition referred to in previous reports. It is, however, proper to state that this condition of things is not due to any indifference on the part of the authorities, a Bill for general harbour and wharf improvements having been recently thrown out by the Diet. The position is an exceedingly unfortunate one, it hampers trade very seriously, and affects Japanese to a far greater extent than foreigners.

PUBLIC WORKS.—The harbour improvement scheme is hanging fire for the present, but people continue sanguine that something will be done in that direction at no very great distance of time.

The electric railway, mooted some months ago, to run throughout the whole length of the city, is not making much progress, and the opposition it has encountered does not seem to lessen. The scheme for the removal of the Kobe station in order that the present site may be used for building purposes has been referred to a special committee; altogether the business is too large an

order to offer any reasonable prospects of present success.

Some progress has been made in regard to the Water-works; this is a matter of dire necessity for the 160,000 people residing in the city.

The works in connection with the proposed diversion of the wide but extremely shallow water-course between Kobe and Hiogo, and the scheme for the cutting of a canal through the south-east point off Hiogo, have not advanced beyond the preliminary steps referred to in the last report.

Great progress has been made with the Osaka Water-works, and it is expected that they will be opened towards the end of the year.

FREIGHT.—The period under review has not been marked by any great fluctuation in the rates of homeward freights, although the quantity of cargo shipped has largely increased. The war with China has induced an unusual demand for foreign steamers. Almost all the larger vessels owned by native steamship companies have been requisitioned by the Government for the transport of troops, and their places have been supplied by the charter of foreign ships. In addition, fourteen steamers have been purchased at this port, at an aggregate cost of \$1,341,000.

During the past ten years the total shipping of this place has increased four fold in tonnage, that of Yokohama has nearly doubled. The tonnage of British ships here is five-fold the amount of ten years ago, that of Yokohama is two and a half times more. The increase in German tonnage is considerable, so is that of French vessels. American shipping is again on the increase, though at one time much reduced, owing to transfer of mail line and steamers to Japanese.

Formerly the coaling of ships took place here, but of late years this work has been more and more generally done at Shimonoseki and Moji, until vessels have now entirely ceased to take coal here.

In connection with British interests generally, and those of shipping in particular, the two ominous signs of the future are that Japan coal is being used in large and increasing quantities, and that shipowners and directors of companies find it greatly to their advantage to have the periodical repairs and overhauling of ships' boilers and machinery carried out at one or other of the ports of Japan and China, owing to the high scale of wages which the British workman demands and insists on having. These are weighty words uttered by the Chairman of the China Mutual Steam Navigation Company.

THE SILVER QUESTION SOLVED.—While on financial matters, it is not altogether inappropriate to refer to what a writer in the *Nippon* (a Tokyo journal) says about the rehabilitation of silver. He urges the authorities to avail of the present humbled condition of China to make Japan chief of an Eastern Asia Silver Union. China is to be ordered to coin silver; this, it is calculated, would drain off at least 20,000,000 ounces from the market. Then the United States is to be called upon to restore the Silver Purchase Bill, and the writer further says that the Indian Government would readily join in the general scheme. Irrespective of the attitude of such petty countries as Singapore, Hongkong, Cochin-China, Java, Tongking, the Philippine Islands, Siam, and Korea, whose attitude, however, cannot be questioned, Japan, China, and India could amply control the whole matter.

If, therefore, a definite amount of silver were to be coined, as in the Latin Union, the annual amount required would be 59,000,000 ozs., and the fall in silver would thus be arrested, even before actual coinage commences, as the price of that article is apparently regulated by the demand in oriental countries. The United States having been induced to purchase silver, the annual demand would equal its production, and be as follows:—

	Ounces,
The Eastern Asia Union	59,000,000
Purchase by the United States.....	54,000,000
European countries	30,000,000
Other countries	10,000,000

Total.....153,000,000

Such are, briefly, the views of the anonymous Japanese financier for the solution of a question which is puzzling the whole world.

EMIGRATION of the lower classes, under Government supervision, continues to increase. Considerable batches of labourers are still being constantly sent to Hawaii. A scheme for sending trained young men to Siam is being matured. Guatemala is also stated to be a promising field. Then, too, the agent of an emigration society established at this port is leaving for North Borneo to inquire into matters, and, if possible, make necessary arrangements. The Fiji Islands scheme has not been a success, so far. In the near future the Brazils will in all probability be a great field for

emigrants. Canada and Australia have also, to some extent, been made use of as outlets for a portion of the labouring classes.

THE COTTON SPINNING INDUSTRY.

The increase in the leading industry in Japan has been extraordinary.

The first spinning mill was erected in 1863, and had 5,456 spindles. There were in Japan:—

	Mills.	Spindles.
At the end of 1883	16	43,700
At the end of 1888	24	88,140
On June 30th, 1892	35	324,800
On June 30th, 1893	37	345,470
On December 31st, 1894	47	—*

The 40 mills returned as being at work at the close of 1894 have 513,936 spindles going, and give employment to 29,455 female and 8,444 male operatives, working in day and night shifts, per month from 12 to 31 days of from 21 to 24 hours. The average wage of the male operative is c.17'61 and that of the female c.9'62. In 5 Osaka mills the lowest and highest wages paid were c.4 and c.55. This industry was during the latter half of 1894 in an unusually depressed condition. There has evidently been a great falling off in the profits of the various companies, and, taken as a whole, last year's proceeds of all the spinning mills were only one-half of those realised in 1893, when this industry enjoyed great prosperity.

In the report for 1893 mention was made of the care taken by the directors of one of the spinning mills of the girls in their employ, of their savings bank system, and of the gratis medical attendance furnished to the sick. It should now be placed on record that the Osaka Cotton Spinning Company deserves credit for being the first to start an educational system for its operatives. Rules were recently drawn up for the instruction of the hands in writing, reading, arithmetic, sewing, &c., and they have been handed in to the authorities for approval. It appears to be the intention to confine this privilege to operatives living at the premises of the company. It has also been decided to defray the funeral expenses of any deceased boarding operative, and to give a trifling gratuity to his relatives.

During the course of this year a branch of the Kanegafuchi Mills, with 50,000 spindles, is to be opened, and a rumour has been current for some time past that a new company is to be started in Osaka for the manufacture of certain higher counts not at present produced in Japan.

In last year's report reference was made to a combination entered into between the Cotton Spinner's Union and the Japan Mail Steamship Company for the purpose of carrying on the cotton trade with Bombay, the chief object being to obtain raw cotton at a cheaper rate of freight. The success of this enterprise, which took effect from November 1st 1893, is readily gauged by the fact that in 1894 that firm petitioned the Secretary of State for India against the Peninsular and Oriental Steam Navigation Company, who had previously been, and still are also running a regular line of steamers between Bombay and Japan. It is stated on excellent authority that some of the arguments used during negotiations, such as the plea that parties of a kindred race should join hands to the exclusion of Europeans, were quite in keeping with the sentiments and principles which dictated the appeal referred to above. It is an established fact that this combination, in itself a perfectly legitimate enterprise, has been anything but a success for some of the parties concerned. The Japanese soon discovered the little game of their would-be friends, and the latter found that running steamers did not agree with their bank account. The spinners, on the other hand, have been supplied with cotton under conditions far less favourable than those hitherto existing and by which they purchased cotton as and when required, instead of having as at present to pay for a whole cargo on arrival. Since the above was written the partnership with the enterprising Indian firm has come to an end, and the Japan Mail Steamship Company now run the necessary steamers without its assistance.

(TO BE CONTINUED.)

Here is a story by Tom Ochiltree, the famous Texan, of one of his recent ocean trips: "I was coming across, and a very good sort of a Britisher used to sit with me in the smoking-room. I tried all my best jokes on him, and he never cracked a smile. At last I got angry and I said: 'I don't think an Englishman could see a joke if you fired it at him out of a gun.' And then that blessed Englishman stood up on his hind legs and said: 'How can you fire a joke out of a gun?'"

A TRAGEDY ON THE "HANKOW."

TWENTY CENTS FOR A MAN'S LIFE.

Just after luncheon on Friday afternoon, between half-past one and two o'clock, Lee Fong, the chief saloon boy on the steamer *Hankow* (Captain Orr), now lying in Yokohama harbour, quarrelled with Chan Pat, the chief cook, over the exchange rate of an American gold dollar, lost by him at *fan-tan* gambling with the cook. The boy in the course of the dispute, which raged over only 20 cents, seized a knife and stabbed the cook in the calf of the leg; then the cook caught the knife and cut the boy a terrible gash on the outer side of the left thigh. So severe was the hemorrhage that within two minutes the boy was dead from exhaustion. The officers of the ship were on the spot as quickly as possible, but of course could do nothing to save the boy's life. On the facts being reported to H.B.M. Consulate, Mr. J. Carey Hall went off and conducted a Board of Trade enquiry into the circumstances. The evidence led was as follows:—

William Ehrhardt, First Officer of the *Hankow*, sworn, deposed—I first heard of a quarrel between the Chinese before lunch. I went to the boys' cabin and told them to keep quiet. They stopped quarrelling and I went to lunch. After lunch, about 2 o'clock, or a little before, I went along the alleyway and heard a shriek. Opening the door of the boys' cabin I found the chief cook and the chief saloon boy engaged in a struggle. The two were handling a knife between them. The saloon boy then spoke to me, saying that he had been killed—he was dying then. Both men were retaining hold of the knife. I went out of the room to get assistance, and then went back and separated the men. In the meantime, the saloon-boy was all but dead, only a few gasps being left in him as we took him out on deck. We tried to staunch the bleeding of the wound, but in vain. The knife I now produce was taken out of the chief cook's hands.

The weapon was an ordinary butcher's sheep-cleaning knife, and was stained with blood.

To the Consul—The affray took place in the boys' room. The cook had no right to be in the boys' room. The chief boy sleeps in the saloon, and the cook has a separate room, along the same alleyway. In quelling the row in the boys' room, before lunch I did not enter the room. There was squabbling going on and high voices were heard. I should think three at least were taking part in the quarrel then. I surmise that the cause of the quarrel was the usual one—a gambling dispute. I have had to stop the cook from gambling in the sailors' fore-castle: he was holding the bank then. This was four or five days ago. He was then gambling with the Chinese passengers. I know that gambling is common among the Chinese boys on board. I do not think the Chinese crew go in for it much, as they have not enough money. When I saw the men after lunch the saloon-boy was lying in a pool of blood. When the boy said that he was being killed, the cook called out, "He is killing me." I did not try to separate them until I obtained assistance, as the men looked dangerous.

Peter A. Miller, Second Officer of the *Hankow*, sworn, deposed—I was standing on the fore-deck some time between half-past one and two o'clock, when the Chief Officer requested me to at once give assistance in stopping a quarrel. I followed the Chief Officer at once, along the star-board alley-way, until I got to the Chinese boys' room, where I could see that a quarrel was going on. I immediately rushed in, and found the European donkey-man inside. I saw the Chinese cook and the first saloon boy lying in blood on the floor. At a hurried glance I saw that the first saloon boy had got the worst of the affray. On examining both of them (by eye-sight) as they lay upon the floor, I saw the handle of a knife sticking out of the cook's hand. Waiting an opportunity, I seized his wrist, and with my other hand wrenched the knife from him. The room being too small to allow me to see what injuries had been sustained, with the assistance of the third officer, I got the chief cook out on deck, and then the saloon boy. On taking the boy on the fore-deck, I looked to see where his wound was, and not finding it on the upper part of his body, I took the knife, which I kept possession of, and ripped up the left leg of his trousers, at once discovering the fatal wound. About a minute elapsed from the time that I saw the wound, until the man was dead. I was then sent ashore by the Chief Officer for assistance.

To the Consul—I surmise the cause of the quarrel was gambling. The boys generally gamble at *fan-tan*. I have seen the boys go down among the Chinese passengers, and I surmise it is for the purpose of gambling, though I have never actually seen them at it. When I went into the

room the cook was slightly leaning over the body of the first saloon-boy. The cook's hand was working underneath the body of the boy, and I now surmise that he was turning the knife in the wound. The boy was past speaking when I arrived: the cook may have said something, but of that I would not be certain. I saw some blood on each side of the cook's head. The donkeyman was in the room before I got there, and there were several Chinese boys in their bunks. I identify Loo Chun as being there.

Thomas Charles Thorp, Third Officer, sworn, deposed—I had just gone into my room after lunch, when I heard a scuffle through the bulk-head. I ran out on deck and round to the boys' room. I went into just behind the donkeyman. I found the cook and the chief saloon boy lying in a pool in blood, the cook having his hand on the handle of a knife. The boy was holding on to the cook's wrist by his right hand. The knife was sticking out at right angles to the boy's thigh, the cook was leaning over the boy's body. The boy said, in English, "This man stab me," and then the Second Officer entered and passed in front of me, so that for the moment I could not see further. The Chief Officer then ordered us to take the men out on deck: we did so, the cook being brought out first. On going back for the boy I found him lying flat on his side on the floor of the room. The donkeyman said, "He's dead." We lifted the boy and carried him out on deck. I could not identify any of the boys that were in the room at the time. I know nothing of the cause of the quarrel, and have never seen the two men together before.

Thomas Kiernan, the donkeyman, sworn, deposed—At twenty minutes to two o'clock I was in the mess-room having my dinner, when I heard a row. I said to the Chinese mess-room boy, "Whats' up, cards again?" He said, "Nothing, only a bit of a row." With that I heard a shriek. I jumped from the table and ran out. The boy ran before me, and when I got to the boys' door, the Chief Officer was just going in. I followed in and the first words the cook sang out were: "He killee me, he killee me." The Chief Officer turned out to go for more help. I saw a knife in the boy's hand, and the cook's hands were round the boy's wrist. I saw the blade of the knife at the end of the boy's sleeve. I directed Mr. Miller's attention to the knife when he came in the moment after, and he took the knife out of the three hands: I could not see which hand it was in. The men were sitting huddled close together when I first saw them, the boy being under, and falling to the deck with faintness. The men were close beside the bottom bunks. Blood was around them and all over the knife.

Loo Wah Kang, cautioned, said the quarrel between the cook and the saloon boy arose through gambling, the men disputing as to the rate of exchange of an American dollar. The saloon boy said, the exchange is \$1.80, and the cook said no, it is \$1.60. Witness was in the room when the fight occurred, lying in his bunk. He did not see the blow struck, but saw the two men grasping each other. He entered the room about a quarter to two o'clock that day, and found the cook and the boy squabbling. Witness went straight to his bunk and laid down. Both the men then called out for assistance, but witness did not see who possessed the knife or first used it. He never saw the saloon boy use a knife like that shown him. This knife belonged to the kitchen. The cook was in the habit of going into the boys' room for a chat. Fan-tan was sometimes played on board, and this quarrel arose out of it. The boy had lost the American dollar to the cook and the cook asked him to redeem it at the rate of \$1.80, but the boy was only willing to redeem it at \$1.60, so the dispute was between the difference in exchange.

Wong Ming, a mess-room boy, cautioned, deposed—While the men were quarrelling I was in the mess-room. I saw the fight. The cook and the boy were facing each other, and the dispute was about the exchange of an American dollar. The boy asked the cook to sell him the dollar back, or return him 20 cents, to make up the difference of exchange, which was fixed at the time of the gambling. The cook, in reply, said: I cannot do it, for the exchange was fixed at \$1.60; now you may find on our arrival at Yokohama the exchange should be \$1.80. You wish to redeem the dollar at \$1.60, but I cannot allow you; for instance, if the exchange at Yokohama is \$1.40, you will not make up the difference to me. Then the boy asked the cook to fight. The cook said that there was no use in fighting, and left the room with the intention of going ashore. Soon after he returned to the room and said that the boat-hire was too dear, the wind blowing so hard. Then the boy demanded the exchange of the dollar again, or else a challenge to fight. The cook

said: "If you went to fight, come out of the room, and fight on deck." Then the boy, leaving his seat, drew a knife and cut the cook on the leg. The cook then took the knife away from the boy and stabbed him with it on the leg. The boy then cried out for assistance and the other Chinese boys sent for the Chief Officer. Then the officers came into the room and the boy died. He was quite sure the boy struck the first blow. He did not see where the boy obtained the knife. The boy was sitting on his bunk when the cook entered the room. Witness did not know to whom the knife belonged. The cook was the first to get up from the bunk before the blow. He was stabbed in the calf of the right leg. The boy was stabbed on the outside of the left thigh. The cook got on to the boy while putting the knife into him.

Tang Wang Yeh, cautioned, deposed to hearing the sounds of the quarrel, but did not see the stabbing.

The inquiry was then adjourned till 10 o'clock on Saturday morning, for the production of Dr. Swann's testimony as to the cause of death.

The cook was then arrested and placed in custody.

James H. Swan, doctor of the *Hankow*, sworn, said:—I have examined the corpse of the deceased, Li Fong. The cause of death was hemorrhage from the femoral artery of the left leg, caused by a deep incised wound, about 4 inches long, extending from above downwards and inwards on the outside of the left thigh about the bottom of the upper third. I have seen the knife (produced). This is just such a knife as would have produced the wound. Death must have resulted within, at the outside, five minutes after the infliction of such a wound. I have examined and dressed the wound on the cook's leg. It is a clean incised wound, an about an inch long, in the calf of the leg, downwards and upwards, merely incising the muscle. It is not dangerous. It is a clean cut, such as would be inflicted by a knife.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, December 1.

The Sultan is still unyielding, and the position reveals a critical state of affairs.

["SPECIAL" TELEGRAM TO "JAPAN MAIL."]

Kobe, Dec. 2, 3.30 p.m.

Judgment has been delivered in H.B.M. Consular Court at Kobe, by Mr. Ensley, in the case brought by Etsu Genjiro, of Sakai-machi, against Messrs. Butterfield & Swire, for \$304.92, for the non-delivery of nine bales of cotton shipped at Shanghai per steamer *Dardanus* in March last. The petition alleged that 700 bales were shipped, and that only 691 bales were received. The defence was that only 691 bales were shipped. Judgment was for plaintiff, the value of the nine bales being computed at the market value prevailing in March last.

White to play and mate in two moves.

YOKOHAMA CHESS CLUB.

CHAMPIONSHIP.

The drawing for the December round is as under:—

Griffin versus Mendelson,
Wollheim versus McIlwraith,
Tennant a bye.

Y.C.C. CLUB TOURNAMENT.

A Handicap tournament starts this month. Entries to be in by the 16th. Play commences Thursday, 19th. Each player to contest two games with every competitor. All games to be finished by 29th February, 1896.

Four classes, with progressive odds as under:—
Scratch; P and move; P and two moves; Knight.

TOKIO CHESS CLUB TOURNAMENT.

This is getting down to narrow limits now; the leaders being Mason, Dim, Pownall, and Walz. The final duel will probably be between Mason and Walz some time before New Year.

Gunsberg writes as follows in the *St. James's Budget* of 4th October:—

THE ST. PETERSBURG MATCH TOURNAMENT.
PILLSBURY'S EARLY PLAY.

The St. Petersburg Chess Club have now issued the formal invitations to the first five prize winners at Hastings to contest the contemplated tournament at St. Petersburg in November. The proposal is that each player shall play four games

with every other, each man thus playing sixteen games in all. The club pays all expenses, and also offers to the players a remuneration in proportion to the games they win. Up to the present Steinitz is the only player who may be definitely relied on to keep Tschigorin company. Tarrasch has positively declared that he would not play, Lasker has not yet definitely accepted, and Pillsbury is very doubtful.

I came across a game played by Pillsbury when the latter was still comparatively unknown to fame, and could not have been more than twenty years of age. With much curiosity I played the game over to look for traces of coming greatness in this early effort, also to see to what extent his style of play had altered. I was much surprised at finding that the game was one which really might have been played at Hastings, and would have been considered a fine specimen of Pillsbury's style. This furnishes us with one more example of the fact often demonstrated, that the player is at his best in his first youth; his style is then formed, and all subsequent play and experience does not affect him to any great extent. He may acquire self-reliance, greater freedom from mistakes, more self-restraint, and greater powers of endurance both mentally and physically; but all this will not affect his style of play, and, in particular, his imaginative faculties will not benefit by experience—in fact, the reverse is likely to be the case. In the appended game Pillsbury adopts the safe queen's side opening, showing that even at that early stage this *début* was most suited to his style. He developed his pieces in a simple manner, but so effectively that he succeeded in making his opponent move his king. Having done that, he does not precipitate an attack, but continues the pressure on the queen's side, by playing 14—P to Q Kt 4, and 15—Q to R 4, &c., in the most approved Philistine fashion. He then plays a very fine move of 17—P to Q 5, and on his opponent being compelled to play P to K 4, he finishes the finely conceived attack in masterly manner, though assisted by a mistake on the part of his opponent, with a move of 18—Kt to R 4.

CHESS IN AMERICA.

(FROM THE "N. Y. TRIBUNE," NOV. 6.)

Pillsbury gave a most extraordinary performance of simultaneous play at the Franklin Chess Club, Philadelphia, on Wednesday evening. He played fifteen games of chess and seven games of checkers simultaneously, and finished all the games under four hours, with the following results:—

He won eleven games at chess, lost two to S. Warren Bampton and F. W. Doerr, and drew two with J. P. and M. Morgan respectively.

At checkers he won five games, he lost one to Mr. Finck and drew one with Mr. Gallagher.

Appended is a fine game, as contested on even terms between Pillsbury and the local player, Herm. G. Voight, at the Franklin Chess Club, Philadelphia, on Tuesday night:—

Following is the pretty position when Voight had to resign the game:

BLACK.—(VOIGHT).

WHITE.—(PILLSBURY).

This has been a bad week for Showalter. Of the three games played in his match with Lipschutz he lost two and drew one, and the present score in the match is 3 to 1 in favour of Lipschutz, one game being drawn.

Showalter, in speaking about the games played last week, had the following to say: In the third game I have given away a certain win by the offer to exchange queens in the first place, and my blindness in placing a rook in such a position as to lose this valuable piece. Had I played R to Q 6, instead of exchanging queens, my adversary would not have had a satisfactory answer at all. Of course, I am utterly disgusted with myself, and the less I say about it the better.

"Neither can I say much about the game played on Wednesday. Lipschutz selected the same defence which I used to play against him, 3...P—Q B 3. Contrary to usual play, I played 4 P—K 4 in order to get a quicker development of my forces. I did succeed in gaining time, but the wholesale exchange of pieces and an equally good position of pawns on either side had to lead to a draw.

"The fifth game, as you know, was conducted on similar lines to the third game. Lipschutz however, never gave me a chance of neutralizing the strong position of his passed pawn on the king's file by means of advancing my queen's and queen's bishop's pawns. He played this game wonderfully throughout, and he really deserved to have won the game. Following is the full score.

GAME No. 401.

FIFTH GAME—RUY LOPEZ.

METALS.

Market very quiet. Quotations nominally the same, with the exception of Wire Nails which have declined yet further.

	PER PIECE.
Flat Bars, 1 inch	\$3.25 to 3.30
Flat Bars, 1 1/2 inch	3.20 to 3.25
Round and square up to 1 inch	3.20 to 3.30
Iron Plates, assorted	3.50 to 3.65
Sheet Iron	4.30 to 4.50
Galvanized Iron sheets	9.00 to 9.50
Wire Nails, assorted	5.40 to 5.80
Iron Plates, per box	5.60 to 5.90
Pig Iron, No. 3	1.60 to 1.65

KEROSENE.

Prices are nominally unchanged, with no sellers. Prospective arrivals are very small, and the Baku fires or floods or both will stop shipments being made from Batoum for at least two months. Consequently buyers here must pay up if they want Oil.

American	Nom. \$1.40
Russian	Nom. 2.50
Langkat	Nom. 3.30

SUGAR.

Brown—The market continues its upward course; Manila sorts being especially strong. White Refined—Good trade and prices firm at quotations.

	PER PICUL.
Brown Takan	—
Brown Manila	\$4.80 to 5.25
Brown Daitong (New)	4.30 to 4.35
Brown Canton	4.20 to 4.75
White Java and Penang	6.90 to 7.10
White Refined	6.30 to 9.50

EXPORTS.

RAW SILK.

After a long period of inaction and increasing stocks, sellers have reduced prices to a point which has once more brought buyers into the market. Stock had grown to 19,000 piculs before the move began. Even now buying is by no means general; and if holders begin to fancy that they can raise their pretensions, the trade will stop again.

QUOTATIONS.—(NEW SILK.)

Reatures—Extra 9/11, 10/12 den.	Nom.
Reatures—Extra 13/15, 14/16 deniers	\$900 to 910

BISSET & Co.'s SHARE REPORT.

Yokohama, December 4th, 1895.

Hongkong Lands, we hear by wire, are wanted in Hongkong at \$68.50, and H. & K. Wharfs and Douglasses are offering at \$48.50 and \$55.50 respectively. With a firm offer, China Mutual Ordinary £5 paid up might be placed at that port to-day at £2.10, and Straits at Shanghai at \$25.75 for January delivery. These quotations show an improvement in the above stocks, the last quotations by wire for Hongkong Lands being \$68.50 sellers, Wharfs \$47.50 sellers, Douglasses \$51.50 sellers, and Straits \$25 nominal. Indo-Chinas have been placed in the Colony yesterday at \$56.75.

Club Hotels might be placed at \$60. Iron Works are quieter, and we now quote them \$130 ex div., steady: The Company paid yesterday an Interim dividend of 10 per cent. for the half year to 30th November, and the Club Hotel 3 per cent. Interim for the six months ended 30th September.

clique, or syndicate, but is absolutely free, independent,
and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing
Shipping, Trading, and Trust Companies, are fearlessly and
impartially criticised in "MONEY."

August 3, 1895.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health
for all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribu-
aries in Abyssinia," says—"I ordered the dragoman Mahomet
to inform the Fakir that I was a Doctor, and I had the best
medicines at the service of the sick, with advice gratis. In a
short time I had many applicants, to whom I served out a
quantity of Holloway's Pills. These are most useful to an ex-
plorer, as, possessing unmistakable purgative properties, they
create an undeniable effect upon the patient, which satisfies
them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations
of all kinds. It acts miraculously in healing ulcerations, curing
skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels
in China, published in 1871, says—"I had with me a quantity of
Holloway's Ointment. I gave some to the people, and nothing
could exceed their gratitude; and, in consequence, milk, fowls
butter, and horse feed poured in upon us, until at last a tea-
spoonful of Ointment was worth a fowl and any quantity of peas-
and the demand became so great that I was obliged to lock up
the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout
World. May 1st, 1890.

THE PROCEEDINGS

OF THE

IMPERIAL JAPANESE DIET

IN BOOK FORM.

THE "Proceedings" include EPITOMISED
DEBATES. Translations of the Bills dis-
cussed, Budgets, Speeches of the Ministers of
State in full, Questions put and the answers of
the Government, and the Legislative Work of
the Session.

PRICE \$1.

To be obtained at the Office of the *Japan*
Mail, No. 51, Main Street.

THAMES ELECTRIC & STEAM LAUNCH CO.

ELECTRIC LAUNCH "GLOW-WORM," 53ft. by 7ft. 3in.

Are prepared to Estimate and Furnish Drawings
and Specifications for Launches in Wood, Steel,
Delta Metal, or Composite, either with Steam or
Electric Power—Speed from 6 to 20 miles per hour;
—also Tugs, and Stern Wheelers, which, if required,
will be prepared and constructed in Sections.

Launches of specially Light Draught constructed
for Shallow Waters.

Electric and Steam Pinnaces for Harbour or
Ferry purposes.

Builders of Electric Charging Stations, Floating
or Stationary; and makers of all required fittings
and equipments.

A selection of Electric Launches always ready
for prompt delivery, of which particulars will be
forwarded on application to

W. S. SARGEANT, M.I.M.E.,

Manager.

TWICKENHAM, ENGLAND.

April 23rd, 1893.

MILKMAID

BRAND

CONDENSED MILK

The "Milkmaid" Brand is guaranteed to
contain all the cream of the original milk.
In the process of manufacture nothing but
water is removed, nothing but the best
refined sugar added.

Avoid low-priced brands from which the
cream has been abstracted, and ask for
the "Milkmaid" Brand, the best for all
purposes.

September 14th, 1895.

ASK FOR

LIEBIG COMPANY'S

And see that each Jar bears Justus von Liebig's
Signature in Blue Ink across the Label.

EXTRACT OF MEAT

FINEST AND CHEAPEST
MEAT-FLAVOURING
STOCK FOR SOUPS,
MADE DISHES AND SAUCES.

Invaluable as an Efficient
Tonic in all cases of
Weakness.

Keeps good in the hottest
Climates, and for any
length of time.

To be had of all Storekeepers and Dealers.

The Company's NEW COOKERY BOOK sent free on application to

LIEBIG'S EXTRACT OF MEAT CO., Ltd., 9, Fenchurch Avenue, London, England.

Cookery Books on Application to Office of this Paper.

June 14th, 1895.

YOKOHAMA: SATURDAY, DEC. 14TH, 1895.

BIRTH.

At Kobe, on the 9th inst., the wife of the Rev. C. B. MOSLEY of a daughter.

MARRIAGE.

At Christ Church, Yokohama, by the Rev. E. Champneys Irwine, M.A., WILLIAM COPE, of Shanghai, to EMILY MARY, youngest daughter of the late J. Colgan, of Shanghai.

SUMMARY OF NEWS.

THE Autumn athletic meeting of the Y. C. and A. C. passed off successfully on Saturday last.

A SUBSCRIPTION list has been opened for the widows and orphans of the men lost by the *Edgar* accident.

A HIGHLY entertaining dramatic performance

by local amateurs was given on Thursday evening in aid of the funds of the Amateur Theatrical Association.

A PAPER manufacturing company is being promoted at Kumamoto with a capital of yen 250,000.

THE resignation of Mr. Hasegawa Naonori, a member of the House of Peers, was accepted on the 7th inst.

YINGKOW was transferred by the Japanese Military officers to the Chinese commission a few days ago.

H.I.H. PRINCE KOMATSU proceeded to the Palace on the 6th inst. and had an interview with H.I.M. the Emperor.

MR. YOSHIDA YOSAKU, Secretary of the Japanese Legation in Berlin, was ordered on the 7th inst. to return home.

THE Photographic Society exhibited on Friday evening a number of magnificent lantern slides from the United States.

COUNT OKUMA, who has been confined to his residence through an attack of influenza, is now quite restored in health.

THE Yokohama residents propose to erect a monument to the memory of the Yokohama soldiers killed in the late war.

A DRAMATIC performance in aid of charity is announced to take place at the Teikoku Hotel on Thursday and Friday next.

THE work of doubling the Tokaido Railway will be divided into sections, and will be given to different contractors through public tender.

THE Okayama Radicals have passed a resolution accepting the *Yiyu to* manifesto relative to the coalition between the Cabinet and the Party.

INFORMATION has been received here that the steamer *Strathnevis*, long over due from Tacoma, has lost her propeller and is making for her port of departure.

THE preliminary examination of Lee Fong, a boy belonging to the British steamer *Hankow*, for the murder of Chan Fat, the cook, took place on Friday morning.

It is stated that H.I.M. the Emperor has decided to visit the Yasukuni Shrine, Kudan, Tokyo, on the 17th inst., and H.I.M. the Empress the following day.

H.I.H. PRINCE KANIN has accepted the post of Superintendent of the Chigaku Kyokai, which position has been vacated through the death of H.I.H. Prince Kitashirakawa.

MARQUIS ITO is on the fair way to recovery, and is expected to return to the capital in two or three days. It is said that the Marquis is now determined to retain his present position.

THE Japanese war-ships now at Yokosuka, will assemble at Shinagawa during the grand festival of the Yasukuni Shrine at Kudan, Tokyo, and the seamen will attend the ceremony.

THE Authorities propose to confer decorations on the Shinto and Buddhist priests who accompanied the Japanese forces during the late war and rendered valuable services in taking care of the remains of soldiers.

MR. KATO JIKO, a Buddhist priest who accompanied the Imperial Guards to Formosa, has applied to the Imperial Household Department for permission to erect a bronze statue of the

late H.I.H. Prince Kitashirakawa either at Uyeno or at Kudan. It is stated that his request will be accepted.

THE new buildings of the Tokyo Club, which are now being constructed on the site of the late City Office, will be completed in March next, and the completion of the work will be celebrated during the flower season.

It is stated that a Chinaman who decamped with yen 100,000 belonging to a Netherlands firm at Singapore, has arrived in Yokohama, and the Japanese police have been asked to arrest the man.

VISCOUNT NOMURA, Minister of Home Affairs, gave a banquet on the 6th inst. at his official residence to members of the Public Works Council. The series of meetings of the Council concluded the same day.

It is said that a leading official and an expert of the Department of Agriculture and Commerce will be sent to England to purchase machinery, if a bill for the establishment of a steel foundry passes the Diet.

A SPECIAL general meeting of the Kawagoye Railway Co. took place on the 9th instant, at which it was decided to extend the company's line from Kawagoye to Tokyo, and to raise yen 1,460,000 for the expenses of the additional work.

THEIR Imperial Majesties the Emperor and Empress have been pleased to grant yen 350 towards the relief of the sufferers through the great conflagration that occurred at Unimura, Kita-takagi District, Nagasaki Prefecture, on November 11th. Their Majesties have also granted yen 200 to the Hogoku Gikai, of Kobe, an orphanage and free medical institution for the poor.

THE first graduation ceremony of the Sanitary School, Tokyo, established by the Japan Sanitary Association, took place on the 9th inst., at which certificates were presented to thirty-nine graduates. During the course of the proceedings a congratulatory address was read by Count Hijikata, Minister of the Imperial Household, and Mr. Matsuoka, Vice-Minister of Home Affairs, and Mr. Nagayo, Chief of the Central Sanitary Board, also spoke.

A GARDEN party was given at the residence of Prince Tokugawa at Sendagaya, Tokyo, on the 8th inst. to a large number of military and naval officers, who formerly belonged to the Bakufu. Among those present were Viscount Enomoto, Vice-Admiral Baron Akamatsu, and Major-General Baron Kuroda and Yabuki. Prince Tokugawa first gave an address of welcome, to which Major-General Baron Kuroda replied on behalf of the other guests.

THERE is not much to be said about the Import trade, the market being more or less disorganised by the fall in exchange, this applying in particular to Textiles and Metals. In Kerosene there is nothing doing, as holders are firmer than ever, and from present appearances Oil is likely to be dearer before it is cheaper. The Sugar market is firm, and all sorts are well held, buyers offering for considerable parcels at a slight reduction on present rates, but the concession is not forthcoming. A moderate business was being done in Silk, but as exchange declined holders raised their prices, with the result that transactions hung fire, and then rates became nominal through lack of business. No change in the Waste Silk trade. There is nothing of interest to report in the Tea trade, and only a dribble of business is now done. Exchange fell day after day, but rates have risen again $\frac{1}{2}$ and are now firm.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The metropolitan journals are gradually settling down to the belief that Marquis Ito has consented to reconsider his intended resignation, and that he will remain in office at least until the conclusion of the coming session of the Diet. It is expected that the Premier will return to Tokyo about the 20th instant. Some curiosity was caused during the week by a rumour that Marquis Saigo had tendered his resignation. That the report was entirely without foundation has already been stated in these columns.

Will the present alliance between the Cabinet and the Liberal Party lead to the inauguration of a system of Government by Party? That very interesting question is apparently considered difficult to answer. The Liberals reply in the affirmative. Their belief constitutes, indeed, one of the principal topics in the speeches of their leaders and in the editorials of their organs. But a section of the Opposition journals affect an attitude of contemptuous scepticism. It being the cue with these journals to represent the alliance as an unconditional surrender of the Liberal Party to the clan statesmen, they cannot consistently express any hope that what they call an "ignominious capitulation" will prelude what they have always called an immense reform. None the less, the general tone of the Opposition papers indicates belief that the inevitable outcome of this open coalition between the Cabinet and the Liberal Party will be the inauguration of a system of responsible Cabinets. In that sense we interpret an article on the subject in Sunday's issue of the *Mainichi Shimbun*. The Progressionist organ discusses the different nature of the bases on which a clan Government and a parliamentary Government rest. What is the distinctive characteristic of a clan Government? Does it consist in the personality of the men composing the Cabinet? Is it a clan Government because men of certain clans occupy Ministerial posts? These questions are answered in the negative. The term "clan" attaches to a Government, not because its members belong to certain clans, but simply because it derives support from clan elements. Thus, even if the present Cabinet contained no Choshu or Satsuma representative, it would still be a clan Government so long as its members owed their positions to the aid of clan influences. On the other hand, a Cabinet may consist entirely of Choshu and Satsuma men and yet be a constitutional Government, if these statesmen depend upon the support, not of clan elements, but of the whole people. "Consequently, if the present Cabinet resigned and if Marquis Ito still enjoyed the confidence of the people, there would be nothing wrong in his again returning to office. Or if Count Kuroda, for instance, enjoyed the confidence of the country, he ought to form a Cabinet. A Cabinet organized in this manner should no longer be denounced as a clan Government, even if its members belonged to some of the powerful clans. It is our great political object to introduce a system of responsible cabinets and thereby to secure the perfection of the constitutional system. We count it a matter of perfect indifference who may occupy official positions, if only clan influence be swept away, and the Cabinet be made to stand upon the support of the people in general." Reading between these lines, it seems plain that the *Mainichi* anticipates the day when its Party will find themselves hand in hand with a group of statesmen whom that journal and others of the same class have been in the habit of attacking as *Hanbatsu seijika*.

There is an impression in certain quarters that the majority of the so-called clan statesmen are in a state of indecision as to the wisdom or expediency of introducing a system of Party Government. These statesmen are assured by

the *Fiji Shimpō* that no danger need be apprehended in taking such a step. By the late war the younger generation proved its capacity for conducting a campaign according to modern principles. By analogy, it may be supposed that the younger generation is equally competent to undertake the political business of the country. The political education of young Japan has been going on without interruption during the past twenty years or more. The statesmen of the elder generation may think that the younger politicians are inexperienced. But the latter are already past forty, and are in the prime of life, apparently fit for any post of responsibility. In respect of age and experience they are fully qualified to take part in the Government of the country. To withhold from them any longer the prize for which they have struggled during so many years, the prize that they are already entitled to receive, would be an act of gross injustice and might even be attended with serious consequences. Moreover, even if the gate be opened for them, there is in the *Fiji's* opinion, no danger of their completely dislodging their elders from the sphere of public trust. The only result of introducing a system of Party Government would be to divide the elder statesmen into two hostile camps, and to assure to them, for some years to come, the direction of State affairs in common with their younger followers. The *Fiji* strongly urges the members of the present Cabinet, now that they have obtained the support of the Liberal Party, to conduct themselves exactly as English statesmen would do under similar circumstances. If they fail to obtain a working majority in the next session of the Diet, they should appeal to the country, and in the event of the verdict of the constituencies proving unfavourable, they ought to resign in favour of their opponents. Such is the only right and logical course of action open to them.

The report that the Imperial Government has made a declaration to the foreign Powers of its willingness to take concerted action with them in regard to the Korean question, has evoked strong protest from the metropolitan press. We have already noticed that a violent article on this subject brought the *Nippon* under the ban of suspension. Other papers are discussing the question in an equally angry and excited tone. The voice of dissatisfaction is swelled even by the *Fiji Shimpō*. In obvious allusion to a recent article on this subject in the *Nichi Nichi*—reproduced in these columns at the time—the *Fiji* observes that, of late, some writers have begun to advocate the adjustment of the Korean question in concert with a neighbouring Power. It is not altogether unreasonable, that the recent turn of events in the peninsula should have prompted a wish for a speedy settlement of the problem. But to deviate from the course hitherto pursued by this country by admitting any other Power to a share in the work of educating and protecting Korea, would be, in the *Fiji's* opinion, extremely rash and unwise. Like a skilful nurseryman who knows how to wait for the growth of his trees with patience and perseverance, Japan should never be in a hurry about the responsible task she has assumed in Korea. Japanese statesmen should look at what England is doing in Egypt. Notwithstanding the constant and provoking opposition of her neighbour across the Channel, England goes on performing her work in Egypt steadily and patiently, paying no attention to what the French are saying or doing about the matter. Whatever pressure France may bring to bear upon her, England never declares to any other Power her willingness to share the duty of guiding Egypt. Such, in the *Fiji's* opinion, should be the policy of the Japanese Government in Korea. Having taken Korea out of the hands of her former guardian, Japan is bound by all the principles of justice and humanity to assume the guidance and education of her ward. The task may involve expense and trouble, but in any event, Japan, for the sake of her dignity, if nothing else, ought never to abandon Korea to her fate.

The *KoKumin* discusses the subject in a lengthy

article. It quotes the Declaration of War, and points out that Japan's object as stated in that document being to undertake the guidance and regeneration of Korea single-hand, she would be abandoning her original position should she now intimate to any other Power her readiness to take concerted action about the settlement of the Korean question. If it was Japan's object to settle the question in concert with other countries, why were not steps taken to make a communication in that sense to the other Powers either at the commencement of the war or upon the conclusion of the Shimonoseki Treaty? Whatever may be the consequences of the step, Japan ought to stick to the course originally decided upon. To abandon it at the present moment, is a step that no Government having the dignity of the country at heart could take, consequently, in spite of some rumours, our contemporary can not bring itself to believe that the object for which so much precious blood and treasure have been expended is to be given up by the Government.

The *Kokkai* acknowledges that when the interests of the country require it, a policy once decided upon may be changed or abandoned. But it cannot believe that her interests require Japan to give up her original policy of undertaking the regeneration of Korea on her own responsibility, in favour of a policy based on joint action with other Powers. Report, however, alleges that the Government has decided upon such a change of policy. The Government must have good reason for taking so important a step, but the *Kokkai* fails to discover it. Our contemporary refrains from censuring the Government in any decided manner, but should it turn out that this grave step has been taken for no adequate cause, the Tokyo journal promises that the public will not spare the Cabinet.

The dissolution of the Municipal Council of Tokyo has attracted a great deal of attention. The *Nichi Nichi* strongly criticises the childish conduct of the former Municipal Council in connection with the iron-pipes case. If anybody be blameable, it is certainly the Municipal Council which, in utter disregard of sense and experience, approved the contract with the Iron Foundry Company; which further, distrusting the Aldermen, created the standing Waterworks Committee; and which repeatedly granted the prayers of the Company for modifications of the contract, thereby enabling it to carry on its fraudulent practices. Our contemporary does not say that Mayor Miura has been entirely free from neglect of duty. But if he is blameworthy, official discipline requires that he should be properly dealt with by his superiors. He is not free to leave office. The *Nichi Nichi* thinks that men like Viscount Tani and Mr. Tomita, who are exerting themselves strenuously to compel Mr. Miura to resign, would not have conducted themselves, under the circumstances, more prudently than the object of their attack.

The Opposition press urges the citizens to return members such as will uphold the course taken by the last Council and pass another vote of want of confidence in Major Miura. These journals also seize the opportunity to discuss the question of abolishing the exceptional system of municipal government operative in the case of the three cities of Tokyo, Osaka, and Kyoto. While in all other municipalities the mayors are elected by the citizens, in these three cities the office of mayor is combined with that of Governor, and the Governor is appointed by the Government. This state of affairs has frequently been the subject of unfavourable comment, but the Opposition papers now write as though the subject is to be brought up for discussion in the coming session of the Diet.

The settlement of Formosa, the Nippon Yusen Kaisha's decision to open a line of steamers to Europe, the development of Hokkaido, the question of taxation, and the extension of railways, are the other topics discussed by the press during the week.

EDUCATIONAL ITEMS.

PRINCE BISMARCK AND MADAGASCAR.

IN a recent number of the *Berliner Politische Korrespondenz* we find the following account of Madagascar, including an amusing statement of Prince Bismarck's. The *Korrespondenz* begins by saying that, when, at the close of last year, the French were preparing for a campaign in Madagascar, a diplomat of great power, who was not particularly well disposed towards France, said, at a dinner in Berlin, that this war would probably cost the French nation a milliard francs to begin with. This prediction was perhaps no exaggeration. For with the occupation of Antananarivo the conflict will scarcely be at an end, but is likely to be followed by a guerilla war with the mountain tribes which may last for years. At all events, it will take a long time before France can peaceably enjoy the possession of this fruitful and wealthy island. For two hundred and fifty years France has, off and on, endeavoured to get possession of the island. Already at the time of Henry IV. and Richelieu (1642) Madagascar was for the first time annexed by France. After numerous changes, and after it had been for a time possessed by the English, a treaty of protection was finally, in 1815, consummated, which France is now endeavouring to uphold with her arms. The fact that France allowed tens and hundreds of years to pass by before she seriously asserted her claims, has naturally attracted the attention of other powers to the Hovas island. Prince Bismarck, too, had once thought on a distant possibility of making this island a German possession, although the subject may never have been a question of actual consideration. An audacious statesman, with the far-sightedness of a Bismarck, will at times allow his ideasto scale regions closed to the eyes of ordinary mortals. It was about a year and a half after the old Chancellor had retired into private life, when two well-known African explorers, of whom one to-day occupies a high position in the Colonial Office, were guests at Friedrichsruhe. After dinner, and after the Prince had lighted his long pipe, the conversation turned on the future of our colonies, especially in East Africa; the probable consequences of the German-English treaty which Caprivi had just concluded, in which we recovered Heligoland as our reward for Zanzibar; especially was the question discussed as to the best means and ways to make good the probable loss, for us, in East Africa which would follow the German withdrawal from Zanzibar. In this connection the old Chancellor developed an idea which was as remarkable as it was genial, and was listened to with intense interest. He said that the thought had frequently occurred to him that East Africa should not for ever be retained as a German possession, but rather as an object with which Germany might some day do a good business. He had come upon this thought because, in the dividing up of Africa, we had really come too late, and consequently had obtained only a few of the least desirable pieces, the utilization of which was all the more difficult on account of our ill-formed boundaries and the envy of our neighbours. His idea of a German colonial empire, the Prince continued, would be the possession of a land where we Germans could be all by ourselves. Such an ideal land was Madagascar. Here, of course, France was heavily engaged, but it would not be beyond the power of wise statesmanship to induce France to relinquish her claims on Madagascar in favour of Germany. This would have to be done by far reaching diplomatic action, that would at the same time favourably influence the European relation of both States. Upon being questioned in what way this could be accomplished, the Prince replied, we would let England have the whole of East Africa, for which she would have to make some concessions to France in Egypt. The English would be all the more ready to do this for they know that in the course of time this will have to be done anyway, and there is no way of getting around it. In addition to this valuable service we might

grant the French a slight boundary regulation in Lorraine which would silence the screamers on the Seine and would reasonably satisfy the national pride of our Western neighbours. In return France would have to relinquish all her claims in Madagascar, to which England would give her consent. Four years have passed since the old Chancellor delivered this piece of phantasm to his guests, a project which is in keeping with the character of the genial old statesman. Laughingly the Prince added at the time, that he would, of course, not have expressed this thought, not even in such a confidential circle, were there the least prospect of its realization; for himself there was no further chance in this respect, and even the finest projects may go to water. Now, after France has been engaged in a colonial war in Madagascar, the end of the song will, of course, be that Madagascar will remain French.

THE NEW ORIENTAL BANK LIQUIDATION.

THE Report of the Liquidator for the third year, ending June 22, 1895, states:—The cash at close of last account was £118,565, which has been augmented by collections, realisations, and receipts amounting to £214,876 12s. 8d. The amount, £333,442, as to the principal part, has been applied thus:—Secured creditors paid in full, £12; unsecured creditors, first three dividends, £12,094; do., fourth dividend, £201,567; and other amounts making £318,130. The difference, £15,312, is accounted for by various payments including Penang tramways, £54. The principal transactions carried out during the year have been the re-arrangement of the debt of the Oriental Estates Company (Limited), and the agreement with the Bank of Mauritius, which included first an agreement for subscribing £50,000 of capital to that bank, without which support on the part of the liquidation the bank would not have been formed. Claims compromised.—(1) Hongkong Lease: This was the subject of legal proceedings, a claim of \$7,482 being formulated, and ultimately compromised by a payment of \$6,500 under legal advice. (2) Calls on shares in Tanjong Pagar Land Company, Singapore: This was an onerous security held by the bank on which a liability of \$7,000 had arisen, which was got rid of by a payment of \$2,500 and \$288 for solicitors' costs. All compromises, whether with creditors, receive the attention and require the sanction of the judge. Penang Tramways: The payment shown is connected with the winding-up of the working account to date of sale. Expenses of Liquidation: Total, £15,780, reduced by sundry repayments £15,659 5s. 9d. Dividends: The payment of another dividend must await the realisation of a holding of £150,000 Six per Cent. Mortgage Debentures of the Oriental Estates Company (Limited). The actual documents are not yet created, as the care of the judge required that the mortgage deed should be placed before him for sanction, and this is not yet done; but it is anticipated that all causes of delay in this matter will speedily be removed and the bonds issued to the public. Upon the whole the collection of debts in Australia, Japan, and elsewhere in the East has been slow and unsatisfactory, and the latest information is far from encouraging the hope of better things.—*L. & C. Express.*

ASCENT OF FUJI IN THE SNOW.

It has already been noticed that Mr. Nonaka, a member of the Meteorological Society of Tokyo, is conducting meteorological observations on the top of Fuji-san, intending to stay there till next summer. After his ascent about two months ago, he was joined by his wife. The results of his observations are looked forward to with a great deal of interest by scientific men, while the idea of passing the winter on the summit of the highest peak of the highest mountain in Japan has appealed so strongly to the imagination of the public in general, that parties are being organized to visit the bold meteorologist and his wife during the cold season. The first party, consisting of Police Sergeant Tsukushi, of Okuriya, in the Prefecture of Shizuoka,

and two others, attempted the ascent on the 30th ultimo, with the assistance of experienced guides. They found the mountain side entirely covered with frozen snow from the third station upward. Thence their progress was extremely difficult. On that day, they succeeded in struggling as far as the sixth station. The following morning, they resumed their arduous journey, but found it impossible to proceed any farther without special equipment. So they had to give up the attempt and return. Profiting by the experience of these persons, another party have made thorough preparations for a second attempt. They are to commence the ascent on the 10th instant, and they invite any friends of Mr. and Mrs. Nonaka that may desire to send letters, to post them to the care of Mr. Sato Yoheiji, Takigawara, Nakabata, Tamahomura, Sunto-gun, Shizuoka, before the 10th instant. It is also reported that Professor Wada, of the Tokyo Meteorological Observatory, intends to pay a visit to Mr. Nonaka on Fuji at the end of the present month.

LLOYD'S REGISTER OF SHIPPING.

FROM the Returns compiled by Lloyd's Register of Shipping, it appears that, excluding warships, there were 356 vessels of 716,575 tons gross under construction in the United Kingdom at the close of the quarter ended 30th September, 1895, the present figures exceeding those reported twelve months ago by about 63,000 tons. As compared with last quarter, the steam tonnage in hand has increased by 16,000 tons, while a reduction of 7,000 tons has occurred in sailing tonnage. Of the other vessels under construction in the United Kingdom at the end of September, 284 of 581,539 tons were under supervision of the Surveyors of Lloyd's Register with a view to classification by the Society. In addition, 24 vessels of 74,981 tons were building abroad with a view to classification. The total tonnage "preparing" (*i.e.* ordered, but not commenced), reached nearly the same level as in June, and was in fact equal to the average of the last five quarters. From the statement of war vessels under construction at private and at Royal dockyards it appears that there are 52 boats of 224,230 tons displacement being built in Great Britain.

THE "EDGAR" DISASTER.

SAYS the *Nagasaki Express*:—From details given by some of the ship's company of H. M. S. *Edgar* we learn that the particulars of the late distressing accident, as given in our Chemulpo correspondent's letter to the *Rising Sun*, were slightly inaccurate; but of course nothing further can be divulged till after the Court of Enquiry has been held. There were 71 men in the boat, instead of 74, as previously stated, and no machine guns were taken by her. The boat was a sailing pinnace, carrying eighteen oars, and she simply sailed into the heavy seas and sank. A funeral service was held on board the *Edgar* at Chemulpo on Sunday, November 17th, when the bodies of those drowned were solemnly committed to the deep with full naval honours. The French, Russian, and American men-of-war all sent representatives to this service to show their sympathy. A subscription has been started on behalf of the widows and orphans of the unfortunate men, and £304 8s. 8d. has already been received. Yen 600 of this amount was collected on board the U.S.S. *Yorktown* alone.

NAVAL NOTES.

FROM the *China Mail* we gather that H.M.S. *Daphne* went into dock at Kowloon on Nov. 28th. The *Plover* went to Canton on the 29th to take the place of the *Pigmy*, which is to be dismantled at Hongkong. Previous to paying off, the *Pigmy* went out for a full speed trial. The 1st Lieutenant of the *Victor Emanuel*, Mr. B. C. Barber, has been appointed to command the *Plover* temporarily, in lieu of Lieut.-Commander the Hon. F. C. S. Addington, who left for England on Nov. 24th in the French mail steamer. H.M.S. *Caroline* has gone to Nagasaki, where a Court of Enquiry will be held into the cause of the *Edgar* disaster, after which the

Caroline will return to Hongkong, calling in at Foochow to bring down the *Tweed* under escort. The new storeship *Humber* passed the Suez Canal on the 22nd ult.

JAPANESE IN HAWAII.

THE Planters' Labour and Supply Association of Hawaii recently held an annual general meeting when statistical reports regarding the labourers engaged on the islands were received. The following is the census of labourers that was given:—

Portuguese (males), Oct. 9, '94	4,700
Arrivals Oct. '94 to Nov. 19, '95 ..	342
Estimated Portuguese population...	5,042
Japanese (males) Oct. 19, '94.....	21,876
Arrivals Oct. 19, '94, to Nov. 19, '95	2,307
Departures	1,319
Total Japanese	22,864
Chinese Oct. 19, '94.....	14,114
Arrivals to Nov. 19, '95	3,216
Departures.....	1,628
Total Chinese.....	15,702

These figures, it is reported, embrace all classes and take no account of mortality, hence they cannot be taken as exact. It is apparent, however, that there are a number not actively employed. Many of the Chinese and Japanese are employed in domestic service and on rice plantations. From particulars supplied by managers of all sugar plantations and of the principal coffee plantations the following figures, showing the nationality of the field labourers thereon employed, have been compiled:—

	Men.	Women.	Children.	Total.
Hawaiians ...	1,591	15	0	1,606
Portuguese ...	2,046	206	326	2,578
Chinese	4,077	3	0	4,080
Japanese	10,872	969	0	11,841
Others	379	0	0	379
Totals ...	18,965	1,193	326	20,484

Of these labourers there are under contract:—

	Men.	Women.	Total.
Hawaiians.....	594	0	594
Portuguese	439	49	488
Chinese	993	—	993
Japanese	6,675	664	7,339
Others	107	—	107
Totals.....	8,808	713	9,521

Not under contract:—

	Men.	Women.	Children.	Total.
Hawaiians ...	997	15	0	1,012
Portuguese ...	1,607	157	326	2,090
Chinese.....	3,084	3	—	3,087
Japanese	4,197	305	—	4,502
Others	272	—	—	272

Totals ... 10,157 ... 480 ... 326 ... 10,963
Comparing these figures with last year, remarks the writer, the report shows that the total number of male labourers now on sugar plantations is 129 above what it was in October, 1894; that there are 29 more contract labourers and about 229 more free labourers. The figures also show that of the three nationalities upon which the planters depend for field labour, there are in the country about 3,000 Portuguese, about 10,000 Japanese, and about 11,600 Chinese engaged in industries and occupations other than sugar cultivation. Particulars obtained from thirty-four coffee plantations show that this industry employs 446 labourers as follows:—Hawaiians 25, Japanese 399, Chinese 11, Portuguese 7, others 4. The desertions have been about 450, 90 per cent. of which were among the Japanese.

MARQUIS ITO.

MARQUIS ITO, we are informed, has nearly recovered from his ailment, catarrh of the throat, which was caused by influenza. It has been stated in some papers that His Excellency is expected in Tokyo in a few days. According to our information, that report seems to be unfounded, if being understood that the Marquis will remain at Oiso for some time longer. Pending his return, no definite announcement can

be made on the subject of his intended resignation. But, so far as we know, the threatened crisis, if not actually averted, is at any rate very likely to be averted.

DECORATIONS.

In recognition of distinguished services rendered during the late war, H.I.H. Prince Fushimi has received a decoration of the Third Class of the Order of the Golden Kite, with an annual pension of yen 700. H.I.H. Princes Arisugawa and Kanin have been decorated with the Fourth Class of the same Order, and receive an annual pension of yen 500 each. T.I.H. Princes Komatsu Yorihito and Yamashina Kikumaro received the Fifth Class of the same Order with an annual pension of yen 300 each.

BURNT AT SEA.

It is now definitely known that the ship burnt at sea, reported previously from Singapore, is the *Avoca* of London, Official No. 91,888, of 1,625 tons, built at Greenock in 1885. The nineteen souls missing are the captain, his wife, and seventeen sailors in one of the ship's boats. One boat, containing ten men, reached Emma Harbour, Padang, on the 9th instant.

MARQUIS SAIGO.

THE Tokyo News Agency reports that Marquis Saigo, Minister of the Navy, sent in his resignation two or three days ago. It is stated that Governor-General Count Kabayama, of Formosa, will be appointed his successor, his place being given to Vice-Admiral Viscount Niire.

THE GERMAN-LLOYD'S NEW BOATS.

THE *China Mail* says:—It is stated that the Fairfield Shipbuilding Company has secured the contract for the building of two large German-Lloyd steamers, to be of greater dimensions than the *Campania* or *Lucania*.

SHIPPING AT WOOSUNG.

THERE were no fewer than nineteen vessels at Woosung on the afternoon of the 27th November, sixteen of them being at the anchorage and the others outside the Woosung Spit Buoy.

THE INTERPORT SHOOTING MATCH.

News has reached Shanghai that Singapore made 934 in the Interport Rifle match, against Shanghai's 903, and Hongkong's 897.

A DISMASTED SHIP.

News reached Shanghai that the *Lillian J. Robbins* has been dismasted off Cape St. James, and towed into Saigon. Her repairs will take some months to effect.

H.B.M. COURT VACATION.

THE winter vacation of H.B.M. Court for Japan begins on December 23rd and ends on January 4th. Police and summary cases will be heard during the forenoons within this period.

THE NIPPON YUSEN KAISHA.

It having been decided at the recent general meeting of the shareholders to open a line to Europe, the Nippon Yusen Kaisha has just despatched a commission westward to make the necessary investigations preparatory to the enterprise. The commission consists of Mr. A. Macmillan, and Mr. Z. Ogawa, hitherto Manager of the Company's branch office at Kobe. They left by the *China* which sailed for America on the 7th inst. It is further reported that Mr. Macmillan is charged with placing orders in London for the construction of six steamers, 5,000 to 6,000 tons each, to be employed on the new line. Mr. Ogawa's place at Kobe has been taken by Mr. S. Yoshitake, hitherto Manager of the branch office at this port, who is in turn succeeded by Mr. T. Hayashi, an assistant-manager of the head-office in Tokyo. Mr. Shoda Heigoro, a director, will shortly proceed to Europe on the Company's business. Messrs. Macmillan and Ogawa were entertained at a farewell dinner by Mr. Kondo, now President of the Company, at the Tokyo Club, on the 5th instant.

THE NATIONAL UNIONISTS.

According to the *Yomiuri Shimbun*, a journal whose political proclivities render it unlikely to misrepresent the attitude of the National Unionists in a sense favourable to the Government, that Party has concluded, and will soon announce its conclusion in a manifesto, that while the Cabinet's action in respect of Liaoting and Korean affairs must be considered to have been dictated by the knowledge in possession of the officials concerned, without full access to which knowledge the public cannot pass intelligent judgment, the present is certainly not a time for disputes between the Government and the people, and it therefore behoves all patriotic politicians to support the Cabinet as far as their principles permit. This somewhat guarded utterance may be interpreted, we presume, in the sense that the National Unionists will vote with the Liberals on the side of the Cabinet in the approaching session of the Diet, thus securing to the Government an overwhelming majority.

DINNER AND SOIRÉE AT THE RUSSIAN LEGATION.

His Excellency the Russian Representative entertained at dinner on Monday evening a large party, consisting chiefly of members of the Foreign Corps Diplomatique and officers from the Russian and French ships-of-war now in port. After dinner a *soirée* was held, all the dancing folk of the capital attending. Dancing commenced at about half-past nine and was kept up until three o'clock in the morning, the doors, with that very practical hospitality characteristic of Russian society, being carefully locked to ensure against desertions. Our readers know the spirit that the Russians manage to put into their dancing—a spirit that converts even sober quadrilles and stately mazurkas into happy combinations of delight, dementia, and discipline. Such a spirit presided from first to last on Monday evening, no more vigorous and hearty exponent of it being present than the Minister himself.

THE CHINESE IN FORMOSA.

We are obliged to our correspondent "X." for calling attention to an important point in our suggestion about Formosa. Of course if the 5th Article of the Shimonoseki Treaty were couched in the terms quoted in our editorial of the 15th instant, every word that our correspondent writes would be unanswerable. But, through an unfortunate printer's error, a vital part of the Article was omitted. The original, instead of reading:—"At the expiration of that period, those of the inhabitants who shall not have left such territories, shall be Japanese subjects," reads, "shall, at the option of Japan, be Japanese subjects." The words "at the option of Japan," which we have italicized, and which were accidentally dropped out, make all the difference in the world. We wrote with the original article before us, as our correspondent must perceive if he refers to our interpretation of it:—

This article does not secure any right of perpetual residence to the Chinese. It merely provides that Chinese hitherto resident in Formosa shall have liberty to sell their property and remove to their own country within the space of two years; and that persons failing to avail themselves of that liberty shall not be entitled to claim any status other than such as the Japanese Government may choose to confer on them. Hence, if at the expiration of two years, a large number of Chinese be found remaining in Formosa, it will be competent for Japan to place them on the same footing as ordinary Chinese subjects visiting her dominions under the provisions of the treaty of friendship and commerce now in process of negotiation.

Our suggestion is simply this, that since many of the Chinese in Formosa, however desirous of realizing their property and leaving the island, may be unable to find purchasers within the given period, or may be compelled to sell at a heavy sacrifice, the Japanese Government should have a fair valuation made and should offer to purchase at that value, intimating, at the same time, that any Chinese remaining in the island after two years, shall not receive the status of Japanese subjects, but shall be treated as Chinese subjects, in accordance with the optional right secured to Japan by the Shimonoseki Treaty.

THE LIBERALS AND FOREIGN POLICY.

The *Fiyu-to Toho* of a recent date, contains an interesting article on the question of Foreign Policy. The article sets out with a strong denunciation of contemporary writers on this subject in Japan, who are either remarkably deficient in the sense of responsibility or blind followers of some shallow thinkers in the West. The writer proposes to discuss the matter from a standpoint essentially Japanese, and to try to elucidate the fundamental principle that should govern the foreign policy of this Empire. It is the practice with most writers on this question to insist that the foreign affairs of the country should be conducted in accordance with a fixed and permanent line of policy, or, in more concrete language, that the attitude to be maintained toward each of the foreign Powers should be determined once for all. But the writer in the *Fiyu-to Toho* is unable to agree with such a view. From the nature of diplomacy, he declares it impossible for a country to pursue any fixed course of policy in the relations with foreign States. The very word "policy" conveys an idea of changeableness and adaptability. It is, therefore, obviously inconsistent to demand that a fixed line of foreign policy should be pursued. To desire to be friendly with this Power and antagonistic to that is all very well. But that is no reason why the country's foreign policy should be governed by such sentiments. The country's friendly feeling may not be reciprocated by the desired Power, while the Power against which hostile feelings are advocated may not, after all, be an ill-wisher. Thus it is idle to talk of alliance with this or that Power and hostility to another. By way of demonstrating the erroneousness of insisting on a fixed and stable foreign policy, the writer proceeds to consider the basis of the relations between the different nations of the world. International relations, though ostensibly dressed in the guise of justice and righteousness, are in reality nothing more than native self-interest. It is customary with all civilized States to justify their diplomatic actions by reference to the principles of right and humanity. But neither humanity nor right is their object. The specious terms they employ are simply used for the sake of appearance. This fact is recognized even by standard authorities on International Law. Now self-interest being the prime motive force in the intercourse of nations, the function of diplomacy is simply to reconcile the conflict of antagonistic interests. Under such circumstances, a consistent and permanent friendship to a particular ally is impossible except at the sacrifice of the country's vital interests.

The writer then goes on to examine more in detail some of the opinions advanced on the subject of foreign policy. There are persons that advocate an alliance with Russia, and others that are in favour of coöperating with England, while still others map out a more heroic and grand policy of organizing a confederation of Asiatic states, with Japan as its leader, for the purpose of putting a check upon the eastward advance of the European races. The advocates of each of these different programmes are in no lack of plausible arguments to back their opinions. The policy of an Asiatic confederation does not receive any serious notice from our author, who doubtless considers it as lying, for the present at least, outside the pale of practical politics. He devotes his chief attention to the proposed alliance with Russia, and in discussing that question he incidentally and indirectly affords some glimpses of his views on the question of an alliance with England. The proposal of a Russian alliance, in his opinion, is based principally on three ideas, namely, first, that, it being the law of nature that nations extend their sway from north to south, Japan's natural sphere of action is in the south and not in the north, where she might come into collision with Russia; secondly, that between Russia and Japan there is little apprehension of commercial competition, such as is inevitable between England and Japan; and thirdly, that England is an untrust-

worthy ally. As to the first of these arguments, namely, the so-called natural tendency of nations to advance from north to south, it is pronounced to be an altogether unwarrantable assumption. There are many instances of a southern people extending their conquest toward the north. The history of Japan is one of the most striking examples. In this country the rule has always been movement from south to north, the north having in no way and in no age exercised ascendancy over the south. Even granting that from north to south is the natural direction of national expansion, the writer in the *Fiyu-to Toho* fails to discover the correctness of the conclusion that Japan ought, therefore, to be a good friend with Russia, for, according to the assumption under consideration, is it not Russia's destiny to advance southward and would not her appearance in the Sea of Japan be a menace to Japan? With reference to the second proposition, that there is no cause of difference between Japan and Russia in the field of commerce, our writer exposes the fallacy of the idea that, because there is little danger of commercial competition between the two countries, there need be no apprehension of a conflict of interests between them. Russia may not be Japan's rival in peace, but it must not be forgotten that she has towering political ambition, which cannot but be prejudicial to the interests of Japan. Russia is reputed to aspire to become the mistress of the world. It might not be wholly inexpedient to secure a temporary alliance with Russia by agreeing on some exchange of interests. But there are most positive objections to any proposal for such an alliance as a fixed national policy. Touching the third reason adduced by the advocates of a Russian alliance, namely, that England is an untrustworthy ally, the Liberal writer observes that to say that Russia is more trustworthy than England, is like attempting to distinguish the sexes of crows. Moreover, he calls attention to the fact that England has apparently good cause of complaint against the treacherous conduct of Russia, and adduces several instances of alleged breach of faith by Russia in Persia and Central Asia. He is at a complete loss to understand why the Russians should be considered more trustworthy than the English.

The question of commercial competition between Japan and England, of which so much is said by the advocates of an alliance with England, receives further and more special attention from the writer in the Liberal organ. Advocates of a Russian alliance allude to this fact as an insurmountable obstacle to an *entente* between Japan and England. But persons arguing in that fashion are ignorant of practical diplomacy. Commerce being England's principal object in Asia, competition is inevitable between her and Japan, because the latter is destined to advance along the same path. But to conclude that commercial competition is incompatible with good diplomatic relations between the two countries, is a most superficial idea. Peace is essential to the continuity of commercial pursuits. Without peace, trade is impossible, and consequently the preservation of peace is the object of Japan and England alike. From the similarity of their pursuits, these countries are equally interested in the preservation of China's territorial integrity and the opening up of her vast markets. England and Japan are also equally interested in keeping Russia's southward march in check, for should the Northern Power be once suffered to obtain an ice-free port in these regions, both British and Japanese interests would be seriously menaced. There is thus little doubt, all things considered, that Japan and England have a strong community of interests in Asia. The writer, however, does not wish to be understood as advocating an alliance with England: his object is purely to point out the fallacy of the arguments adduced by persons zealous for an alliance with Russia. He acknowledges that circumstances may possibly necessitate alliance with Russia, or may even favour the formation of a confederation of Asiatic countries. What he tries to make clear is that it is absurd and

impossible to fix in advance a permanent policy to be followed by the Empire in its foreign intercourse, and that diplomacy should be adopted to the varying conditions of each moment and juncture.

The essayist next proceeds to discuss the ideas held by European writers on the subject of diplomacy. He thinks that Occidental authorities make a flagrant mistake in considering diplomacy as something quite distinct from the art of war. In his opinion the art of diplomacy and the art of war really belong to the same profession and ought not to be considered separately. In other words, he thinks that diplomacy is only part of the art of war, for he understands the art of war in the broad sense applied to the term by the old Chinese authors, in whose age the petty principalities into which their country was divided were engaged in perpetual warfare, and who, consequently, had no idea of diplomacy as it is understood among modern civilized nations. Taking such authors as his guide, the Liberal writer thinks that the highest function of diplomacy consists in the adage, *si vis pacem para bellum*—keeping the country in a state of preparation and depriving other powers of any opportunity to pick a quarrel. He thinks that authors of text-books and statesmen in the West are very superficial in their ideas about diplomacy, because they commonly treat it in its restricted sense. Quotations are made from Sir Charles Dilke and Lord Salisbury to illustrate the point, but we fail to identify the original passages, and to re-translate these quotations into English would be unfair to the writers. Neither does this part of the essay possess any great value, for the writer's aim is simply to warn his countrymen against blindly following the "shallow" opinions of Occidental authors and politicians on matters of diplomacy, and to urge them to consider the foreign relations of their country from a standpoint essentially Japanese.

Briefly speaking, the essayist's idea amounts to this, that the functions commonly included in the term diplomacy are of secondary importance, and that the secret of true diplomacy is to keep the country in such a state of military preparedness that so-called diplomacy may be dispensed with. Such, he alleges, has always been the idea entertained by the Liberal Party, which was the first to advocate the paramount importance of strengthening the Navy and of making it the principal defence of the country. Thus the Liberals demanded, on the one hand, reforms in the Navy, and, on the other, insisted on the speedy increase of the fleet to 150,000 tons. That was some years since, and in those days the Liberals were taunted by the Progressionists with being seized by a mania of conquest. The Progressionists were even silly enough to declare that it would be more prudent to set to the world the example of disbanding the military and naval forces, and of devoting the money thus saved to the encouragement of education. As to the public in general, they, too, did not realize the importance of increasing the country's fighting strength, and society was more and more tending toward effeminacy and degeneracy. Such was the state of the country when war was declared last year, and the Liberals welcome the war principally as a means of awakening the nation from its temporary torpor and saving it from the evils of luxury and effeminacy. They were prepared for some reverses and calamities. Indeed they considered that something of the kind was needed to open the eyes of their countrymen to the gravity of the situation. Speaking frankly, the Liberals did not expect that the war would be so complete a success, and they have abundant reason to be satisfied with its general result. The writer here bestows well merited ridicule upon those that were timid before the war but are now writing and speaking as though they were the bravest fellows in the world.

Diplomacy, the essayist repeats, can never be confined to a fixed and permanent course. Yet there ought to be some fundamental principle guiding the Empire's foreign policy. Russia

appears to make military aggression the principle of her diplomacy, while the United States of America adopts peace and commerce as the aims of their policy. Judging from the geographical position of the country, and the history and character of its people, there is no room to doubt that the future of Japan lies in the fields of navigation, commerce, and industry. The promotion of the nation's smooth development along these lines should be the principal object of Japanese diplomacy. But in order to attain that object, it is absolutely necessary for the country to have at its back a sufficient military and naval power to command the respect and even fear of other Powers. The safety of the empire thus secured, the rest may be trusted to justice and righteousness, for the courage and spirit arising from the consciousness of justice and righteousness is a great moving force in human affairs. The country provided with a reasonable amount of military force, and the people determined to fight to the last drop of blood, while at the same time zealous in the pursuit of commerce and industry, Japan may feel secure in her position, without the necessity of seeking allies now in this quarter and anon in that. The writer asks his countrymen to bear in mind the fact that, after all, "the European Powers always put between them and Japan a great gulf of narrow-minded race prejudice." Under these circumstances it would be the height of folly for Japan to be duped into alliance with this State or into enmity with that.

THE NEW DOCKYARD AT SASEBO.

The ceremony of opening the newly finished dockyard at Sasebo was conducted on the 5th instant, and was attended by the officers and men of the war-vessels in port, the higher officials of the Prefectural Government of Nagasaki, the law officers of the Courts at the same place, the Nippon Yusen Kaisha's branch at Nagasaki, and so forth. From the speech of Rear-Admiral Shibayama, commandant of the Naval port, we reproduce the following facts. The plan of the dock was completed in September, 1892, but it was not until March of the following year that work was actually commenced. The breaking out of the late war made it necessary to hasten the construction, and through the zealous exertions of the naval expert, Mr. Kakikawa, and all employed on the works, the dock was finished in August of this year. The total cost was 639,315 yen 66 sen. The length of the dock is 135 metres, and the breadth at the entrance 36 metres, with a total capacity of 38,000 tons. It can be filled with water in an hour and a half, while five hours and a half are required to drain it. Ships of 15,000 tons can be docked.

BALL ON BOARD THE RUSSIAN FLAGSHIP.

The Commander and Officers of His Imperial Russian Majesty's ship *Amiral Nakhimoff*, Flag Ship on this station, gave a ball on board on Wednesday evening. Steam-launches were in waiting from 8.45 p.m. to 10 o'clock to carry the guests to the ship, and a special train was provided at 2.30 a.m. for the convenience of those desiring to return to Tokyo; but the delights of the ball and the genial hospitality of the hosts proved so attractive that only two persons out of the whole party availed themselves of the special train, the visitors from the capital preferring to remain until the first regular morning train at 5.35. Dancing took place in the battery, which was beautifully decorated, one end being converted into a grotto, with fountains springing and brooks running among shrubberies softly illuminated by many-coloured electric lights. After supper a *cotillon* was danced lasting until half-past four o'clock, and on leaving the ship each lady was presented with a prettily designed little brooch, a miniature rope tied in a sailor's knot, with a silver pendant bearing the inscription "Amiral Nakhimoff 11 Decembre 1895."

HISTORY OF THE DIPLOMATIC COMPLICATIONS ABOUT THE RETROCESSION OF LIAOTUNG.

Under the above heading, the *Nichi Nichi Shimbun* publishes a brief summary of the facts connected with the Retrocession of Liaotung. We reproduce the substance of our contemporary's account:—"On the 23rd of April last the three Powers, Russia, Germany, and France, first offered their advice to Japan relating to the desirability of her renouncing permanent possession of the Liaotung peninsula. After one or two communications with the allied Powers on this subject, the Japanese Government, on the 5th of May, expressed its willingness to adopt that suggestion. These facts were recently narrated in our columns at some length. At the time when the above mentioned reply was given by the Japanese Government, the pledge entered into by this country had reference simply to the renunciation of perpetual possession of Liaotung, and it was understood that everything relating to the manner of retrocession and the compensation to be demanded in return by Japan, would be settled between this country and China. That such was the case is shown by reference to the Imperial Rescript promulgated on the 13th of May.

"But, as the pledge given by Japan related simply to the renunciation of permanent possession of Liaotung, it was uncertain when, and under what conditions, evacuation would be effected, and there was also a possibility that, in the event of the conditions imposed by Japan proving beyond the capacity of China to fulfil, Japan's presence in the districts in question might eventually become permanent. Such in fact seems to have been the fears of the allied Powers, for their Representatives called together upon Count Mutsu at the Foreign Office on the 30th of May, namely, the day on which the Emperor returned to Tokyo, and expressed a wish that an early opportunity should be taken by the Japanese Government to fulfil in an effective manner the pledge given by it. The same representation was repeated on several subsequent occasions.

"Emboldened by Japan's compliance with the advice of the three Powers, the Minister of one of them is known to have declared that, since Japan had already renounced the possession of Liaotung, she had no right to demand from China any compensation for the return of the peninsula. When Count Mutsu pointed out the extravagance of such a contention, the statement was explained away by another Minister, who assured the Minister of Foreign Affairs that they did not question Japan's right to demand compensation, but that they feared lest her demands, if exorbitant, might lead to her occupying the peninsula indefinitely. There could be no question, of course, that Japan was entitled to compensation for the return of Liaotung. Not only had the three Powers declared to Japan at the outset that they had no intention of depriving her of the fruits of her victories, but the home Government of the very Minister who made the ill-considered statement that Japan had no right to such compensation, had distinctly told the Japanese Minister, Viscount Aoki, at the time when Japan's acquiescence with the admonition of the Allies was notified, that it would take steps to induce the Chinese Government to pay reasonable compensation to Japan. Thus the Allies definitely recognized Japan's right to demand compensation for the retrocession of Liaotung in the interests of peace in the East; but, at the same time, they repeatedly called attention to the circumstance that, should any large amount of indemnity be demanded, China's inability to make the payment might possibly lead to the practical annulment of the pledge offered by Japan.

"Meanwhile, upon the restoration of friendly relations between Japan and China, Consul Arakawa proceeded to Tientsin to resume his duties there. Earl Li caused Mr. Wu Ting-fang to visit the Japanese Consul and inform him that the Peking Government had fallen into the

hands of Russia and was apparently in an inextricable situation, and to express the hope that, as Japan was now the only country capable of rescuing China from utter ruin, she would consider the unhappy situation of her neighbour and be magnanimous and friendly. China had just entrusted Russia with the raising of a loan and was feeling the full force of the new relationship with the Northern Power, and Earl Li seems to have referred to this state of affairs with the object of arousing the sympathy of Japan. He is understood to have requested the Japanese Consul to transmit the statement he had caused to be made by his subordinate to the Government in Tokyo. Some journals rejoiced at the incident as a proof that Earl Li's faction were leaning upon the friendship of Japan. But the fact is that the step was simply a prelude to asking Japan to be moderate in her demands relative to the retrocession of Liaotung.

"Not long afterwards, Earl Li was summoned to Peking. On the eve of his departure for the Capital, he asked Consul Arakawa to telegraph to the Japanese Premier as follows:—"I put my signature to the Shimonoseki Treaty in the confidence that I was serving, to the best of my ability, the interests of peace between the two countries. But my countrymen are very loud in blaming me, so that I feel that my aged shoulders are too feeble to bear the weight of responsibility. I earnestly implore that, in consideration of my well-meant motives at the time of the negotiation of that treaty, you will be so good as to afford me an opportunity, in connection with the matter now under consideration, to lighten somewhat the heavy burden of censure that is pressing down my aged frame." In speaking of the matter under consideration, the Earl doubtless alluded to the question of the return of Liaotung, the negotiations about which he expected to be entrusted to him upon his arrival in Peking.

"Previous, however, to his arrival in Peking, the subject was opened to our Minister there by the Ministers of the Tsung-li Yamên, who stated that Japan had promised to return Liaotung—which had been ceded by China in good faith—in consideration of the remonstrances of the three Powers, but that no further interference of the Allies should be suffered in the settlement of the matter; it ought to be conducted between China and Japan alone. They further stated that Japan and China being bound together by the closest ties of friendship and mutual interest, no European Power ought to be suffered to come between them, and that if Japan agreed to return the ceded territory, China, in eternal gratitude for this act of liberality, would ever remain Japan's ally and would further permit the Japanese to build a railway between Peking and Tientsin. It is thus seen that the Chinese Government proposed the free retrocession of Liaotung in return for a petty concession, and the promise of an alliance the value of which was at least problematical. Minister Hayashi appears to have been inclined to favour this proposal, as calculated to put an end to the interference of the Allies. But the instructions that he received from his Government were decidedly opposed to it, and the negotiations were suspended for the moment.

"While these things were passing in Peking, the allied Governments, being desirous of securing an early settlement of the question, offered to the Japanese Government that, should the latter's demands be reasonable, they would try their influence with the Chinese Government to make it accept Japanese terms speedily. Having reason to suspect some ulterior motive in the proposal made by the Chinese Government, and believing it better to avail itself of the mediation of the allied Powers, His Imperial Majesty's Government changed its policy and decided to arrange the matter first with those Powers, and then to let them undertake the task of inducing China to accept Japan's terms. At the same time, the three Powers, perceiving that their interests, especially those of Russia, would be seriously prejudiced should Japan, after the return of Liaotung, con-

sent to the cession of Formosa and the Pescadores to some other Power or to the closing of the Formosan Channel to all Powers except the friends or allies of the new proprietor, approached the Imperial Government on the subject. France in particular positively declared that she had not the slightest objection to the Japanese occupation of Formosa and the Pescadores, and at the same time asked, in common with the other Allies, for a declaration that those islands should never be ceded to any other Power. France made this declaration to Japan because it was very generally rumoured in the East as well as in Europe, that she was opposed to Japanese possession of the islands. Believing that a declaration of non-cession and free navigation would not be prejudicial either to the dignity or interests of the country, but might, on the contrary, be of use to ease the minds of the Allies and secure their good offices, the Government accepted their request as to the two matters just mentioned, and simultaneously proposed an indemnity of 50,000,000 taels in return for the Liaotung peninsula.

"Germany approved the above proposal, but Russia objected to it and was supported in her objection by France. After communications between the three Powers, Germany at last expressed her agreement with her Allies. Thereupon, the Imperial Government accepted the views of the Allies and consented to reduce the amount of compensation to 30,000,000 taels. The Allies agreeing to advise China to pay the sum, Japan promised to evacuate the peninsula in three months after the payment should have been effected. Thus a basis for the solution of this problem was at last furnished, and instructions founded on that basis were sent to Minister Hayashi. The Japanese Minister's conferences with Earl Li and the final conclusion of the convention have already been described in our special correspondence from Peking.

"Such being the facts about this question, it will be seen that China had no choice but to agree to what had previously been arranged between Japan and the three Powers, and it will also be easy to understand the reason why Earl Li paid repeated visits to the Ministers of the allied Powers before opening negotiations with Minister Hayashi."

A CORRECTION BY THE "NICHİ NICHİ."

The *Nichi Nichi* has the following note:—"Since publishing our account of the diplomatic proceedings relating to the Liaotung question in our issue of the 5th instant, we have discovered that our information was not accurate in some points. That is especially true of the passage in which the Minister of a certain Power was represented as declaring that Japan having already renounced her right of possession in Liaotung, was not entitled to demand reparation for it; and of another passage saying that Minister Hayashi was in favour of accepting the proposal of the Tsung-li Yamên, thinking that such a course would put an end to the interference of the three Powers. Having ascertained that these statements are incorrect, we hereby withdraw them."

THE LADIES' BAZAAR IN TOKYO.

The Ladies' Bazaar, held in the buildings of the former Engineering College, Toranomon, Tokyo, on Saturday, was very successful. By two o'clock in the afternoon the stalls were dressed, and very picturesque they looked, the pretty and useful articles with which they were stocked being most tastefully disposed. The attendance, especially of gentlemen, was exceptionally large. Among the visitors were the Representatives of Great Britain, Germany, Russia, and Italy, and several members of the staffs of these as well as the Spanish, French, and American Legations. The sum realized was 760 yen, an amount considerably in excess of anything previously taken, and distinctly remarkable considering the simple character and limited number of the articles displayed.

THE TOKYO MUNICIPAL COUNCIL.

The Tokyo Municipal Council's meeting of Monday, the 9th instant, was very stormy. The proceedings opened at 4.30 p.m., Mr. Kusumoto Masataka, M.P., being in the chair. After some minor reports had been read by a clerk, Mr. Yoshino Seikei asked the President to cause the report of the Special Committee charged with the investigation of the water pipes case to be communicated to the meeting at once. As the document was extremely lengthy, the President thought it sufficient to have read only the parts relating to the responsibility of the Mayor, the Aldermen, the Standing Water Works Committee, and the Municipal Council. We need not follow the report from point to point. It will be sufficient for our purpose to state that the document condemned the whole administrative and legislative branches of the Municipal Government as guilty of serious neglect of duty in connection with the frauds of the Iron Foundry Company. As to the part of the report concerned with the pecuniary aspect of the question, the direct and indirect losses inflicted on the City are estimated at 146,732 yen. This sum does not include the loss of receipts occasioned by delay in the completion of the Water Works, and the payment of interest on the Municipal Loan. Such items had not been computed by the Special Committee, but it may be assumed that they will bring the total loss to a considerable sum. The prisoners' property attached aggregates 1,889,895 yen, of which 1,072,705 yen is subject to prior claims, the available sum being thus reduced to 817,190 yen. Another fact made clear by the report is that the frauds will necessitate a delay of nearly a year in the completion of the Works.

The reading of the report was followed by questions, explanations, and angry recriminations among the members of the Council. A recess was taken at 5.30 p.m. for refreshments. On the resumption of the proceedings at 6.35 the debate on the report was continued. What occasioned most dispute was the omission of the names of six out of eleven members of the Council who had attended a meeting held at Shibaura on September 8th in the interests of the Iron Foundry Company. The Special Committee was doubtless wrong in withholding the names of these persons, while not hesitating to mention the names of others. Mr. Koi-zuka, one of the members of the Committee, was finally compelled to give up the names, and after some further controversy, the report was voted by a large majority.

Dr. Hasegawa Tai, M.P., then moved that disciplinary punishment be inflicted on the Standing Water Works Committee. In the present mood of the Municipal Council, no penalty can be severe enough, and the motion introduced by Dr. Hasegawa was approved unanimously.

The next measure introduced had long been expected, namely a resolution of want of confidence in Governor Miura in his capacity of Mayor. The introducer of the motion was Mr. Yoshino Seikei. It was received with enthusiastic acclamation by the whole assembly. Mr. Tsunoda Shimpei, M.P., strongly criticised Governor Miura's conduct in refusing the friendly advice that the Council had sometime since given him to resign his office. The resolution was passed without one dissentient voice.

Lastly, having condemned everybody connected with the municipal administration, it was now the Council's turn to sit in judgment on their own conduct. The unanimous opinion of those present being that the Council were to blame for having elected the Aldermen and the Standing Water Works Committee now proved guilty of neglect of duty, it was resolved that the members of the Council should tender their resignations separately. If this plan be followed, the city will be left in a state of complete anarchy.

THE COUNCIL DISSOLVED.

As might have been expected from its extravagant proceedings on Monday last, the Tokyo Municipal Council was dissolved on the following day, the 10th, by the Minister of State for Home Affairs in virtue of the 120th Article of the

Organization of Municipalities. The Article runs as follows:—

The Minister of State for Home Affairs shall have power to dissolve a Municipal Council. In that case, he shall at the same time issue orders for the election of members within three months. Pending the convocation of the new Council, its functions shall be discharged for the time being by the Board of Aldermen.

The members of the dissolved Council are reported to be using their eloquence to persuade the members of the different Urban Division Councils to disapprove whatever measures may be submitted for their deliberation by the Mayor, who has been declared unworthy of the confidence of the Municipality. There are abundant indications that the anti-Mayor agitation is getting stronger and stronger. Many of the Aldermen, led by men like Viscount Tani and Mr. Tomita Tetsunosuke, are also bringing pressure to bear upon the Mayor. They make it their business to oppose whatever measures are submitted by him. They are also understood to have personally tendered strong advice to him to resign his office.

THE "NICHİ NICHİ" ON THE KOREAN QUESTION.

The *Nichi Nichi*'s recent article on the Korean question seems to have given rise to an erroneous idea in Tokyo political circles that the Government had changed its policy toward the peninsular Kingdom. Our contemporary now points out that such an idea is mistaken. The Imperial Government has not yet given up the policy it proclaimed at the time of the declaration of war with China, namely the policy of assisting Korea to establish its independence and advance its civilization. By way of explaining what it has of late written on the subject, the *Nichi Nichi* observes that in view of the perpetual feuds between petty factions in the peninsula during the past twelve months, it cannot but recognize the fact that the Koreans are lamentably deficient in some of the attributes essential to national independence. Holding that opinion, our contemporary naturally began to consider whether it might not be advisable to abandon a policy having for its basis the maintenance of Korean independence. "But," continues the *Nichi Nichi*, "we did not mean to say that the time was propitious for a change of policy, neither did we think that the Government was acting unwisely in following the same policy as of old. We only called the attention of the Cabinet to the importance of considering the policy that ought to be pursued in future." Japan's object being to assist Korea in the maintenance of her independence, it has never entered the former's mind to station troops perpetually in the peninsula. Thus the announcement made by the Imperial Government to the United States and some other Western countries, is simply a repetition, in a more definite form, of what was originally proclaimed at the time of the declaration of the late war. Such an announcement does not signify any change of policy on the part of the Japanese Government. The *Nichi Nichi* concludes as follows:—"It is not easy to discuss diplomacy in all its intricate aspects. If independent Korea be deemed trustworthy as a neutral country, the Empire will adhere to its original policy and assist in maintaining the little Kingdom's independence. But should Korea prove incapable of profiting by Japan's assistance and appear only liable to cause trouble and danger to Japan, it would be necessary for this country not only to give up the task of helping the peninsular Kingdom, but also to take such steps as might be required for the preservation of her own rights and interests. No necessity of adhering to the old policy would exist under such a changed state of affairs. We are thus disposed to consider that the Imperial Government has been guilty of too rigid adherence to obsolete methods in making the recent announcement to the United States and other Powers. Nothing, at the same time, could be more erroneous than to suppose that the Government has adopted a new policy toward Korea."

CURRENT TOPICS.

Concerning the rumour that Marquis Saigo has tendered his resignation, the *Nichi Nichi* has the following note:—"A rumour is widely circulated in the capital that the Minister of the Navy has resigned, but inquiries in official circles show that there is not the slightest truth in the report. It seems to have originated in Marquis Saigo's absence from the Cabinet Council of the day before yesterday (10th). But his failure to attend was owing to an entirely different reason. Marchionness Saigo is suffering from fever of a violent type, and her condition was at one time even critical. Having watched at her sick bed day and night, Marquis Saigo considered it inadvisable to attend a Council held in the Imperial Palace. But he has never ceased to transact business at the Naval Department, where he can be found at any time during office hours in the afternoon. The conference of Admirals, in session since the 10th instant, is daily attended by the Marquis. Altogether there is absolutely no foundation for the story.

Count and Countess Inouye left Tokyo on the 11th instant for Izu. They intend, we are informed, to stay for some weeks at Shuzenji, and to return to the capital by the middle of January.

The leading members of the National Unionist Party held a conference on the afternoon of the 11th instant, to consider the lines of the Manifesto to be issued on the 22nd instant. According to rumour, they decided that the document should conform with two general principles; namely, first, that the National Unionists are to devote their whole attention, in the coming session of the Diet, to questions relating to increase of armament and the promotion of industries; and secondly, that, with regard to the question of Ministerial responsibility about the Liaotung and the Korean complication, the Party is, on the one hand, to avoid completely identifying itself with the Government as the Liberals are doing, and, on the other, to refrain from pursuing such an attitude of uncompromising hostility as the Opposition parties intend to pursue. If this report be true, we may conclude that the National Unionists are determined, while nominally remaining neutral, to show distinct sympathy with the Government.

The question of amalgamating the different sections of the Opposition into one body does not seem to be making any practical progress. It is noteworthy that despite their undisputed ascendancy among the section, the Progressionists have not succeeded in removing the personal prejudice with which they are regarded by their present allies, especially the Constitutional Reformists. The airs of intellectual superiority that the followers of Count Okuma assume are said to be very irritating to their political allies, while some episodes in the history of their Party have created wide-spread distrust of their sincerity. The Constitutional Reformists, as for example, Mr. Kawashima Jun, Mr. Kusumoto Masataka, President of the House of Representatives, and Mr. Ohigashi Giteisu, are understood to be of opinion that the time has not come for fusing the Opposition sections into one political body. While, therefore, strongly disposed to believe that circumstances will one day necessitate such a combination, we imagine that an interval must elapse before it becomes an accomplished fact.

There is a strong movement among the so-called *Yitsugyo* (Industrial) members of the Lower House to effect a combination for the purpose of passing the Military, Naval, and Industrial measures in the coming session of the Diet. Condemning the course contemplated by the Opposition, namely, to demand the resignation of the Cabinet in connection with the Liaotung and Korean questions, they propose the milder measure of voting a resolution embodying moderate condemnation of the Government's policy on these questions. Such a resolution, even if passed would not, they believe, create a Cabinet crisis. In short, they appear

to be bent upon pursuing the same line as the National Unionists.

Things are thus decidedly unfavourable to the Opposition. But the astute politicians that lead the Cabinet's enemies do not entirely despair of their chances in the next session. As the National Unionists and the Industrial members are supposed to be not altogether disinclined to pass some measure of mild censure upon the Cabinet's foreign policy, the Opposition politicians are said to be thinking whether it may not be advisable to defer their contemplated attack on the Government until the very last moment, when, the armament and industrial bills having been passed, the National Unionists and the *Yitsugyo* members would be free to join the assault. However mild the form of censure may be, they think it quite easy for them to give the debate such a complexion as would place the Cabinet in an awkward position, and even bring things to an extremity.

THE "THALES" INCIDENT.

The facts of the *Thales* incident, if not already familiar to our readers, will be sufficiently explained by the documents printed below, both of which appeared in the Japanese language, in the *Official Gazette* of the 9th instant. The occurrence had evoked criticism in the columns of English local journals in the East, and there had been an assumption on the part of the critics that the British Government were neglecting their duty in not exacting full explanation, apology, and pecuniary reparation from Japan; or that Japan was playing fast and loose with Great Britain's just demands. Neither hypothesis being in the least degree tenable, we did not concern ourselves to offer any comment. The facts and the methods adopted in dealing with them were certain to be known to the public before long, when it would be at once seen that the two Powers concerned had acted, the one with all expedition and plainness, the other with a full sense of responsibility and justice. In laying the documents before our readers, it is only necessary to call attention to the following dates:—The incident occurred on the high seas between Amoy and Taiwan on the 21st of October; an explanation was sought from the Japanese Government by Her Britannic Majesty's Representative in Tokyo on October the 24th; on November the 6th the Japanese Government replied, acknowledging in the frankest terms that "the acts committed by the Commander of the *Yayeyama Kan* were wholly without warrant, in contemplation of International Law;" "regretting exceedingly that the occurrence should have taken place," and declaring their readiness "to fully compensate the *Thales* for the wrong suffered." If all international complications could be settled with a similar display of promptness, courtesy, and justice on both sides, the world would be happier. The following are the documents:—

NOTE VERBALE.

The British steamer *Thales* having left Taiwan on the 20th of October with eight hundred passengers, mostly women and children, was stopped 15 miles from Amoy by the Japanese cruiser *Yayeyama*, before daybreak on the following morning, and a search crew was placed on board by the Commander of the cruiser. The Commander wished to take out seven passengers, against which the Master protested.

The Commander of the cruiser then insisted on placing two officers on board, and after a detention of ten or twelve hours, allowed her to proceed to Amoy on condition of holding the men he required at the disposal of the Japanese Consular authority for that port.

Her Britannic Majesty's Consul of course demanded that the men claimed by the Commander of the Japanese cruiser should be delivered to him, and that having been done, set them at liberty.

Her Britannic Majesty's Minister has now received instructions from his Government to inquire what explanation the Japanese Government have to offer respecting the stoppage of a British ship on the high seas by a Japanese war-vessel, and her search and detention.

Tokyo, October 24th, 1895.

NOTE VERBALE.

The Imperial Government have not failed to take into very serious consideration, the Note

Verbale which His Excellency H.B.M.'s Minister did them the honour of presenting to them on the 24th ultimo, in reference to the search and detention of the British steamer *Thales* by the Japanese man-of-war *Yayeyama*.

Full reports of the attending circumstances of the case are still wanting, but sufficient is known to enable the Imperial Government to determine that the incident occurred on the high seas, and that the *Thales* was at the time on a voyage from Taiwan to Amoy, China.

From the meagre information at hand, the Imperial Government are led to believe that the acts complained of were the result of a misapprehension of instructions, but setting aside once for all any discussion of incidental points, the Imperial Government hasten to acknowledge that the acts were, in contemplation of International Law, wholly without warrant. They regret exceedingly that the occurrence should have taken place, and are prepared to fully compensate the *Thales* for the wrong suffered.

The instructions which the Imperial Government are issuing to their vessels-of-war will make a repetition of the incident impossible, and while expressing their warm appreciation of the considerate manner in which the event was brought to their attention, the Imperial Government venture to hope that the explanation and reparation which they offer will prove satisfactory to H.B.M.'s Government.

The Guaimusho, November 6th, 1895.

JOURNALISM IN PEKIN.

The *Kokumin Shimbun's* Pekin correspondent sends some interesting details about the condition of journalism in the Chinese Capital. There are now three journals in Pekin, namely, the *Yucheh Wei-tsun*, the *Kin-pao*, and the *Wan-kwoh Kung-pao*. The first two are dailies; the last is issued on alternate days. The *Yucheh Wei-tsun* (*Official Gazette*) is published from a book store, the proprietor of which is an official of some standing. It is in the form of a small pamphlet, about 11 by 7 inches, containing from 10 to 30 leaves, and its contents consist entirely of Court news, official notifications of all sorts, memorials presented to the throne, and reports from provincial mandarins. Its price is 1 tael per month including the carrier's charge, and its daily circulation is put at between 600 and 700 copies.

The *Kin-pao* (Metropolitan News) is also taken up entirely with Court intelligence and the publication of official documents. In general get up and quantity of matter, it is far inferior to the *Official Gazette*. Like its rival, it is in pamphlet form, consisting of a dozen leaves, the dimensions of a page being about 6 by 4 inches. But being cheaper in price,—20 cents per month—it is a great favourite with the middle and lower classes, and its circulation is twenty times larger than that of the *Yucheh Wei-tsun*.

The last, but not the least important, is the *Wan-kwoh Kung-pao*, a new journal, to which reference has been made in these columns more than once. The two daily publications alluded to in the foregoing paragraphs, being simply dry repositories of official news, without editorial comments of any kind, do not exercise any direct influence on the minds of the reading public in the capital, except through some of the memorials to the throne published in them, which sometimes contain instructive allusions to the present needs of the Empire. But the *Wan-kwoh Kung-pao* (Universal Intelligence), has made a new departure, for it publishes original essays discussing, in an intelligent manner, the various reforms needed in China. The personality of its editor has long been a mystery, but the *Kokumin's* correspondent states that, according to his information, its progressive articles owe their conception to an American missionary, though they are written in Chinese garb by a certain Chinese scholar of Hanlin grade. The circulation is at present only six or seven hundred copies, but, as the correspondent justly observes, its future career is full of interest.

As to the method of distributing newspapers to their subscribers, the correspondent of the *Kokumin* says that the system is in its infancy. How it is conducted may be judged, he says, from the fact that the newspaper carriers never venture out of doors on stormy days.

THE SUSPENSION OF THE "NIPPON."

Tuesday's issue of the *Nippon* being considered prejudicial to public peace, the paper was placed under the ban of suspension. The issue contains two articles, either of which would alone have been sufficient to invite official intervention. In one of them, our contemporary strongly censures the Government's weak and conciliatory attitude toward European Powers, especially Russia. The passages most offensive by presumption are treated in the manner usually adopted by Japanese journals to evade the provisions of the Newspaper Regulations, namely, blotted out, so that the article appears with blank spaces at frequent intervals. Notwithstanding these precautions, the apprehended calamity befel the *Nippon*. Alluding to the different attitudes assumed toward, on the one hand, the weak countries of Asia, and, on the other, the strong Powers of Europe, the Japanese Government receives the soubriquet of a sheep in a tiger's skin. When Russia demanded the retrocession of Liaotung, the Japanese Government showed prompt readiness to comply with the demand, disclaiming at the same time any intention of disturbing the peace of the East. When the incident of October 8th gave another opportunity to Russia, the Japanese Government was so meek and compliant as once more to obey the Northern Power; on the one hand, arraigning Minister Miura and others before a court of law, and, on the other, declaring its intention of withdrawing its troops from the peninsular kingdom and keeping its hands away from that country. What impression has such weak and gentle conduct produced upon the Russian Government? Russia is more than ever bent upon aggressive schemes. Korean conspirators are harboured in the Russian Legation at Söul, some being suffered to find asylum on board a Russian man-of-war, and, above all, Russia's Pacific Squadron is constantly strengthened. The *Nippon* goes on in this fashion censuring the conciliatory attitude of the Government toward the Northern Power. The article being signed *Don-gori*, the *nom de plume* of a well known writer on the staff of the paper, must not be read as reflecting in every respect the sentiments of the chief editor, whose philo-Russian tendency is well known. But that such an article has been published in the editorial columns of his paper, must be considered as a significant commentary on the state of public feeling in Japan.

The other article of an offensive character in the *Nippon* of the 10th instant is an outspoken attack upon the authorities of the Department of Education, especially Marquis Saionji. The Minister, the Vice-Minister, and the rest of the principal officials of the Department, are all charged with strange indifference and inaction. An alleged conversation with a certain official of the Department is quoted, in which the anonymous functionary is made to utter sweeping strictures upon his chief's indifference to matters of education. The article is not yet concluded, and, from its heading, it seems that the writer's object was to extend his criticism to the Department of Agriculture and Commerce also. We (*Japan Mail*) confess that we have no manner of sympathy with the *Nippon*. It is an inflammatory, ill-balanced, rabidly anti-foreign and altogether extravagant newspaper, in our opinion.

A NEW LIBERAL ORGAN.

The *Mesamashi Shimbun*, hitherto nominally independent, though well known to be more or less a representative of Liberal views, has now come out plainly as a Liberal organ, under the new title of *Tokyo Shimbun*. It announces the fact in very simple language, giving no detailed exposition of what its readers are to understand as Liberal politics, except that they point to a large development of the country's economical and industrial systems. The *Tokyo Shimbun* commences its new rôle on the 15th instant, when it promises to enlarge its sheets and improve their contents.

THE "EDGAR" CATASTROPHE.

We invite our readers' attention to the fact that a fund is being raised for the relief of the widows and orphans of the sailors drowned on the occasion of the sinking of the *Edgar's* pinnace. The accident was so inexpressibly sad and its results must have carried bitter sorrow and calamity to so many homes, that we need not attempt to speak of it in detail. But it may be useful to remind the public that while numerous calls are made upon their purses on account of penury or suffering among the Japanese—calls that are always responded to with admirable generosity—not once in a dozen years does any occasion present itself to contribute for the relief of our own countrymen or countrywomen on a large scale. Many a distressed British subject has been privily aided to find his or her way back to the old country, and to land there not without some slender resources, and even at this moment succour is being given, without ostentation or reluctance, to several persons that have been distanced in the hard race for sustenance. But we have now before us an incident happily unprecedented in the history of foreign intercourse with the East, and the opportunity thus furnished to do a work of real kindness to sufferers of his own nationality must be welcome to every loyal Britisher. We are persuaded that the appeal of the kind-hearted ladies by whom the work has been taken up will evoke a munificent response.

The following sums to this fund have been subscribed:—

Mr. Mizuno, Chief Civil Administrative Officer of Formosa, paid a visit to the Premier at Oiso on the 10th inst., on business connected with some bills to be introduced in the approaching session of the Imperial Diet with reference to Formosa. It is stated that Mr. Mizuno will be Government delegate in the coming session of the Diet for bills connected with the island.

HARBOUR IMPROVEMENT SCHEMES.

The people of Shimonoseki are reported to have taken into serious consideration a scheme for improving their harbour so as to fit it for a port of foreign commerce. Such an undertaking had been on the *tapis* for some years past, but the magnitude of the work and its cost had proved deterrent. The new Governor of the Prefecture, Mr. Oura, has interested himself in the matter, and his encouragement, combined with a state of general industrial prosperity, have induced the principal inhabitants of the place to take up the scheme with eagerness. Apparently the principal feature of the project is to fill up the space between the two islands Ganryu-jima and Hikoshima in the western part of the harbour, leaving a narrow channel in the centre, and to connect Hikoshima with the mainland by means of bridges. In this way sufficient ground would be obtained for the construction of a large new city. The cost is estimated at about 2,000,000 yen.

Keen competition is going on between the inhabitants of Fukuoka and Karatsu about the selection of a new port for foreign commerce. These two places were in former times centres of trade with China, Fukuoka being the older. It is now generally felt that the rapid growth of industry and trade in Kyushu will necessitate the opening of a new port for foreign trade in the north of the island, and consequently great efforts are being made by the inhabitants of each place to have their own port selected for the purpose. As a practical means of attaining their object, they are competing with each other in schemes to improve their harbours. In the case of Karatsu, the port designed is not the one usually known by that name, but another in the same bay a little to the eastward, named Funakoshi. Deputations from both towns are now competing in Tokyo for the help of capitalists, and are also seeking to sound official views.

BALL IN TOKYO.

One of the most enjoyable and perfectly managed evening parties ever given in Tokyo took place on Tuesday, the host and hostess being Mr. G. A. Lowther, Secretary of the British Legation, and Miss Lowther. Dancing commenced at a little before ten o'clock, and after a programme of ten dances had been disposed of, supper was served, by way of preliminary to a cotillion which lasted until half-past two. The favours were exceptionally handsome, and it was notable that at the point where the supply of these adjuncts usually becomes scarce, or the quality indifferent, prettier and more novel surprises made their appearance. The last figure, in which the ladies and gentlemen pelted each other with mimic snow-balls filled with a dust of many-coloured paper, created great amusement. After a second supper the party broke up at half-past three.

FIRE IN TOKYO.

On Thursday afternoon at five minutes past two o'clock, a fire broke out in Saionji-machi, in the Shiba district of Tokyo. A strong Westerly wind fanned the flames, and the locality being crowded with houses of the poorest character, no possibility existed of checking the conflagration before it had laid waste an area including a portion of Saionji-machi and thence *via* Kawaguchi-cho. At half-past four the work of destruction ended. By that time some five hundred houses were in ruins, making the worst record of the kind since 1893. The weather being bitterly cold and the people rendered homeless being of the lowest classes, terrible suffering must have been entailed.

Another fire occurred at No. 16, Hatchobori, Ichome, Kyobashi, Tokyo, on the 12th inst. at 1.30 a.m., destroying 49 houses, one school, and 4 sheds; 28 houses and one shed were damaged. The fire is said to be of incendiary origin.

THE KOREAN CASE AT HIROSHIMA.

The preliminary examination of the military officers connected with the *émeute* of October 8th, which was going on at the Head-quarters of the Gendarmes in Hiroshima, has just been brought to a conclusion, and the report of the results is now under consideration by the military authorities. It is believed that the prisoners will be brought for trial before a court-martial.

As to the civil prisoners, their preliminary examination has not yet been finished, but it is expected to be concluded before long. Three minor prisoners have been admitted to bail. Viscount Miura was reported recently to be suffering from indisposition, but the latest correspondence from Hiroshima alleges that he has completely recovered. He is said to have declared to a recent visitor that he is entirely satisfied with the considerate treatment he receives in prison. The other prisoners have repeatedly expressed themselves to the same effect. Viscountess Miura is shortly expected at Hiroshima, where she intends to stay until the case is concluded.

When the case comes up for open hearing, it is believed that the presiding judge will be Justice Matsushita, the chief judge of the Hiroshima Local Court, while the prosecution will be conducted by Public Procurator Kusano of the same court. The leading counsel for the prisoners will be Mr. Masujima, who will no doubt be assisted by a number of barristers.

THE COUP D'ETAT OF OCT. 8TH.

It is a relief to learn that the atrocities perpetrated in the Korean Palace on the morning of October the 8th were, perhaps, not quite so terrible as rumour has hitherto led us to suppose. The account thus far circulated is to the effect that the Queen's murderers, uncertain as to Her Majesty's identity, assassinated several of her ladies in waiting, lest by any chance their intended victim might be disguised as one of her own attendants, or for the purpose of extorting the truth by intimidation. Now, however, there seems to be at least a possibility that the Queen was the only victim. The Editor of *The Korean Repository*, writing in the Middle of November, says:—"We have it on good authority that all the ladies who were in attendance upon Her Majesty have been found, and though some of them have been badly wounded, none are dead." It matters very little, so far as the moral guilt of the assassins is concerned, whether they only wounded the ladies badly or killed them outright, but there is comfort for the public in knowing that the dimensions of the catastrophe are less appalling than was imagined.

THE HOME MINISTER AND THE LOCAL OFFICIALS.

We read in the *Kokkai* that, in connection with the alliance between the Liberals and the Government, and with a rumour that the portfolio of Home Affairs was to be given to Count Itagaki, considerable excitement arose among the Provincial Governors and Secretaries, to calm which a circular has been addressed to them by Viscount Nomura, the present Minister of State for Home Affairs. The import of the circular, according to our contemporary, is that although Marquis Ito had desired to resign, the Emperor did not consider the time suitable for such a step, and the idea had consequently been abandoned. Further, with regard to co-operation between the Government and the Liberals, its prime purpose was to promote measures for the increase of the country's armaments. In several other directions, also, the Liberals found themselves in the same route as the Government, and would therefore work with it. But as to the general policy and organization of the Government, there would be no change whatever. The *Kokkai*, commenting on this circular, says that, although emanating from the Minister of State for Home Affairs only, the nature of its contents justify the conclusion that it represents the sentiments and has the endorsement of the whole Cabinet.

THE LIBERAL PARTY.

Telegrams from Nagoya, Yamagata, and Tochigi, announce that at the meetings of the respective local Liberal associations, held on the 8th instant, it was unanimously resolved to approve and support the Manifesto recently issued from the head-quarters of the Party.

Greater importance attaches to the news that the grand meeting of the Liberals of the Kwan-sai district, held at Kyoto on the 8th instant, enthusiastically declared its adhesion to the Manifesto. There were present three hundred Liberals, the head-quarters being represented by Messrs. Kono Hironaka and Komuro Shinobu. The meeting further voted a declaration. After emphasizing the alliance between the Cabinet and the Liberal party as a great step of progress in the constitutional system of the country, being in short, a distinct advance toward the introduction of Government by Party, the document went on as follows:—

"The measures of urgent national importance are very numerous. In the coming session of the Diet, we shall approve an increase of armament so far as the resources of the country permit. We shall also endeavour to attain our long cherished objects with respect to enlarging liberty of speech, publication, and public meeting, extending the franchise, improving the local government system, establishing a new university, widening the scope of common education, encouraging technical and art education, developing the steamship service, educating navigators, reforming the agrarian system, effecting riparian improvements, and so forth."

THE RAILWAY SERVICE BETWEEN YOKOHAMA AND TOKYO.

We hear frequent complaints on the subject of want of information about the arrivals and departures of trains on the Tokyo-Yokohama line, many people being ignorant that the recently announced changes still hold, and will probably hold until the middle of next month. We append a table of the present times:—

THE TSUNG-LI YAMEN.

The Tsung-li Yamén, that wonderful body of Chinese statesmen, who from time immemorial furnished to the world a magnificent object lesson in the art of how not to do it, are beginning to find themselves "left" by the times. Their chief function, the management of foreign affairs, has been virtually transferred to the new Ministry of War, a Board of Six, namely, Prince Kung, the *Tu pan* or President, the sixth and only surviving son of the Emperor Tao Kwang; Prince Li, *Hsiang-pan* or Co-President, chief of one of the eight "iron-capped" families, which helped to conquer China in the middle of the 17th century; Weng Tung-ho (Chinese), President of the Board of Revenue; Li Hung-tsao (Chinese), President of the Board of Rites; Hsu Fu (Chinese), President of the Board of War; and Jung Lu (Manchu), Commander of the Pekin Gendarmerie, and now said to be the principal favourite of the Emperor. This new Ministry has further been instructed to assume charge of all the provincial arsenals, hitherto controlled by the local Viceroys, so that, in the matter of armament at any rate, a marked step has been taken in the direction of centralization. No lesson was taught more forcibly by the recent war than the fact that China owed much of her weakness to the dissipation of her fighting energy, caused by each province's regarding itself as a district apart, and not as a unit of the empire. The Board of Six, though entrusted with the conduct of the country's important foreign relations, has no member at all versed in foreign affairs, except Prince Kung, who is now very infirm. It might have been expected that the ex-Viceroy Li Hung-chang's name would have appeared on the Board, but though Japanese observers persist in saying that Li is gradually recovering political influence, no practical evidences of the fact are yet visible.

A strong movement is stirring among the British communities in the East for the establishment of a branch of the British Naval League. Men have been roused by the perception that Russia has now four iron-clads and four armoured cruisers on the Pacific station against two British iron-clads and one armoured cruiser. It is true that the discrepancy is diminished by one first-class cruiser of 7,350 tons, five second-class cruisers ranging from 3,600 to 3,730 tons, four third-class cruisers of about 1,700 tons each, all flying the Union Jack, against three Russian armoured cruisers, one third-class cruiser, and five sloops. It is also true that the total displacement of the two squadrons is nearly equal—British 58,908 tons and Russian 58,838 tons. But Englishmen find the comparison very disquieting, and there will certainly be a display of loyal munificence in the Far East.

German ships-of-war continue to survey and explore the coasts of Fukien and Kwangtung, and they are reported to have done a great deal of work about Quemoy Island. Either Namoa Island or Quemoy Island might be of use as naval stations, but it is not considered that they would serve as trade centres so long as Swatow and Amoy remain. Germany's designs in these districts, if she has any designs, are still wrapped in mystery.

The negotiation of the new commercial treaty between China and Japan is proceeding very slowly. The Chinese plenipotentiary has proposed a treaty of absolute equality, quietly ignoring the fact that under the sixth article of the Shimonoseki Treaty, China has pledged herself to take as a basis "the treaties, conventions, and regulations now subsisting between China and European Powers." It matters little to Japan what obstructions or delays are created in Pekin, for the Shimonoseki Treaty secures to her people most-favoured-nation treatment in all respects pending the conclusion of the new treaty.

It is now definitely settled that Herr von Brandt, formerly German Representative in Pekin, is to discharge the duties of Commercial Ambassador, on his return to China—not an official appointment, but a commission from German merchants and manufacturers. The

idea of the Germans is said to be, not merely to take advantage of the needs that China must feel in the sequel of the late war, but also to cultivate and develop her progressive desire to manufacture her own raw material and to be self-supplying in the matter of warlike apparatus. Herr von Brandt has hitherto posed as an uncompromising foe to Japan's expansion, on the ground that her manufacturing capacities would make her a keen competitor with the West in the markets of the world. He now offers proof of his sincerity and consistence by coming out to assist China in developing the very capacities that he denounced as a serious menace to the Occident in Japan's case.

It seems pretty certain that the Mohammedan rebellion is petering out. The followers of Islam are fighting among themselves, and the Imperial forces have commenced the terrible rôle of extermination that always forms the concluding page of such chapters in Chinese history. The world will probably hear little more of an insurrection that threatened at one time to over-tax the resources of the Manchu dynasty.

NEWS OF THE "STRATHNEVIS."

SAFE, BUT HER MAIN SHAFT BROKEN.

Messrs. Dodwell, Carlill, & Co., the agents in Yokohama of the Northern Pacific Steamship Co., courteously write to us:—"We are pleased to inform you that we have to-day (9th inst.) received a cable from our firm in Tacoma containing the news that the steamer *Strathnevis*, now considerably overdue at this port, was spoken by a sailing vessel on the 19th November, in N. lat. 48° 40' W., long. 145°. The sailing vessel reports that the steamer's main shaft is broken, but that she was otherwise undamaged, and was endeavouring to make her way back to Victoria, B.C. Our Tacoma house adds that they expect further particulars to-day, when, if desirable, they will cable again. In the meantime, the Captain of the steamer *Tacoma* has been instructed to make a rigid search for the steamer on his present westward voyage."

HER PROPELLER LOST.

Messrs. Dodwell, Carlill & Co., inform us that further cable advices from their Tacoma house received on Tuesday, report that the Northern Pacific Steamship Company's steamer *Strathnevis* signalled that she had lost her propeller.

THE DENVER MIRACLE-WORKER.

It appears that Schlatter, the miracle-worker of Denver, is in danger of being soon exposed as a common imposter. The Rev. C. W. Heisler, pastor of the Lutheran Church in Denver, having made an investigation of this "modern messiah" and his methods, reports thus:—

"A careful investigation fails to satisfy you that one actual healing has taken place. I looked up the case of a blind man reported as healed. Yes, he thought he could see a little now; he could tell when people passed in front of him. He thought he was getting better every day. On leaving his home, I remarked to my companion 'You see there is absolutely nothing in that testimony.' And since then I have heard that the man never was totally blind. There are multitudes of people, however, with real and imaginary complaints, especially of a nervous character, who are easily duped. If they had the 'faith,' Mr. Editor, it would do them just as much good to take your hand as it does Schlatter's."

"At first I was inclined to think that Schlatter was a self-deluded enthusiast, as he seemed to be so sincere. Since visiting him the second time and in the light of subsequent events, I am inclined to put him down as a humbug of the first water, and I am beginning to question whether we evangelical pastors are pursuing the wisest course in holding our peace concerning him. In view of the crowds who seem to be led away by him, I wonder whether we ought not publicly protest against his sacrilege. . . . Of course the end is not yet. Schlatter does not claim to heal instantaneously. When a lame man came to our Lord for healing, he could throw away his crutches instantly. But Schlatter tells him in two, three, five months he will be entirely well. Notwithstanding this time element, which is really very prudent on his part, I have no hesitancy in writing down the whole thing as a senseless delusion and a snare. But it pains one to think we have so many simpletons among us."

THE "EMPEROR" OF KOREA.

In the latest number of *The Korean Repository* we find an interesting note in the editorial department, with reference to the proposed assumption of the title of Emperor by the King of Korea. Our readers will perceive, on examining the account given by the *Repository*, that all preparations for the assumption of the title had been made, and that the ceremony was on the very verge of being performed, when the Japanese Minister arrived at the palace, and after his departure it was announced that the project had been postponed. We call attention to this fact because the strongest denials, and charges of direct falsehood, were evoked in certain quarters by our recent assertion that the assumption of the title of "Emperor," so far from being instigated by the Japanese after the death of the Queen, was actually prevented by them. The writer in *The Korean Repository* was actually an eye-witness of what occurred, and he describes the arrival of the Japanese Minister on the scene as having suspended the programme. It is possible, of course, that the Japanese Representative went to the Palace as the exponent, not of his own views only, but of those of the whole foreign *corps diplomatique* also. At any rate, he was the immediate instrument of intervention. We refer to this matter only as a matter of history. In our opinion, no objection can be legitimately urged against the Korean Sovereign's calling himself "Emperor" if he pleases. He has already assumed that title in his treaties with Japan and Western States. But there certainly was a very strong objection to his assumption of it in the immediate sequel of the bloody drama of October 8th, and with the advice and assistance of officials that had been privy, so far as the world knows, to the brutal assassination of his Queen. Here is *The Korean Repository's* note:—

All change is not necessarily "reform" or "progress," though these much abused and misunderstood terms involve the idea of "change." On the 25th of Oct. the Cabinet that climbed into power since the storming of the Palace on the 8th, issued an order commanding the officers of the several departments of the government to assemble within the Palace enclosure the following day between the hours of seven and ten in the morning to witness the assumption on the part of the King of the title of Emperor. Whether the braves who are implicated in the murder of the Queen were to show their allegiance to their lord by raising him upon a shield or not, we do not know. Immediately on the issue of the order there were conferences, consultations, caucuses between Koreans and Japanese; and between the representatives of western nations and the Japanese the subject was discussed.

We should say in passing that this subject of making Korea an empire is not a new one, now suggested for the first time. Not at all. It is one that has been carefully weighed by our broad-minded Korean statesmen—in the absence of other business we suppose—ever since the signing of the treaty of peace at Shimonoseki last April, when Korea was made independent. Up to this time, before his own people, the king used the term *Kouk Woang*, which to the average Korean means King. In the treaty with Japan and other countries the terms employed is *Woang Chei* which, being interpreted, meaneth Emperor. Why not finally and forever cut loose entirely from anything and everything that savours of dependency on China? Why retain a term that betrays subordinate relations, rather than to choose one that expresses what you really are—a free, a sovereign, and an independent ruler? Linguistic lore evolved shades of meaning from the Chinese characters, keen discriminations and delicate distinctions were without doubt made by men of whom it might be said, to borrow a homely figure, that though too bungling to split saw-logs nevertheless attempted to split hairs. What arguments were arrayed, what men of straw were set up and knocked over, into what wee hours of the night these erudite statesmen and pure minded patriots continued their deliberation, we have not been informed. The matter is of minor importance and we shall not lay it up against them. Suffice it to say we took the precaution, in view of the momentous interests at stake, to secure a good night's rest for the arduous duties of the morrow.

The next morning, to prove our interest in the welfare of the empire soon to be ushered into existence, we went with eight other equally self-sacrificing foreigners to the Royal Palace,

The morning was crisp, and the fifteen minutes walk exhilarating. The dull coolie with charcoal on his back, the huge bull groaning under a load of rice straw, and the ubiquitous merchant boy were on their way to the marts of trade. Our business, however, was far higher and more important. We passed the Korean guards at the Palace gate, the same gate which eighteen days before was entered by a murderous band of Japanese *soshi* hirelings, attended by regulars from the Japanese and Korean armies, escorting the Tai Wön-kun to the presence of the King, and there with an indignation born of hatred and revenge to eject "the base fellows" who had dared to climb back again to power. Through two massive gates, around the frowning Audience Hall, through a smaller gate and between buildings used by scribes (possibly Pharisees and hypocrites); under two gates and into a long lane that turns through another gate and over a camel hump bridge; now a few yards to the right and through one more gate and up along the west side of the lake well known to foreigners for the skating parties invited there by their Majesties. We make a low bow as we turn from the road leading to the quarters where the King has spent eighteen long, sad, and anxious days; we cross a drain with an effluvia not limited to the Palace, for we have had the misfortune to meet it many times in the streets of the filthy city; a few steps more and through the last gate into the court where stands the beautiful buildings that contain the Royal Library, part of which are occupied by Generals Dye and Le Gendre and—we beg these gentlemen's pardon—for the time being by ourselves.

The hands of the clock in the tower to the west of us had not yet reached seven and we felt sure the important ceremonies had not been performed. We viewed the Library buildings, than which probably there are no more handsome structures in the Palace or in the country. We strolled down to the pond. The Tai Wön-kun in the plain white dress of the civilian, attended by a single servant, came from the house of his son the King. Age is telling on the fiery Prince. His body is bent, his step is slow, he leans upon a staff. He looks at us, but not having our divining cap with us, we know not his thoughts. His favourite grandson, a young man of less than twenty-five, soon follows. He bows to us and enters into conversation. If the plump face and contented look are not deceptive, he has fully recovered from "the terrible sufferings" (to use his own words) through which he passed last winter and spring, a fifteen year sentence of banishment on the island of Kyo Dong. He assures us that our devotion to and concern for Korea are as beautiful as they are disinterested, and that the trouble to which we have placed ourselves in coming to the Palace at such an early hour is fully appreciated, while all that the distracted, disturbed, distressed country now needs is a western protectorate. We do not pretend to give the exact words of the patriotic young Prince, neither would we be rash enough to venture an opinion on his chances of reaching the throne of Korea.

Time passes and we look at the Palace built in western style of architecture, we stroll around the lake, we enter the pine grove to the east of the lake; watch with interest the arrival of several members of the Cabinet, we discuss Korean politics—if her political troubles may be called by that term—and the politics of other countries; the probable candidates and their chances of election for the Presidency of the United States next year are named and weighed, but for valid reason we shall not publish the results; the prospective war between Russia and Japan must of necessity receive attention; one of our number taking advantage no doubt of the presence of two physicians, learns to ride on a bicycle; two improvise stone and pitch quoits. The Resident Japanese Minister arrives and is received in audience by His Majesty and promptly takes his departure. The sun has now reached zenith, the King's older brother, Minister of the Royal Household and father of the Prince above mentioned visits us, salutations are exchanged, we gather around him to hear the very latest, and he announces with Oriental snavity that the ceremonies connected with the assumption of the title Emperor had been—postponed. We are greatly relieved. The Minister of Foreign Affairs had already gone to announce the decision to the several Legations. Thus ended the attempt on the part of an over-zealous Cabinet to crown His Majesty, the King "Emperor of Korea."

GERMANY AND JAPAN.

AT the time when three great European Powers entered into an alliance to change the terms of the Shimonoseki Treaty, we expressed an opinion, probably shared by the majority of our readers, that, before long, Germany would be found to have resumed the friendly attitude previously maintained by her toward Japan for many years. It would seem that the expectation is likely to be soon fulfilled. So far as can be seen, Germany's action with regard to Liaotung has brought her nothing. France and Russia, though willing enough to avail themselves of her assistance, have taken no account of her in the division of the spoils. She has not even succeeded in keeping her fingers "between the bark and the wood," where her chief object was to get them, for the triple alliance has brought France and Russia closer together than ever. Even assuming, as some assert, that her procedure was directed against England, partly because she has never forgiven England's attitude during the war of 1870, or British abstention from the Dreibund, and partly because she adheres to the Bismarckian policy of endeavouring to find in the East a safety-valve for the fighting spirit of Europe, it would seem that she has failed in her purpose, for the force of events is driving her into the same camp with England. The transfer of the empire of the sea to France and Russia would be scarcely less fatal to Germany than to England. Such a catastrophe can not be contemplated with equanimity by any loyal German. To keep Russia busy with England in the East, and so avert any chance of an effective combination between France and the Great Northern Power for the purposes of a war in Europe, might be a wise policy. But to unite France and Russia for a maritime attack upon England, would be to incur the tremendous risk of seeing British strength at sea disabled, after which the allied fleets of Russia and France would make but one mouthful of Germany's navy. Is there any probability that they would refrain from doing so? Their recent conduct towards Germany in the East certainly suggests no likelihood of forbearance in the presence of opportunity. The original purpose that unites Russia and France is certainly not pro-German, nor can it be made pro-German by any such coquettish procedure as the recent alliance to drive Japan out of Liaotung. If the markets of the Orient are to be kept open to the Occident, the thing must be accomplished by Germany, England, and Japan. Russia and France have not, nor ever will have, any such aim in view. With Russo-phobism we have no manner of sympathy. We appreciate the thorough reasonableness of Russia's southward impulses, and her Central-Asian expansion is certainly open to no censure from

Englishmen. But her exclusive trade policy must be resisted, and that is equally true of France. Japan's financial needs impel her, for the moment, to increase her import duties. But her destiny is to be a manufacturing country, and the necessity of gaining access to foreign markets must compel her to make her own reciprocally accessible. Thus a common commercial policy draws together Germany, Japan, and England. The *Kölische Zeitung's* latest utterance on this subject is worth quoting:—

It is time that the German people should understand that Japan can not be kept down. Politically this may be possible, if the right kind of coalition is formed; economically it is impossible. We must acknowledge that the land of the rising sun has entered the lists of peaceful competition as an equal of all other civilized nations. It is impossible to stop her progress. All attempts to do so can only hurt our interests. Japan is the land of the future in the Far East, and is bound to become the predominant power of Asia. Germany will do well to reckon with this. And it is also time to remember that the possibility of Japanese competition has been much overrated. Japan will obtain as much of the world's trade as belongs by right to forty-two millions of intelligent people. This can not be kept from her, but on the other hand, she is chiefly agricultural, and will remain so.

With the last opinion here expressed, namely that Japan will remain chiefly agricultural, we do not agree. But it does not seriously affect the general issue. Germany, as the *Neue Freie Presse* alleges, may have sought, last spring, to destroy British ascendancy in the East, and may have joined with Russia and France in pursuit of that purpose. But she must now perceive that if British interests be driven to the wall, German will follow them, and that wherever France and Russia succeed in planting their feet firmly, she herself will be elbowed out.

AUSTRALIAN HORSES.

IT appears not improbable that the seven horses constituting the remnant of the twenty-five recently shipped from Melbourne for this country, may ultimately be offered for sale in Yokohama, as the Japanese have not yet determined to take them. It was a sad business, the loss of eighteen horses out of twenty-five, especially as it occurred when the voyage had been almost accomplished, the ship being in the vicinity of Hongkong. So far as these seven are concerned, however, their survival should serve as an advertisement and a recommendation, for it certainly indicates superior endurance and toughness. The horses are of the type supplied in thousands every year by Australia for Indian cavalry remounts, and their arrival prompts us to repeat an opinion expressed in these columns more than once previously, namely, that the wisest course for Japan to pursue would be to abandon all idea of attempting to utilize the ponies of this country for cavalry or artillery purposes—mountain batteries and land-transport service, perhaps, excepted—and to boldly introduce the Australian breed at once. We do not

pretend to speak any last words on the subject. Doubtless it has received careful attention at the War Department, and whatever programme be adopted will have good reasons to support it. But two facts obtrude themselves on every intelligent observer's notice: one is that the ponies of Japan would be absolutely useless for cavalry operations against any Western nation; the other, that all attempts hitherto made to improve the Japanese breed, have ended in virtual failure. As to the former point, it is of course possible that the ponies of Japan should be employed, without great disadvantage, for vidette and outpost duties. But if opposed to horses such as all Western armies use, the Indian army not excluded, they would be simply annihilated in a charge, and even for the attack of infantry their low speed would keep them fatally long under fire, and their want of weight would deprive their onset of a great part of cavalry's effectiveness. Hooked to guns, too, their lightness must render obstacles formidable that would easily be negotiated by any artillery team in Europe. Indeed, in the matter of military serviceableness they are altogether unworthy of attention. The Japanese trooper rides well, but his mount being a mere rat, his general appearance is better calculated to raise a smile than to create alarm. No particular difficulty attends the use of such wretched cattle against Chinese troops, who are no better mounted. But suppose that Japan had to fight England, for example. Her cavalry's only hope would be to hide itself. One squadron of Sikh troopers would ride through all the cavalry Japan could muster. Her men might be as plucky as it is possible for soldiers to be, but the immensely superior weight, and therefore momentum, of an enemy mounted on Australian horses would sweep the insignificant Japanese pony off his feet in a moment. These are indisputable facts. They must be recognised and dealt with. On the other hand, the results obtained from foreign sires and Japanese dams, the half-breeds, are horses that would be ridiculed at any remount dépôt in Europe, America, or India. They are mere rails; chestless, weedy, long-pasterned beasts, without weight, endurance, pluck, or temper. Possibly after fifty years of crossing and re-crossing something like a serviceable horse might be obtained. But can Japan wait fifty years before she supplies herself with an efficient cavalry arm? It seems to us that she should make up her mind at once to procure a good supply of cattle from Australia, not merely for mounting her cavalry and horsing her artillery forthwith, but also for establishing breeding parks whence her remounts could be furnished. It is plainly a problem of the greatest importance, and we have reason to apprehend that the factor of cost may impede its solution to a dangerous extent, though three or four

million *yen* would probably suffice. Five thousand Australian cavalry-horses could be laid down here at a cost of about £25 each, we imagine—that is to say 2½ million *yen*, in round numbers—and another million *yen* would procure a good stock for stud purposes. That amount should not deter Japan, seeing what an effort she is now making to increase her armaments, and to place them on a really effective footing from a Western point of view.

THE DOCTRINE OF IMMORTALITY.

WE propose to examine briefly Mr. BARTLETT'S interesting and philosophical contribution to this topic, published in our issue of November 18th. Mr. BARTLETT holds that the doctrine of immortality is logically demonstrable, and he advances three syllogisms in support of this view. By casting his syllogisms in the hypothetical instead of in the categorical form, he has impaired the intelligibility if not the force of his arguments, and we shall therefore modify their form while leaving their sense unchanged.

The first syllogism runs as follows:—

Major premise. All existing organs or forces possess (or are survivals from periods of such possession) adequate functions.

Subordinate argument. The conscious ego is an existing force or organ; it must therefore possess (or have outlived the possession of) an adequate function.

Minor premise. The function possessed by the conscious ego of guiding the physical and intellectual man through a few decades of time is a function entirely inadequate to such an organ.

Conclusion. The conscious ego must have a function beyond this life.

Examination of the first syllogism. The major premise we accept as a sound induction from biological experience. The subordinate argument, stating that the conscious ego is an existing force or organ, appears to endow the ego with a real, objective existence, such as that of the liver or the heart. It is to such organs as these that the induction from biological experience applies, and to transfer it from these to the ego, which, as KANT showed, is merely the name given to "the consciousness of my thinking," is in truth "materialism" of the very grossest kind. This criticism of the subordinate argument entirely deprives the first syllogism of any logical value. But since the criticism will be unintelligible to those that have failed to master the principles of the Kantian philosophy, and since many of our readers are, perhaps, in philosophical matters, still numbered among pre-Kantians, we shall further adduce the argument by which a century and a half ago HUME refuted the minor premise of Mr. BARTLETT'S syllogism. "If the reason of man,"

he writes, "gives him great superiority above other animals, his necessities are proportionably multiplied upon him; his whole time, his whole capacity, activity, courage, and passion, find sufficient employment in fencing against the miseries of his present condition; and frequently, nay, almost always, are too slender for the business assigned them. A pair of shoes, perhaps, was never yet wrought to the highest degree of perfection that commodity is capable of attaining; yet it is necessary, at least very useful, that there should be some politicians and moralists, nay, even some geometers, poets, and philosophers, among mankind. The powers of men are no more superior to their wants, considered merely in this life, than those of foxes and hares are, compared to their wants and to their period of existence. The inference from parity of reasoning is therefore obvious."

The third syllogism, which for the convenience of the argument we consider before the second, runs as follows:—

Major premise. The infinite is unchangeable.

Subordinate argument. The infinite is capable of entering into relations, and, since the infinite is unchangeable, those relations are necessarily unchangeable.

Minor premise. Man is capable of conscious relations with the infinite.

To those that have accepted the Kantian philosophy, this syllogism also is illicit, for the infinite is beyond the range of possible experience, and therefore neither unchangeability nor any other attribute except infinity is logically predicable of it; we do not know whether the infinite is unchangeable or not; nor do we know that the infinite is capable of entering into relations, and most thinkers would here incline to the negative view. (In mathematics, at least, the infinite has no relations, as is shown by the following equations: $\infty + n = \infty$; $\infty - n = \infty$; $\infty \times n = \infty$; $\infty \div n = \infty$.) And lastly, whether the infinite, speaking generally, has or has not relations, many thinkers have held, and we learn from Mr. BARTLETT that no less a man than EMERSON was one of these, that man at least has no conscious relations with the infinite.

With regard to the third syllogism, as with regard to the first, let us now put the Kantian criticism on one side, and examine the argument on its merits, assuming its terms to be intelligible and true. We see at once that it proves too much, for it proves not merely that the consciousness of man is permanent, but it proves further that in so far as it is permanent, it is *unchangeable*. It is not the play of changing thoughts that makes up the consciousness of daily life which this syllogism shows to be permanent; that, at any rate, since the essence of its nature is change, can have no relations with the unchangeable infinite; what is proved to

persist is merely the arch-ego, or, in the language of the schoolmen, the *principium individuationis*. Neither memory nor emotion, nor indeed anything that we value among the elements of our conscious life, is guaranteed by the syllogism to exist after the death of the body, for all these states of consciousness are changing states, and the infinite can have no relations with the changeable. The only element of consciousness that the syllogism proves to persist is the hypothetical unchanging consciousness of relation with the unchanging infinite. This chill abstraction can never satisfy the eager longings of ordinary men and women for an immortality that will give them the sunshine of the present life, without its shadows of sin, suffering, and death.

It is in effect on these longings that Mr. BARTLETT'S second syllogism, so far as it has any force whatever, is based.

Major premise. The history of all organisms is cyclical, passing through successive periods of development, service, and decay.

Subordinate argument. The conscious ego is organic (Qy. an organism). It may therefore be expected to present a complete cyclical history.

Minor premise. The history of the conscious ego in this life does not present a complete cycle.

Conclusion. Therefore the completion of the cycle of the conscious organism may be expected after the death of the body.

We accept the major premise as a valid induction from biological experience. The subordinate argument is subject to the serious criticism already made on the subordinate argument of the first syllogism. Let us pass this over and consider the minor premise. It appears to us that biological experience, shows that the mental life of man has a cyclical course comparable with that of his physical life. Where the decay of the bodily powers is slow, as in old age, this decay is usually accompanied by the progressive mental deterioration which, in extreme cases, culminates in senile dementia. It is true that in a large number of cases—the majority, in fact—the mental cycle is, happily, not completed, and the conscious existence appears to be arrested, by accident or disease, in the full vigour of mental activity. But precisely in these cases, the physical cycle is also incomplete. A man in full health of body and mind is struck on the head by a falling stone. All manifestations of activity, both bodily and mental, cease at once, and, as far as our senses can judge, for ever. But the mental cycle was incomplete, and we are therefore to infer that this cycle is to be completed in a future existence. *A fortiori*, then, we must argue that the bodily existence is destined for similar completion. This syllogism, like the last, would seem to prove too

much, and to lead us to a manifest absurdity. In truth, all that biological experience warrants us in concluding with regard to the cyclical course of organic life, is that in each case the cycle tends to completion unless some forces more potent than those that sustained the tendency to completion intervene and bring about a premature arrest of the cycle. But, amid the warring play of activities that we term nature, such a premature arrest of the cyclical course is the rule rather than the exception, and in this respect the human mind has, so far as we learn from experience, to share the common lot.

In his commentary on the second syllogism, Mr. BARTLETT is misled by the most potent source of fallacy in enquiries of this character, namely, a sudden, but easily overlooked, transition in the meaning of a term. The word cycle, as he uses it in his syllogism, is the biological cycle of development, maturity, and decay. But when he tells us that "the human cycle is always incomplete this side of death; that was what GOETHE felt, SOCRATES (or PLATO) felt, JESUS CHRIST (or the synoptic writers) confidently affirmed"—the "cycle" is one unknown to biology, a cycle of permanent maturity, in which decay has no part. We have here no more to deal with an induction from biological experience, but merely to use plain language, with a widespread (but by no means universal) longing for immortality. To a consideration of this longing we will return in a moment, after we have discussed Mr. BARTLETT'S last attempt to prove the doctrine of immortality by recourse to biological analogies. He writes: "My own belief in intrinsic immortality rests on the additional fact that the higher the organism the smaller the proportion of wasted individuals to perfected ones, and the conviction that the soul is the last and highest product not to be wasted." To this ingenious argument, the only answer necessary is that the diminution of wastes as we ascend in the biological scale is by no means so rapid as to lead us to suppose that with man waste has arrived at a vanishing point. Here again the argument from biology applies to the body quite as much as to the soul. Nature squanders individual human bodies as if they were things of small value; then why not also individual human souls? To nature, "red in tooth and claw with ravin," there can here be no appeal.

The only one of Mr. BARTLETT'S arguments that appears to have survived is the inference that men are immortal because they feel that the present life does not satisfy all their aspirations. In respect of this we can not do better than quote the words of one of the greatest writers of our time, HUXLEY, in his work on the philosophy of HUME. "It is remarkable that HUME does not refer to the sentimental arguments for the

immortality of the soul which are so much in vogue at the present day; and which are based upon our desire for a longer conscious existence than that which nature appears to have allotted to us. Perhaps he did not think them worth notice. For indeed it is not a little strange that our strong desire that a certain occurrence should happen should be put forward as evidence that it will happen. If my intense desire to see the friend from whom I have parted, does not bring him from the other side of the world or take me thither; if the mother's agonised prayer that her child should live has not prevented him from dying; experience certainly affords no presumption that the strong desire to be alive after death, which we call the aspiration after immortality, is any more likely to be gratified. As HUME truly says, "all doctrines are to be suspected which are favoured by our passions;" and the doctrine that we are immortal because we should extremely like to be so, contains the quintessence of suspiciousness."

Our conclusion is that Mr. BARTLETT'S well-meant attempt to provide an intellectual ground for the belief in immortality is "too late a week;" and that natural religion, like dogmatic atheism, belongs to the eighteenth century. Between faith and agnosticism there is no middle standing-ground. But if the intellect cannot prove that man is immortal, neither can it prove the opposite. To the purely contemplative (unemotional) intellect, it appears to us that the analogies that lead us to infer that the individual consciousness ceases at death are strong; but they do not, and cannot, amount to logical proof. In proportion, then, as the scientific or the emotional temperament predominates in a man who, disregarding faith, sets himself to examine this problem of the ages, will his mind dwell especially on the negative or on the positive aspect of the question; will he answer it (to quote the words of EDMUND GURNEY) with a "Probably, No," or a "Possibly, Yes."

RAILWAY NEWS.

The question of the advisability of transferring the State railways to the control and possession of private companies is beginning again to attract attention. Early last year a number of prominent men in Tokyo formed themselves into a sort of association to consider ways and means of attaining that object, and the association appointed a special committee to conduct investigations. The committee held two meetings, the second being in July of last year, when the outbreak of war temporarily suspended their work. Now, once more bestirring themselves in the matter, they held their meeting in the Imperial Hotel on the 5th instant, Messrs. Shoda Heigoro, Nakamigawa Hikojiro, Sayenobu Michinari, Watanabe Hiromoto, Oku Saburobei, Imamura Seinosuke, Shibusawa Eiichi, and Hara Rokuro being present. After a debate of some length, they are said to have decided that, the war having made no change in the general aspect of the railway question, they should continue their investigations on the original basis. A report of their debate publish-

ed in the Tokyo press contains rather severe reflections upon the railway authorities. They are blamed for insufficient attention to the convenience of the public, and for the slow progress of work on new lines. In the opinion of the committee, these defects are inseparable from Government undertakings, and can not possibly be remedied except by transferring the State-owned lines to the possession of private companies. It may be expected that, in view of the railway mania now prevailing, the agitation for the sale of Government lines to private companies will develop great force and may not improbably obtain the support of the Diet. At all events the question will be much heard of during the approaching session of the Houses.

The Government, on the other hand, purposes submitting to the Diet various bills relating to railways. One of the most important will be for doubling the Tokaido railway. Other measures are the construction of a central station in the city of Tokyo connecting the Shimbashi terminus of the Tokaido, and the Uyeno terminus of the Northern railway; the continuation of the central railway from Hachioji, through Kofu, to Nagoya; the connection of Hirosaki and Fukushima, through Akita, and Yonezawa; the prolongation of the Naoyetsu line to Shibata, touching at Niigata *en route*; the laying of a line from Yatsushiro to Kago-shima; and the construction of two more lines in Kyushu.

Attempts are being made to organize an agitation among the inhabitants of the intermediate *shukuba*, the former postal stations on the Tokaido, to have the course of the railway altered so that it shall touch at these villages, and that there shall be a *depôt* at each of them. The organizers of this movement threaten that, should their representation be rejected by the railway authorities, they will open communications with the members of the Diet and in combination with them thwart the construction bills that the Government is understood to have under contemplation. Men are going from one village to another along the Tokaido haranguing in this fashion, and of course their speeches meet with the approval of the villagers. We are not surprised that it should be so to a certain extent. The routes of the Tokaido, and Japan Railway Company's lines are doubtless well chosen from an engineering point of view, but the question of feeding lines has not yet received much practical consideration, and the result is that many villages and small towns lying at a distance of a few miles from the railways, derive comparatively little advantage from them. It is in the interests of the railways themselves, not less than of the population in the districts through which they pass, that every means should be adopted of extending their carrying facilities as widely as possible.

FORMOSA NEWS.

DECEMBER 7TH.

The latest correspondence from Formosa published in the vernacular press contains an account of the reduction of a formidable stronghold held by a numerous gang of robbers. About a dozen miles from Tainan-fu, there is a wild tract of almost impenetrable jungle and dangerous precipices, where the upper steam of the Sôbun-kei develops its tortuous course. There a gang of banditti constructed a fastness several years ago. The leader was a desperate character named Chin Fah. They made occasional descents on villages in the neighbourhood, and carried away treasure, provisions, and women. The Chinese Viceroy of the island, Liu Ming-chan, once attempted to hunt out the depredators, but the difficulty of finding the way to their den compelled him to give up the attempt. Some years ago, in one of his forays, the Chief of the banditti was caught, condemned, and deported to the Pescadores, where he was undergoing a sentence of penal servitude when the general confusion caused by the arrival of the Japanese troops in the spring of the present year gave him an opportunity to regain his liberty and return to his stronghold

in Formosa. Since his return there he did not forget to wreak vengeance upon the villagers to whom he owed his apprehension and punishment. The villagers recently applied for protection to the commander of the Japanese troops (a company of foot) stationed in the vicinity.

The Japanese officer, Captain Sato, at once complied with the request, and started in the direction of the robbers' stronghold, at the head of about sixty men. Under the guidance of a few villagers, the party struggled through jungle and over hills, and at last, with great difficulty, reached the top of an eminence confronting, at a speaking distance, another elevation surmounted by the strongly intrenched position of the banditti. The intervening space being of an impassable character, it was necessary to make a detour of some miles in order to reach the fastness. Accordingly, the Japanese pitched their camp and rested a while. Sometime afterwards, there arrived four messengers from the banditti, bringing presents of fowls, wild geese, and vegetables. One of them was detained, while the rest were allowed to go back, charged with a message to their leader to the effect that, if he surrendered, he and his followers would be pardoned, and that he should at all events come to the Japanese camp the following day.

The chief, however, not making his appearance one of the native guides was ordered to shout to the sentinel in front of the opposite fastness and inquire why the chief hesitated to come. The sentinel, after seeking instructions, replied that for certain reasons the banditti were unable to come, whereupon the Japanese officer answered that if they could not come he should go himself. The answer was that they should be glad to receive his visit, but that he must not bring a large number of men. Captain Sato, followed by two or three men, then proceeded to visit the robbers in their lair. With infinite difficulty, he succeeded in making his way to their quarters. There were seven rows of buildings, the whole surrounded by breast works and bamboo stockades. The Japanese messenger was shown into an apartment, where the chief soon came out to receive him, and drink was served. Chin, the chief, having asked permission to introduce his brothers, seven or eight big fellows came into the room taking their seats beside Chin. After the usual salutations, Captain Sato demanded why they had not come to the Japanese camp. They replied that they were willing to do so, but that, as the way lay near a hamlet, the inhabitants of which were at feud with them, they dared not run the risk of being attacked by their enemies. Upon this Captain Sato gave them several copies of a free pass, which, he explained would secure them against the villagers, and suggested that they should pay the visit as soon as possible. But as they still asked for a period of ten days, it became plain that they were resolved not to come. They inquired when their messenger, detained by the Japanese, would be allowed to return, whereupon Captain Sato told them that the man could not be set free until they themselves visited the Japanese camp. At this a violent dispute arose among these so-called brothers of the chief. Captain Sato could not make out what they were saying, for, although able to conduct a conversation with the banditti in writing, he had no knowledge of spoken Chinese. It was apparent, however, they were disputing about the advisability of detaining a captive by way of retaliation. But they seem to have been pacified by the Chief, for no such attempt was made. Before taking leave of the banditti, the Japanese officer expressed, in a seemingly indifferent tone, a wish to look round the place, as he had been informed that it was one of the most picturesque spots in the island. The chief would not allow this, however, so the Japanese had to be contented with what they could observe in passing rapidly from the building in which the meeting had been held to the gate.

It being now evident that the robbers had no intention of surrendering, and the force under Captain Sato's command being inadequate for reducing the stronghold, he decided to return to his station. On the way back, the Japanese

came upon an outpost of the banditti, consisting of four men. Three escaped, but one was secured and carried away. The captive proved to be Ho An, second in command of the banditti.

By this expedition it had been ascertained that the stronghold was guarded by a little less than two hundred banditti. When Captain Sato visited it, there was no trace of any fire arms, but in the course of a scouting tour in the vicinity of the fastness he observed a breech-loader in the hands of a sentinel, and from this and other evidence, he concluded that the banditti possessed a sufficient supply of arms and ammunition. It was even stated by some villagers in the vicinity that the robbers had bought two cannon and fifty rifles from the beaten followers of Liu Yung-fu.

An evil fate attended a party of seven Chinese, who, hearing the news of the Japanese expedition against their old enemies, followed Captain Sato's detachment. They missed the route of the Japanese, and fell into the hands of the banditti. One of them subsequently came back to the village with news that his comrades must be ransomed for ten taels per head.

Another expedition was soon organized at Tainan. It consisted of two companies of infantry under the command of Major Kawagoye. Leaving Tainan on the 15th ultimo, the detachment passed that night at Wanrigai, where it was joined by Captain Sato at the head of a small force. On the 16th, the Japanese encamped a few miles from the stronghold of the banditti, and on the 17th, they resumed their march before dawn. The ascent was arduous and in some places almost impassable. At several spots the Chinese coolies had to dig foot-holds for ascending the sides of precipitous hills, and streams had to be forded times without number. At half-past nine, the Japanese came in sight of the stronghold, and their commander, Major Kawagoye, caused a captive robber, Wan, to call out to the sentinel that the leader, Chin, and his followers would be pardoned if they came out and surrendered within an hour, but if they refused to do so they must take the consequences. The sentinel, after consulting with his chief, replied that they would surrender, if the Japanese commander would be so good as to send a formal note commanding them to lay down their arms. They were told that no such note would be sent, as there was no necessity for it. However, Captain Sato was ordered to enter the stronghold and hold a parley with the banditti. He was proceeding at the head of a small force, when he was fired at from the stronghold. His party was then at the bottom of a valley fully exposed to the enemy's fire. The path to the stronghold led up the side of precipitous hill, and it being impossible either to stay and fight or to climb over the precipice and charge, the Japanese had no choice but to retreat. Before they could do so, however, one of their officers, Sub-Lieutenant Ina, and a bugler were wounded. They climbed up a hill confronting the robbers' fastness, and from thence opened fire. Meanwhile, the rest of the detachment quickly took up positions on the tops of several hills, and the attack commenced at twenty minutes past noon. The banditti replied vigorously. At a little past one, Captains Sato and Otachime charged up the precipitous path in front of the stronghold, and breaking through the barricades, succeeded in forcing their way into the stronghold, an entry being effected nearly at the same time from another direction by a party under Captain Hasegawa. Two of this last party were shot down while climbing up the path. Thus vigorously attacked, the robbers lost heart and fled along a path in a southeasterly direction, leaving thirty-two dead bodies behind. It was about 1.30 p.m. when the place fell into the hands of the Imperial troops. There were found Mexican and Japanese silver pieces to the amount of about 2,500 yen, seventy-four small arms, two cannon of old style, spears, 2 swords, and a quantity of ammunition.

About four o'clock on the same afternoon, it being reported that a number of robbers were hiding at the bottom of a valley near the strong-

hold, a search party was despatched. They discovered no robber, but their attention being attracted by the furious barking of a dog, they went to the spot, when they found two young Chinese women, one of whom had a baby a month or two old. The women said that they had been carried to the stronghold by the robbers in April last, and had since then remained prisoners. They implored the Japanese soldiers to conduct them to their homes in the vicinity, and their prayer was at once complied with.

As to the chief of the robbers, it was known that he had left the place at noon, taking with him a number of female captives. Three Chinese prisoners found there were liberated. The Japanese left the place on the 18th, setting fire to the building.

Lately it was discovered that in the south of Formosa some remnants of Liu Yung-fu's followers were giving trouble, plundering villages and threatening small parties of Japanese troops. Telegrams just received in Tokyo announce that order has been restored there. The first telegram, dated Taipeh-fu, November 29th, and wired from Ujina on the 4th instant, runs as follows:—

"The Yamaguchi detachment arrived at Seisei-sho (left bank of the Tong-kang) on the 28th, when the insurgents in the vicinity completely dispersed, the leaders escaping into the mountains and the rest mingling with the local inhabitants. To-day the detachment is to make a search at Chokosui and Haisi-roto. The people at Seisei-sho and in its vicinity have entirely submitted to the Imperial rule. For the convenience of the detachment, a field telegraph line has been established with an office at Seisei-sho. The laying of a commissariat telegram line between Fang-lian and Hêng-chuen has been commenced."

The next message, dated Taipeh-fu, November 30th, and transmitted from Ujina on the 10th instant, says:—

"When the search parties sent out by the Yamaguchi detachment on the 29th, arrived at Chokosui and its vicinity, the inhabitants made act of submission, surrendering their arms and ammunition. The detachment proceeds to-day to Chokosui. A body of troops has been stationed between Seiseisho and Fêng-shan."

The latest telegram, dated Taipeh-fu, December 4th, 5.50 a.m., is as follows:—

"The Yamaguchi detachment, then staying at Banzen-sho, sent out a party to Chetong-ka in order to effect a junction with the troops stationed at Fang-liao. The detachment has received the submission of the Hakkas and a majority of the aboriginal tribes. Peace having been restored in these regions, the detachment intends to come back to Fêng-shan by the 9th instant, leaving half a battalion of infantry at Akogai and a squadron at Senshito. The chiefs of the four tribes inhabiting a tract forty Chinese miles north-east of Naibunsho, have come to Tainan, followed by 140 of their tribesmen. They brought presents of various things which they offered to the Commander of the Second Division, thanking him for the despatch of the detachment."

CHINA NEWS.

DECEMBER 10TH.

Our last intelligence from China was to the effect that the Mohammedan rebellion in Shensi had begun to "peter out," and that nothing now remained except the closing page of all such chapters in Chinese domestic history, namely the slaughter of the insurgents and the confiscation of their property. That news was based on telegrams received in Peking about the middle of November, but it would seem from correspondence published in the leading Shanghai journal, that a very different state of affairs existed at the beginning of November, the rebels up to that time having been virtually unopposed. There was also a report that large quantities of arms and ammunition had fallen into the hands of the insurgents, and it seems to have been considered certain that 2,000 troops, by whom these munitions were escorted,

had been annihilated. General Tung Fuhsiang had been commissioned to make peace, but the Mohammedans were insisting upon the decapitation of a military graduate whom the Government was resolved to protect, and were also declaring that if they were to be treated as rebels, they would resist to the death. It is exceedingly difficult to discover the real state of affairs in Shensi. A certain Mr. Simpson, who passed through the disturbed districts in the closing days of October and reached Lanchow, reports that for six days he saw only deserted or burning villages and crops uncut.

An unquiet state of affairs is reported as prevailing in Shansi. Its proximate causes are said to be the appointment of a Hunan man to be Governor, and the circulation of wild stories about successes achieved by Liu Yung-fu against the Japanese in Formosa. Vile literature, scurrilous placards, and other means of rousing public feeling against foreigners are largely resorted to:

When the war with Japan began to develop its most disastrous phases for China, considerable excitement prevailed among the *Chüjen* that had come to Peking to receive their *Chiu-shih* degree. They could not endure the idea of China's suing for peace, and in order to prevent such humiliation they drew up a memorial and presented it at the Censors' Yamên on the 4th of May, believing that there would thus be time to enter their protest before the exchange of ratifications at Chefoo on May 8th. They were too late, but their memorial remains, and its very interesting contents are thus epitomized by the *North China Daily News*:—

- I.—To create a patriotic spirit.
- II.—To remove the capital to Hsianfu in Shensi.
- III.—To raise and drill armies.
- IV.—To make reforms.

In order that peace may not be signed, that the outer barbarians be repelled, that our country be preserved, and that our dynasty be prolonged.

I.—To create a patriotic spirit five things are necessary.

- 1.—Reform. Laws and regulations like utensils become old and useless and new ones must be provided according to the needs of the times.
- 2.—Confess sins like the ancient Emperors! Call upon all to wipe out the nation's disgrace as if avenging a personal enemy.
- 3.—Punish unworthy officials.
- 4.—Employ better men.
- 5.—Don't listen to Japan about not punishing those who were engaged in war.

II.—Remove the capital. The present is too far near the sea and therefore is too easy of access to all Foreign nations. The former Treaties were all made from fear of losing the capital. Put it at a safe distance and former humiliations will not be repeated.

- III.—Raise and drill an army.

The indemnity asked for by Japan (Tls. 200,000,000) should be used to equip the army.

Young generals should be elected who are not bound by old and out-of-date methods, and encouraged to raise armies and drill them night and day.

The barbarous nations are constantly making new guns. (Here they give the names of the different guns and rifles used by the different armies of Europe and America.) While barbarous nations buy the new and discard the old, we buy up the discarded rifles of Siam, how can we prosper? they say.

IV.—Reforms. So long as we have only a revenue of Tls. 70,000,000 how can China ever repay an indemnity of Tls. 200,000,000? Various reforms are necessary.

A.—To enrich the people six things are necessary.

- 1.—Must establish Banks. By means of these the financing of the nation in regard to all matters will be easy.
- 2.—Must have railways. Their savings to the country will be very great.
- 3.—Must encourage machinery.
- 4.—Open coal mines.
- 5.—Coinage. Instead of the millions of dollars which come in from abroad now annually and which are alloyed with large quantities of lead, coin our own. Besides we do not want the year of our Christ put on our coins.
- 6.—Post offices.

B. There are four other ways of benefiting the people.

- 1.—Agricultural reform.
- 2.—Technical training and patents.
- 3.—Encourage trade so as to be delivering in-

stead of destroying the nation. Note the exports and imports.

- 4.—Provide for the poor.

(1) Let the manufacturers (producers) be increased and the transporters (distributors) lessened. About Tientsin 60% are carriers, while the producers are only 40%.

(2) Let there be emigration and colonising as the British do in Canada and the Russians in Siberia.

- (3) Let there be reformatory schools.

- (4) Let there be poor relief.

C.—Reform of Education.

1.—What is studied by all other nations should be studied by China.

2.—There should be an increase in the number of educated, for other nations have 79 or 80 per cent. able to read, while China has no more than 20 per cent.

3.—Military training should be changed into technical training.

4.—A new system of examination of those who have been studying in colleges without a fixed number of passes.

- 5.—Have public libraries.

6.—Have newspapers and magazines of all kinds to encourage different departments of learning.

7.—Found a religious department of Education. The customs of our country are degenerating fast because we have no religious teachers! Thus it is that the depraved religions of foreign barbarians spring up and deceive our people. Every province is full of chapels whilst we have only one temple in each county for our Sage Confucius. Is this not painful? Let religious instruction be given in each country. Let all the charitable institutions help. Let all the unowned temples and charity guilds be made into temples of the Confucian religion and thus make the people good and stop the progress of strange doctrines (Christianity). Let the most advanced students of Confucianism be called up by the Emperor to the capital and given the Hanlin degree and funds to go abroad. If they succeed in establishing schools in foreign countries where are gathered 1,000 pupils let them be ennobled! Thus we shall take Confucianism and with it civilise all the barbarians, and under the cloak of preaching Confucianism travel abroad and quickly learn the motives of the barbarians and extend the fame of our country!

D.—Re-arrange the officials both in the capital and the provinces as suggested by former noted mandarins.

E.—Have a college to teach foreign affairs to those who shall become Ministers abroad.

F.—Let there be more travelling abroad like Peter the Great instead of the princes and nobility staying at home and knowing nothing.

G.—Let the power of memorialising the Throne be much extended, instead of leaving all power in the hands of a few Viceroy and Governors as now, by which the Emperor has little chance of knowing the whole truth.

H.—Let the people, say every 100,000 families (half a million), elect one man to come to Peking and meet at the Tai Ho palace in the presence of the Emperor to discuss matters of the national interest and make a fresh election each year. In this way the Emperor will soon know all.

When Bismarck thought of the changes that might be made within 100 degrees of longitude, 6,000 miles in length, a population of 400 millions, and 260,000 different products, he could not think of it without dread and at first advised the division of the empire. But finding that China procrastinated he said there was nothing to fear from it.

Turkey, because of its refusal to change, has been divided by six Powers. Japan, though only a barbarous island, by changing has taken Loochoo away from us and invaded our empire.

If our parents were suffering from some dangerous illness we would strongly urge them to take the right medicine. China is now in very great danger, and we therefore most anxiously urge the adoption of right measures for her safety.

It is noteworthy that this memorial, while thoroughly anti-foreign in spirit, nevertheless advocates emphatically the adoption of foreign methods of progress and civilization.

Viscount Tani and Messrs. Tomita Tetsunosuke and Sudo Jiichiro called on the 11th inst. on Viscount Nomura, Minister of Home Affairs, and advised him to dismiss Mr. Miura, Governor of Tokyo, in connection with the waterworks scandal. Nothing has been heard relative to the result of the interview, but they are resolved to interview Marquis Ito if their advice is not accepted by the Home Minister.—*Mainichi Shimbun*.

CORRESPONDENCE.

THE CHINESE IN FORMOSA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your Editorial of the 5th inst. regarding the regulations issued by Governor-General Count Kabayama contains some startling propositions. You say:—"Recently issued regulations for the control of Chinese visiting Formosa suggest the question, what steps does Japan intend to take with respect to the Chinese already settled in Formosa? Will she suffer them to remain there, as subjects of her own, or will she adopt measures to ensure their return to China?" You add: "Japan does not wish, and cannot afford, to expose her territories to a deluge of Chinese." The sum of your suggestions amounts practically to the adoption of measures to deprive the Chinese inhabitants of Formosa, permanently residing there at the period of the cession of the territory to Japan, of all the rights they had under the Chinese Government and drive them from their homes and out of the country. Your view of treaty obligation, as urged in this connection, to me appears passing strange. The fifth article of the treaty of Shimonoseki reads—as quoted by you:—

"The inhabitants of the territories ceded to Japan who wish to take up their residence outside the ceded districts, shall be at liberty to sell their real property and retire. For that purpose a period of two years from the exchange of the ratifications of the present Act, shall be granted. At the expiration of that period, those of the inhabitants who shall not have left such territories, shall be Japanese subjects."

If words mean anything definite there can be no question regarding the guaranteed status of the Chinese resident of Formosa. A treaty concluded with China should be as binding upon Japan as a treaty made with England or any other Power, so I can see no escape from the logical conclusion that if faith is to be kept by Japan with the Powers that have concluded treaties to go into effect in the near future, China and all the world besides can expect nothing less than that the stipulations contained in Article V. of the Shimonoseki treaty will be observed to the letter. There is no ambiguity in the words. At the expiration of that period, those of the inhabitants who shall not have left such territories, shall be deemed to be Japanese subjects. The inhabitants of Formosa are clearly entitled to the privilege of election whether they will place themselves outside of Japanese jurisdiction or remain subjects of the Empire. There is no method by which Japan can escape from the results of this fifth Article of the Shimonoseki treaty, be they agreeable or otherwise, than by bald repudiation of treaty stipulations together with the perpetration of the grossest outrage against the commonest dictates of humanity. The Chinese in Formosa being guaranteed the right of election regarding their citizenship by treaty stipulations, if they should be treated as you suggest they may be, and in Japanese interests should be, without protest from the nations of the earth now awaiting the period when they likewise have to test the integrity of the Japanese government in its dealings with their subjects and citizens who may be found within the precincts of the realm, it would evidence a state of affairs incomprehensible to the average minds. For one, I cannot believe that Japanese statesmen would initiate such a course, although their hearts might pulsate in that direction, and that I doubt.

The Chinaman may be all that is detestable in human depravity; objectionable in every way that the human mind can depict; yet Japan entered into a solemn compact with the Emperor of China to accept as Japanese subjects all Chinese residents in Formosa who might elect to remain there. Would the Editor of the *Japan Mail* urge that, had the Liaotung peninsula not been retroceded Japan would have been competent, under treaty stipulation, to have proceeded in the manner he suggests should be pursued in Formosa? The Japanese Government knew, at the time of entering into the compact with China, that Formosa had a large contingent of Chinese inhabitants; that the Liaotung peninsula was filled with Chinese to the exclusion of all others than Chinese;—and the general make-up and characteristics of these Chinese were as fully known at that time as today. If, to enable Japanese to fully utilize Formosa in its vast possibilities, all the Chinese inhabitants must be driven from the country, it is time for Japan to call a halt to any hope for further territorial expansion, for the spirit of the age will not countenance the theory that she may exterminate a people by dispersion because the fear may be present that the individual Japanese is not capable of competition with the conquered in the strife to live—Japan should be able to take care

of her new subjects in Formosa: they electing to become such,—and find her profit in the accession. The Chinaman is not altogether bad, and he is capable of improvement.

Yours truly,
Yokohama, December 7th, 1895.

X.

SUNDAY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Apropos of the question concerning the observance of Sunday, now being agitated in your correspondence columns, I have thought that the enclosed from Mr. Gladstone might serve to throw some light upon the subject. Will you kindly insert it *in toto*,

Yours truly,
Mayebashi, December 5th, 1895.

MR. GLADSTONE AND THE LORD'S DAY.

The April (1895) number of the *Church Monthly* will contain the second part of Mr. Gladstone's article on the Lord's-day. In the course of an extremely interesting argument he says: The question for the Christian is, not how much of the Lord's day shall we give to service directly divine. If there be any analogous question it is rather how much of it shall we withhold? A suggestion to which the answer obviously is as much, and as much only as is required by necessity, and by charity or mercy. These are undoubtedly terms of a certain elasticity; but they are quite capable of sufficient interpretation by honest intention and an enlightened conscience. If it be said that religious services are not suited for intensity over the whole day, and could only lead to exhaustion and reaction, I would reply that the business of religion is to raise up our entire nature into the image of God, and that this, properly considered, is a large employment—so large that it might be termed as having no bounds. But the limit will be best determined by maintaining a true breadth of distinction between the idea of the new life and the work of the old. All that admits the direct application of the new spirit, all that most vividly brings home to us the presence of God, all that savours most of emancipation from this earth and its *discentum catene*, is matter truly proper to the Lord's day, and what it is in each case the rectified mind and spirit of the Christian must determine. What is essential is that to the new life should belong the flower and vigour of the day. We are born on each Lord's-day mornings, into a new climate, a new atmosphere; and in that new atmosphere (so to speak by the law of a renovated nature, the lungs and heart of the Christian life should spontaneously and continuously drink in the vital air.

It may perhaps be said that this view of the subject disparages the Christian life of the other six days of the week. A fatal objection, if only the fact were so. But I believe that, if we search the matter to the bottom, it is found difficult or impossible to reach any other firm foundation for the observance of the Lord's-day. The counter idea is to give a certain portion of the day to work associated with the new life, and to withhold the rest. On what authority, what groundwork of principle, does such an idea rest for its warrant? There is no allocation of a portion, of a *quantum* of time weekly for such a purpose commanded in the Old Testament, none in the New, none in the known practice and tradition of the Church. Would it not seem that this plan savours of will-worship rather than the other? The observance of the Lord's-day by spiritual service rests, in its inner soul and meaning, not on a mere injunction, but on a principle.

Does, then, that principle impart any dishonour to the general law of love, obedience, and conformity to the divine command, which embraces all days alike without preference or distinction of degree? It does nothing of the kind. The service of God in this world is an unceasing service, without interval or suspense. But, under the conditions of our physical, intellectual, and social life, a very large portion of that service is necessarily performed within the area which is occupied by this world and its concerns, and within which every Christian grace finds perpetual room for its exercise. But for its exercise under circumstances not allowing the ordinary man, unless in the rarest cases, that nearness of access to the things of God; that directness of assimilation to the divine life, which belongs to a day consecrated by spiritual service. So the grace and compassion of our Lord have rescued from the open ground of worldly life a portion of that area, and have made upon it a vineyard seated on a very fruitful hill, and have fenced it in with this privilege, that, whereas for our six days work the general rule of direct contact must for the mass of men be with secular affairs, within this happy precinct there is provided, even for that same mass of men, a chartered emancipation; and the general rule is reversed in favour of a direct contact with spiritual things.

"PLOT AND PASSION" AT THE PUBLIC HALL.

Amateurs, especially in small communities, where necessarily the numbers are few who can declaim a dozen lines decently or who know how to "carry" themselves on the stage, lie under a heavy handicap when appearing in such a piece as that selected for presentation last night. "Plot and Passion" is a play that possesses but one element of success—the acting. It is neither scenic or witty, nor do either of the three acts culminate in a *finale* that is at all startling. With the exception of *De Neuville*, there is not one among the cast that exhibits an amiable trait in his or her character, consequently there is nothing to enlist the sympathies of the audience outside the dramatic action of the piece. The scene opens in Paris during the Empire, is removed to Prague

in the second act, and reverts to the French capital in the third, where the atmosphere reeks with intrigue and conspiracy, the outcome of which are hypocrisy and bribery on every hand, each of the principal characters being ready to sell the life or liberty of another without the slightest hesitation or compunction, the prominent characteristics of the principal rôles being the daring impudence and duplicity of *Desmarets* and the brutal selfishness and savagery of *Fouché*, while *Madame de Fontanges* is a creature of the secret police and an unblushing and inveterate gamester. Noble sentiments and pretty wit being generally absent from the dialogue, it will be seen that our estimation of the task that Mr. Bayne set his company in their latest essay, is not wide of the mark.

The following is the cast with a synopsis of the play:—

<i>Fouché</i> (Duke of Otranto, Minister of Police).....	Mr. A. C. Read.
M. <i>Desmarets</i> (Head of the Secret Department of Police).....	Mr. W. G. Bayne.
The <i>Marquis de Cevennes</i> (A Legitimist).....	Mr. H. V. Henson.
<i>Berthier</i> (Prince of Neufchatel, Grand Chamberlain).....	Mr. F. J. Hall
<i>De Neuville</i> (Secretary to <i>De Cevennes</i>).....	Mr. H. J. Sharp.
<i>Jabot</i> (House Steward to <i>Madame de Fontanges</i>).....	Mr. H. M. Arnould.
<i>Grisboulle</i> (a Subordinate of <i>Desmarets</i>).....	Mr. W. R. H. Carew.
<i>Madame de Fontanges</i>	Mrs. A. C. Read.
<i>Cecile</i> (her Maid).....	Miss F. Eldridge.

Fouché, Duke of Otranto, Minister of Police under Napoleon, I., taking advantage of the passion of *Madame de Fontanges* for gaming, causes her to be tempted by his agents, and beggared through play, in order that he may avail himself of her services as a police spy. Of noble lineage and of high repute, and unsuspected in society, this lady is visited by *Fouché*, disguised as an abbé, under pretence of being her confessor, but, in reality, to clandestinely consult with *Desmarets*, the head of the secret service. To enable him to do so, the Minister had caused a concealed passage to be cut through the walls of the adjoining house, owned by his head agent, under the assumed name of *Lebon*. In this passage-way is a secret vault, wherein are preserved state documents, which might either compromise the safety of *Fouché* or be used for his security. Visiting the apartments of *Madame* beneath his priestly garb, the Minister converses, in her absence, over state affairs with *Desmarets*, his covert enemy, who informs him of the publication of a most bitter pamphlet, emanating from "Timon," which lays bare the enormities of *Fouché's* political career, supported by the reproduction of damning documents, copied from the secret archives of the State. *Desmarets* inwardly exults over the vexation of his wily employer, to whom, as evidence of his ingenuity and subserviency, he presents a page of the original manuscript, obtained from a spy in the printing office wherein the publication was composed. *Fouché* vows vengeance upon the unknown author, should he be discovered, when he is visited by the *Marquis de Cevennes*, a noble charged with plotting for the restoration of Louis XVIII., and summoned into his presence in the name of the police. *Fouché* reveals himself to the astonished nobleman, and alarms him into accepting a delicate mission to Prague, through accurately detailing incidents of his previous career in conspiracy. *De Cevennes* incautiously places in the Minister's hands, a memorial, the hand-writing of which corresponds with that of the offensive publication. The *Marquis*, on receiving his instructions, promises to produce the author, his secretary, prior to his departure, and goes in search of him. *Madame de Fontanges*, in the absence of *Fouché* and his new tool, returns to her house, where she finds *Desmarets*, who declares his love for her upon her demanding the loan of money to redeem her jewels, pledged for gaming losses. Although scolding the agent's proposition of marriage, the lady, abashed at the degradation of her position, still overcome with her propensity for play, accepts the money, tendered only to rivet more firmly her chains, and hastens to again tempt fortune at the gaming table. *Fouché*, having arranged that the carriage on the left of the courtyard should proceed in desperate haste to Prague, while the one on the right, surrounded by soldiers, should convey the secretary, *De Neuville*, to the dungeons of Vincennes, returns to receive these gentlemen. *Desmarets*, fearing that the arrest of *De Neuville* would disclose the fact of his having betrayed his trust through supplying documents from the secret archives, places the secretary on his guard, who, thus warned, takes the carriage destined for Prague. The *Marquis* endeavours to depart on his mission immediately upon the return of *Madame de Fontanges*, who is in high spirits at

having broken the bank but, taking the wrong carriage, leaps, from it to avoid arrest, is fired upon, and returns to the house. Discomfited at the escape of his calumniator, *Fouché* determines upon sending the beautiful *De Fontanges* to Prague, there to become acquainted with *De Neuville*, so as to fascinate and allure him back to Paris. She refuses to accept the task, and pleads hard to avoid it, till the orders of the police minister are imperative. At Prague, although surrounded by spies, the female agent becoming deeply enamoured of the man she is designed to betray, who, without knowing her real occupation, reciprocates her passion, endeavours to shake off the thralldom of *Fouché* and to apprise *De Neuville* of the danger. At this moment *Desmarets* and *De Cevennes* appear upon the scene, the one as an emissary of the police minister, and the other as an unconscious bearer of a correspondence antagonistic to Napoleon's matrimonial scheme. The *Marquis* exhibits to the agent a cane he is charged to carry from a lady to *Fouché* as a curious present. *Desmarets* purloins a dispatch concealed within it, and substitutes a copy, and then, to gain *De Fontanges'* affection, entrusts her with the secret of the hidden vault, containing evidences of *Fouché's* treachery. The lady in the desperation of love, resolves upon the overthrow of the Minister to secure the safety of her lover. She avails herself of *De Cevennes'* return to Paris, and furtively accompanies him on his journey, and, while he sleeps, takes possession of the dispatch entrusted to him. *De Neuville*, mad with jealousy, and *Desmarets*, fearful of his secret being betrayed, hurry after them. *Fouché*, apprised of his enemy's return, comes in person to cause his arrest, but *Madame de Fontanges*, having caused the treacherous dispatch to reach the Emperor, the power of the Minister is broken, and he himself driven into exile.

There was a good house, and the audience took early and frequent opportunities of signifying their approval by applause. Thus encouraged, the actors soon warmed to their work, and the production of the piece must be pronounced a success—a decided success. The most difficult rôle was that of *Madame de Fontanges* (Mrs. Read). This is doubtless the heaviest part that lady has ever undertaken, one of alternating pathos and passion, several of the situations being exceedingly trying, but they were all excellently filled. It might be said that a little more intensity in some of the scenes would have been more effective, but on the professional stage to arrive at the acme of excellence in such a part requires the experience of several performances. The only other lady in the cast was Miss F. Eldridge, who made a very acceptable first appearance as *Cecile*, and spoke the lines allotted to her distinctly and without the embarrassment so frequently found in novices. Little need be said of Mr. Bayne's *Desmarets*. As an accomplished actor who never misses a point, it was expected that the character of the Police Agent would be perfectly rendered—and it was so; the part suited him well and he made the most of it. The versatility of Mr. Read (*Fouché*) enabled him to take his part with such consummate ease and assurance, that were he to perform the rôle for a hundred nights we question if he could improve upon it. For his capital rendering of the character of *De Neuville*, much praise is due to Mr. Sharp. He delivered his lines with rare accuracy, and in the management of his voice and the modulation of his tones he was full of force and feeling, while his half-suppressed emotion was a triumph of the actor's art. Mr. Henson played the *Marquis de Cevennes*, a somewhat colourless character—a nervous gentleman in great awe of *Fouché*. It was a careful and creditable performance. Mr. F. J. Hall appeared as *Berthier*, and two servants were played by Messrs. Arnould and Carew, the former one of the most conventional order, the latter one of an eccentric type.

The piece was well put upon the stage, and a new scene was painted for the environs of Prague. The town band played between the acts.

IMPERIAL RAILWAY DEPARTMENT.

ANNUAL REPORT OF THE IMPERIAL RAILWAY DEPARTMENT FOR THE 26TH FISCAL YEAR OF MEIJI, APRIL 1893 TO MARCH 1894.

In continuation of the annual report for the previous fiscal year, the following report is now made on the general condition of works undertaken during the year beginning with April, 1893, and ending at the close of March, 1894, and on the principal features in connection with financial affairs during that period. The divisions and order of headings in the present report are modelled after the last annual report, and are as follow:—

1. General condition of works on different lines:—

- Hokuriku Line:—Tsuruga-Morita Section.
 O-u Line:—Aomori-Ikarigasaki and Fukushima-Yonezawa Sections.
 Tokyo-Kobe Section.
 Takasaki-Naoetsu Section.
 3. Finance—Capital Account.
 4. General Condition of Traffic.
 5. Finance—Revenue Account.
 6. Private Railway lines.

APPENDIX.

Table No. 1.—Detailed Statement of Expenditures on Capital Account.

Table No. 2.—Detailed Statement of Expenditures for the construction of new lines.

Table No. 3.—Detailed Statement of Receipts and Expenditures on Revenue Account.

Table No. 4.—General Balance-sheet.

Table No. 5.—Rolling Stock Returns for the end of the 26th fiscal year.

Table No. 6.—Statistics of Passenger Traffic.

Table No. 7.—Statistics of Goods Traffic, with total Train Mileages.

Table No. 8.—Locomotive Mileages of the different Sections.

Table No. 9.—List of Deaths and Injuries among passengers, staff, and others in the different sections during the 26th fiscal year.

Table No. 10.—List of Casualties and Accidents in connection with the running of trains in the different sections during the 26th fiscal year.

Table No. 11.—Comparative table of the earnings, expenditures, &c., of the Private Railway Companies, during the 26th fiscal year.

Table No. 12.—Rolling Stock Returns of the Private Railway Companies for the end of the 26th fiscal year.

GENERAL CONDITION OF WORKS ON DIFFERENT LINES.

The new works undertaken during the year under review consisted of beginning the construction of the Hokuriku and O-u lines, which form portions of railways to be constructed within the so called "first construction period" provided in the Law concerning Railway Construction.*

Of repairs, those made on the Tokaido Trunk Line were heaviest; there was besides a considerable amount of new and supplementary work done to meet the requirements of traffic development, such as widening the railway between Osaka and Sannomiya for the admission of another line of rails.

The main features of these undertakings will now be reviewed.

HOKURIKU LINE.

TSURUGA-MORITA SECTION.

ROUTE AND TOPOGRAPHY.—The line starts from the present Railway Station in the town of Tsuruga and follows the existing railway in a southerly direction for a short distance, when it turns to the left, takes a north easterly course and, passing Miyama-dera, Kashimawari, and Usokochi, goes on to Habara; thence curving toward the north-west and entering the narrow valley of Tera-dani, it proceeds to Kobayashi-dani in Aso. The nature of the ground between Tsuruga and Tera-dani is such that the line has to be taken exclusively on two steep gradients of 1 in 53 and 1 in 40; and, in order to avoid habitations and cultivation, it is carried along hill-sides. Between Kashimawari and Usokochi, curves are necessarily very numerous owing to the railways having to pass through the narrow valley of the Kinome-gawa, which river has to be crossed at four different places between these two points.

From Kobayashi-dani the line goes, by way of Urakurayama-dani and Fimaga-tani, to the eastern side of Sugitsu, and thence, passing along hill-sides, crosses the Shiwasu and Wanayama valleys. From this point the ground becomes extremely rough, and the line crosses over the Mawari, Ashi and Ira valleys by a succession of tunnels and bridges, strikes the Nakayamatoge, and comes out to the west of the old Hokuriku Kaido—the highway from Tsuruyo to Imajo. The $4\frac{1}{2}$ miles from Habara to this place is the roughest portion of the whole section, there being no less than 10 tunnels, with an aggregate length of 2 miles 34 chains within this short distance. Thence the line follows the downward course of the Kasogawa for over two miles to Ogiri. This portion, though short, requires some very heavy work owing to the nature of the locality's being such as will only admit of a road on steep gradients and with numerous curves. From Ogiri eastward the ground be-

comes more open and level: the Kasogawa has to be crossed, however, at nine different places before reaching the villages of Shinmichi and Mawari. Here the line crosses the Yanagase-Kaido and comes out at the town of Imajo. The Hokuriku Kaido is then crossed, and the course of the Hino-gawa followed to Yuo-toge near the village of Saba-nami, and the line proceeds straight northward between the Hokuriku-Kaido and the Hino-gawa. From the southern end of Shinkawa the line goes through the narrow strip of land between the highway and the river, and crosses the former at the southern extremity of Nishikaido. It then crosses the Wakimoto-gawa, passing the villages of Wakimoto and Kunkane, crossing the Ojiogawa, and after skirting the villages of Imajiku and Shirōmaru, the town of Takefu is reached. The 10 miles between the towns of Imajo and Takefu is the most level portion of this section. From Takefu the line goes to Iyehisa where, curving to the right, it crosses the Hino-gawa and thence takes, a north eastern direction to reach Sabae. It again turns to the right and, passing the villages of Kamikawabata, Shimokawabata, Toba, Tokumitsu, and Sambongi, goes on to the foot of Monju-zan, and then, passing the villages of Ikuno and Tsunowara, goes straight to Hokogasaki. Curving now to the left and taking a northern direction, it passes Handa; from this place the road is laid out via Shinkai, Kawagita, Omachi, Hanadō, and Kida, and, curving to the right in crossing the Ashiba-gawa, proceeds to the city of Fukui on the straight. The road for $8\frac{1}{2}$ miles between Sabae and Fukui is located through generally level country. The district between Toba, Tokumitsu, and Sambongi, through which the Asamizu-gawa winds its crooked course, is subject to frequent floods, and owing to the flatness of the locality the water does not speedily recede, but remains on the adjoining fields for a long time. In consequence of this a large number of flood openings have to be provided. The water of the Ebata-gawa, a similar description of river, which runs between Handa and Hida, acts during rainy seasons in like manner, and the stream has not only to be bridged over but numerous flood openings have to be provided along the approaches. For these reasons greater engineering difficulties are encountered, and more works have to be prosecuted than are apparently warranted by the general flatness of the district.

In leaving Fukui the line skirts the city to avoid the thickly habited parts, curving to the right, passes along the eastern side of the old castle grounds, and crosses the highway at Takagi and proceeds to the village of Morita, on the Southern bank of the Kuzuryu river, the terminal of the section.

CONSTRUCTION WORKS.—In April, 1893, a Branch Office of the Railway Department to superintend the survey and construction of this line, was established in the town of Tsuruga. Final surveys over the route indicated by the previously made preliminary surveys were at once proceeded with. Upon the completion of the same in August, the line was divided into three Construction Sections, viz:—1st, Tsuruga-Yamanaka; 2nd, Imajo-Yuo; and 3rd, Hokogasaki-Kida, and construction works were taken in hand. At the close of the period with which this report deals, the principal work completed was as follows:—Earthworks: including cuttings, embankments, deviation of roads and rivers, and laying out of station grounds, 72,924 tsubo. Bridge-works; 3 bridges (all over the Kinomegawa), and 14 culverts. Rails laid: on the main line and sidings, 5 miles 5 chains. Locomotives were being employed in transportation of material for a distance of $4\frac{1}{2}$ miles from Tsuruga. Tunnels: of which these are 13 in all, the 1st (Kashimawari) and the 2nd (Usokochi) had been completed; all the others being well in hand. Buildings:—Offices and other subsidiary buildings belonging to them, together with a temporary Engine shed, were built, all of which are within the Tsuruga Station yard, the total area of these being 397 tsubo.

O-U LINE.

This being an important and lengthy system between the distant cities of Fukushima and Aomori, it was decided, with a view to facilitating construction, to start the work from both ends; and the work from the Aomori end was begun in July 1893, and from the Fukushima side in February 1894, under separate sections, viz., Aomori-Ikarigasaki, and Fukushima-Yonezawa, as is shown below:

AOMORI-IKARIGASAKI SECTION.

ROUTE AND TOPOGRAPHY.—Aomori Station, the northern terminal of the Nippon Railway Company's system, is the starting point of this railway. On leaving the station, the line follows the highway in a south-western direction, and runs for a short distance parallel to the existing line of

the company, when it curves to the right, crosses the highway, and enters Nishitaki village. It then crosses the Nishitaki and Okidate-gawa, recrosses the highway, passes Ishiye-mura, curves to the left and, crossing Shinden-gawa (1st crossing), enters the village of Shinjo. The ground between the starting point and this village, a distance of 3 miles 37 chains, is mostly level, and the line passes through paddy fields and over moors. After leaving Shinjo the line curves to the left to Shirahatano, crosses the highway, makes another curve to the left, crosses the Toaza-gawa, enters Tokado village, and again curving to the left crosses the Obukuro-gawa. Here it turns to the right, crosses the highway and the Shinden-gawa (2nd and 3rd crossings), each twice, recrosses twice both the highway and the Shinden-gawa (4th and 5th crossings), and reaches Tsuruga-ita village. From thence it has again to make two crossings over the Shinden-gawa (6th and 7th crossings) and by means of a succession of contrary curves the Daishaka tunnel (891 feet in length) is entered. Passing through the tunnel the line comes out at the western end of Daishaka village, passes to the north of the town of the same name, curves to the left and crossing the highway known as Goshogawara-Kendo reaches the Daishaka Station. The line eastward of Shinjo to this place is laid mostly through a hilly district. It has to follow the intricate valley of the Shinden-gawa; and it is only after reaching Tsuruga-ita and getting through the Daishaka tunnel (parallel to the highway) that it emerges into a more open country. From Daishaka Station the line passes on to Tokuhaji and Suginosawa, and after crossing the Daishaka-gawa and Aka-gawa (the former at two different places), it curves to the right, and the village of Namioka is reached. This part of the country is flat, and the line is laid through paddy fields. From Namioka the road proceeds *via* Mejikazawa, crosses the highway, passes the village of Shimodogawa, and, crossing the Togawa, goes on to Hitachi-mura, and thence to Kawabe-mura. From the latter village the Asa-seishi and Hirakawa are crossed, and the town of Hirosaki is reached after passing the villages of Nadeushiko and Watoku. Between Namioka and Hirosaki the line passes through the celebrated plains of Tsugaru, and this portion is the most level and open throughout the section. From Hirosaki the line crosses the highway to Oshimizu-mura, crossing Owazawa-gawa, and passing the villages of Horikoshi and Ishikawa curves to the right to Daibutsu-gahana, where it crosses the Hira-kawa and follows its southern bank up to Moriyama. It then goes across the Meuchi-gawa, and after passing Nijigai recrosses the Hira-kawa and proceeds to Owani. Over this portion of the route the line, though generally level, has to curve around the hillsides to a considerable extent. From Owani the line crosses the highway, passes Kuradate-mura and follows the highway to Nagamine-mura; it then crosses the Inari and Sawa-kawa and proceeds along the hill-sides which form the southern bank of the Hira-kawa. It finally crosses the river and strikes Karaushi tunnel (528 feet long) on the straight. On leaving the tunnel the line crosses the highway, and by curving to the right and left several times, reaches the town of Ikarigasaki.

CONSTRUCTION WORKS.—For the purpose of construction, this line of 36 miles 4 chains, was divided into four sections, viz:—1st Aomori-Tsurugasaka; 2nd, Tsurugasaka-Namioka; 3rd, Namioka-Owazawa-gawa; and 4th Owazawa-gawa-Ikarigasaki. The 1st Section was taken in hand in July, 1893, and the 2nd and 3rd, respectively, in August and September of that year. Whilst the construction works were making considerable progress in each of the sections, they were checked in November by heavy rains, and were thereafter more or less interrupted throughout the winter by the abundant snow-fall to which these districts are subject. It was not until the latter part of February, 1894, that they could be fully resumed. The principal work done up to the date of this report may be summarized as follows:—Earthworks: consisting of cuttings and embankments and deviation of rivers and drains, 112,533 tsubo; or say, the whole of the 1st section, eight-tenths of the 2nd Section, and nine-tenths of the 3rd Section. Bridges and Culverts:—(In the portion of the line between Aomori and Namioka it was at the outset decided to utilize brick for these structures as the existing roads were so hilly and wretched in condition as to hinder the free transportation of any heavier material; whilst to the south of the latter town and about Hirosaki it was resolved to use masonry for the same purpose, as stone of excellent quality was obtainable in abundance in those parts). In the section where brickwork was employed, all the work including the Obukuro gewa bridge and six bridges over the Shinden-gawa, were completed, with the exception of some of the wing-walls. In

* Issued in June 1892. The other railways included within the "first construction period" or to be constructed within 12 years from the date of the promulgation of this law, being:—The Chiu-o (Central), from Hachioji, the terminal of the Kōbu Railway, through Kofu and along the Nakasendo to Nagoya where it will join the Tokaido Line; a line from the Sanyo Railway to the Military port of Kure; and a line from the Kyushu Railway to the port of Kagoshima.

the masonry section seven-tenths of the work may be said to have been finished, though no steps had yet been taken in the erection of the girders and the building of the wing-walls. Rail-laying:—The road had been laid and ballasted for 7 miles and 40 chains to the south of Aomori; and with the progress in the making of embankments plate-laying kept pace and had advanced to Tsurugasaki, or say 8 miles 40 chains, at the time of which this report treats. Tunneling:—The headings of the Daishaka tunnels have met, and seven-tenths of the work in widening and lining may be said to have been completed. Buildings:—Consisting of temporary offices, out-houses, and residences for the staff, built within the Aomori Station compound, and amounting in all to 374 *tsubo*, were constructed.

FUKUSHIMA-YONEZAWA SECTION.

ROUTE AND TOPOGRAPHY.—Starting in a western direction from the Fukushima Station on the Nippon Railway Company's system, this line passes the villages of Shimidzu and Noda, and goes into Niwasaka-mura. Up to this place the ground is level, and the road passes through paddy fields, mulberry plantations, and forest land. From Niwasaka a turn is made to the left, and curving again to the westward the course of the Matsukawa is followed along its southern bank to the neighbourhood of Akaiwa, in Osasa-mura, where it crosses the river, and thence follows its northern bank up to the village of Itaya; curving then to the south, the hills of the Itaya-pass are reached. These are negotiated by a tunnel, and the line taking a westerly direction, follows the serpentine course of the Haguro-gawa along its southern bank, passing the village of Osawa, and, crossing the river twice near Hanazawa-mura, proceeds to Sekine-mura. From Niwasaka to this place the country is extremely wild and hilly, and engineering works of considerable magnitude are encountered. From Sekine-mura the route goes north-westward through paddy fields and mulberry plantations and over more or less level ground to the city of Yonezawa.

CONSTRUCTION WORKS.—From Fukushima and Niwasaka-mura, 4 miles; and from Niwasaka-mura to Ohimuki-mura, 6 miles 20 chains, were respectively made the 1st and 2nd construction sections, and the 1st section was taken in hand in February, 1894. Surveys and the preparation of the working drawings were begun in October, 1893, and during the same month the Construction Office of this Bureau was established at Fukushima, and much of its time has since been occupied in purchasing the right of way, and other business of a like nature. As only a short time has elapsed since the works were begun in the 1st Section, there has been nothing done worthy of special record. It may, however, be stated that 4,959 *tsubo* or eight-tenths of the whole amount of earthworks, 10 out of 14 culverts, and all the drain pipes within the section were laid and finished at the conclusion of the period with which this report deals. Mention may also be made of a temporary siding of about 32 chains from the Fukushima Station to Su-gawa, from which river—gravel for ballasting purposes will be obtained. Arrangements were made with the Nippon Railway Company for the prosecution of this work in March. The work was forthwith proceeded with, and the siding was completed within the same month. Other works in progress at the date of this report were of a preparatory nature, and the results of these preparations will be recorded in the report for the next fiscal year.

TOKYO-KOBE SECTION.

All the rivers in the province of Mikawa, and the Toyokawa, which runs between Toyohashi and Goyu Stations, in particular, became much swollen on the 18th of August, 1893, owing to heavy rains which prevailed in that district. The water in this river, which at one time registered 12 feet above its normal level, forced its way through its banks at several places, some two or three miles above the railway, and came rushing down the line. The railway embankment was washed away at two places to the extent of about 20 chains, besides causing damage to the masonry of the bridge at four places. Traffic had to be suspended between the two stations until the 21st of the same month, by which time the road was sufficiently repaired to admit of its resumption.

From the 17th of August the rain continued in the Mino plain and the water accumulated in the rivers between Gifu and Ogaki, viz.: Nagara, Goroku, Sai, and Ibi. The streams of these rivers greatly increased in volume, as much as 21 feet above the normal height in the case of the Nagara-gawa. On the 23rd, the banks of the Goroku-gawa gave way, and the line between Nakagawa and Sai-gawa became submerged. This was followed by the Nagara-gawa bursting its banks in about

ten different places both above and below the railway. Through this cause the railway between Nakagawa and the Nagara-gawa became likewise covered by the flood; and traffic had from that day to be suspended. On the 24th breaches occurred in the banks of the Sai-gawa, and the district between this river and the Ibi-gawa were also under water. The whole plain between the Nagara and the Ibi-gawa was thereby deluged and converted into one great lake. At some of the deeper places the rails were submerged 14 feet below the surface of the water; and of the railway bridges over the Naka, Sai, and Goroku-gawa, the tops of the girders barely remained visible. From the 26th the water began to recede, when it was discovered that so great had been the force of the current that rails for a distance of about 6 chains between Nagara and Naka-gawa were washed away completely, and also that some damage had been done to the masonry of the flood-openings in this locality. Repairs were conducted with the utmost speed, and the line was rendered fit for traffic by the 28th of the same month.

As had been the case during the previous fiscal year, a large amount of work, such as increasing sidings, extensions, and increase in the accommodation of the railway platforms and station buildings to meet the requirements of the continual development of the traffic, were undertaken during this year. Under this head mention may be made of converting into brick arches the wooden bridges at Washizu and Toyohashi, the widening of the Hoshikoshiyama tunnel, the removal of the Stores-buildings from Shimbashi to Tsuruga, the removal of the Engineers' offices from Hamamatsu to Kodzu, the building of new goods sheds at Hiratsuka and Shizuoka, the replacing of the wooden passenger pass-over bridge at the Kodzu Station by one of iron; the extending of the offices of the finance and stores department at Shimbashi; the removal to other stations of residences of the staff from Shizuoka, Okazaki, Kakegawa, Nagahama, and Numadzu; the extension of the platforms of the Hamamatsu, Kariya, Obu, Gifu and all the stations between Mukomachi and Suita; and the extension of sidings at several stations. The total amount of work involved in the above enumerated repairing and supplementary works being: Earthworks, 10,763 *tsubo*; masonry, 4,218 *tsubo*; sidings, 1 mile 65 chains; bridges, wooden girders which were replaced by those of iron, 21; buildings, repairs and additions were made at 52 different places; the total area amounting to 689 *tsubo*.

DOUBLE LINE BETWEEN OSAKA AND SANNO-MIYA.—With regard to the Section between Kyoto and Sannomiya, though constructed as a single line, provision had, from the first, been made for the admission of another line of rails. Thus, the right of way had been procured; embankments were made of sufficient width for the laying of two lines of rails; and similar provision had been made for drains, bridges, and bridge-piers; and all the larger bridges were so constructed that whenever necessary they could be widened for bearing another pair of girders. By these far-seeing provisions the doubling of this section is a mere matter of widening the tunnels and bridges, and laying another line of rails. From the time of the opening of the Tokaido railway constant increment in both goods and passenger traffic has taken place all through the line, and this being specially so over the portion between Baba and Kobe, the desirability of increasing the capacity of the railway became very much felt. The Osaka Station had of late become the centre for the accumulation (owing to speedy distribution being beyond the capacity of a single line) of an enormous amount of goods, and inconvenience was thereby caused to all concerned. As a first step, it was decided to double the 19 miles of line between Osaka and Sannomiya. This work was begun from both ends on the 28th of January, 1894. The principal works connected with this undertaking are the widening of the tunnels under the rivers Sumiyoshi and Ishiya, the widening of 39 spans of bridges over the Shimojuso, Shimo-Kanzaki, and Muko-gawa, the widening of 24 culverts, and the extension of the different intervening stations. Two-tenths of the work in the Eastern Section between Osaka and Nishinomiya, and nine-tenths on the Western Section between Nishinomiya and Sannomiya, were completed at the date this report closes, and it is expected that the whole will be finished at no distant time.

YOKOSUKA BRANCH.—The work done in the Section between Ofuna and Yokosuka consisted of extending the Station buildings at Dzushi, and of replacing the old platforms at Yokosuka by those of masonry.

TSURUGA BRANCH.—Five wooden bridges between Maibara and Tsuruga were replaced by those of iron, and the sidings at Yanagase and Hikida Stations were lengthened by 5 chains.

TAKASAKI-NAOYETSU SECTION.

A land-slip occurred at the cutting situated 83 miles 8 chains from Naoyetsu (between Yokogawa and Karuizawa) during a severe storm on the 27th of May, 1893, and interrupted the line. The road was cleared, and traffic was resumed in the course of the same day. Owing to the opening of the Section between the above Stations on the 1st of April, 1893, a considerable amount of new works, extensions, and additions had to be made in stations and buildings during the year; such as the building of a middle passenger platform, an engine shed and quarters for engine drivers and firemen at Yokohama; the building of new quarters for the staff at Karuizawa and Kashiwabara; and extensions and additions made to Miyoda, Mure, Taguchi, and Sekiyama stations. These are the principal works done, besides the ordinary minor repairs which are not of sufficient importance to be noticed here. The aggregate amount of the work done during the year on this Section being:—earthwork, 15,510 *tsubo*; stonewalls and sods laid, 80,664 *tsubo*; sidings, 26 chains; buildings, 1,609 *tsubo*.

CAPITAL ACCOUNT.

The railway fund granted by the Government from the first establishment of railways (March 1870) up to the close of the last fiscal year (end of March, 1893), amounted to yen 37,554,475. The increment of the railway capital during the year under review is as follows:—

Amount received from Treasury during the year under review for the Construction of the Usui Mountain Railway	Yen. 16,556
Amount expended during the year under review on Supplementary works of open lines defrayed from the Revenue, in accordance with the Regulations for Government Railway Finances	638,857
Amount received from Treasury during the year under review from funds obtained by the issue of Bonds in accordance with the provisions of Law No. 4 of 1892, concerning the Construction of Railways	1,382,509
Total	2,037,922

This total, added to the amount at the close of the previous fiscal year, gives yen 39,592,397. The amount of Capital reduced during the year under review is as follows:—

Amount of surplus, returned by Construction paymasters of the Usui Line during the year under review, of cash entrusted to them during the previous year	Yen. 757
Amount paid in by a Contractor for the value of material on "Bond account" lost during transportation under his charge and paid into the Treasury as General Revenue	1
Amount of property sold and paid into the Treasury as General Revenue	16
Amount realized by the sale of Construction Stores no longer required	6,163
Amount of Fixed Capital (the premises of the office of the Department) transferred to Communications Department	17,729
Total	24,666

The balance remaining of yen 39,567,731 from reductions thus made, represents the total Railway Capital at the close of the 26th fiscal year. This amount may be divided into 1st, Fixed Capital; 2nd, Working Fund; 3rd, Construction Stores, the accounts of which have not been adjusted; 4th, Expenditure of funds obtained by the issue of Bonds in accordance with the provisions of Law No. 4 of 1892 concerning Railway Construction. The details under these heads are as follow:—

1. **FIXED CAPITAL.**—The amount, at the beginning of the year under review, stood at yen 33,427,735. Adding to this amount the sums of yen 638,857 for expenditures on supplementary works to railway property, yen 66,295 for Construction Stores used, accounts of which have been adjusted, and yen 1,991,665, the amount of the Construction account of the Usui railway adjusted during the year, a total of yen 36,124,552 is obtained. Deducting from this amount yen 16 for property sold, yen 3,555 for stores, the accounts of which had previously been adjusted, but returned to the Stores Department, they having been found unnecessary, and yen 17,729 for the premises of the head offices of the Bureau, transferred to the Department of Communications, the balance remaining is yen 36,103,252, which sum represents the actual amount of the Fixed Capital of the Government Railways at the close of the year under review.

The details of the Fixed Capital are as follow:—

1. TOKAIDO LINE.—Tokyo-Kobe Section, Ofuna-Yokohama Section, Obu-Taketoyo Section, Maibara-Tsuruga Section: the construction and supplementary-works expenditures which were defrayed from the old funds for the promotion of industries (*Kogyo-hi* and *Kigyo-hi*) or from grants in accordance with the old and new Regulations for Railway Finances:—

	Yen.	Yen.
Amount of Fixed Capital at the close of the last fiscal year		29,605,324
Amount of Fixed Capital increased during the year under review.		
Issues from the Supplementary Works Fund	599,309	
Stores, the accounts of which were adjusted	42,089	641,398
Amount of Fixed Capital reduced during the year under review:—		
Property sold.....	16	
Stores, the accounts of which were adjusted, but returned to the Stores Department, they being not required	3,555	
Premises of the Head Offices of the Bureau transferred to the Communications Department	17,729	21,300
Amount of the Fixed Capital at the close of the year under review:—Balance		30,225,422

2. TAKASAKI-NAOETSU LINE.—Takasaki-Yokogawa Section, Yokogawa-Kanizawa Section, and Kanizawa-Naoetsu Section, the construction and supplementary works, expenditures of which were defrayed in accordance with the old and new Regulations for Railway Finances:—

	Yen.	Yen.
Amount of Fixed Capital at close of the last fiscal year		3,822,411
Amount of Fixed Capital increased during the year under review:		
Issues from the Supplementary Works Fund.....	39,548	
Stores, the accounts of which were adjusted	24,206	
The Construction Expenditures of the Usui Railway, the Accounts of which have been adjusted..	1,991,665	2,055,419
Amount of the Fixed Capital at the close of the year under review.....		5,877,830
Aggregate Fixed Capital of all the Sections at the close of the year under review		36,103,252

2. WORKING FUND:

The Amount fixed according to the law of the Government Railways.....

2,000,000

3. CONSTRUCTION STORES, THE ACCOUNTS OF WHICH HAVE NOT BEEN ADJUSTED.—The Construction Stores, the accounts of which remained unadjusted at the close of the previous fiscal year, were yen 150,829; adding to this sum yen 3,600 for stores the account of which had been adjusted but were returned to the Stores Department afterwards, as they were not required, the total is yen 154,429. Now deducting from the latter sum yen 66,295, the amount of stores the accounts of which were adjusted during the year under review, and yen 6,163 the amount realized for stores not further required, or sold and paid into the Treasury as General Revenue; the sum left is yen 81,971, which represents stores the account of which remained to be adjusted at the close of the year under review. The details of this account are as follow:—

	Yen.	Yen.
Amount of Stores on the old construction account the accounts of which had not been adjusted up to the close of the year under review		81,971
Details:—		
Materials in Stores.....	68,248	
Sums receivable for stores of no further use, sold	13,723	

4. RAILWAY BOND FUND:—According to Law No. 4 of 1892, concerning the construction of railways, which provides for the construction of lines of railway from Fukushima to Aomori, and Tsuruga to Toyama, within 12 years, at the estimated cost of yen 18,451,080, the construction of these lines was begun in April, 1893; and the amount of this

fund received from the Treasury from that date up to 31st March was yen 1,382,509. Out of this amount yen 1, the sum returned by a contractor for certain stores he had undertaken to convey to Aomori and lost on the way, was paid into the Treasury as General Revenue; hence yen 1,382,508 represents the actual amount received. The details of this Account are as follow:—

	Yen
Amount received from the Treasury of the Railway Construction Bonds Fund	1,382,508
Details:—	
Construction Expenditures on the Fukushima-Aomori Section the accounts of which have been adjusted	622,232
Construction Expenditures on the Tsuruga-Toyama Section the accounts of which have been adjusted	347,255
Amount chargeable to both Sections adjusted	5,706
Amount in the hands of Construction Paymasters	213,683
Stores, the accounts of which have not been adjusted	193,632

The total above given, added to the totals of the Fixed Capital, Working Fund, and the unadjusted amount of Stores, will agree with the sum already stated as the aggregate capital of the Government Railways at the close of the year under review, viz:—yen 39,567,731.

In the following table the Fixed Capital amounting to yen 36,103,252 is analyzed under various heads, and the average amount of the expenditures per mile under each head, with the ratio they bear to the aggregate amount at the close of the year under review, are given and a comparison made with those of the previous fiscal year:—

Items.	Average Amount per mile on open lines.		Percentage of aggregate amount.	
	End of 18th fiscal year.	End of 19th fiscal year.	End of 18th fiscal year.	End of 19th fiscal year.
	Yen.	Yen.	Per cent.	Per cent.
Preliminary Surveys	536	508	.0082	.0084
Superintending and Engineering	1,425	1,897	.0210	.0214
Right of way	2,982	2,991	.0461	.0493
Earthworks	10,456	10,368	.1616	.1709
Bridges (including culverts)	15,805	15,603	.2443	.2572
Tunnels	5,761	4,418	.0890	.0748
Permanent way (including drain-pipes, fences, boundary posts, and telegraphs)	10,332	10,021	.1597	.1652
Stations	3,308	3,244	.0512	.0533
Transportation (including construction trains)	1,924	1,451	.0297	.0239
Wharves	202	205	.0031	.0034
Locomotives	3,866	3,098	.0598	.0512
Other rolling stock	4,082	4,096	.0734	.0755
Buildings	702	604	.0108	.0114
Shops and Machinery	1,367	1,367	.0211	.0225
Construction plant	578	501	.0089	.0040
General charges	1,001	1,005	.0154	.0166
Total	64,701	60,667	1.000	1.000

From the above it will be seen that the average cost per mile at the close of the year under review was yen 64,071, which, when compared with that of the previous year, shows an average increase of yen 4,034 per mile.

In the following table the average cost per mile, at the close of the year, of the different sections of the lines in operation is compared and given:—

	Average Miles.	Cost per mile, yen.
Total length of open lines	557	64,701
Details:—		
1. Tokyo Yokohama Section	18	162,741
(Double line, construction begun April, 1870, completed September, 1872.)		
2. Kobe Otsu Section	58	142,659
(1 mile double; construction begun November, 1870, completed September, 1879.)		
3. Tsuruga Ogaki Section	49	71,600
(Construction begun May, 1880, completed July, 1884.)		
4. Takasaki Naoetsu Section	110	35,329
(Usui-toge excepted; construction begun October, 1884, completed December, 1888.)		
5. Yokohama Ogaki Section	258	52,156
(22 miles double line; construction begun August, 1885, completed April, 1889.)		
6. Ofuna Yokosuka Section	10	41,538
(Construction begun January, 1888, completed July, 1889.)		
7. Otsu Nagahama Section	48	34,202
(Construction begun February, 1887, completed July, 1889.)		
8. Yokogawa-Kanizawa Section	7	284,524
(Construction begun April, 1890, completed March 1893.)		
Double line between Oyama and Numazu	22	15,617

(Being a portion of the Yokohama-Ogaki Section; construction begun February, 1890, completed March, 1891.)

The foregoing railways were already in a state of completion in the previous fiscal year. The reduction by yen 716 of the average cost per mile of the Tokyo-Yokohama Section in face of expenditures on this line to the extent of yen 4,901, the account of which was adjusted during the year, is owing to the sum of yen 17,729, the value of the premises of the Head Office, which on being transferred to the Department of Communications, was written off, and to the further sum of yen 55, an overcharge made in the accounts for this Section in the previous year, having been deducted. The general augmentation in the average cost per mile noticeable in all the other Sections is owing to supplementary works which were carried out during the year.

The construction of the Yokogawa-Kanizawa Section (Usui Toge), began in the 23rd Fiscal Year was completed in the 25th, and the amount of yen 1,991,665 on the Construction Account of the same having been adjusted, has been included within the Fixed Capital.

The supplementary works done during the year on the existing lines amounted to yen 638,857. The whole of this amount has likewise been charged to the Fixed Capital.

In the following table the amount of the Gross and Fixed Railway Capital at the close of each fiscal year from the 19th is compared with the mileages of lines in operation, and the average cost per mile in respect of the aggregate and fixed capitals is given:—

Fiscal Years.	Amount of Aggregate Capital at the close of fiscal year.	Amount of fixed Capital at close of fiscal year.	Percentage of Fixed Capital to Aggregate Capital.	Miles in operation.	Per One Mile of open lines.	
					Amount of Aggregate Capital.	Amount of Fixed Capital.
	Yen.	Yen.	Per cent.	Miles.	Yen.	Yen.
Before 19th	27,885,844	14,971,665	53.7	143	195,076	104,697
19th	21,134,852	17,729,952	84.8	209	101,124	82,079
20th	26,284,822	21,447,623	81.6	245	107,285	91,623
21st	33,391,027	28,032,343	84.3	246	135,785	113,928
22nd	34,447,633	31,618,348	91.8	251	137,258	126,348
23rd	34,671,702	32,745,991	94.5	251	138,130	126,470
24th	36,583,118	33,608,184	91.6	252	145,187	133,365
25th	37,554,475	33,427,735	89.0	251	149,635	133,173
26th	39,567,731	36,103,252	91.2	258	153,363	139,971

The proportional increase in the amount of the Fixed Capital, notwithstanding the reduction of the latter by over yen 17,000 for the transfer of the Head Office premises to the Department of Communications, is owing to the inclusion in the fixed Capital of the sum of over yen 1,990,000, the cost of the construction of the railway over the Usui Pass, which was opened in April of the year under review.

The increase of the Aggregate Capital per mile indicated in the above table is owing to the sum of over yen 1,380,000 received from the Railway Bond Fund having been added into that account.

Table No. 1, appended, treats of the Aggregate Railway Capital; it gives the details of the Expenditures chiefly of the lines in operation. The details of expenditures on the lines under construction and defrayed from the Railway Bond Fund will be found in Table No. 2.

GENERAL CONDITION OF TRAFFIC.

TRAFFIC RECEIPTS AND THE CAUSES OF THEIR VARIATION.—The traffic earnings of the Tokyo, Kobe, and Takasaki-Naoetsu Sections, taken together, show, as the result of the operations for the year under review, an increase of 14 per cent. over that of the previous year. The coaching receipts show an increase of 13 per cent.; the number of passengers 12 per cent.; passengers receipts 14 per cent.; and the average mileage per passenger has also increased by 2 per cent. The goods receipts were increased by 16 per cent., the goods tonnage by 6 per cent., and the average mileage also shows an increase of 15 per cent. The train mileage likewise shows an increase of 5 per cent. The details of the variations, and their cause, in each of the above sections are as follow:—

THE TOKYO KOBE SECTION.—The traffic earnings of the year show an increase of 12 per cent. compared with that of the previous fiscal year. The number of passengers increased 13 per cent.; the passenger receipts 12 per cent.; the average passenger mileage showed a decrease of .02 per cent. The increments above indicated in face of interruptions to the traffic that occurred several times, are attributable to a gradual increase in the number of persons availing themselves of the railway as a means of transit.

The goods traffic shows an increase over the last year of 7 per cent., and goods receipts an increase of 13 per cent., and the average ton mileage of 13 per cent. This increase in the goods traffic is brought about by causes above referred to in regard to the passenger traffic.

TAKASAKI-NAOETSU SECTION.—The traffic earnings for the year under review show an increase

over that of the previous year by 33 per cent. The number of passengers shows an increase of 6 per cent., the passenger receipts of 34 per cent., and the average mileage per passenger of 25 per cent. In goods tonnage a decrease of 3 per cent. was experienced; however, the receipts for goods were increased by 31 per cent., and the average mileage per ton by 33 per cent. The decrease above indicated in the tonnage may be thus explained. Prior to the opening of the Usui line, goods coming from the north were frequently delivered over to the owners at Karuizawa, and those coming from the south at Yokogawa, and re-received at either of the above stations as the case might be, and carried to their destinations. Under these circumstances, the tonnage of one lot of goods was not seldom entered twice over in the records, a condition of affairs which has passed away with the opening of the through traffic between Takasaki and Naoetsu.

As was the case during the previous year, the line was interrupted by snow last winter; still the traffic over it for the year gives the satisfactory results above stated, proving thereby the constant development of the traffic over this railway.

NEW LINES OPENED FOR TRAFFIC:—On the 1st of April, 1893, the Yokogawa-Karuizawa Section was opened to the public for traffic. From the following day (2nd) goods trains began to run over the section four times a day.

ALTERATIONS OF TRAIN SERVICE.—The time tables of the Yokogawa-Karuizawa and Karuizawa-Naoetsu Sections were altered on the 1st of April, 1893. The service for the whole line between Yokogawa and Naoetsu was revised on the 1st of May following, by which 38 trains were added. On the same date the service of the Tokyo-Kobe Section and the Yokosuka Branch was revised, and 24 main-line trains and 2 branch line trains were added. The service between Osaka and Nishinomiya of Passenger Train No. 157 was altered on the 1st of Nov., and from the 1st January, 1894, train No. 142 was made to stop at Kanazaki.

SPECIAL TRAINS.—During the year 6 special trains were run for the Emperor and Empress, 9 for the Austrian Prince, 23 for transportation of troops, and 463 for ordinary passengers. Of goods trains 360 specials were run.

CASUALTIES.—On the Tokaido Line, the railway was flooded between Toyohashi and Goyo, by the Toyokawa having burst its banks on the 18th of August, 1893, and train 91 was the last that was able to pass over that district on that day. Traffic was resumed on the 21st, the first train to get over being No. 157. On the 23rd of the same month the Goroku, Nagara, Sai, and Naka-gawa between Ogaki and Gifu burst their banks and flooded the whole district as far as Ibigawa. All traffic had to be stopped from Train No. 73 of that day, and remained suspended till the 28th of the same month.

In the Takasaki-Naoetsu Section, the engine and brake van of a goods train were derailed between Taguchi and Mure owing to snowslip on the 2nd April, 1893. The trains were interrupted between Yokogawa and Karuizawa on the 27th of May by the falling of a part of the cutting during a severe storm which prevailed. On the 24th of December train No. 25 had to be stopped at Toyono, the line between it and Mure having become impassable by snow. From the 15th of January to 15th of February, traffic was suspended by the snow over the whole of the line north of Kashiwabara. Although snow-ploughs and one or two goods trains succeeded in passing through during the interval, the line was practically closed for 30 days.

TELEGRAPHIC MESSAGES:—The number of the Telegraphic Messages for the year under review amounted to:—Railway Messages, 827,027, which shows an increase over the previous fiscal year's figures of 87,434; public messages, 130,403, which also shows an increase over the previous year of 7,980, and the receipts for public messages was yen 7,157, which shows an increase of yen 78 over the previous year. The expenditures on account of the maintenance of telegraphic instruments at the different stations was yen 2,464, which shows a decrease of yen 813 compared with the expenses for the previous year. The total length of telegraph wires in operation at the close of the year under review was 433 *ri* 12 *cho*, 7 *ken*, 5 *shaku*, which is a decrease of 50 *ri*, 35 *cho*, 44 *ken* from the length at the close of the previous year. There are 106 stations provided with telegraph, telephone, or block signalling instruments, an increase of 2 stations, and at 38 of these stations the business of public messages is undertaken, together with that of the messages for the railway service being an increase of 4 stations. There are in employment, 137 Siemens-Morse printing instruments, 16 telephone instruments, and 36 blocksignalling instruments.

The statistics of traffic, statements of locomotive and train mileages, lists of casualties, &c., will be found in the Tables from No. 6 to No. 10 inclusive, at the end of this Report.

REVENUE ACCOUNT.

The mileage of open lines for the year under review is 558 miles, an increase of 7 miles over that of the previous year. The lines during the 12 months have been remarkably free from casualties and interruptions, and in consequence the operating mileage was the same as the mileage open to traffic, and the earnings compared with that of the previous year showed an increase of yen 803,823 whilst the Operating Expenses were reduced by yen 223,824, and the net profit show an increase of yen 1,027,647. The details of the Revenue Account are treated under different heads as below:—

1.—REVENUE AND WORKING EXPENDITURES:—

Revenue:—	Yen.	Yen.
Coaching Receipts	3,977,086	
Goods Receipts.....	1,306,397	
Miscellaneous Receipts ...	100,972	
Total	5,384,455	

Working Expenses:—

Maintenance-of-way	640,494
Locomotive Power.....	775,386
Traffic Expenses	396,580
General Charges	129,915
Total	1,942,375

Net Profit, Balance. 3,442,080

The proportion of the Working Expenses to the revenue is 36 per cent., and when compared with that of the previous year, shows a decrease of 11 per cent. This result has been obtained alike from the large increase in the earnings; and marked decrease in the expenses incurred in operation.

Note.—The total amount of the revenue above given is correct, but it is to be understood that the figures of the three items of receipts being based on approximate accounts may become subject to slight variations when the preparation of the actual accounts is completed.

2.—THE INCREASE AND DECREASE OF REVENUE AND WORKING EXPENSES AND THEIR CAUSES.

In the following table the average revenue and working expenses per day and the same per mile of lines in operation of the different sections for the year are given and compared with those of the previous year:—

Sections.	Average amount of Revenue and Working Expenses per Day.			
	26th fiscal year.	25th fiscal year.	26th fiscal year.	25th fiscal year.
Yen.	Yen.	Yen.	Yen.	Yen.
Tokyo-Kobe Section	12,389	10,685	3,999	4,054
Ofuna-Yokosuka Section	290	183	60	62
Obu-Taketoyo Section	78	69	35	30
Maibara-Tsuruga Section	362	307	170	238
Takasaki-Naoetsu Section ...	1,733	1,306	1,058	942
Total average.....	14,752	12,550	5,322	5,935

Sections.	Average amount of Revenue and Working Expenses per Mile.			
	26th fiscal year.	25th fiscal year.	26th fiscal year.	25th fiscal year.
Yen.	Yen.	Yen.	Yen.	Yen.
Tokyo-Kobe Section	11,963	10,318	3,866	4,494
Ofuna-Yokohama Section.....	6,922	6,671	2,177	2,278
Obu-Taketoyo Section	2,372	2,103	1,074	1,180
Maibara-Tsuruga Section.....	3,226	2,730	1,516	2,123
Takasaki-Naoetsu	5,497	4,333	3,299	3,122
Total average.....	9,650	8,323	3,482	3,951

The abovetable shows that the revenues of all sections have increased, and the increment is most marked in those of the Tokyo-Kobe and Takasaki-Naoetsu Sections. The general decrease noticeable in the working expenses is owing to the lines having been free from casualties, and extraordinary expenditures having in consequence been slight. The Takasaki-Naoetsu Section, where there is an increase in the expenses over the last year, is the sole exception in this respect. This is attributable to the portion of the line over the Usui Pass, being built on a special (Abt) system. The railway is on a grade of 1 in 15, and the permanent way and locomotives as well are of special kinds, which, together with the existence of 26 tunnels within the distance of 7 miles, necessitates greater expenditure for the maintenance of the way and motive power than lines laid out and worked in the ordinary way. The sum of yen 5,384,455, the gross revenue for the year, is divided under three heads of Passenger, Goods, and Miscellaneous Receipts, and the ratio that each bears to the total for this and the last fiscal year is as follow:—

Receipts.	Amount for the year under review.		Amount for the last fiscal year.		Percentage of the different receipts to the total revenue.		Increase or Decrease.	
	Yen.	Yen.	Yen.	Yen.	26th fiscal year.	25th fiscal year.	per cent.	per cent.
Passengers	3,977,086	3,487,133	1,489,954	73.9	76.1	72.8		
Goods	1,306,397	1,019,562	227,116	24.8	22.3	21.9		
Miscellaneous	100,972	74,238	14,734	1.9	1.6	2.3		
Total	5,384,455	4,580,932	1,803,823	100	100			
		Decrease.	Increase.					

As is indicated in the above table, each item of receipts has increased over the previous year. The most noticeable being the proportionate increase of the goods receipts, which is 1.9 per cent. above the ratio of the 25th year.

In the following table the aggregate Working Expenditure, during the year under review, namely, yen 1,942,375, is divided under the four heads of Maintenance of Permanent Way, Locomotive, Traffic, and General Expenses, and the ratio these bear to the Revenue and Working Expenditure is given for this and the previous year:—

Expenses.	Amount for the year under review.		Amount for the last fiscal year.		Ratio of the respective expenses to the revenue.		Increase or Decrease.	
	Yen.	Yen.	Yen.	Yen.	26th Fiscal Year.	25th Fiscal Year.	Per Cent.	Per Cent.
Maintenance	640,494	819,796	199,302	33.0	12.9	38.8	18.3	
Locomotive	775,386	800,520	25,134	39.9	14.4	37.0	17.5	
Traffic	396,580	379,654	16,926	20.4	7.4	17.5	8.3	
General	129,915	140,229	10,314	6.7	2.4	6.7	3.3	
Total	1,942,375	2,166,190	723,624	100.0	36.1	100.0	47.3	
		Increase.	Decrease.					
Expenses.	Amount for the year under review.		Amount for the last fiscal year.		Ratio of the respective expenses to the revenue.		Increase or Decrease.	
	Yen.	Yen.	Yen.	Yen.	26th Fiscal Year.	25th Fiscal Year.	Per Cent.	Per Cent.
Maintenance	640,494	819,796	199,302	33.0	12.9	38.8	18.3	
Locomotive	775,386	800,520	25,134	39.9	14.4	37.0	17.5	
Traffic	396,580	379,654	16,926	20.4	7.4	17.5	8.3	
General	129,915	140,229	10,314	6.7	2.4	6.7	3.3	
Total	1,942,375	2,166,190	723,624	100.0	36.1	100.0	47.3	
		Increase.	Decrease.					

Note.—The figures on the left side in the columns of percentages gives the percentage of Working Expenses; those on the right percentages of Revenue.

During the year under review expenditures for the maintenance of the way, locomotive, and general charges have in each case considerably decreased, as shown above. The decrease in the maintenance and general expenses is attributable to all the lines having been comparatively free from casualties.

The reduction in the locomotive expenses was caused by reasons quite different. The locomotive running mileage for the year under review was 4,126,128 miles, or 168,069 miles over that of the previous fiscal year; and under ordinary circumstances the expenses should have shown an increase instead of a decrease; that such was not the case is owing mainly to the lowness of the price of coal which prevailed during the year. There were 57,592 tons consumed (which is more than 5,000 tons over the consumption of the year previous), at the cost of yen 258,384 or yen 27,448 less than what was expended for the same purpose during the previous year; this, the main cause, together with the termination of the engagements of two members of the foreign staff belonging to the Locomotive Department—one in January and the other in March, 1893—brought about the results above shown. The increase of traffic expenses is owing to the augmentation of both the passenger and goods business.

The different heads of the receipts and expenditures in the revenue account of the last three years, divided by their appropriate divisors, give results as shown in the following tables:—

Receipts.	Average Receipts per average mile in operation.		Average mileages in Passenger operations.		Receipts.		Receipts.	
	Yen.	Yen.	Yen.	Yen.	Yen.	Yen.	Yen.	Yen.
26th fiscal year	558	7,128	2,341	181	9,650			
25th fiscal year	551	6,328	1,850	135	8,313			
24th fiscal year	539	5,899	1,529	197	7,625			

Average for 3 years

EXPENSES.	Average mileages in Passenger operations.		Receipts.		Receipts.		Receipts.	
	Yen.	Yen.	Yen.	Yen.	Yen.	Yen.	Yen.	Yen.
Fiscal Year.	Divisor.	Per mile run.	Divisor.	Per mile run.	Divisor.	Per mile run.	Divisor.	Per mile run.
26th fiscal year	558	1,148	4,126,128	.188				
25th fiscal year	551	1,524	3,958,059	.202				
24th fiscal year	551	1,840	3,547,377	.244				

Fiscal Year.	Traffic Expenses.		General Expenses.		Total Revenue.		Revenue and Expenditure.

24th fiscal year...	4,110,141	9.182	6,537,041	2.589				

Average for the three years

The details of the Receipts and Expenditures of the Revenue Account for the various sections will be found in Table No. 3.

3.—WORKING FUND.

The Working Fund is floating capital used for prosecuting operations and is therefore amalgamated and accounted for with the Revenues and Expenditures in the Revenue Account, the details of which are as follow:—

Working Fund	2,000,000
Operating Receipts	5,384,455

Total

DETAILS.			
Material in Stock:—	YEN.		
In stores	736,965		
At shops.....	45,228	782,193	
Sums receivable and Office Furniture, &c.	54,045		
Cash belonging to the Working Fund	1,163,762		
Operating Expenses.....	1,942,375		
Expenditures on supplementary works	638,857		
Disparity between new and old accounts	93,463	4,674,595	

Net Profit—Balance 2,709,760

4.—CASH ACCOUNT.

	YEN.	YEN.
Amount at deposit at the close of the year under review		4,023,812
Amount belonging to the Working Fund.....	1,163,762	
Amount carried over to the next fiscal year to meet sums payable...	150,390	1,314,052
Balance		2,709,760

The last balance represents the sum remitted to the National Treasury as the amount of Net Railway Earnings for the year.

The foregoing are the results as worked out in accordance with the new regulations. But since the division of items and the system of accounts generally employed in previous years are here retained, in order to facilitate comparison of the progress made by the operation of railways, the sum of yen 3,442,080 is taken as the net profit in this statement.

5.—NET PROFIT.

The net profit of the year under review, yen 3,442,080, compared with the aggregate amount of the capital, yen 39,567,731 and the total of the finally adjusted amount of the same, or Fixed Capital, yen 37,078,445, give the following ratios for this year, those of the three previous years being also given for the comparison:—

Fiscal Year.	Net profits compared with Gross Capital. Per cent.	Net profit compared with Fixed capital. Per cent.
26th fiscal year.....	8.7	9.3
25th fiscal year.....	6.4	6.8
24th fiscal year.....	4.6	4.9
23rd fiscal year.....	6.3	6.8

As may be observed in the above table, the net profit of the year was 8.7 per cent. of the Gross Capital and 9.3 per cent. of the Adjusted Fixed Capital. In the Gross Capital, however, is included the sum of yen 1,382,508 expended for the construction of the Ou and Hokuriku Railways and the adjusted sum of yen 975,193 is included in the Fixed Capital. Were these amounts, which are as yet unproductive, excluded from the respective Capitals, the net profit would have amounted to 9 per cent. of the Gross and 9.5 per cent. of the Fixed Capital. Such therefore are the percentages of the net profit of the year's working when compared with the actual productive capital invested; an increase of 2.2 and 2.3 per cent. respectively over the net profit percentages of last year's operations.

In the following table the annual increase of the Capital and of the Gross Receipts is compared, and the annual increase of the mileage in operation and the percentages are given, to show the relation between the Capital and the Revenue for this last and the three previous fiscal years:—

Fiscal Year.	Increase of mileage in operation.	Increase in amount of aggregate capital.	Proportion of increase of capital.	Increase of gross receipts.	Percentage of increase of gross receipts.	Proportion of gross receipts to capital.
	Mile.	Yen.	Per cent.	Yen.	Per cent.	Per cent.
26th fiscal year...	7	1,023,156	5.4	803,893	17.5	13.6
25th fiscal year...	0	971,357	2.7	472,492	11.4	12.2
24th fiscal year...	0	1,621,416	4.6	203,663†	2.4†	12.2†
23rd fiscal year...	9	524,069	1.5	442,174	12.7	12.0

† Decrease.

The Net Profit of yen 3,442,080 is the result when the account is based upon the mode of adjustment observed prior to the introduction of the new system of accounts, according to the law of Government railway finances. According to the latter, the sum paid into the National Treasury, amounts to yen 2,709,760, as before stated. The following may explain the relation the two systems of rendering accounts bear to each other:—

Net Profit	3,442,080
The amount of sums receivable, after deducting therefrom sums payable, which are included in the adjustments according to the new system,	

but excluded from it in the old system until the year in which such sums are actually received

93,463

Expenditure on supplementary works on open railways, which according to the new system are excluded from the account of railway property, but included therein by the old system of accounting..... 638,857 732,320

Amount remitted to the National Treasury as Railway net profit, Balance 2,709,760

This amount of yen 2,709,760 is 7.1 per cent. of the Aggregate Capital and 7.5 per cent. of the Adjusted Fixed Capital.

The General Balance Sheet of the Capital and Revenue Accounts are given in Table No. 4.

PRIVATE RAILWAYS.

Applications received during the year under review for permission to form companies for the construction and working of railways were 34. Beside these, applications for extensions of existing lines were made by 11 Railway Companies. The whole of these 45 projects come under applications for provisional charters. The number of railway charters granted during the year amounted to 11, and of provisional charters to 5. The lines opened to public traffic during the year, after having been duly inspected and passed by the authorities of the Railway Bureau, were:—Sotogawa-Hiraigawara Section of the Iyo Railway; Takata-Sakurai Section of the Osaka Railway; Kotake-Iidzuka Section of the Chikuhō Railway; Anegasaki-Ikeda Section of the Settsu Railway; Miyagawa-Tsu Section of the Sangu Railway; Shiuchi-Hachinobe Section of the Nippon Railway; and Kudzu-Koshina Section of the Sano Railway.

The details of these facts are given in tabulated form below.

The total mileage of the railways of the different companies in operation at the close of the year under review amounted to over 1,381 miles, showing that 61 miles of new private lines were opened during the year. The lines open, lines under construction, and lines surveyed are given in the Railway Sketch Map* annexed to this report.

CHARTERS WERE GRANTED TO:—

The Sano Railway Company:—

Office—Kudzu Machi, Tochigi Ken.

Charter—Granted 13th April, 1893.

Capital—Yen 145,000.

Line—Kudzu to Koshinagawa.

Length—9 miles 54 chains.

Period of Construction—1 year.

The Nara Railway Company:—

Office—Nara, Nara Ken.

Charter—Granted 13th April, 1893.

Capital—Yen 1,000,000.

Line—Nara to Kyoto.

Length—25 miles 53 chains.

Period of Construction—3 years.

The Kwansei Railway Company:—

Office—Yokkaichi, Miye Ken.

Charter—Granted 15th June, 1893.

Capital—Yen 1,060,000.

Line—Kuwana-Nagoya.

Length—15 miles 40 chains.

Period of Construction—5 years.

The Nanwa Railway Company:—

Office—Goshomachi, Nara Ken.

Charter—Granted 26th July, 1893.

Capital—Yen 500,000.

Line—Takata to Gojo.

Length—16 miles 40 chains.

Period of Construction—2 years.

The Bantan Railway Company:—

Office—Shikama, Hyogo Ken.

Charter—Granted 30th June, 1893.

Capital—Yen 1,000,000.

Line—Shikama to Ikuno.

Length—30 miles 57 chains.

Period of Construction—2 years.

The Bōsō Railway Company:—

Office—Sogamachi, Chiba Ken.

Charter—Granted 7th September, 1893.

Capital—Yen 230,000.

Line—Soga to Otsuna.

Length—11 miles 75 chains.

Period of Construction—1 year.

The Ota Railway Company:—

Office—Otamachi, Ibaraki Ken.

Charter—22nd December, 1893.

Capital—Yen 178,000.

Line—Otamachi to Mito.

Length—12 miles 18 chains.

Period of Construction—2 years.

The Nanyo Railway Company:—

Office—Korinakamachi, Ehime Ken.

Charter—Granted 24th January, 1894.

Capital—Yen 95,000.

Line—Matsuyama to Korinaka.

Length—6 miles 57 chains.

Period of Construction—1 year.

The Dogo Railway Company:—

Office—Dogo Yunomachi, Ehime Ken.

Charter—Granted 24th January, 1894.

Capital—Yen 38,000.

Line—Dogo Mimuro-machi to Furumachi.

Length—3 miles 6 chains.

Period of Construction—2 years.

The Naniwa Railway Company:—

Office—Osaka, Osaka Fu.

Charter—Granted 15th February, 1894.

Capital—Yen 150,000.

Line—Osaka to Hojo-mura.

Length—8 miles 13 chains.

Period of Construction—2 years.

The Sobu Railway Company:—

Office—Tokyo, Tokyo Fu.

Charter—Granted 23rd January, 1894.

Capital—Yen 321,750.

Line—Koiki to Honjo.

Length—6 miles.

Period of Construction—2 years.

PROVISIONAL CHARTERS GRANTED:

The Kojima Railway Company:—

Office—Kurashiki, Okayama Ken.

Provisional Charter—Granted 17th Nov., 1893.

Capital—Yen 280,000.

Line—Kurashiki to Ajino.

Length—11 miles 21 chains.

Period for Surveys—12 months.

The Iyo Railway Company:—

Office—Matsuyama, Ehime Ken.

Provisional Charter—Granted 1st Dec., 1893.

Capital—Yen 25,000.

Line—Tachibana to Morimatsu.

Length—3 miles 14 chains.

Period for Survey—12 months.

The Hase Railway Company:—

Office—Nara, Nara Ken.

Provisional Charter—Granted 18th Jan., 1894.

Capital—Yen 400,000.

Line—Nara to Sakurai.

Length—14 miles 40 chains.

Period for Survey—12 months.

Nippon Railway Company:—

Office—Tokyo, Tokyo Fu.

Provisional Charter—Granted 15th Feb., 1894.

Capital—Yen 2,200,000.

Line—Kawaguchi to Uchihara.

Length—60 miles.

Period for Surveys—12 months.

The Chikuhō Railway Company:—

Office—Wakamatsu, Fukuoka Ken.

Provisional Charter—Granted 16th Feb., 1894.

Capital—Yen 123,590.

Line—Kotake to Kōburo.

Length—3 miles 40 chains.

Period for Surveys—6 months.

APPLICATIONS FOR PROVISIONAL CHARTERS HAVE BEEN MADE BY:—

The Kōbu Railway Company:—

Office—Yodobashi, Tokyo Fu.

Capital—Yen 1,500,000.

Line—Yotsuya, via Akasaka to Iidamachi.

Length—5 miles 12 chains.

The Toyokawa Railway Company:—

Office—Toyohashi, Aichi Ken.

Capital—Yen 50,000.

Line—Shimoike to Toyokawa.

Length—4 miles.

Capital—Yen 100,000.

Line—Toyokawa to Shinjo.

Length—8 miles.

Capital—Yen 40,000.

Line—Toyokawa to Kokufuji.

Length—4 miles.

The Settan Railway Company:—*

Office—Kawanishi-mura, Hyogo Ken.

Capital—Yen 1,350,000.

Line—Oto to Sonobe and Ikuse to Mita.

Length—38 miles 40 chains.

The Settan Railway Company:—*

Office—Sonezaki-mura, Osaka Fu.

Capital—Yen 1,500,000.

Line—Umeda to Funaoka.

Length—34 miles.

Capital—Yen 3,000,000.

Line—M'meda, via Sanya, to Maizuru.

Length—67 miles.

Capital—Yen 3,000,000.

Line—M'meda, via Ayabe, to Maizuru.

Length—69 miles 40 chains.

The Ryomo Railway Company:—

Office—Tokyo.

Capital—Yen 300,000.

Line—Maebashi to Shibukawa.

Length—11 miles.

* The Map cannot be reproduced here. The Tables are given at the end of the report.

* Two distinct Companies bearing the same name.

The Ota Railway Company:—
Office—Ota-machi, Ibaraki Ken.
Capital—Yen 50,000.
Line—Mito to Ono.
Length—6 miles.

The Sobu Railway Company:—
Office—Tokyo.
Capital—Yen 600,000.
Line—Koiwa to Akabane.
Length—14 miles 40 chains.
Capital—Yen 90,000.
Line—Chiba to Hamano.
Length—4 miles 40 chains.
Capital—Yen 250,000.
Line—Hamano to Shigewara.
Length—12 miles 40 chains.
Capital—Yen 300,000.
Line—Sakura to Narito.
Length—15 miles.
Capital—Yen 425,000.
Line—Ichikawa to Fuse.
Length—17 miles.
Capital—Yen 900,000.
Line—Narito to Choshi.
Length—30 miles.
Capital—Yen 425,000.
Line—Senju to Okawaguchi.
Length—8 miles 40 chains.

The Ise Railway Company:—
Office—Mito, Ibaraki Ken.
Capital—Yen 200,000.
Line—Mito to Iwamachi.
Length—7 miles 64 chains.

The Goyu Railway Company:—
Office—Goyu-machi, Aichi Ken.
Capital—Yen 75,000.
Line—Goyu to Toyokawa.
Length—6 miles.

The Osaka Railway Company:—
Office—Osaka Fu.
Capital—Yen 150,000.
Line—Sakurai to Hase.
Length—3 miles 30 chains.

The Kyoto Railway Company:—
Office—Kyoto.
Capital—Yen 5,000,000.
Line—Kyoto via Maizuru and Miyabe to Fuku-chi-yama and Wadayama.
Length—100 miles and 2 chains.

The Sakura Railway Company:—
Office—Sakura-machi, Chiba Ken.
Capital—Yen 130,000.
Line—Sakura to Narita.
Length—7 miles 71 chains.

The Shimosa Railway Company:—
Office—Sawara-machi, Chiba Ken.
Capital—Yen 500,000.
Line—Sakura to Sawara.
Length—20 miles 40 chains.

The Kayo Railway Company:—
Office—Osaka.
Capital—Yen 300,000.
Line—Kashiwara to Mikkaichi.
Length—14 miles.

The Kidzu-Naniwa Railway Company:—
Office—Kidzu-machi, Kyoto Fu.
Capital—Yen 900,000.
Line—Kidzu to Shijo.
Length—13 miles 60 chains.

The Nippon Railway Company:—
Office—Tokyo.
Capital—Yen 5,000,000.
Line—Ueno to Shimbashi (elevated).
Length—3 miles 60 chains.
Capital—Yen 5,640,000.
Line—Mito to Iwanuma.
Length—130 miles.
Capital—Yen 450,000.
Line—Nakazato-mura to Sumidagawa.
Length—3 miles.

The Hankaku Railway Company:—
Office—Osaka.
Capital—Yen 5,500,000.
Line—Sonezaki to Maizuru and Fuku-chiyama to Yatsushika.
Length—106 miles.

The Joka Railway Company:—
Office—Kyoto.
Capital—Yen 800,000.
Line—Kidzu to Shijo and Nagao to Yawata.
Length—22 miles 40 chains.
Capital—Yen 250,000.
Line—Yawata to Shijo.
Length—not yet known.

The Hokuwa Railway Company:—
Office—Nara, Nara Ken.
Capital—Yen 600,000.
Line—Nara to Shijo.
Length—13 miles.

The Kiwa Railway Company:—
Office—Gojo-machi, Nara Ken.
Capital—Yen 1,400,000.
Line—Gojo to Wakayama.
Length—31 miles 20 chains.

The Fushiki Railway Company:—
Office—Fushiki, Toyama Ken.
Capital—Yen 140,000.
Line—Fushiki to Takaoka.
Length—4 miles 40 chains.

The Chiuwa Railway Company:—
Office—Horyuji-mura, Nara Ken.
Capital—Yen 130,000.
Line—Koryu to Kwarajo.
Length—5 miles 49 chains.

The Iga Railway Company:—
Office—Nabari-machi, Miye Ken.
Capital—Yen 2,300,000.
Line—Sakurai to Toba.
Length—68 miles 50 chains.
Capital—Yen 200,000.
Line—Nabari to Ueno.
Length—11 miles.

The Futami Railway Company:—
Office—Yamada-machi, Miye Ken.
Capital—Yen 136,000.
Line—Yamada to Futami.
Length—5 miles.

The Dzus Railway Company (electric):—
Office—Tsukiji, Tokyo.
Capital—500,000.
Line—Kodzu to Yumoto and Numadzu to Nanjo.
Length—17 miles 58 chains.

The Chiu-Etsu Railway Company:—
Office—Takaoka-machi, Toyama Ken.
Capital—Yen 350,000.
Line—Takaoka to Shirobata.
Length—19 miles.

The Boso Railway Company:—
Office—Sogamachi, Chiba Ken.
Capital—Yen 450,000.
Line—Otsuna to Tokane and Otsuna to Ichino-miya.
Length—18 miles and 7 chains.
Capital—Yen 450,000.

Line—Tokane to Yokaichiba and Soga to Chiba.
Length—18 miles 51 chains.

The Kaikyo Railway Company:—
Office—Sakai, Osaka Fu.
Capital—Yen 1,500,000.
Line—Sakai to Hachimoto-machi.
Length—22 miles.

Sanuki Railway Company:—
Office—Tadotsu, Kagawa Ken.
Capital—Yen 500,000.
Line—Marugame to Takamatsu.
Length—17 miles 19 chains.

The Chikugo Railway Company:—
Office—Wakamatsu, Fukuoka Ken.
Capital—Yen 129,000.
Line—Iidzuka to Usui.
Length—5 miles.
Capital—Yen 1,224,834.

Line—Iidzuka to Harada.
Length—21 miles.
Capital—Yen 522,486.
Line—Tosu, Sanya to Yoshikawa.
Length—17 miles.

The Nishinari Railway Company:—
Office—Fukushima Mura, Osaka.
Capital—Yen 300,000.
Line—Sonezaki to Tempozan.
Length—4 miles 56 chains.

The Arima Electric Railway Company:—
Office—Kobe, Hyogo Ken.
Capital—Yen 300,000.
Line—Kobe to Yuyama.
Length—15 miles.

The Yamaga Railway Company:—
Office—Yamaga, Kumamoto Ken.
Capital—Yen 265,000.
Line—Yamaga to Ueki.
Length—10 miles.

The Kano Railway Company:—
Office—Nanao-mura, Ishikawa Ken.
Capital—Yen 700,000.
Line—Tsubata to Nanao.
Length—34 miles 70 chains.

The Toyo Railway Company:—
Office—Imajimachi, Ehime Ken.
Capital—Yen 300,000.
Line—Imaji to Matsuyama.
Length—28 miles.

The Kisetsu Railway Company:—
Office—Osaka.
Capital—Yen 2,800,000.
Line—Osaka to Wakayama.
Length—40 miles.

The Bantan Railway Company:—
Office—Kobe, Hyogo Ken.
Capital—Yen 500,000.
Line—Ikuno to Wadayama.
Length—13 miles 40 chains.

The Omi Railway Company:—
Office—Hikone-machi, Shiga Ken.
Capital—Yen 1,000,000.
Line—Hikone to Fukagawa.
Length—26 miles.

The Kodzuke Railway Company:—
Office—Takasaki, Gumma Ken.
Capital—Yen 200,000.
Line—Takasaki to Shimoshinden.
Length—16 miles.

The Hakata Railway Company:—
Office—Fukuoka, Fukuoka Ken.
Capital—Yen 500,000.
Line—Hakata to Dazaifu.
Length—12 miles.

The Hoshin Railway Company:—
Office—Yukihashi, Fukuoka Ken.
Capital—Yen 198,512.
Line—Ikari to Yugeia.
Length—2 miles 10 chains.

The Kanyo Railway Company:—
Office—Hakodate.
Capital—Yen 95,000.
Line—Hakodate to Shimoyugawa.
Length—3 miles 50 chains.

The Settsu Railway Company:—
Office—Itamimachi, Hyogo Ken.
Capital—Yen 300,000.
Line—Amagasaki to Ajikawa.
Length—4 miles.

The Sewa Railway Company:—
Office—Matsuzakamachi, Miye Ken.
Capital—Yen 4,500,000.
Line—Sakurai, Toba, to Kawaidzu.
Length—90 miles.

The Bisei Railway:—
Office—Tsushima Machi, Aichi Ken.
Capital—Yen 200,000.
Line—Tsushima to Ichinomiya.
Length—10 miles.

THE RAILWAYS WHICH WERE OPENED FOR PUBLIC TRAFFIC DURING THE YEAR UNDER REVIEW ARE AS FOLLOW:—

	Length M. C.
The Iyo Railway Company:— Line—Sotogawa to Hiraigawa.....	4.33
Opened—7th May, 1895.	
The Osaka Railway Company:— Line—Takata to Sakurai	6.00
Opened—23rd May, 1893.	
The Chikugo Railway Company:— Line—Kotake to Iidzuka	5.05
Opened—3rd July, 1893.	
The Settsu Railway Company:— Line—Amagasaki to Ikeda	8.35
Opened—12th December, 1893.	
The Sangu Railway Company:— Line—Miyagawa to Otsu.....	23.58
Opened—31st December, 1893.	
The Nippon Railway Company:— Line—Shirouchi to Hachinobe.....	3.30
Opened—4th January, 1894.	
The Sano Railway Company:— Line—Kudzu to Koshina	9.45
Opened—20th March, 1894.	
Total	60.55

For the purpose of showing the working of private railways, the Receipts, Working Expenses, per centages of the net earnings, &c., for the year under review, of the Nippon and fourteen other railway companies, as they appear in their respective reports, are given and compared with those of the previous year in Table No. 11.

The Rolling Stocks Returns of the different Companies are given in Table No. 12.

TABLE OF MILEAGES OF ALL THE RAILWAYS IN OPERATION ON THE 31ST MARCH, 1894:—

GOVERNMENT RAILWAYS.		M. CH.	M. CH.
Shimbashi-Kobe Section.....	376.31		
Ofuna-Yokosuka Section	10.03		
Obu-Taketoyo Section	12.01		
Maibara-Kanegasaki Section.....	31.01		
Takasaki-Naoetsu Section.....	117.10		
Baba-Otsu Section †	1.23		
Fukutani Nagahama Section † ..	9.60		
	557.49		
NIPPON RAILWAY.			
Ueno-Aomori Section	454.66		
Shinagawa-Akabane Section	12.76		
Omiya-Maebashi Section	51.14		
Utsunomiya-Nikko Section.....	25.00		
Iwakiri-Shiogama Section	4.23		
Ueno-Akihanohara Section †	1.15		
Oyama-Mito Section	41.45		
Mito-Nakagawa Section †62		
Shirouchi-Hachinohe Section	3.30		
	595.11		
KOBU RAILWAY.			
Shinjiku to Hachioji	22.77		
RYOMO RAILWAY.			
Oyama to Maebashi.....	52.17		

† These lines are used for Goods Traffic exclusively.

SANYO RAILWAY.		
Kobe-Mihara Section	143.40	
Hyogo-Wadanomisaki Section †	1.64	145.24
<hr/>		
KYUSHU RAILWAY.		
Moji to Kumamoto	121.31	
Tosu to Saga	15.30	136.61
<hr/>

Amagasaki to Ikeda		8.35
<hr/>		
SANGU RAILWAY.		
Tsu to Miyagawa		23.58
<hr/>		
SANO RAILWAY.		
Kudzuu to Koshina		9.54
<hr/>		
Total		1,038.50

Table of mileages of Railways either under construction, or for which surveys have been made, *i.e.* of the lines projected by companies for which they had been granted charters and hence possessing the right of construction on 31st March, 1864.

Government Railway :—		
Fukushima to Aomori	298.26	} 422.04
Tsurugā to Toyama	123.58	
Kobu Railway :—		
Shinjuku to Iidamachi ..		4.00
Sanyo Railway :—		
Mihara to Shimonooseki		176.23
Kyushin Railway :—		
Kokura to Gyohashi		} 134.40
Kumamoto to Yashiro and Misumi ..		
Saga to Nagasaki and Sasebo		
Kwansei Railway :—		
Yokkaichi to Nagoya		22.35
Osaka Railway :—		
Tennoji to M'ameda (Osaka)		6.31
Sōbu Railway :—		
Honjo to Sakura		31.00
Hoshū Railway :—		
Gyohashi to Yokkaichi		} 43.65
Gyohashi to Kashun and Ikari		
Settsu Railway :—		
Ikeda to Ikuse		6.00
Kawagoye Railway :—		
Kawagoye to Kokubunji.....		18.20
Ome Railway :—		
Ome to Tachikawa		13.07
Nippon Railway :—		
Hachinohe to Minato		1.63
Nanwa Railway :—		
Takata to Gōjō		16.40
Bantan Railway :—		
Shikama to Ikuno ..		30.57
Nara Railway :—		
Kyoto to Nara		25.53
Bōsō Railway :—		
Soga to Otsuna.....		11.75
Ota Railway :—		
Mito to Ota		12.18
Nanyo Railway :—		
Matsuyama to Korinaka.....		6.57
Dogo Railway :—		
Dogo to Omuro.....		3.06
Naniwa Railway :—		
Osaka to Shijō.....		8.13
Total		994.47

DETAILED STATEMENT OF RAILWAY EXPENDITURES ON CAPITAL ACCOUNT FOR THE YEAR ENDING MARCH 31ST, 1894.														
Items.	Tokyo-Yokohama, Double Line, 48 miles.	Kobe-Osaka, Single Line, 58 miles.	Tsuruga-Ogaki, Single Line, 49 miles.	Naotsu Line, Single Line, 100 miles.	Yokohama-Obu.			Total.	Ogaki-Taketoyo, Single Line, 53 miles.	Total.	Yokosuka Line, Single Line, 10 miles.	Biwa Lake Shore Line, Single Line, 48 miles.	Usui Line, Single Line, 7 miles.	Grand Total.
					Single Line, 205 miles.	Oyama Numa-zu Double Line, 22 miles.	Total.

AGGREGATE TRAIN MILEAGES.

Passenger train mileage	1,996,030	*	27,122	20,140	15,964	2,016,170	*	11,158
Goods train mileage, down train	407,388			37,210		444,598		
Goods train mileage, up train	407,047			44,802		451,849		
Total.....	814,435	*	10,292	82,012	38,556	896,447		28,263
Mixed train mileage, down train	234,472			181,465		415,937		
Mixed train mileage, up train	224,406			174,977		399,383		
Total.....	458,878		130,757	356,442	43,806	815,320		174,563
Grand Total	3,269,343		93,34 2	458,594	98,326	3,727,937		191,668

* The inclusion of the Otsu and Fukutani Goods lines causes the operating Goods train mileage to be longer than that of the passenger trains.
† ½ of mixed train mileage added to the total Goods train mileage.
‡ Number of vehicles multiplied by the number of days employed.
§ Calculated from freighted wagons only. Empty wagons not included.

TABLE NO. 10. LIST OF CASUALTIES & ACCIDENTS IN CONNECTION WITH THE TRAFFIC IN THE DIFFERENT SECTIONS DURING THE 26TH FISCAL YEAR.

Section.	Derailments.			Collisions.		Failures.	Obstruction to the road and trains.		Trains Delayed.	Trains Stopped.	Violators of Railway Regulations.
	Carriage.	Waggons.	Engines.	Waggons.	Engines.		Natural Causes.	Wilful Acts.			
Tokyo-Kobe Section	6	33	7	1	—	193	156	35	118	238	150
Takasaki-Naoetsu	—	10	5	—	1	81	57	12	27	79	3
Total	6	43	12	1	1	274	213	47	145	317	153

NOTE.—By "Derailments" and "Collisions" are meant vehicles getting off the track or colliding with each other by negligence on the part of Pointsmen, steam being in excess, &c.
By "Failures," vehicles becoming disabled by over-heating of the axles, parts of machinery breaking, or giving way, &c., is meant.
Obstructions to the road and trains mean impediments on the lines caused by storms, &c., or by persons wilfully placing stones, wood, &c., on them.
Delays of the trains are interruption of their working brought about by these obstructions; the stoppages result from same causes.
Violators of Railway Regulations mean passengers who over-ride their station and fail to pay their fare, and those who otherwise act contrary to the Railway Regulations.

* The 25th Fiscal year of this Company consisted of only 9 months from April to December 1892. In order to facilitate comparison, calculations have been made for 12 months based on this actual figures for the 9 months. The upper figures in this column are for 12 months so calculated and the lower the actual amounts for the 9 months.
† Both the 25th and 26th years of this Company not having been of 12 months, calculations were made as in the above case, and the upper and lower figures in these columns should be read in the same sense.
‡ The lines of these Companies having only been opened only for a short time in the 25th year no comparison is made.

THE AUTUMN ATHLETIC MEETING.

The Autumn Athletic Meeting of the Yokohama Cricket and Athletic Club took place on Saturday on the Cricket Ground. The weather was blustery, the wind coming keen from the north-east, but at times the sun shone out of the grey banks of clouds with agreeable warmth. As the afternoon progressed, many ladies put in an appearance, brightening up the ground considerably; the attendance of the other sex was also above the normal. The entries were not so large as might have been expected and no very exciting competitions have to be recorded. Johnson, who looked an easy winner for the Hurdles, did not justify expectations in this event, having evidently tired himself in previous contests, and the winner turned up in B. Mason, of Tokyo, an old Ipswich Middle School boy. Another winner from Tokyo was A. Dewette, who won the mile walking race in 9m. 46 secs. The bicycle race, of course, attracted the greatest amount of attention, being the first of its kind, we believe, on the Yokohama ground. But the disparity in the weight and make of the machines rendered racing on equal terms out of the question. In one sense the race was international, a Britisher coming in first, an American second, and a Swiss third. The Town Band was in attendance and played a very good selection of airs during the afternoon. For the sake of record, we may mention that in order to give the cyclists a cinder path, all the corners of the ground were altered, and the course measured 506 yards. The quarter mile was therefore 66 yard less than once round; the half mile 132 yards less than twice round, or about 1½ laps; the mile 3 laps and 242 yards (about 3½ laps); whilst the 2 miles, starting opposite the Pavilion, was just 22 yards short of 7 laps. The following were the officers:—Mr. J. P. Mollison, President; Mr. A. H. Dare, Judge; Mr. Jas. Dodds, Starter;

Mr. J. F. Pinn, Time-keeper; Messrs. A. B. Walford, E. F. Kilby, W. S. Stone, K. F. Crawford, E. R. Morris; H. V. Dickson, E. O. Kenyon, and F. E. White, Committee. To the great delight of all, Mr. Kenyon, the indefatigable and cheery Secretary of the Cricket Club, who has been very ill, was able to venture out for an hour or so, while the sun shone: many were the hearty good wishes expressed on his restoration to health. Mrs. Mollison presented the prizes at the close. Details:—

100 YARDS FLAT RACE (Prize presented by Messrs. Read and Jackson).

1st HEAT:—G. C. Allcock, 3 yards, 1st; H. Goddard 3 yards, 2nd; E. J. Libeaud, 2 yards, 3rd; D. Tyng, 4 yards, 4.

Allcock led from the start and won easily from the second man; the others were three yards behind. Time, 11 secs.

2nd HEAT:—H. E. Allcock, 5 yards, 1st; E. B. S. Edwards, 1 yard, 2nd; B. Mason, 4 yards, 3rd; A. Kingdon, 3 yards, 4.

This was a close thing, the scratch man being only beaten a stride from home by less than half a yard. Time, 11½ secs.

FINAL HEAT:—G. C. Allcock, 3 yards, 1st; H. Goddard, 5 yards, 2nd; E. B. S. Edwards, 1 yard, 3rd; H. E. Allcock, 5 yards, 4.

The men got off well, G. C. Allcock soon obtaining a lead. Just at the close Goddard spurted, but he failed to catch the leader; who won a good race by about six inches. Time, 10½ secs.

LONG JUMP.

R. C. K. Johnson, scratch, 18ft. 8½in. 1st; G. Philip, 6 inches, 17ft. 8in. 2nd; H. Goddard, 12 inches, 17ft. 3½in. 3rd; W. Goddard, 12 inches, 0; E. J. Libeaud, 12 inches, 0; J. F. Drummond, 12 inches, 0; E. B. S. Edwards, scratch, 0; and G. C. Allcock, 12 inches, 0.

Johnson made a magnificent jump; Philip also jumped well. Most of the competitors retired at the second trial.

HURDLES, 120 YARDS.

1st HEAT.—R. C. K. Johnston, minus 5 yards, 1st; H. S. Goddard, 5 yards, 2nd; J. F. Drummond, 5 yards, 3.

The scratch man drew level at the fifth hurdle, and then romped home at his own pleasure. Drummond retired half way down. Time, 20 seconds.

2nd HEAT.—B. Mason, 10 yards, 1st; H. Goddard, 5 yards, 2nd; W. Goddard, 5 yards, 3.

Mason led all the way, but only won by 2 yards. W. Goddard fell at the last hurdle. Time, 19 seconds.

FINAL HEAT:—B. Mason, 10 yards, 1st; H. S. Goddard, 5 yards, 2nd; R. C. C. Johnston, minus 5 yards, 3.

To the surprise of many, the scratch man did not catch up, and the race finished as it started, Mason only losing a few yards of his handicap. Time, 18 secs.

PUTTING THE SHOT.

E. B. S. Edwards, 30 ft. 6½ in. 1st; M. Schellenberg, 28 ft. 1 in. 2nd; G. Philip, 25 ft. 8 in. 3rd; W. Goddard, 24 ft. 3 in. 4; and H. S. Goddard, 22 ft. 3 in. 5.

BOYS' RACE (under 15) 200 YARDS.

Master Gibbs, 1st; Master Tyng, 2nd; Master Carst, 3rd.

Fifteen started. Carst, last year's winner, was penalised 10 yards, and two small lads of five years old were the "limit men" at 70 yards. Carst made a grand struggle, but his handicap was too heavy, though he finished close up to the leaders, who were separated by about 4 inches. Master Hans Grosser, the smallest tot of the lot, gallantly ran the whole distance, and finished amid applause. Time, 32½ secs.

HIGH JUMP.

There were five-competitors, and their best jumps were as follows:—M. Schellenberg, 4 inches, 4ft. 10in., 1st; D. Tyng, 3 inches, 4 ft. 9 in., 2nd; R. C. K. Johnston, scratch, 4 ft. 9 in., 0; J. F. Drummond, 2 inches, 4ft. 8in., 0; H. S. Goddard, 3 inches, 4 ft. 6 in. Johnson attempted the 5 ft. 1 in., to tie, but failed.

QUARTER MILE FLAT (Prize presented by Mr. Walford).

G. C. Allcock, 15 yards, 1st; H. S. Goddard, 20 yards, 2nd; E. J. Libeaud, 15 yards, 3rd; R. C. K. Johnson, scratch, 0; E. B. S. Edwards, 15 yards, 0; W. Goddard, 25 yards, 0; A. Dewette, 20 yards; F. B. Abenheim, 25 yards, 0; M. Schellenberg, 30 yards, 0; H. E. Allcock, 15 yards, 0.

This was one of the largest fields seen in Yokohama for a quarter mile flat. The winner soon opened out and passed man after man. Entering the straight he spurted and passed to the front. The others then came up and the race was only won by about 6 inches; bad third. Time, 55 secs.

THREAD AND NEEDLE RACE.

Runner.	Threader.
1.—M. Schellenberg.	Mrs. Campbell.
2.—E. B. S. Edwards.	Miss Young.
3.—G. C. Allcock.	Miss Scott.

Edwards was the first to reach the rail, 60 yards from the starting line. But the fortune of war was not with him, for Schellenberg, the second runner-up, managed to get his needle threaded quickest and romped home an easy winner. Time, 22½ secs.

BICYCLE RACE (2 miles)—Prize presented by Mr. H. McArthur.

E. Adet, 50 yards, 1st; Poole, 25 yards, 2nd; R. Dubuffet, 70 yards, 3rd; H. Corté, scratch, 0; H. Tennant, 60 yards, 0.

The men went round the first lap in the following order, Dubuffet, Adet, Tennant, Poole, Corté. During the second lap Tennant fell behind, and the at end of the third he dropped out, the riders then being Dubuffet, Adet, Corté, and Poole. At the end of the fourth lap, Corté gave up. In the fifth lap Adet took the lead and finished the lap with a good lot in hand; Dubuffet being a dozen yards ahead of Poole, who was still riding easy. Poole drew up on Dubuffet in the sixth lap, but when the lap finished Adet still maintained his splendid lead. No change was effected till near the finish of the race, which Adet won comfortably by about forty yards, Poole overtaking Dubuffet on the finishing line. Had the laps been announced we think the race would have ended differently, as Poole had a lot left in him, having saved himself for another lap. Time, 6 min. 48½ secs.

ONE MILE FLAT (Prize presented by Mr. Dare).

M. Schellenberg, 70 yards, 1st; E. H. Irwine, 120 yards, 2nd; H. R. Mair, 50 yards, 3rd; G. C. Allcock, 30 yards, 0; W. Goddard, 30 yards, 0; F. B. Abenheim, 60 yards, 0.

Irwine led for the first two rounds; and Allcock made a desperate effort to come up, but unsuccessfully in the second round. In commencing the last lap Schellenberg drew up to Irwine; and Allcock, Goddard, and Abenheim fell out. Going up the back straight, Mair spurred, but it was too late for him to achieve anything. Entering the straight for home, Schellenberg overtook Irwine, and won easily by half a dozen yards; bad third. Time, 5 min. 21 sec.

SACK RACE.

M. Kingdon, 1st; J. F. Drummond, 2nd; H. E. Campbell, 3rd; F. J. Lias, 0; E. R. Morris, 0; B. Mason, 0.

An amusing race, with only two spills. Kingdon won in a canter.

ONE MILE WALKING.

A. Dewette, 20 yards, 1st; H. S. Goddard, 10 yards, 2nd; J. F. Drummond, 20 yards, 0; W. Goddard, 10 yards, 0.

The shades of evening were gathering fast when this race was started, and it was nearly dark by the time it finished. Dewette won easily; bad third. Time, 9m. 46 secs.

LETTER FROM PHILADELPHIA.

[FROM OUR OWN CORRESPONDENT.]

Philadelphia, October 16th.

All our street car companies, save one, have been merged into a union company, which controls absolutely all the lines. It is about the most gigantic combination we have had in this Quaker city. Undoubtedly the public will lose by the absence of healthy competition, but the new company promises all sorts of things as an equivalent for the withdrawal of certain others. This is one of the signs of the times here, that great business interests are being merged into larger corporations. The ruinous character of indiscriminate competition has brought this about. Now we may have to suffer from the other extreme, the absence of all rivalry. Oh, for Confucius' doctrine of the Golden Mean! Another great union is that between the Westinghouse Company of Pittsburg and the Baldwin Locomotive Works. These two immense establishments, of world-wide reputation, are uniting to get out electric locomotives. Mr. Westinghouse declares that the joint company will put out electric locomotives which will cost only a sixth of the present motors; and that they will do away with the unsightly overhead wires.

I was over in Brooklyn, N.Y., at the great meeting of the American Board. It was an enthusiastic gathering. Instead of the Chinese horrors dampening the zeal of these friends of missions, it seems as if they rather increase it. By the way, I have just received news from England that the son of Rev. R. W. Stewart who was killed at Whasang on August 1st by the Chinese

Vegetarians, has offered to take his father's place and to assume his work. The American Board last year spent upon its missions \$661,885, of which \$93,783 was spent upon the Japan mission. Excepting only the Western Turkey mission, this is the largest sum expended on any mission. The Board has a debt of \$114,632. It was argued, in the Brooklyn meeting, that the Board should pay as it goes. But Dr. Meredith and others very wisely suggested that the Board did perfectly right in availing itself of its good credit and that the work could not be measured by yearly periods. Still it is evident that, unless the money comes in very freely, a severe retrenchment will be ordered. One giver offered \$25,000, another \$2,500, several \$1,000, and still others smaller sums for the extinction of the debt. The Board has 20 missions, with 187 ordained missionaries, and some 572 "labourers" sent from America. The total number of members of mission churches is now 44,413, with an addition of about 3,300 this last year.

The American Baptists are also sending out earnest appeals for help. The riots in Western China have, in driving out the Baptist missionaries from the Szechuan Province, entailed a great expense. The Missionary Union started at the beginning of its year, April 1st, with a debt of \$189,956. That has been greatly reduced, certainly at least half of it is paid, but about \$300,000 is needed before March next year. Rev. Wm. M. Upcraft, of the Western China mission, has started overland from the head of navigation on the Yangtze-kiang to the Irrawady river in Burma.

I have been mousing through the book-stores of New York and Philadelphia and have talked with some of the travellers of the great publishing houses. Book-selling is going to be very active this Fall. Nothing especially noteworthy on Japan is promised. Dr. George L. MacKay has written "From Far Formosa," and Revell in New York will issue it in November. It will have maps and illustrations in abundance. The best collection of stories ever published, I think, is Ian Maclaren's "Beside the Bonnie Brier Bush." He will issue Nov. 4th a new collection, "Auld Lang Syne." The book has had a wonderful sale, greater than any book for many a year. Du Maurier's "Trilby," sold like everything for a while, but the book-sellers hardly sell a copy a week nowadays.

LETTER FROM AMERICA.

[FROM OUR OWN CORRESPONDENT.]

Ithaca, N.Y., November 15th.

We are waiting in anxious expectation to see what will become of the war cloud, about as big as a man's hand, which seems to rise weekly out of the great newspaper sea, only to melt as often into thin air. The war of the telegrams reminds one of the episode of the Killenney cats, for each one seems to destroy the other. Meanwhile, there is more or less solicitude about the missionaries who dwell in the far interior of the countries affected by the recent and prospective movements. It seems at times as though the old Chinese and Oriental world were breaking up, and what the rearrangement of the elements will be no one can tell. Perhaps to us Americans, the most practical question is less the rearrangement of the map of Asia and the distribution of spoil among the European powers, than the possible rapid shaping of a definite foreign policy. Heretofore, with so much territory to occupy and perfect for civilization, the tendency has been ultra-conservative toward preserving the old status of indifference to the actions of European governments, so long as the continent of America was not taken into their programme.

One may easily be mistaken in regard to the depth and force of American sentiment regarding that so-called Monroe Doctrine, which was first suggested by Great Britain, but which took definite literary and positive form under President Monroe. Counting out the truculent Jingo element in American politics (upon which the sober-minded citizen is apt to sit down with all his *avoir-dupoi*), it may be said that our people are pretty well determined to prevent foreign aggression from Europe toward the weak nations of Central and South America. This does not mean that the United States will concern itself with the petty quarrels of the Spanish American States, or shield them in the attempts which they may make to shirk debt, obligations, or justice; but it is evident that American sentiment is already unanimous in the determination to allow no European Power to treat any part of the American Continent as these Powers are quite accustomed to treat Asia or Africa. The willingness with which the American people submit to taxation in order to have a navy that will be able to enforce its claims, is one of the noticeable signs of the

time. With such a mixture of peoples on American soil, it is not at all wonderful that certain politicians seem sometimes unusually forward in trying to foment hostility to Great Britain. In addition to the Irish, who are always with us, there is among certain people a very keen desire to marshal the sons of the South and the North once more shoulder to shoulder under the same flag, and against a common enemy. Nevertheless, those who know our people best, know also that every year sees the tie between the old country and the new strengthened, the glorying in a common inheritance more manifest and the determination that no war shall, if possible, ever take place between the two peoples intensified.

If it is one of the evils which grow alongside of great advantages that editors must have something to say of a sensational nature. So, when other things fail, the gentlemen of the newspaper sanctum officially declare war against the only people who can read as vernacular their proclamation. There is further, in the United States, a strong faith in the idea that even Englishmen themselves would consider a war between the two peoples, a disgrace to Christianity and civilization.

In reality, the question most considered by the thoughtful is the probability that events in the Far East, if not nearer home, will compel the shaping of a definite foreign policy which shall be practically unchangeable by any emergency in home politics. At present and heretofore, so far as the United States has had any business abroad, beyond the extension of trade and international congresses, things are as they were a century ago. The policy of one administration is very apt to suffer a radical change when a new administration, elected to office by a hostile political party, comes in. What seems to be the need of the near future is the shaping of a rule of action on which both Democrats and Republicans will agree. Throughout our national history, there have really been only two parties. One, the Democratic, has always held to a strict, even literal, construction and application of the Constitution. The Democratic party has emphasized popular and local liberties, and made prominent State right. The Republican party has always, with its predecessors in name, believed in interpreting the Constitution liberally. Without ignoring local or State powers, it has wrought strenuously to strengthen the National Government. This is the real difference between the two parties. It is the key to our politics, which, rightly used, may help foreigners to understand why the Republicans, as a rule, favour protection and believe in high tariffs, while the Democrats tolerate tariffs "for revenue only." The impartial student must acknowledge, however, that some of the most pronounced exhibitions of American power abroad have been made under Democratic Presidents, as by Jackson, and Pierce, and Buchanan. Yet it seems more likely that what may be called a "stalwart" foreign policy will be inaugurated under Republican leadership. Any day may change the eastern cloud into a storm that will convert the most ultra-conservative American into believing that the United States cannot long hold aloof from action abroad, which will be at least an advance upon, if not a change in, American foreign policy.

A question that is thoroughly practical, yet not perhaps clearly understood in all its bearings, is the protection of American missionaries in the various countries not usually recognized, either diplomatically or sentimentally, as equals in civilization. There are people, even in the United States, who seem to be very much muddled on the subject, and who do not seem to know that the United States Government is bound by the very law of its being to protect even the gentlemen and ladies who, in the unsympathetic language of the seaports, are called "hired converters." Whether a man is religious or not; whether he is professionally a freethinker, an Israelite, a Christian, or a Buddhist, the Government of the United States never inquires. It does not know anything about the religion of its citizens. For in the language of Washington and the first officers of the government, "The Government of the United States of America is not in any sense founded on the Christian religion" (Treaty with the British, 1796). The nation is undoubtedly a Christian nation; the people in overwhelming majority are Christians, and not adherents of any other religion than that which is at least believed to have been founded by and inherited from Christ Jesus. Even the various states are, by open declaration of their constitutions, more or less committed to tenets and forms that are Christian. But the Government of the United States itself knows nothing about the religion of its citizens. When a man from Iowa, Ohio, or Texas is abroad, the government does not even know him as a citizen of any particular State, but only of the United States, and it makes

no distinction whatever between missionaries, merchants, or sailors. Indeed; it makes no more inquiries into a man's lawful occupation than into his religion. Hence, since the government of the United States knows nothing about a man's religion, all its citizens are alike in the eyes of the law. The very simplicity of the relations between a citizen and his government forms the surest guarantee of his rights in an alien country, as all citizens are alike in the eyes of the law. The missionaries' rights, based on precedent, even though not on treaty stipulation, are as justly founded as are those of the sailor, merchant, trader, or traveller. Not even the petty local prejudices of the mercantile communities in the treaty ports of the Far East against the so-called "hired converters" are ever likely to avail very much in modifying the policy of the government of the United States. The union of the States as a body politic knows nothing about the religion or the bigotry, or even the irreligion or atheism, of its subjects abroad, so long as they are obedient to the recognized law to which they are responsible.

To change violently and suddenly from a great subject to something so contemptible as "the simple and unostentatious potato," let me note one or two points for the sake of "more light." In a letter, received this very morning, from the President of a Bank at Rockford, Ill., who used to be personally acquainted with Mr. Townsend Harris, he states, "That the Japanese owed to him (Mr. Harris) the introduction of the Irish potato into their country, and (Mr. Harris) said it was a great boon to the people, as they depended so much on fish food." Is it not the fact, that the Irish potato under the name of the Java (*Jagatara-imo*) was known much earlier than Mr. Harris' time in south-western Japan? Was not the white potato introduced by the Dutch. This, however, would not interfere in any way with Mr. Harris' statement that he personally introduced the "Irish" potato (so-called, being originally of American habitat) into that part of Japan where he lived, and where foreigners do most congregate at present, viz., around the shores of Yedo Bay?

Another item of interest may be worth quoting. In Mr. Townsend Harris' diary, which has recently been published, a reference is made at pp. 134-139 to a visit at Shimoda in 1857 from the American bark *Messenger Bird* from Boston, via the Sandwich Islands; Mr. Edward F. Hall being super-cargo. In the text of the printed book, the name of the captain is given as "Horner" and in the index as "Hosmer." This discrepancy occurred because the proof-sheets were revised while the editor was in Europe. A fresh examination of the original manuscript of Mr. Harris, shows that the name was "Homer" and a letter from Captain Homer's relatives in Boston gives the information that this is the first word or news of any kind that has reached them since Captain Jacob Homer, with his handsome wife and two healthy children, sailed away to try their fortunes in the then hardly opened Japan of 1857. After they left the Sandwich Islands, a baby was born off the Caroline Islands, but what, after leaving Shimoda, became of the family of five (and of Mr. Hall the super-cargo?) and the crew, nobody ever knew. It is believed they were lost by shipwreck or killed by pirates. The publication of Mr. Harris' Journal is as an echo out of the past. Who can give information about the ship or the people?

During the past week, Rear-Admiral R. W. Shufeldt, U.S.N., has "joined the majority." He never recovered from the attack of pneumonia from which he suffered a few years ago, and he knew he could not survive another. He died in unimpaired mental health, however, and his memoirs, with which he was recently busy, will doubtless be of interest. Beside his adopted daughter, he leaves two sons, one the United States Marshal at Shanghai, and the other, his namesake, who is the renowned ornithologist of the Smithsonian Institution at Washington. He was not exactly the Perry of Korea, though he negotiated the first treaty ever made by that unhappy country with a Western power.

It is possible that we may yet have also another publication of "material for history." The son of the Rev. J. G. Bettelheim, so long the lonely missionary at Napa, in the Loo-choo Islands, is living at Brookfield, Mo. He has the journals and letters of his father, about the publication of which there have been some talk and writing. One needs, however, to be somewhat of a capitalist to be able to publish anything of an historical nature, for the outlay is almost sure to swallow up any income that may arise. The majority of people like to have their history in the form of fiction. The pill of fact must be heavily coated with the sugar of invention. The investigator gets little thanks, but plenty of blows.

Whether fiction or history, however, books on Japan continue to multiply. Already the table of the student of Japanese affairs resembles the landscape of Central New York in late October. As many coloured as the autumn leaves are the gaily-decorated covers of the books which fall from the publishers' presses. Here is the lively bundle of letters of Bishop Charles B. Galloway, called a "Circuit of the Globe." In gray and silver, and crimson is Canon Fritram's "Rambles in Japan." Francis Tiffany's "This Goodly Frame, the Earth," is handsome within. The polychrome paper-covered "My Japanese Wife," and Mr. J. Morris' matter-of-fact "Advance Japan," with military cover, strike the eye. Even China and Korea are well represented, and Professor Douglas's "Li Hung-chang," and Louise Jordan Muir's "Quaint Korea," and Mr. Stewart Culin's handsome and scholarly book on "Korean Games," show how well interest in the Oriental lands keeps up. What we really want just now is a scholarly work which will tell us exactly what Russia is and means, and intends to do in the Far East.

I close this letter with a passing reference to the arrival of the new Japanese Consul, Mr. Saito, at Tacoma, November 10, "to make a report to his government on the feasibility of establishing a Japanese mail line to this country." This will be a fine outset of usefulness for the transport steamers purchased during the recent war. Should this line be established, it will add one more link of communication between the young Republic and the old Empire. Yet one wonders all the more why a submarine telegraph is not yet laid between Japan and California. Are the Americans waiting until Hawaii becomes one of the United States? Will her star be the 46th? W.E.G.

TRIBUTE TO JAPAN'S SOLDIERS.

The following is from the *New York Herald* of November 7:—

Yokohama, Japan, Oct. 1, 1895.

Dining at the house of an acquaintance in this city a few evenings ago, I was presented to a young Chinese gentleman who interested me greatly. He appeared to be about thirty years of age. His face, while of the pure Mongolian type, was full of intelligence, and his eyes were keen and spirited. He was dressed after the manner of a Europeanized Japanese student—in fact I took him at first for a Japanese professor or clergyman. I learned subsequently that he was Tsai Ting-kan, or Tsoy Chan, the young naval officer who had charge of the Chinese torpedo fleet at Wei-hai-wei. He behaved with gallantry there, but surrendered when the Japanese possessed themselves of the well equipped but thoroughly incapable Chinese fleet. He was brought a prisoner to Japan, and the Emperor of China, believing him to have been guilty of treason, put a price upon his head. In the final settling up of war affairs this young officer was given his liberty, and as he had no desire to return to China, the ungrateful land, he took up his abode quietly with some friends here, and has been living *perdu*, so to speak.

I found Tsoy Chan a very well informed gentleman. He spoke English smoothly and idiomatically. He is now a thoroughly Christianized man. He informed me that he was thirty-four years of age, that he had spent several years at school in Hartford, Conn., and that he had just taken a prize for his English, and was preparing for a lofty collegiate fight when he was ordered home by his government and assigned to the torpedo service. He received his education at the hands of German naval experts, and, on account of his intelligence, skill, and alertness, was given command of the torpedo fleet assigned to the protection of Wei-hai-wei. That he did his duty during the terrible days of February last is generally agreed, but he could get no service out of his men. The Japanese naval officers, I am told, have the highest respect for his talent and learning, and all of them sympathized with him in his misfortune. The kindness which he received at their hands during his entire captivity so impressed him that he wrote an article for publication, giving expression to his sentiments. At my suggestion he turned over this manuscript to me, with the understanding that the *Herald* would be glad to print it. Here it is:—

"We, who have been for some time prisoners of war in Japan, have felt it our duty to write some account of our experience and thank the Japanese for their kind treatment. While war was still raging, and the two nations were in the heat of conflict, careful thought for the comfort of enemies was not to be expected, but it was our good fortune to have met uniform kindness and sympathy everywhere. It would be impossible to give in detail the experience of every individual,

but when some of us were captured in the vicinity of Wei-hai-wei we were supplied at once with warm and suitable clothing. After marching some distance, the lieutenant in charge told his soldiers to give us something to eat from their haversacks. On the road we met a superior officer, who asked a few questions, and then from his own haversack gave us some bread and dry beef. During the journey we were allowed to rest quite a number of times, as our feet were frozen, and some, who were in a bad condition, had to be supported as we marched along.

"We reached Wei-hai-wei city in the afternoon, and after answering a few questions put to us by the officers we were collected around a good fire. After being warmed we were supplied with rice, and then shown a large room, where we slept on the straw. One of our officers was given a room to himself and a quilt allowed him. Medicine was also applied to our sores, and on the next five following days we were sent from station to station, by easy marches. In most of the stations we had blankets to cover ourselves at night. In the last we had a thick quilt. In the second station, called Hoo-shan, the officers and interpreters were exceedingly kind. The sergeants and soldiers gave us cigarettes and sugar. During the last day of our march our feet were very sore, and the sergeant in charge reported our condition and applied to the officer for stretchers to carry us. This was granted. At our noon-day meal, besides rice and fish, the officer of the station gave us some fresh beef, which was most acceptable. He gave us also some cigarettes. It is seldom that I have met a kinder-hearted man than Sergeant Chobo, who had us in charge. After tiffin, four of us were borne by Japanese coolies to the last station. We remained here two days, and then embarked on the steamer *Doyo Maru* for Japan. It was commanded by Captain Sakamoto, and we were placed in charge of Lieutenant Inouye. All the officers of the ship will ever be remembered with grateful hearts. We had a comfortable room given us, and the luxury of a soft pillow and easy bed was never realized so much before as at this time. We reached the port of Hiroshima five days after we left China. When we were passing the Inland Sea, Sergeant Naruta would call us out of the cabin whenever a pretty view or celebrated spot was in sight, and would explain to us in writing the names of the places and the historical incidents connected with them.

"After dropping anchor at Ujina, Lieutenant Inouye went ashore to report our arrival, and soon a boat came off to take us ashore. Lieutenant Inouye had spoken kindly about us to the officers on shore, so when we landed the officers and men were ordered to stand apart, and the Japanese officers supplied us with cigarettes. From Ujina harbour we were ordered to a Buddhist temple near Hiroshima. On the way there a crowd of boys followed us, but no shouting or unseemly demonstrations took place. Sergeant Naruta was very careful that no harm was done us. We were handed over to Major Otawa and Captain Tanimura, who looked after our welfare most thoroughly. Two cotton wadded quilts and two blankets were supplied to each of us. Also a Japanese soldier's uniform that had been slightly worn, and a new suit of underclothes and soap were supplied.

"By special kindness of the authorities in charge we were permitted to receive calls from missionaries, who kindly brought us some books and oranges, which were very much enjoyed and highly appreciated. Such acts of kindness made a deep impression upon our minds and will never be forgotten. The numerous tokens of kindness and sympathy we received at Hiroshima are too many to be enumerated, and many of the names of the officers and soldiers are forgotten, but we can still remember Captain Tsunoda, of the Japanese navy; Mr. Miura, of the Agriculture and Commerce Department; Lieutenants Yamada and Yoshita, of the Japanese army; Sergeant Hirogawa, and Nonaka, the interpreter. These and many others showed their kindness in various ways, while Mr. Kachiyama, the keeper of the temple, was extremely obliging. His wife offered to wash our soiled clothes, and he himself would often bring us some sweetmeats.

"At the end of April we were transferred to Osaka. Lieutenant Abe took charge of us. This officer was exceedingly friendly, frank, and open-hearted, and very energetic. He did everything to make the journey pleasant, exchanging thoughts with us constantly by writing. With many a kind word he delivered us over to Lieutenant Terada, who had charge of the prisoners. The latter officer was always kind and considerate, but at the same time order and obedience were insisted upon. In winter the prisoners had each a cotton stuffed robe; in spring a double cloth robe and in summer a single cloth robe. Every third day we had baths. In the summer officers had mosquito netting.

Captain Takamatsu inspected the quarters several times, and the authorities took every precaution to prevent disease. Lime was scattered all over the place and carbolic acid sprinkled in the private buildings. Every two or three days the doctors from the Red Cross Hospital visited and examined the prisoners. They were accompanied by a nurse, who carried the medicine and bandages.

"In the Red Cross Hospital the patients were treated most kindly. Plenty of milk and fresh eggs were given. Rice, beef, fish, turnips, and onions formed the ordinary diet. Mr. Mesaki was the superintendent of the hospital and is a most conscientious man. Unless on public business, he never left the hospital, and every night he went through the patients' quarters twice. The head nurse was Mrs. Tanaka, the wife of an officer, and a very energetic lady. She was not afraid of work and did many kind acts to relieve the sufferers. Ten other nurses were under Mrs. Tanaka, all of whom had special duties at regulated times. Every other morning Mr. Mesaki would send to the patients' quarters a few pots of morning glories, which were much appreciated and admired by us.

"The nurses seemed to have administered to the patients with a sense of religious duty. There were two or three Christians among them; the rest adherents of Buddhism. There were two young doctors who never left the hospital unless doing duty in the prisoners' lodge. They took turns in the night watches. Every morning a senior doctor came to examine the patients. Scrupulous cleanliness was kept in the hospital.

"One day an army surgeon, Dr. Arima, and the Rev. Mr. Wada, Tokyo, visited the hospital and spoke to us most kindly, wishing us a pleasant passage home and a joyful reunion with friends and relatives. At the word home many dropped tears. One night we were treated to a magic lantern exhibition. The different pictures showed the history of the Red Cross Society, and among the pictures were also those of Their Majesties the Emperor and Empress of Japan. The wives of some Japanese officers visited the Red Cross Hospital. The first party gave three *yen* to the patients to buy what they liked; the second party gave seven *yen*. Some handkerchiefs, tobacco, and cakes were distributed to each of us in the hospital as souvenirs to take back home.

"It is with an indescribable feeling of mingled sadness and joy that I write this account. It is sad to have been made a prisoner of war; but, having been captured, I am glad that it was my good fortune to have been thus kindly treated. The total number of prisoners at Osaka, including officers and men, was very nearly 300, comprising captives from Ya-san, Ping-yang, Chiu-lien cheng, Tai-lien-wan, Port Arthur, Kin-chow, Kai-ping, Hai-cheng, Yung-Wei-hai-wei, and Chin-kwan and all agreed that we were better treated than we had any reason to expect. It is usually with reluctance that men speak well of their opponents, but facts like these ought not to be concealed. We have a saying in China that kindness received should never be forgotten. I have not written this account with the joy and enthusiasm of a sensational novelist, but simply to discharge what I feel to be clearly my duty."

This is the narrative of the Chinese ex-prisoner just as he wrote it, his chirography being, I may remark, very much clearer than mine. Such a tribute to Japanese hospitality and kindness ought to go far toward shaming the casual observers who have tried to make the world believe that the Japanese are to-day the same savage, barbaric people that they were three hundred years ago, when Hideyoshi, the Napoleon of Japan, invaded Korea, devastated it with his armies, and sent home to Kyoto enough pickled ears and noses of the Korean variety to form a monument.

JOHN A. COCKERILL.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, Dec. 8.

The foreign Embassies at Stamboul have again been instructed to insist upon the doubling of the guardships at Constantinople, and further action is imminent.

London, December 12.

An Irade has been issued which authorises the guardships to pass the Dardanelles.

["SPECIAL" TELEGRAM TO "JAPAN MAIL."]

Kobe, December 10.

The British steamer *Bonnington*, which left

Yokohama on the 3rd inst. for this port, has not arrived here, and fears are entertained for her safety.

The Crown Prince of Austria is ill and will pass the winter in Egypt.

(FROM THE "BANGKOK TIMES.")

London, November 14.

A rabid anti-Semite, Herr Lueger, whose election as Burgomaster of Vienna was cancelled by the intervention of the Emperor, has been re-elected and thereupon the Common Council was dissolved. Intense excitement prevails throughout Vienna.

(FROM THE "N.C. DAILY NEWS.")

London, Nov. 30.

Negotiations between France and Great Britain on the Meikong question are, for the time, at a standstill.

All the Socialist Reichstag Committees have been closed on the ground that they endanger public order.

The Sultan, who appears to be entirely in the hands of a Palace clique, still refuses to grant firman for extra guard-ships.

H.M.S. *Dryad* is now at the entrance of the Dardanelles, and is awaiting a firman allowing her to proceed.

There have been fresh disorders in Erzeroum.

London, Dec. 2.

The Sultan shows no sign of yielding.

H.M.S. *Dryad* has rejoined the squadron at Salonica.

The situation is critical.

There have been fresh massacres at Aintab, and the Kurds have been raiding the province of Van, committing horrible atrocities. The entire population of the village of Jurtalon, numbering two hundred persons, has been killed.

London, December 6.

The Embassies have again addressed the Porte on the subject of the guardships, and the diplomatists at Constantinople have expressed a strong opinion that further delays should not be tolerated much longer.

Said Pacha, who was recently Vizier, has been ordered to reside in the Sultan's Palace, but, being in fear of being murdered, has taken refuge in the British Embassy.

(FROM JAPANESE PAPERS.)

Hiroshima, Dec. 10.

Captains Murai, Maki, and Fujita, who are now under arrest in connection with the Söul disturbance, were examined yesterday, and Lieut.-Colonel Kusunose was examined to-day.

Kobe, Dec. 10.

The French flagship *Bayard* proceeded to Nagasaki, and the Russian sloop *Bobre* put into this port this morning.

Osaka, Dec. 11.

A meeting of promoters of a large dock to be constructed at Moji took place here yesterday. Messrs. Yamada Torakichi and Iyeiri Yasushi reported that Moji is fit for the purpose in every way. Captain Tajiro then spoke about the importance of the proposed dock, and the community resolved to build one by extending the Moji Iron Works. Baron Ogawa and Captain Tajiro, of Tokyo, Messrs. Tateno Gozo, and four other Osaka promoters and two Kiushu promoters were appointed to investigate and report upon the scheme.

Kanazawa, Dec. 11.

A number of persons favoured with the privilege of using the Sai river have objected to the place being chosen as the site of an electric

factory and yesterday held a meeting. They subsequently attempted to call on Mr. Kiuchi, a Secretary of the Home Department, to protest against the scheme, but were dispersed by the police.

Söul, Dec. 10.

The Russian and American Ministers have not visited the Palace for the past few days. They seem to have acknowledged the Cabinet.

It is stated that the U.S. Minister has put forward no objection to the dismissal of Captain F. J. H. Nienstead and another American employé.

Nagoya, December 10.

Lieut.-General Viscount Katsura and Major-General Baron Oseko proceeded to Toyohashi to-day to inspect the troops.

Sendai, Dec. 10.

Heavy seas broke over the shore of Natori and Watari Districts on the night of the 8th inst., and much damage was done. Some *Kencho* officials were dispatched to inspect these places.

Tottori, Dec. 11.

About thirty houses were destroyed by fire at Fujino-mura, Takakusa District.

Kobe, Dec. 11.

The remains of the late Mr. Ishikawa Goichi, an interpreter to the Japanese army who was killed at Tientsin by the Chinese officials, reached here to-day, and will be sent up to Tokyo to-morrow.

Söul, December 12.

Mr. Uchida, Japanese Consul, sent a police inspector to the U.S. Legation to-day, and summoned Gen Ko-taku, a Korean refugee who has been in hiding at the Legation, and examined him as a witness in connection with the disturbance of October 8th. Tei Rei-ka and General W. McE. Dye will also be examined as witnesses. It is said that they witnessed the disturbance of October 8th.

Li Sai-yen, who fled to the U.S. Legation after the recent disturbance, is said to be guiltless, and he has removed to the house of a friend. Li says that In Chi-ko and Li Han-shin have not yet effected their escape.

Hakodate, Dec. 12.

A severe gale has been raging for the past two or three days, and considerable damage has been done at Ezashi, Kameta District. Some lives have been lost.

Shimonoseki, Dec. 12.

The *Tokyo Maru* arrived here from Vladivostok this morning.

Nagasaki, Dec. 12.

Fire broke out in Chinatown at Shinchi, and two dwellings and one godown were destroyed.

Söul, Dec. 12.

Jo Ko-han, Minister of Education, was to-day appointed Korean Minister to the United States of America, his place being taken by Li Do-sai, Minister of War. Gyo In-chu, Minister of Finance, was ordered to hold the portfolio of War in conjunction with his present office.

Some Cabinet Ministers propose the abolition off the Education Department through scarcity of funds, and convert it into a Departmental Bureau.

Taipeh, Dec. 11.

H.I.H. Prince Fushimi left Kelung at noon by the *Satsuma Maru*.

Söul, Dec. 12.

It is stated that there is a scheme to rescue the prisoners concerned in the latest disturbance.

Hiroshima, Dec. 12.

Sub.-Lieutenant Miyamoto Takemaro and a soldier named Meaki Torataro, who have been examined by gendarmes in connection with the disturbance of Oct. 8th, were released to-day.

Talien, Dec. 19.

Owing to heavy gales since the 7th inst. the embarkation of soldiers on the *Riofun Maru* and *Matsuyama Maru* has been suspended.

On the 8th the wind became more violent although snow ceased to fall. Communication between the ships and shore was interrupted.

The gale slightly abated on the 9th, and although embarkation was commenced the wind again rose and operations were interrupted.

There are at present no signs that the sea near the harbour will be frozen.

SOLUTION OF PROBLEM No. 206.

WHITE.	BLACK.
1—B to Q 6	1—B takes P
2—P to K 5	2—B moves
3—R to K 7, mate	1—K takes B
2—P takes B (R)	2—K to B 3
3—R to K 6, mate	1—B to Kt 3
2—P to Q 8 (Kt) ch.	2—K takes B
3—Kt to B 4, mate	if 2—K to B 3
3—Kt to Q 5, mate	1—B to B 2
2—P to Q 8 (Q)	2—B moves
3—Q to K 7, mate	1—K to B 3
2—P takes B (B)	2—K to K 3
3—R to R 6, mate.	

Correct answers received from W.H.S., Digamma, Kr., Shogi, W.D.C., Omega, and J.D.

E. J. KING telegraphed solution of Problem No. 204 late at night on December 6th, when we were already in type.

Correct solution of Problem No. 205 received from "Don" too late for acknowledgment last week.

The excellence of Problem No. 206 has caused one of our enthusiastic solvers to "drop into poetry!" We pardon him this time; and print his effusion, as follows:—

PROBLEM No. 206.

B to Q 6, accounting it no shame
To lose his life, and thus to win the game.
Should then the King the Bishop captive make;
Pawn slays Black B, a *Castle's* form to take;
King then to Bishop's third square needs must go;
Rook to King's sixth completes the tale of woe.
But, if B goes to Knight three, still he errs;
Pawn then moves on, and wins his *Knightly* spurs,
Checks, and the King takes Bishop, all too late,
Knight to B four administers the mate:
If the King goes on Bishop's third to stay,
Knight to Queen's fifth will surely win the day.
While, if the B to Bishop's second tries,
Pawn, moving on, secures a *Queenly* prize;
Then, when B moves, his monarch meets his doom,—
Queen to King seven leaves him no standing room.
But, if the King for Bishop's third square hope,
Pawn takes the Bishop,—*wears his Lawn and Cope*;
Then must the King to King's third square retreat,
Only, from Rook on Rook six, death to meet.
Once more, the Bishop dares to take the Pawn;
Pawn to King five—Black's chances all are gone;
For, when the Bishop strives in vain to pass,
Rook to King seven gives Black the *coup-de-grace*.

W.D.C.

PROBLEM No. 208.

By S. GOLD.

BLACK.

WHITE.

White to play and mate in three moves.

Mr. Planck, the well known problemist, has, strange to say, committed a plagiarism upon himself by recomposing a problem he made and published three years ago and had quite forgotten.

HASTINGS CONGRESS.

CONCLUSION.

In round 19, Pillsbury, Steinitz, Tarrasch,

Tschigorin beat respectively Tinsley, Maró, Lasker, Pollock. In round 20, Blackburne, Janowsky, Pillsbury, Tarrasch, beat respectively Lasker, Tschigorin, Veigani, Steinitz; and in round 21, Lasker, Pillsbury, Steinitz, Tarrasch, Tschigorin beat respectively Burn, Gunsberg, Walbrodt, Veigani, Schlechter. Round 21 brought the play in the masters' tourney to an end, and the final scores in wins, draws, and losses of the leading players were as follow:—Pillsbury 15, 3, 3; Tschigorin 14, 4, 3; Lasker 14, 3, 4; Tarrasch 12, 4, 5; Steinitz 11, 4, 6; Schiffers 9, 6, 6; Von Bardeleben, Teichmann 8, 7, 6; Schlechter 5, 12, 4; Blackburne 9, 3, 9; Walbrodt 6, 8, 7. The prize-winners were Pillsbury, Tschigorin, Lasker, Tarrasch, Steinitz, Schiffers, Von Bardeleben, Teichmann (the two last-named dividing the seventh prize); and the respective values of the prizes were £150, £115, £85, £60, £40, £30, £20. In addition, Tschigorin, as the winner of the largest number of Evans Gambits, received a special prize, consisting of a gold ring and a chess book; and for the best score against the prize-winners Schlechter received a special prize of £5.

As to the contests of the prize-winners with one another Pillsbury lost to Tschigorin, Lasker; won from the other five. Tschigorin lost to Steinitz, Schiffers; won from the other five. Lasker lost to Tschigorin, Tarrasch, Von Bardeleben; won from the other four. Tarrasch lost to Pillsbury, Tschigorin, Teichmann; drew with Von Bardeleben; won from the other three. Steinitz lost to Pillsbury, Lasker, Tarrasch; drew with Teichmann; won from the other three. Schiffers lost to Pillsbury, Lasker, Tarrasch, Steinitz; drew with Von Bardeleben, Teichmann; won from Tschigorin. Von Bardeleben lost to Pillsbury, Tschigorin, Steinitz; drew with Tarrasch, Schiffers, Teichmann; won from Lasker. Teichmann lost to Pillsbury, Tschigorin, Lasker; drew with Steinitz, Schiffers, Von Bardeleben; won from Tarrasch. These details, which show some cross-results, are in favour of Tschigorin—the more so if it be remembered that Pillsbury's win from Von Bardeleben was scored by default. Schlechter's record was superior to that of several of the prize-winners. It was made up of wins from Pillsbury, Schiffers; draws with Tarrasch, Steinitz, Von Bardeleben, Teichmann; losses to Tschigorin, Lasker.

The total number of games contested was 230—equivalent to 21 times 11, less one scored by Pillsbury against Von Bardeleben by default. The 230 games were made up of 88 W (White wins), 84 B (Black wins), 58 D (draws). The number of openings played was 28, the favourite among which was 1. P to Q 4—62 times in all, of which 4 were Queen's Gambits, and 27 were Queen's Gambits Declined. The 62 games were made up of 25 W, 25 B, 13 D. The Ruy Lopez attack was played 44 times for 19 W, 12 B, 13 D; the French Defence 28 times for 16 W, 8 B, 4 D; the Vienna 12 times for 4 W, 6 B, 2 D; the Giuoco Piano 11 times for 6 W, 2 B, 3 D; the Scotch 9 times for 2 W, 3 B, 4 D; the Two Knights' Defence 7 times for 1 W, 5 B, 1 D; and the Evans Gambit 7 times for 1 W, 5 B, 1 D. These 10 openings account for 180 games, distributed into 77 W, 64 B, 39 D. The other openings account for 50 games distributed into 11 W, 20 B, 19 D. One of them was played six times, each of two five times, each of four two times, each of four three times, each of five two times, and each of four one time.

The following is the game of the twentieth round, by losing which Tschigorin lost the first prize of the tourney:—

GAME No. 402.

THE VIENNA GAME.

WHITE. Tschigorin.	BLACK. Janowsky.
1—P to K 4	1—P to K 4
2—Kt to Q B 3 (a)	2—Kt to K B 3
3—P to Q 3 (b)	3—P to Q 4 (c)
4—P takes P (d)	4—Kt takes P
5—Q to K 2	5—Kt to Q B 3
6—B to Q 2	6—B to K 2
7—Castles	7—Castles
8—Q to B 3	8—B to K 3
9—Kt to K 2	9—P to B 4
10—Q to R 3	10—Q to Q 3
11—Kt takes Kt	11—Q takes Kt
12—Kt to B 3	12—Q to R 4 (e)
13—P to Q R 3 (f)	13—B takes P
14—Kt to Kt sq.	14—B takes P ch.
15—K takes B	15—Q to R 7 ch.
16—K to B sq.	16—Kt to Q 5 (g)

And Tschigorin resigned.

NOTES.

(From the *Daily News*, condensed.)

(a) In this opening the defence frequently does well; the first player is rarely successful.

(b) The only continuation leading to a sound game is 3 P to Kt 3.

(c) Well played.

(d) Inferior to 4 P to K B 4.

(e) White must now submit to some loss.

(f) Inexplicable, unless on the theory that the continued strain of hard play had affected the soundness of Tschigorin's judgment.

(g) This move there is absolutely no reply.

GAME No. 403.

The following is the game of the twentieth round by which Lasker lost his last chance of scoring a tie with Pillsbury for the first prize:—

RUY LOPEZ.

WHITE. Lasker.	BLACK. Blackburne.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3

36—R to Kt 2	36—P takes P
37—R takes P	37—Kt to R 6 ch.
38—K to B sq.	38—Q to B 3 (h)
39—P to K 5	39—P takes P
40—R to R 2	40—P to K 5
41—R takes Kt	41—Q to R 8 ch.
42—K to Kt 2	42—P takes P ch.
43—K to Kt 3 (j)	43—Q to K 4 ch.
44—K takes P	44—Q takes P ch.

And Lasker resigned.

NOTES.

(From the *Daily News*, condensed.)

(a) Tried, perhaps, because 3.....Kt to B 3 leads to drawn position and 3.....P to Q R 3 had not fared well in the Hastings tourney.

(b) Black had nothing to fear from the exchange of Queens.

(c) Better have played 12 Q takes Q.

(d) If, instead, 15.....R takes P, 16 R takes R, Q takes R; 17 R to K sq., Q to B 4; 18 R to K 8 ch., with considerable attack.

(e) If 23 B takes B, 23.....R takes B, bringing the Rook into dangerous play, and if 24 P to B 4, 24.....Q to R 3 ch, winning another Pawn.

(f) If now 25 Q takes Q, 25.....R takes Q ch., &c., winning the King's Pawn.

(g) 14.....Q to B 3 seems to be a very strong move.

(h) More effective would have been 38.....Q to R 3.

(i) If 40.....Q to R 3; 41 Q to Q B 4; and if 40.....R to R 5;

41 R takes Kt

(j) Tschigorin recommended 43 Q takes B P Q to Kt 7 ch.; 44 K to Kt 3, R takes R ch; 45 K takes R, Q takes Kt; 46 Q takes P, Q to Q 6 ch; 47 K to Kt 4, Q to B 5 ch; 48 K to Kt 5, Q takes R P; 49 K to Kt 6, &c., as giving White the best chance of drawing.

In the Ladies' Tourney, the prize-winners in the first section of 12 players were Lady Thomas (Southsea), Miss Field (London), Miss Fox (London). In the second section of eight players the prize-winners were Mrs. Ridpath (Hastings), Miss Dobell (Hastings), and Mrs. Bowles (London).

Lasker has offered to play in the course of next year a match for the championship of the world either with Pillsbury or with Tschigorin.

LATEST SHIPPING.

LATEST COMMERCIAL.

IMPORTS.

The market has been disorganised this week by the "slump" in Exchange, which naturally tends to raise prices here in Yen. With a dull market before-hand, dealers are not disposed to pay up immediately, but prefer waiting to see if exchange will not improve.

COTTON FIBRE GOODS.

Gray Shirts—8½ lb, 38½ yds, 39 inches	PER PIECE.	\$2.30 to 2.90
Gray Shirts—9 lb, 38½ yds, 45 inches		2.75 to 3.30
T. Cloth—7 lb, 24 yards, 32 inches		1.70 to 2.00
Indigo Shirts—12 yards, 44 inches		1.90 to 2.40
Prints—Assorted, 24 yards, 30 inches		2.00 to 3.75
Cotton—Italian and Salteen Black, 32 inches	PER YARD.	0.16 to 0.22
Velvets—Black, 35 yards, 22 inches	PER PIECE.	7.75 to 9.75
Victoria Lawn, 12 yards, 32 inches		0.75 to 0.90
Turkey Reds—2.0 to 2.4 lb, 24/25 yards, 30 inches		1.60 to 1.75
Turkey Reds—2.8 to 3 lb, 24/25 yards, 30 inches		1.85 to 2.10
Turkey Reds—3.8 to 4 lb, 24/25 yards, 32 inches		2.35 to 2.65
Turkey Reds—4.8 to 5 lb, 24/25 yards, 32 inches		2.90 to 3.30

WOOLLENS.

Flannel	PER YARD.	\$0.30 to 0.47½

No. 208, Bombay		—
No. 168, Bombay		—

RECIPIENTS.

No good news. The fall in exchange has caused holders to pluck up heart and hold more firmly to stocks in hand, but there is no general trade as yet.

Flat Bars, 1 inch	PER POUND.	\$3.25 to 3.30
Flat Bars, 1 inch		3.20 to 3.25
Round and square up to 2 inch		3.20 to 3.30
Iron Plates, assorted		3.50 to 3.65
Sheet Iron		4.30 to 4.50
Galvanized Iron sheets		9.00 to 9.50
Wire Nails, assorted		5.40 to 5.80
Pin Plates, per box		3.60 to 5.90
Pig Iron, No. 1		1.60 to 1.65

KEROSENE.

In statu quo. The fall in exchange adds to the firmness of holders, and it looks as though we must see a fresh rise in the price of Oil here ere long.

American	Nom. \$8.50
Russian	Nom. 2.50
Langkat	Nom. 9.30

SUGAR.

Brown—Market firm at quotations. Someholders think that prices should improve yet further, while dealers say that the advance has gone far enough. White Refined—Steady business at late rates.

Brown Takao	PER POUND.	—
Brown Manila		\$4.80 to 5.25

Brown Daitong (New)	4.30 to 4.35
Brown Canton	4.20 to 4.75
White Java and Penang	6.90 to 7.10
White Refined	6.50 to 9.50

EXPORTS.
RAW SILK.

A moderate business continued until the declining exchange caused holders to ask a little more money for their wares, and some kinds of Re-reels are said to be \$5 higher. Prices at the close are more or less nominal, sellers trying to push them up to counterbalance the advantage which buyers would find in a low exchange.

QUOTATIONS.—(NEW SILK.)

Filatures—Extra 9/11, 10/12 den.	Nom.
Filatures—Extra 13/15, 14/16 deniers	\$900 to 910
Filatures—No. 1, 10/13 deniers	860 to 870
Filatures—No. 1, 13/15, 14/16 den.	840 to 850
Filatures—No. 1½, 10/14 deniers	840 to 850
Filatures—No. 1½, 13/16, 14/17 den.	810 to 820
Filatures—No. 2, 10/15 deniers	810 to 820
Filatures—No. 2, 13/18 deniers	800 to 805
Re-reels—No. 1, 13/15, 14/16 den.	810 to 815
Re-reels—No. 1½, 13/16, 14/17 deniers	770 to 780
Re-reels—No. 2, 14/18 deniers	750 to 760
Re-reels—No. 2½, 14/18 deniers	730 to 740
Re-reels—No. 3, 14/20 deniers	710 to 720
Kakedas—Extra	Nom. 840
Kakedas—No. 1	810 to 820
Kakedas—No. 1½	790 to 800
Kakedas—No. 2	760 to 770
Kakedas—No. 2½	740 to 750

WASTE SILK.

Market unchanged. The lower rates for silver will enable some outstanding orders to be filled at limits if sellers are wise and do not seek to advance prices for Waste.

QUOTATIONS.—(NEW WASTE.)

Noshi—Filature, Best	\$125 to 130
Noshi—Filature, Good	115 to 120
Noshi—Oshu, Best	120 to 125
Noshi—Oshu, Good	110 to 115
Noshi—Oshu, Medium	100 to 105
Noshi—Shinshu, Best	75 to 80
Noshi—Shinshu, Good	65 to 70
Noshi—Bushu, Best	130 to 135
Noshi—Bushu, Good	120 to 125
Noshi—Bushu, Medium	110 to 115
Noshi—Joshu, Good	65 to 70
Noshi—Joshu, Fair	55 to 60
Kibiso—Filature, Best	100 to 105
Kibiso—Filature, Seconds	90 to 95

TEA.

Nothing of interest to report. A small retail business goes on. Prices nominally unchanged.

Choicest	PER POUND.	\$30 to \$32
Choice		28 to 29
Finest		26 to 27
Fine		24 to 25
Good Medium		22 to 23
Medium		20 to 21
Good Common		18 to 19
Common		16 to 17

EXCHANGE.

Exchange declined daily during the past week, but rates yesterday again rose ½, and quotations now present some appearance of stability.

Sterling—Bank T.T.	2/1½
— — Bills on demand	2/1½
— — 4 months' sight	2/1½

August 3, 1895.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In I short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea, spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1890.

THE PROCEEDINGS

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, DEC. 21ST, 1895.

BIRTHS.

On Tuesday, the 17th inst., at 16, Tatsukacho, Hongo, Tokyo, the wife of Rev. H. H. COATES, of a son.

At No. 46, Bluff, on December 20th, 1895, Madame KLOBUKOWSKI of a daughter.

MARRIAGE.

On the 17th inst., at the Legation of the United States, at Tokyo, by the Rev. T. S. Ting and the Rev. A. F. King, VICTOR FRANÇOIS THIENNETTE DE BÉNIQY, of Kobe, to MARY ELIZABETH, only daughter of Paul Andreas Dithlefsen, of Kobe.

DEATH.

GEORGE DUBOIS, born at Locle, Switzerland, the 17th September, 1862, died of typhoid fever, at No. 235, Bluff, Yokohama, on the 16th December, 1895, at 9 a.m., in the 34th year of his age.

SUMMARY OF NEWS.

H.I.M. THE EMPRESS, who was to visit the Yasukuni Shrine, at Kudan, Tokyo, on the 18th inst.,

was compelled to give up her intention through indisposition.

CAPTAIN HIRAYAMA, of the *Yayeyama Kan*, was superseded on the 14th inst.

H.I.M. THE EMPEROR visited the Yasukuni Shrine, Kudan, Tokyo, on the 17th inst.

JUDGE TANAKA, of the Hachioji District Court, has been transferred to the Yokohama Local Court.

H.I.M. THE EMPEROR has granted *yen* 2,000 towards the expenses of the grand festival of the Yasukuni Shrine, Tokyo.

THE military attachés in the German, French, Spanish, American, Russian, and British Legations visited the Yasukuni Shrine on the 17th inst.

THE Chinese Consulates at Nagasaki, Kobe, Yokohama, and Hakodate will not be opened before the Chinese new year, in obedience to instructions of the home Government.

H.I.M. THE EMPRESS-DOWAGER has contributed *yen* 1,000 towards the fund now being raised by H.I.H. Princess Kitashirakawa for the soldiers of the Formosa expeditionary force.

FOREIGN iron pipes to the amount of 1,400 tons, to be used for the Tokyo Water Works, reached Yokohama on the 10th instant in the British steamer *Drumfell*, and are now being conveyed to Tokyo.

HAGIWARA SHINZO, age 21, residing at Takecho, Shitaya, Tokyo, on the 15th inst. committed *kara-kiri* because he could not pass the doctor to join the army. He is not dead, though the wound is over seven inches in length.

It is stated that the Government has selected, as the site of the proposed steel foundry, Ominato, in Aomori Prefecture, as the materials are to be procured chiefly in Fukushima, Yamagata, Niigata, Akita, Aomori, and Iwate Prefectures.

THE losses sustained by the Osaka Fire Insurance Co., during the latter half of this year exceed *yen* 27,000, of which *yen* 14,000 were lost in the Nemuro fire, *yen* 8,000 in the Echigo fire, and the remainder by other smaller fires.

THE Kanagawa Prefectural Assembly and Yokohama Town Assembly have rejected an application for permission to construct an electric railway in Yokohama, but the promoters are endeavouring to get up another petition for a similar purpose.

H.I.M. THE EMPEROR has given a pair of *shippo* (cloisonné) flower pots and a small silver case to H.I.H. Prince Komatsu Akihito in recognition of services rendered by him as Superintendent of the Fourth Industrial Domestic Exhibition.

SUBMARINE telegraph cables for use between Osaka and Marugame and Saga and Shimono-seki lately arrived from England, and the work of laying the same will shortly be commenced. Government exports left the capital on the 17th inst. for the districts named.

H.I.M. THE EMPEROR has been granting an annual sum of *yen* 300,000 to be added to the fund for the construction of new warships. The Aichi Prefectural Assembly thinks it inadvisable to receive this from his private purse, and have petitioned the Imperial Diet to decline the grant.

THE *Okayama Shimpō* states that the certain Mr. Miyatani, of Kagawa Prefecture, has discovered an extensive iron mine in Aba District, Sakushu. The length of the lode is measured

at 4 *ri* (one *ri*=2½ miles), and the total area at 4,000,000 *tsubo* (one *tsubo*=6 ft. sq.). The ore is said to be better than that of the Kamaishi mine.

SOME leading residents at Wakayama contemplate constructing a railway between Osaki and Wakayama via Okacho, Wakanoura, Kimidera, Utsumi, Kuroguchi, Hidaka, Nadaka, and Fujita, at a cost of *yen* 600,000.

COUNT D'ORFINI, the Italian Minister, was received in audience by H.I.M. the Empress on the 14th inst. Mr. Oyama, Secretary of the Japanese Legation at Vienna, and Mrs. Oyama, who lately returned home on leave, were also received in audience by Her Majesty the same day.

REUTER telegraphs:—A select battalion, with Prince Henry of Battenberg, has embarked for Ashantee. The steamer *Gorsedd*, which was seven weeks out from Singapore, has arrived at Port Townsend. Major Toselli's force has been surprised and surrounded by King Menelek's army at Ambagali; and General Arimondi, while advancing to relieve him, was forced to retreat to Makalle, after a battle in which King Menelek lost heavily. Seventeen officers, forty non-commissioned officers, and a mountain battery, who were with Major Toselli's force in Abyssinia, were massacred at Ambagali, after six hours' desperate fighting, in which the Italians were crushed by vastly superior numbers. Reinforcements to the number of four thousand men are to be sent from Naples. The British and Italian guardships have passed the Dardanelles. M. Nelidoff, Russian Ambassador at Constantinople, appealed to the Sultan in the name of H.I.M. the Czar with a view to prevent an ultimatum being presented by the Powers. The Sultan thereupon yielded. The Italian Government has voted an extra credit of four million *lire* (£160,000) for the expenses in Africa. The Hon. John G. Carlisle, Secretary of the Treasury of the United States, announces that the Estimates show a deficit of seventeen million dollars, and proposes to cancel the greenbacks of small paper currency in order to make room for silver coinages certificates.

THE Import trade has not yet recovered, though exchange rose a point on several days last week and is fairly steady at the close. Yarns and Shirtings continue dull, and there is little or no improvement in Cotton Piece-goods. Fancy goods are not in much demand, Velvets excepted, and these have been sold for more money. The Woollen trade is also quiet, Italian Cloth being about the only article enquired for. Nothing to report in Metals, and from present appearances there can be no movement till the new year. The Sugar trade has toned down, and large supplies coming in on the top of recent heavy transactions have had the effect of weakening the market. Prices at present may be said to be nominal, and the opinion is that a drop in values is not far off. There has been some business in Silk, but not enough to make a great impression on the heavy stock now on offer. Prices for the very best parcels have been pushed up somewhat, though Common and Medium grades remain about the same. Holders of Waste have at last made some reduction in their demands, but with very little result, buyers who would have done business two months ago now declining the offers made. Somewhat more buying in the Tea trade, about 1,000 piculs of Common to Medium grade leaf having been taken. Chinese are still making small shipments to the Straits. Exchange has recovered the late decline to a certain extent, the rise of a point being recorded several days last week. Rates close fairly firm.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

With the return of Marquis Ito to Tokyo, all talk about his intended resignation has ceased, it being now definitely believed that he will remain in office for some time yet. The Opposition journals, however, continue to discuss the position of the Cabinet and clamour for the organization of a responsible Ministry and one that shall enjoy the confidence of the nation. Writing on this subject, the *Nichi Nichi Shimbun* remarks that it is absurd to demand the formation of a responsible Cabinet as though the one in existence were not responsible. In point of fact, there has never been an irresponsible Ministry during the present era, especially since the coming into force of the Constitution which explicitly defines the responsibility of the Ministers of State. This truth is practically recognized by the Opposition papers; they have never ceased to discuss the question of Ministerial responsibility in a spirit clearly indicating their belief that the Cabinet is responsible. They assert, however, that the Cabinet ought to enjoy the confidence of the nation, whereas the *Nichi Nichi* contends that these two questions should be considered separately, being quite independent of each other. Under the Japanese Constitution, the Cabinet may be perfectly responsible and yet not enjoy the confidence of the people, though practically the latter consummation is to be desired. Recent Japanese Cabinets, however, cannot be said to have lacked the confidence of the people. The Yamagata Cabinet, for instance, was supported in the first Diet by a majority in the House of Peers, and even in the House of Representatives it was not opposed by the majority. Under the Matsukata Cabinet the Opposition was at one time in a majority, but after dissolution the new Diet rejected the Address of impeachment. The Ito Cabinet was also once opposed by a majority in the House of Representatives, but two successive dissolutions left the Government master of the situation. Another circumstance that ought to be always kept in mind by the Opposition journalists, is that in order to secure the smooth conduct of the administration, it is necessary for a Japanese Ministry to have a majority not only in the House of Representatives but also in the House of Peers. If the Opposition organs mean to be at all logical and responsible in their discussion of this question, they ought to be able to show how, if at all, a Cabinet enjoying a larger measure of public confidence than the present one can be organized. Parties like the Progressionists, that have been able to number more than fifty or sixty in the Lower House, have no right to cry out that the present Cabinet does not enjoy the confidence of the people. If they mean to discuss the question in a responsible manner, Opposition papers are told that they must wait until their parties have secured a working majority in the Diet.

The undecided attitude of the National Unionists attracts considerable attention. The Opposition parties have not even now entirely given up the hope of securing their support in their proposed attack upon the Cabinet's foreign policy. But, as already pointed out in these columns, there seems to be no ground for such a hope. The flat refusal of the National Unionists to attend the conferences of the allied Opposition parties, is the best proof, if proof were needed, that our views are correct. The *Choya*, which is understood to represent a large section of the National Unionists, writes in the following strain:—"We think it a mistake to suppose either that the National Unionists will support the Cabinet, or that they will coöperate with the Opposition. They once attacked the Cabinet most vigorously because they discovered that their views were different from those held by Marquis Ito and his colleagues. But they also supported these statesmen with all their hearts (namely, in the session at Hiroshima), because, both in view of the national interests and in reference to their political principles, they thought it necessary to repose confidence

in the Ito Cabinet. The Diet not having yet been opened, and the Cabinet's policy being still unknown, how can the National Unionists decide either to support or attack those in power? The question depends entirely upon the policy to be followed by the Government. The National Unionists may leave nothing unutilized to attack the Cabinet as in the fifth and sixth sessions of the Diet, or they may give their hearty and unstinted support to it. The solution of the problem thus entirely rests with the Ministry and not with the National Unionists. Similar remarks may be made about their probable attitude toward the Liberal Party. On the question of an increase of armament, they will not hesitate to coöperate with that Party, but on other topics they may be found voting with other parties. It may, however, be safely stated that the National Unionists will never be found supporting any scheme that has for its object the attack of the Ito Cabinet even at the sacrifice of national interests." The emphasis laid upon the last mentioned passages leaves little doubt as to the general attitude of the National Unionists.

The Opposition organs strongly censure the Government on account of its weak and conciliatory foreign policy. The particular incidents cited in support of the criticism are—besides the retrocession of Liaotung—the reduction of the compensation for the return of the peninsula, the Government's silence on the subject of the Russians connected with the disturbance of the 28th ultimo, the readiness of the Cabinet to apologize to the English Government about the stoppage and search of the *Thales* by the *Yayeyama*, and so forth. In the present mood of the Opposition journals anything is welcome to them that serves as a device, however clumsy or unreasonable, for discrediting the Ministry in the eyes of the people. Alluding to these hostile criticisms, the *Nichi Nichi* points out that moderation is as much a virtue between nations as it is between individuals. Morbid or ignominious moderation ought of course to be avoided, but wherever it is consistent with the honour and interests of the country, moderation deserves praise rather than censure. As to the return of the Liaotung question, and the decrease of the indemnity for it, the *Nichi Nichi* frankly admits that the step taken by the Japanese Government was not properly moderation, but simply a policy dictated by a sense of inferior power. Japan's apology to England in connection the *Thales* affair was quite different, as were also her prompt and decisive measures about the participants in the *coup d'état* of Oct. 8th. On these occasions her conduct was prompted by a genuine desire to be moderate and conciliatory. The Government is not to be blamed on account of these steps. As to its silence on the question of the alleged implication of the Russians in the trouble of the 28th November, the *Nichi Nichi* observes that thus far no evidence has been forthcoming to establish the rumoured connection of Russians with the conspiracy, and, consequently, there is no reason why communications should be opened on the subject with the Russian Government. Thus, all things considered, there appears little ground for complaint about the Government's foreign policy.

The report that the Chinese Government has agreed to lease the port of Kiao-chow, in the Shan-tung peninsula to Russia, has created considerable excitement in this country. The *Choya Shimbun*, among others, is inclined to believe the telegram. China's situation, says our contemporary, deserves sincere pity, for she is completely in the hands of her worst enemy. If she alone were concerned, it would matter little, although she deserves sympathy. As it is, however, the increase of Russian influence in China is a direct menace to Japan, and the question, therefore, should be most seriously considered by the Japanese people. Our contemporary goes on to allude to the stir caused in London by the report, since proved untrue, that Russia had obtained the right of anchorage in Port Arthur. When such a noise

is made in far off England about every danger of an increase of Russian power in these waters, there is no reason why the present report should be regarded with indifference by Japan, which is more directly concerned than England. The *Choya* then proceeds to urge the importance of diplomacy in avoiding external dangers and raising the prestige of the country. Our contemporary recognizes the importance of increasing the fighting capacity of the Empire, but fears that its countrymen do not attach sufficient value to diplomacy. Unless something is done to increase the efficiency of the diplomatic service, the *Choya* fears that mere increase of armament will not go far to help the country *vis-à-vis* foreign Powers. Our contemporary regards it as no chimera to think that one of these days China will be foolish enough to be pushed by Russia to try to be avenged upon Japan.

The *Mainichi Shimbun* hears that the Chinese Government intends to appoint Liu Yung-fu to an important post. Should such a step be taken by China, our contemporary urges the Japanese Government to exact satisfaction for the gross insult offered to this country. Strictly speaking, China ought to have transferred the island in a state of perfect peace and tranquillity. But in the present disorganized state of that Empire, it was probably too much to expect her to discharge her duties in such a thorough manner. She ought not to be pardoned, however, should she go so far in her insolence as to restore Liu to any official position. In resisting the peaceful occupation of the island by the Japanese, the Black Flag leader offended as much against China as against this country. Consequently, instead of official recognition, punishment is his proper reward from the Court of Peking. The fact is, on the contrary, that he is being everywhere highly honoured by the people as well as the mandarins, and the report of his official appointment is not improbable. Japan, reiterates the Progressionist organ, will never tolerate such an insult to her honour.

Other questions that have been discussed in the vernacular press during the week, have been the increase of the Navy, the employment of the indemnity, the grand meetings of Liberals and the Progressionists, and the agitation in Tokyo against Mayor Miura.

EDITORIAL NOTES.

FUNERAL OF MR. GEORGE DUBOIS.

A VERY large assemblage gathered at the funeral of Mr. George Dubois on Tuesday afternoon, the procession being of such a length that the head of it had arrived at the Cemetery gate before the rear had left the Hospital premises. Mr. Dubois was a nephew of Mr. J. Favre-Brandt, and was connected with the firm at this port, though he was also well-known and highly respected in Osaka, from whence many beautiful wreaths of flowers and messages of condolence were received. Among those present were the French Consul-General, the Swiss Consul-General, the Vice-Consuls of Belgium and Portugal, Mr. Casati, of the Italian Consulate, &c. Several Japanese naval and military officers, amongst whom was Admiral Count Kawamura, were present, also civil officials; and telegraphic messages of condolence were received from General Marquis Saigo, Minister of State for the Navy; General Marquis Oyama, Minister of State for War; Colonel Ota, Colonel Kono, and other naval and military officers, civil officials, and private friends. Beside a large number of flower-stands in the Japanese style, wreaths and crosses were received from the following, many of which were of the most beautiful and elaborate description:—Messrs. Arnold Dumelin, James Walter, H. Abegg, Fritz Ehrismann, Edward Bosshart, Ernst Baumgartner, J. Kern, E. Balmes, Max Maelger, Theo. Staubli, P. J. Hellendall, Emil Leopold, Walter Loxton, Hyacinthe Renault, Max Kaufmann, J. R. Merian, August Egli, Hans Spörry, Martin Schellenberg, Yasuda

Genzaburo, K. Tamamura, M. Hunt, Rodolphe Schmid, James Eastham, M. Hansell, J. Favre, Jun., Ishikawaya, Theodore Culy, P. L. Abry, François Favre-Brandt, A. Coxe, Jules Sibiodon, E. Andreis, E. Berard, L. de Micheaux, Georg Peterson, Albert Debourg, M. Engert, S. Huguenin, O. Keil, Henry Delmas, F. Nabolz, L. Muraour, Francis Herb, P. Vautier, Herrmann Heckert, A. Culy, L. Gros, E. R. H. Manley, Benjamin Martinelli, Arend Seekamp, R. Robert, Albert Hofmann, A. Mingard, Hans Frick, A. Deguy, F. Retz, Gustave Gilbert, L. Rubattel, Joseph, A. Baud, T. Meyerdirks, E. Freivogel, H. C. Deck, Alfred Unger, L. Gros, H. Gouilloud, F. R. da Silva, Ishiono, Matsufuji, Gennosuke, Miki, Kijiwaya, Ito, Sakai, Yoshioka, Yuota, Sugiashi, Madame Baylies, Dr. Paul Ritter, Captain Carst, the family of the late M. Jubin, the family of J. Favre-Brandt, Mr. and Mrs. Witschi, Mr. and Mrs. Paul Colomb, Mr. and Mrs. Strähler, Mr. and Mrs. Salabelle, Mr. and Mrs. Weinberger, &c., &c. The Rev. E. C. Irwine, M.A., conducted the funeral service, and the pall bearers were:—Messrs. Robert, Dubourg, Deguy, Gros, Egli, Abegg, Kern, Gilbert, Spörri, Salabelle, Abry, and Frick.

AN INGENIOUS CONTRIVANCE.

ABOUT two months ago, the British steamer *Isis* arrived in this port in a damaged condition, through collision with the American ship *W. H. Macy*. Her port side, below the bridge amidships, was completely crushed in, making it necessary to remove and renew a number of plates and angle-irons in her side. The work was placed in the hands of the Yokohama Engine and Iron Works, and operations were commenced a day or two after the steamer's arrival. After her cargo had been discharged the steamer was shifted further towards the Kanagawa shore and there listed as much as possible; but it was found that the injuries extended several feet below the water line, even after she had been listed over. As the docks in Yokosuka were engaged, some means had to be devised whereby the necessary repairs could be proceeded with. A coffer-dam was consequently constructed, built of heavy timbers and planks, and made to conform to the shape of steamer's bottom. This was towed out and placed in position and then pumped dry. That part of it touching the steamer was thickly padded; this acted as suction while the outside water pressed it firmly to the vessel. Wire hawsers were also fastened to the coffer-dam from the steamer, both forward and aft, making movement impossible. A powerful centrifugal pump was placed on a lighter outside of it, in case of leakage or other accident. Inside this impromptu dry dock the men have been prosecuting their work, removing old and inserting new plates with as much ease and security as if they were in an ordinary dock. This is the first time a coffer-dam has been used in this way on a steamer in Yokohama, and credit for the ingenious contrivance undoubtedly belongs to the Yokohama Engine and Iron Works; it has probably saved the *Isis* several thousands of dollars, in time if not in money. In another month or less all the repairs will be finished, and the steamer will be in as good condition as when she started on her present voyage.—*Communicated*.

PROF. LOISETTE'S LECTURE.

PROF. LOISETTE, of New York and London, the distinguished Memory Psychologist, whose system of memory culture has a world-wide reputation, will give his popular lecture on *Assimilative Memory* at Van Schaick Hall next Monday evening. At Sydney recently twenty-five hundred persons were unable to gain admission to this lecture. After this address, he will give a course of three Instruction Lectures, imparting the principles and practice of his system in great detail. At Hongkong recently, the Professor gave four courses of instruction in English and two through an interpreter. One of Hongkong's foremost lawyers, Mr. J. J. Francis, Q.C., gave the Professor the following testimonial:—"As a mere system of memorising, your methods are admirable. As a mental discipline and as

a memory training, they are simply invaluable, and I think unrivalled. I have profited much by them. You might rechristen your system 'the art of study' or 'the whole science of application'—either name would fit it." The Professor claims that he imparts a good all-around memory to all who attend and heed his lectures, and his testimonials certainly support his claim. He says that his system differs from all others in this, that it uses no artificial appliances whatever; that while other systems when attempting to teach how to learn one thing compel you to learn another thing in the hope that it will "aid" you to know the first, but that he teaches only the thing itself directly by an almost instantaneous act of assimilation.

PREHISTORIC ART.

In the Pyrenees region of France there have been dug out some mutilated statuettes of ivory belonging to the epoch "when great glaciers covered a part of France, and immense herds of animals furnished not only nourishment and clothing, but materials for the expression of artistic feeling—ivory from the mammoth, the teeth of bears and lions, and the bones of many animals." It is declared that these works "recall in their vigour and sureness of touch the unfinished statues of Michel-Angelo," but their wood-cut reproductions certainly do not justify any such eulogy. What is most interesting about them is the type of humanity they represent, a type very low down in the scale. On this subject we quote from a translation in the *Literary Digest*:—

"These figurines reveal to us unexpected facts. The ancestral race shows itself to us in them as it really was, furnishing characteristics that could never have been inferred from the rare crania in our possession. Now, says M. Piette, the Magdalenians resembled in certain special features the Bushmen and Hottentots of our own time. Do you recollect those odd-looking women that were exhibited at the *Jardin d'Acclima-*

tation in Paris some years since; Hottentots with pendant breasts and enormously developed hips? The adipose system was exaggerated in them in a limited region of the body, forming a fatty mass between the skin and muscles. This is what is called *steatopygy*.

"This characteristic is found, less accentuated, among the African peoples, among the women of the Namaquas, the Kaffirs, the Nigritians of the Nile, and, according to Hartmann, among those of the Berbers and the Bengos.

"The ancient Egyptians were acquainted with *steatopygic* peoples. There have been found bas-reliefs that represent the Queen of the country of Noun (the Somali region) coming to render homage to Queen Hathason. *Steatopygy* is very evident.

"Two statuettes of Brassemponty seem to show this characteristic in the women of this epoch. We present one of them, the remnants of which are typical (Fig. 1). It is of ivory and much mutilated: the trunk alone remains, with its pendant breasts and protuberant hips faithfully portrayed. This remnant appears almost formless at first sight, for it has been mutilated. But if we study it attentively we shall agree with M. Piette in recognizing the exaggerated size of the hips. We can not, nevertheless, affirm absolutely that there is true *steatopygy*. Perhaps it is, as M. A. de Mortillet suggests, only a mark of obesity.

"More interesting still for the artist is the head of a woman found in the same cave (Figs. 2 and 3); the length of the nose is extreme and, on the contrary, the part of the face comprised between the nose and the extremity of the chin is very diminutive. The cheeks are protuberant, the visage flattened, the nose retreating, as with the Mongols. But very noticeable is the point at the chin, formed by the meeting of two straight lines starting from the lobes of the ears. Add to this, a round, brachycephalous head, swelling in the temporal region, and you will be tempted to say with M. Zaborowski that by these two characteristics—the angular chin and the protuberant temples—this head recalls those of the modern Basques. M. de Quatrefages, and recently M. de Collignon, have dwelt on the value of these two characteristics in recognizing Basque blood.

"However this may be, another point strikes the observer. The head-dress of the woman is arranged in parallel strips, recalling distinctly that that of the ancient Egyptians. We must not conclude that there is any relationship between this woman and the Egyptian race. Care for the hair is yet carried to a high degree of perfection among savage peoples. No doubt similar arrangements of the hair could have been devised at different epochs and in different countries by ingenious minds, without any relation between them.

YOKOHAMA LITERARY SOCIETY.

A LARGE audience assembled to hear Captain Crawford's entertaining paper on "Picket Duty." An excellent story with many touches of adventure in the field, and an episode about escorting a lady-prisoner back to her home for a day's visit. A hearty vote of thanks followed the paper, and we hope to hear more of these personal reminiscences at an early date. Mr. Loomis also gave a short narrative of a narrow escape he had in the same great civil contest, and the meeting dispersed at 10.30. Following is the full programme, the musicians and singers receiving unstinted applause and some of them would have had to appear again had not the President with inexorable firmness forged ahead with the "next item":—

P. E. Duo	Sonata in F. flat	Weber.
Miss and Mr. Griffin.		
Paper	Picket Duty in the Warwick	
	Swamps, Virginia.	
	Captain W. H. Crawford.	
Song	Spring	Gounod.
	Mrs. F. Herb.	
Violin Solo	Polish Dance	Young.
	Miss Helena Page.	
Address	A personal incident of the War.	
	Rev. H. Loomis.	
Song	Dreams	Gatty.
	Mrs. Taft.	
Violin Solo	Canzonette	Godard.
	Mr. H. A. Poole.	

THE "NATAL"—"EIHO MARU" COLLISION.

The certificate of Henry David James, a British pilot, was suspended on the 3rd inst., by a finding delivered by the Osaka Marine Court of Inquiry. James was on duty as pilot when the *Natal* ran down the *Eiho Maru* off Wakimurabana, Iyo province, on September 10th, 1894. The Court was of opinion that the pilot had not exercised sufficient care when the collision occurred, and that he acted improperly in refusing to reply to questions put by the Court on the 3rd of June last, when he withdrew from the Court without permission and declined to an-

swer a summons by the Court on August 15th last. The circumstances of this case are no doubt well known; also the fact of the owners of the junk having withdrawn their petition in the French Court and agreed to a compromise by which they received only a nominal sum as compensation.

PHOTOGRAPHIC SOCIETY OF JAPAN.

A LANTERN meeting of this society took place on Friday evening at 8.30 o'clock in Keil's building, when a magnificent set of lantern slides sent by the Lantern Slide Exchange of the U.S. were exhibited. The slides included a variety of exquisite land and seascapes with some beautiful cloud effects, while the figure subjects showed great care and technique. Professor Wood, in the absence of any other foreign member of the Society, gave short explanations of the pictures, apologising at the outset for the want of business tact of the Society in giving an exhibition on mail night. A vote of thanks was tendered Mr. Kajima for the use of his lantern.

DINNER TO CAPTAIN DE BOULAY.

MARSHAL MARQUIS OYANA, Minister of War, gave a farewell dinner on the 11th inst. to Captain De Boulay, Military Attaché of the British Legation, who is about to leave for home. Marquis Saigo, Minister of the Navy, Vice-Admiral Viscount Ito, Chief of the Bureau of Naval Command; Lieut.-General Viscount Kawakami; Major-General Baron Kodama, Vice-Minister of War; Major-Generals Terauchi and Inouye, Rear-Admiral Samejima, and Mr. Nagasaki, a Master of Ceremonies in the Imperial Household Department, were also entertained.

REPORTED OPENING OF THE WEST RIVER.

It is reported, says the *Hongkong Daily Press*, in Chinese official circles at Canton, that Wuchowfu, on the West River, is shortly to be opened to foreign trade. Shuihing, it is said, will not be opened. It is further said that the opening of Wuchowfu may take place within a month, and at any rate within two or three months. This news is important if true. We repeat it simply on hearsay and cannot guarantee its accuracy. It is also reported that in addition to the new ports mentioned in the treaty with Japan a port is to be opened in Hunan and three in Liaotung.

THE NEW SWISS PRESIDENT.

THE following telegram, dispatched by Mr. Sugimura, *Chargé d'Affaires* of the Japanese Legation in Austria, has been received by the Foreign Department:—On the 12th inst. Adrian Rachener (?) was appointed President of the Swiss confederation for 1896, and Adolf Doehel (?) Vice-President.

YOKOHAMA CHAMBER OF COMMERCE.

THE election of officers of the Yokohama Chamber of Commerce, which took place on the 14th inst., resulted in the return of the following gentlemen:—Mr. Hara Zenzaburo, President; Messrs. Otani Kahei, Ono Mitsukaze, Watanabe Fukusaburo, Asada Matashichi, Sonoda Koshichi, and Kimura Riyemon, Standing Committee.

THE NEW CABLE STEAMER.

THE new cable-laying steamer, the *Okinawa Maru*, which is now being built on the Clyde, is to be handed over to the Japanese on the 10th of February next, and is expected to arrive in Nagasaki some time in April. On the 12th inst., says the *Nagasaki Express*, some eighty Japanese seamen and engineers left here by the *Ancona*, and will take charge of her and bring her out.

THE "ARCTIC."

UNDER instruction from the Marshal of H.B.M.'s Court, the schooner *Arctic* was sold by public auction yesterday by Mr. Jno. W. Hall, and, together with the guns, ammunition, &c., on board, realized \$1,290.

MRS. MOWAT.

WE have been asked to say that Mrs. Mowat, who has now returned from Nikko, begs her

friends who have written so kindly on the subject of her recent accident there, to be good enough to excuse her from replying, as the injury to the right arm will prevent her using it for three weeks, during which time she regrets also she will not be able to see her friends.

HIGHER COMMERCIAL SCHOOL FOR OSAKA.

THE Minister of Education has a bill for the establishment of a Higher Commercial School in Osaka, which he intends to introduce in the coming session of the Diet. If the bill be passed, Mr. Komaya, President of the Tokyo Higher Commercial School, it is said, is to be removed to Osaka. Some persons, however, are very unwilling to have this able President removed to the western city, and are preparing to petition for his retention in Tokyo.

SEAMAN DROWNED.

A SEAMAN named Peter Tiernay, belonging to the British vessel *Federation*, was drowned in Yokohama harbour at 12.15 a.m. on Friday through the capsizing of a boat when alongside his vessel. Four men were in the boat at the time: one succeeded in jumping on board, two others were rescued by the second officer and watchman, but the fourth was lost.

PRIVATE RAILWAY COMPANIES.

THE receipts of the following private railway companies during the ten days ended the 10th inst. were:—Ryomo Railway Co., yen 6,951.935, a daily average income of yen 13.631 per mile; Osaka Railway Co., yen 10,041.105, a daily average income of yen 23.160 per mile; Sangu Railway Co., yen 2,607.105, a daily average income of yen 10.863 per mile.

NEW TELEGRAPH CABLES.

SUBMARINE telegraph cables for use between Osaka and Marukame and Saga and Shimonoseki lately arrived from England, and the work of laying the same will shortly be commenced. Government experts left the capital on the 17th inst. for the districts named.

MR. H. M. BEVIS.

WE (*China Gazette*) understand that Mr. H. M. Bevis, the late popular Manager of the local Hongkong and Shanghai Banking Corporation, has been appointed General Inspector for all branches in every part of the world, Mr. John Walter, the late General Inspector, having been permanently appointed to the London office.

THE JAPANESE MINISTER IN AUSTRIA.

MR. TAKAHIRA, Japanese Minister in Italy, was transferred to Austria on the 16th inst. He also received the additional appointment to represent Japan in Switzerland.

MYSTERY IN SOUL.

The mystery of the Korean Queen's death seems to have remained a mystery among the bulk of the foreign residents in Soul for more than a month after the occurrence. At first nothing was known definitely in Tokyo, for Viscount Miura's telegrams to the Foreign Office were couched in language purposely designed to leave a part of the truth untold. But very soon the facts came out, and it was ascertained beyond all question that Her Majesty had been murdered. Yet, in the middle of November, we find the editor of *The Korean Repository* writing: "The mystery surrounding the fate of the Queen still remains unsolved. It is generally admitted in the Japanese journals that she is dead and their correspondence from Soul claims that her body has been found in a well with a fatal cut, well known to Japanese swordsmen, extending from the shoulder down into the breast. We should like to know who the parties are that found the body, and what they have done with it. Either someone is lying desperately, or else they possess facts in which the public has a tremendous interest."

JAPAN IN THE EAST.

Recently, referring to a trade report by Consul-General Jernigan of Shanghai, we congratulated the writer upon having been the first to recognise officially the display of commercial liberality made by Japan in the Shimonoseki Treaty. It has never happened previously, so far as we can remember, that a victorious State exacted from a vanquished conditions plainly unfavourable to the tradal interests of the former, in order that the rest of the world might profit by them. Had Japan sought to obtain a monopoly of the Chinese markets for her own spun or woven cottons, she should naturally have desired, above all things, to prevent the establishment of cotton mills under foreign auspices in China, whereas, on the contrary, she included in the Shimonoseki Treaty a clause finally disposing of all the impediments hitherto placed by the Chinese in the path of such enterprise. Has she received any public recognition of her liberality? None, so far as we can see, except from Consul-General Jernigan. The projectors of the Ewo Cotton Mills, when announcing by circular that they were at length in a position to carry their undertaking to a practical issue, went out of their way to attribute their suddenly acquired ability to the exertions of the British Representative in Peking, whereas, in point of fact, they owed it entirely to the privileges secured by the Shimonoseki Treaty. For years the British Representative had been working to obtain the required permission from the Chinese Government. He had even begun to be very doubtful whether such a concession would benefit the British empire, since the machinery needed for establishing cotton mills would probably come from the United States, and the products of the mills would compete ruinously with manufactures imported from Great Britain. But the conclusion of the Shimonoseki Treaty settled everything. Immediately Her Majesty's Representative obtained for his nationals the permission of the Taung-li Yamên, under the right conferred by the most-favoured-nation clause, and within a few days the Ewo Mill projectors were able to inaugurate an enterprise that had hung fire for years. If they shrank from openly accrediting that consummation to Japan's cosmopolitan liberality, they might at least have refrained from attributing it to the efforts of the British Representative, as though to place on record their indifference to what Japan had done. It is not to be assumed, of course, that Japan's action was purely altruistic. She doubtless desired to conciliate Europe's good will. But, at all events, that is a spirit that Europe should try to develop by approval instead of chilling it by injustice. We fear that this experience may serve to drive Japan into the wholly selfish grooves from which it ought to be the object of her foreign friends to hold her back. A correspondent from Shanghai, writing on the subject, says:—"Your editorial comment on an extract from one of Consul-General Jernigan's reports, recently republished in the *Mail*, is timely and certainly just to Japan. Possibly you may have seen another report from the same official, in which he says:—"Japan has accomplished more for civilization in Asia than a hundred years of European diplomacy and arms." The machinery imported by the Ewo Cotton Mill would have remained on ship-board or in a godown until Japan's action created the right to land and use it, and it is most unfair to Japan to withhold the credit that is justly her due. Historic truth ought to be no less sacred than religion, and it is a historic truth that Japan has done more to liberalize commerce in Asia than Europe and America combined have done. It will require a lever of great motive power to turn China over. Europe made a mistake in checking the progress of Japan's arms, probably not a mistake when considered from the point of self-interest, but certainly a mistake when viewed from the standpoint of a more liberal civilization."

MR. FUKUZAWA AND HIS PUPILS.

Nobody in Japan is more widely respected and esteemed than the Sage of Mita, whose sixty-first anniversary has just been celebrated by his pupils and admirers in a most picturesque and impressive manner. Born on the 12th day of December (old calendar), in the 5th year of *Tempo* (1834), Mr. Fukuzawa has not yet completed his sixty-first year. But the usual custom in such cases is to make no distinction between the old and new calendars. Anniversaries of births are celebrated on the day of nominal, instead of real, correspondence between the two systems, for in that way many revered associations are preserved. The case is of course different with persons born since the introduction of the new calendar twenty-three years ago. Thus Mr. Fukuzawa's sixty-first birthday was celebrated by his disciples at the Maple Club, Tokyo, on the 12th instant.

We take the following facts from a minute account of the affair published in the *Yiji Shimpō*:—The gate of the Koyo-kan was spanned by a big arch of evergreens, with words appropriate to the occasion picked out in yellow chrysanthemum blossoms. The garden at the back of the building was decked with paper lanterns in the usual style. At one in the afternoon, Mr. Fukuzawa and his family arrived in carriages and were greeted most enthusiastically by nearly two hundred and fifty of his former pupils, now prominent men in various departments of life. Among them were noticeable:—Mr. Kuki Kyūichi, Privy Councillor; Viscount Nagaoka, Baron Suyematsu, Chief of the Legislative Bureau; Mr. Yano Fumio, a Master of Ceremonies; Mr. Tsuji Shinji, ex-Vice-Minister of Education; Mr. Iwasaki Hisaya; Mr. Kondo Rimpei, President of the Nippon Yusen Kaisha; Mr. Kato Masayoshi, Vice-President of the same Company; Mr. Masuda Takashi, Mr. Soda Heigoro, Mr. Toyokawa Ryohei, Mr. Abe Taizo, Mr. Watanabe Hiromoto, Mr. Oishi Masami, ex-Minister to Korea; Mr. Ozaki Yukio, M.P., Mr. Kashiwada Moribumi, M.P., Mr. Inukai Ki, M.P., Mr. Inouye Kakugoro, M.P., Mr. Minoura Katsundo, M.P., Mr. Obata Tokujiro, Imperial Nominee to the House of Peers; Professors Kikuchi Dairoku and Mizukuri Kōkichi of the Imperial University; Dr. Nagayo Sensai, Dr. Kitazato, the bacteriologist, Dr. Matsuyama. We also find the name of Count Goto, but we believe that he was not Mr. Fukuzawa's pupil; probably he joined the celebration simply out of admiration for the great educationist. There were also several Koreans present, and the foreign professors of the Keiwo Gijuku.

At 2 p.m., the party assembled at the *No* theatre which was connected with the Koyo-kan by a temporary covered way, specially constructed for the occasion. The performances consisted of *Hashi-Benkei*, *Yamauba*, *Suminori*, and *Shojo*. Upon the conclusion of the *No* performances, Mr. Obata Tokujiro, the earliest disciple and well known assistant of Mr. Fukuzawa, appeared on the stage and read a congratulatory address on behalf of the assembled former pupils of the great master. The address commenced by congratulating Mr. Fukuzawa upon the extraordinarily good condition of his health, which was attributed in part to the strong constitution inherited by him from his mother, but principally to his well regulated and virtuous mode of living. The great Chinese philosopher Mencius said that the three things to be most esteemed were virtue, age, and honours. Virtue and age are the undisputed attributes of Mr. Fukuzawa, and as to honours, he does not covet them. He is perfectly happy without them. The address then went on to speak in high, but well deserved, terms of the great services rendered by Mr. Fukuzawa in the field of education in its broadest sense, and concluded with wishing continued prosperity and happiness to the great master. Congratulatory letters and telegrams that had been received from all parts of the country and from Korea were then read by Mr. Takahashi Yoshio and Commander Kaburaki, I.J.N.

Mr. Fukuzawa then rose to address his entertainers. He thanked them sincerely for the magni-

ficent manner in which they had celebrated his birthday and for the highly eulogistic address that had just been read by his esteemed friend Mr. Obata. He thought it fit to say something about his birth and past career. "On the 12th day of the 12th month of the 5th year of *Tempo*, I was born in the clan *yashiki* of Nakatsu, at Tamaye-bashi, Dojima, in Osaka; or to speak more correctly, in the *nagaya* to the right of the front gate of that *yashiki*. At the age of three, I lost my father, and went back to Nakatsu in company with my mother and five brothers. At twenty-one I went to Nagasaki, where I began to study the Dutch language. Subsequently I proceeded to Osaka and entered a school kept by the late Agata Koan, where I remained until 1858, when I bade adieu to my birthplace and came up to Yedo. I opened a little school in the compound of the *yashiki* of my clan at Teppozu. About this time I gave up Dutch in favour of English. While I was thus prosecuting my studies and imparting what little I knew to others, mighty changes were taking place in the political world, changes that finally resulted in the Restoration of 1868. That revolution inaugurated a new epoch of civilization, and the impetus thus given to the pursuit of knowledge soon swelled the number of the pupils, necessitating the removal of my school first to Shinsen-za and finally to Mita. Such was the origin of the Keiwo Gijuku." Mr. Fukuzawa then went on, in his characteristically easy, simple, yet withal eloquent manner, to expatiate on the facts that he is still the same artless student of former days, and that, in associating with his fellow men his greatest joy has always been to speak with all, high and low, rich and poor, on terms of perfect equality.

Afterwards the whole party returned to the Maple Club and sat down to dinner, separating into four different groups in four separate apartments. Mr. Fukuzawa went round the different groups and thanked his pupils and friends. A band played in the garden. The party dispersed about 9 p.m. each carrying home, as a *souvenir* of the occasion, a portion of red and white *mochi* (dried cake), a *sake* cup with an inscription in Mr. Fukuzawa's own writing, and a *fukusa* with his picture and a poem printed on it.

On the same day, the students of the Keiwo Gijuku assembled in the central yard of the school, where, having solicited the presence of Mr. Fukuzawa and his family, they shouted *bansai* in honour of their master, and congratulatory addresses were read by the spokesmen of the different departments of the institution. Mr. Fukuzawa addressed them in an interesting speech which deserves to be noticed at some length, as it contains many suggestive allusions to the history of Japan during the past forty years. He could say without any taint of egotism, that, although he did not deserve the panegyrics pronounced upon him, he was eminently happy to have been a spectator of the memorable drama enacted during the past four decades. Not only had he been a spectator, but he had also taken a part in it. Men twenty years younger than he had only seen one-half of the stirring drama, but it had been his good fortune to witness it from the very beginning of the first scene. What had been his part in the performance? His part had been to talk and to theorize. While he was between twenty and thirty, the country was still under the full sway of feudalism, divided up among two hundred and seventy barons. The hereditary system of government held the people under a discipline hardly conceivable by the present generation. Even in those days there were men that rebelled against the existing state of affairs, and secretly ridiculed the customs and institutions of the time. Mr. Fukuzawa remembered well that, having become a confirmed believer in the theory that the age of the sword was to be succeeded by the age of the pen, he sold all the swords in his possession to a dealer in Hikage-cho, Yedo. Students of western science in those days were fiercely opposed to Chinese philosophy and its votaries. Being entirely dissatisfied with the existing order of things, they thought it laudable for the feudal retainers to sever their connections with

their clans, and enter the fraternity of *Ronin*, who were devoted to the introduction of a new era based on the principles of western civilization. What was the impression produced upon society by these revolutionary spirits? They were hated and disliked; they were in fact regarded as drunkards breaking in upon a peaceful family circle. What the disciples of Occidental civilization advocated with ardour, merely caused surprise; their talk about the various material wonders produced by modern science was received with utter incredulity. How could a Japanese of those days believe that by constructing an iron road between Yedo and Osaka, he could leave the former city in the morning and eat his supper in the latter on the same day, whereas the journey there involved a fortnight by road. Even the most uncompromising revolutionaries of those days did not dream that things, by describing which they delighted to surprise their ignorant fellow countrymen, would soon become accomplished facts. The students of western civilization, thirty or forty years ago, were veritably in a state of despair. But the revolution of 1868 soon led to the realization of all their apparently impossible dreams. Indeed, the changes accomplished in the sequel of that revolution were so sweeping and radical in character, that the advocates of the new civilization felt ashamed because they had not been more sanguine and sweeping in their opinions and dreams of reform. It was not uncommon forty years ago to hear young zealots sing verses in which gigantic schemes of foreign conquest and a glorious future for the country were depicted, but neither the composers nor the reciters of these verses had the smallest expectation of witnessing such glorious days. How happy then did Mr. Fukuzawa, one of the dreaming zealots of forty years ago, feel to have lived to share the joys of a glorious campaign that had raised the country's prestige so much! All seemed to him like a dream, so unexpectedly rapid and successful had been the progress of his country along the path of civilization. It might justly be said that the drama that opened forty years ago had just been brought to a conclusion, but Mr. Fukuzawa assured his young hearers that they need not feel any regret on that account, for there would ensue a glorious performance, in which they would take their parts each according to his worth and ability. In order to be prepared, therefore, they should discipline their intellects, make themselves acquainted with the true aspect of human affairs, and above all work out their independence. Should they find themselves too much in advance of the time to carry out their cherished ideas, they must not despair, for there remained for them a nobler field of activity, namely, that of teaching the people by pen and by mouth.

THE SHARE MARKET.

Reference was made recently to the extraordinary rise that took place in the prices of shares during the latter part of last month. Since the beginning of the present month, the opposite tendency has set in, as shown by the following table:—

Shares.	Paid up. Yen.	Highest Dec. 3. Yen.	Highest Dec. 3. Yen.	Depreciation. Yen.
		Yen.	Yen.	Yen.
Ryomo Railway.....	(50)	91.50	85.50	6.00
San-yo Railway.....	(30)	66.00	59.90	6.10
Kwan-sai Railway....	(47)	82.50	71.80	10.70
Kyushu Railway ...	(41)	77.00	67.90	9.10
Kobe Railway	(50)	162.00	148.00	14.00
Tanko Railway	(50)	108.80	102.70	6.10
Nippon Yusen	(50)	117.00	100.90	16.10
Taikoku Shogyo				
Ginko	(25)	52.10	47.50	4.60
Kanagafuchi Bosenki	(50)	78.40	72.20	6.20
Tokyo Stock Exchange	(50)	820.00	597.00	223.00

On the whole, the depreciation has been in proportion to the former appreciation, and it may be stated as a general fact that the quotations have returned, or are fast returning, to the condition in which they were found during the first half of last month.

THE PROGRESSIONIST MEETING.

The grand lecture meeting of the Progressionists at the Kinki-kan on the 15th instant ended in a fiasco. It was apparent long before the meeting was opened that the audience, which already filled the hall to overflowing, contained a large number of hostile *soshi*. Everybody, therefore, expected animated scenes. Scarcely had the first speaker, Mr. Ogawa Michizo, ascended the platform, when the *soshi* began to cry "banzai! banzai!" in ironical tones. A body of *soshi* belonging to the Progressionist Party replied in an angry tone, and the altercation led to a confused scene, the audience standing up and increasing the tumult by all sort of shouts. Blows were freely exchanged, and one or two Progressionist partizans received cuts from knives. It is asserted that some *soshi* were armed with daggers and revolvers, but the statement lacks confirmation. The confusion increasing every moment, the police inspector ordered the dissolution of the meeting. His order was received with loud cheers by the hostile *soshi*, but those in the employ of the Progressionists became still more exasperated and refused to disperse. While the tumult was at its height, there appeared on the platform the notorious Mr. Tanaka Shozo, who loudly protested against the measures taken by the police inspector and censured him for his partiality to the hostile *soshi*. Mr. Tanaka was requested to descend from the platform, but as he refused to do so, he had to be dragged down by force. The police being in large numbers and apparently ready to act with decision, the excited audience gradually dispersed uttering execrations against the guardians of the peace. The Progressionist papers strongly censure the conduct of the police, charging them with gross partiality for the hostile *soshi*. Being present in strong force, the police, it is argued, could have succeeded, had they been so inclined, in keeping the *soshi* under control. But we fail to see how they could have done so, when the confusion was increased to a hopeless degree by the conduct of Progressionist *soshi*, who usurped the duties of the police.

THE PROGRESSIONIST MANIFESTO.

The following is a translation of the Manifesto voted at the meeting of the Progressionists on the 14th instant:—

By the success of our arms in the war with China, our national prestige was on the point of being augmented when a diplomatic blunder prevented us from realizing our object. Was not that a serious warning to the nation?

Our deliberate opinion is that, in order to secure the full benefits of the constitutional system, it is absolutely necessary to have a strong Cabinet enjoying the confidence of the people. Under a strong Cabinet alone will it be possible to secure the success of our arms and extend the prestige of the country. That we have not been able to retain the fruits of our victory over China, that our original policy toward Korea has not been consistently followed, are not these the consequences of not having a Cabinet responsible to the Diet? Thus the recent turn of events has made us feel more keenly than ever the necessity of responsible Cabinets.

By a singular change of situation, the attention of the Powers of the world has been concentrated upon the East, and in that way Japan is now the object of increasing observation by those Powers. It is, therefore, universally recognized by the nation that the course of events has proportionately increased the military responsibility of the Empire. Our Party is convinced that it is a measure of the most urgent importance to maintain in constant readiness a force as strong as the national resources permit.

Industry is the means by which the material resources of a country are increased, while intelligence and virtue constitute the moral strength of a nation. In order to secure the permanent maintenance of a powerful fighting force, steps should be taken to promote the development of the moral strength and material resources of the country. Our Party, therefore, attaches great importance to the encouragement of education and industry.

Taking these ideas as a basis, our Party hereby adopts the following resolutions:—

"Firstly.—The retrocession of Liaotung has

stained the honour of the country, and the Government's Korean policy has increased the dangers of the situation in the East. There has been maladministration in connection with other foreign affairs, but our Party should limit its attention to the above two questions as a reason for demanding the resignation of the Cabinet.

"Secondly.—It is contrary to the dignity and interests of the country to change the Korean policy. The object of maintaining the independence of Korea should, therefore, be pursued to the end in obedience to the declaration of war.

"Thirdly.—An increase of armament is a matter of urgent importance. But in carrying out that principle, attention should be paid to the importance of reforms in the Army and the Navy, to the rejection of all ornament, and to making practical utility the sole object. While advocating, on the one hand, an increase of armament within the limits of the national resources, our Party, on the other, should exert itself to carrying out reforms in the interior of the Army and the Navy.

"Fourthly.—Military equipment and diplomacy are inseparably connected. Our Party, therefore, should use its endeavours for the definite settlement of the country's foreign policy and for the improvement and extension of the machinery of diplomacy.

"Fifthly.—It being impossible to increase the prestige of the country unless abundant resources are available, our Party should direct its attention to the development of industries of all sorts.

"Sixthly.—The operations of the troops would not be effective and the development of industries would be incomplete, unless railways and telegraphs were increased, steamship services extended, the maritime fleet augmented, and officers and men educated and trained in increasing numbers. Our Party should, therefore, direct its attention to carrying out these important measures.

"Seventhly.—More increase of troops would not make the country strong unless the people were animated by a high martial spirit. Neither would a high martial spirit alone secure the prosperity of the country without a corresponding degree of intelligence and virtue on the part of the people. Our Party should, therefore, endeavour to improve and extend the educational system of the country, so as to secure the advance of education among the people.

"Eighthly.—In order to defray the expenses required for increased armaments, extension of the diplomatic service, and other important measures, it will be necessary to increase the taxes. But simultaneously with increasing the taxes, it is important that reforms should be introduced in the system and method of taxation, superfluous expenditures being curtailed, and the general finances prudently managed.

"Ninthly.—A prevalent fault on the part of the Authorities is to disregard and encroach upon the rights and liberties of the people. Our party should endeavour to root out this evil.

"Tenthly.—Vigorous general administration is impossible without a firm foundation. Recent blunders and maladministrations abundantly prove the truth of this statement. Our Party should, therefore, exert itself to inaugurate a system of responsible Cabinets, which is the foundation of all political reforms."

It is the desire of the Progressionist Party that all its members, both those having seats in the Diet and others, should harmoniously coöperate for carrying out the above resolutions and other objects entertained by the Party.

VISCOUNT TANI & THE GOVERNOR OF TOKYO.

Viscount Tani seems to be employing all the zeal by which his pursuit of any cherished object is usually marked, to induce the Mayor of Tokyo, Governor Miura, to resign his office in deference to the opinion of the Committee appointed to examine and report upon the Iron-foundry frauds. The Governor justly observes that the Committee have no competence whatever to discuss his resignation, but Viscount Tani replies that whether the recommendation of the Committee be *ultra vires* or not, Governor Miura should adopt it if it be good—a species of argument to which the Governor naturally offers no conclusive reply. Viscount Tani is probably one of the most emotional statesmen in Japan. That is a distinction, at all events.

THE LIBERALS.

A general meeting of the Liberal Party was held in the buildings of the head-quarters at Shiba, Tokyo, on the 15th instant. The proceedings were opened by Mr. Ishizuka, the manager of the Party at 9 a.m. There were present over three hundred and fifty members. At the instance of Count Itagaki, Mr. Kono Hironaka was voted to the Chair amid enthusiastic cheers. Count Itagaki then rose and addressed the meeting as follows:—

The ninth session of the Diet being near, a general meeting has been convened in pursuance of the usual practice. I thank you on behalf of our Party for promptly responding to the summons and assembling here in such large numbers. I shall proceed to say a few words, as is my wont, about the policy of the Party. That policy was announced by a Declaration issued in July last, and was subsequently propounded in the Manifesto proclaimed recently; so that it is not necessary for me to dwell upon the subject at any length. The situation of affairs subsequent to the war has seriously increased the responsibilities of the Empire. Unless we increase our armaments, it will be impossible not only to preserve peace in the East, but even to guarantee the safety of this country. And in order that we may be able to increase our Army and Navy to an adequate point, and maintain them in a state of efficiency, it is of imperative necessity to nourish and develop the resources of the country. These two measures are of such paramount importance that any delay in carrying them out will have a serious influence upon the destiny of the country. Therefore, in respect of these two measures, all classes of the people should be united. In addition to this reason for combined action with those in power, it was perceived that an alliance with them would open hopes for perfecting the system of constitutional government, which is the basis of our national wealth and strength. Under these circumstances, our Party's alliance with the Cabinet, I am convinced, must be regarded as an act of patriotism well becoming a great political body like ourselves.

Our Party does not possess a majority in the Diet, and consequently it will be necessary for us to open communications with some other parties in connection with the questions that may be brought up for discussion in the coming session. In order to secure smooth and harmonious coöperation with other parties, it is not advisable to decide definitely beforehand upon the line of action to be pursued on each and every question. I hope, therefore, that you will repose confidence in those having seats in the Diet and leave them free to act according to the requirements of each case.

In conclusion, I wish to say a word of two on the future prospects of our Party. We have succeeded in obtaining the confidence of the country so that we now exercise a large degree of influence in the Legislature. But prosperous as its condition is, our Party has not yet secured a majority in the Diet, and consequently much remains to be accomplished. Perseverence, therefore, should be our motto. One word more about our alliance with the Cabinet. It is a mistake to suppose that we are ready to make any sacrifice short of abandoning our principles. But in so far as our political creed is not prejudiced, we should try to bury in oblivion whatever unpleasant passages may have taken place between ourselves and the Cabinet, so as to unite together for the furtherance of measures of national importance. We cannot lower our self respect and personal dignity. But it is at the same time important that the true proportions of things should be kept in view, and it should also be remembered that by retracing a step on one point we can often advance six on another. It is the virtue of constancy that has secured for us the confidence of the country. In adversity it is comparatively easy to be constant; but that virtue is more difficult to maintain in times of prosperity. We are nearing a period of prosperity, and it is my earnest wish that we should endeavour to remain true to the virtue by which we have thus far been distinguished.

On the conclusion of this speech, the Chairman called for the election of a Committee to consider and report upon the measures submitted to the meeting. To avoid the trouble of voting, the Chairman was unanimously requested to nominate the Committee, whereupon he nominated 10 members of the Diet and 5 ordinary members of the party. None of the persons selected is of sufficient standing to be named here: indeed, the nomination seems to have been made purposely from the ranks of

the third-rate members. The Committee withdrew to a separate apartment to enter upon their business at once. Meanwhile, the assembly listened to and approved reports on the general affairs and finances of the party.

At the instance of Mr. Okuno Ichijiro, Mr. Kayetsu Ujifusa was requested to thank the Leader and the Council of the Party for their zealous devotion to its interests. Mr. Kayetsu discharged the duty thus entrusted to him in a few well chosen words, expressing on behalf of the whole party, entire satisfaction with the alliance that the Leader and the Council had effected. The assembly then adjourned for tiffin.

At half-past twelve, the conference was resumed. On a motion by Mr. Hirata Shin, the assembly decided that, in order to secure promptitude and activity in the conduct of Party affairs, the Council of sixteen members should be replaced by a Political Committee of three. The nomination of the Committee was entrusted to the leader, who named Messrs. Kono Hironaka, Hayashi Yuzo, and Matsuda Masahisa. This nomination was enthusiastically received by all present.

The committee that had been nominated during the morning session to report upon the measures submitted for the approval of the assembly, then submitted their report. They recommended approval of the declaration of July 17th and of the Manifesto of Nov. 22nd. They further recommended approval of another measure for delegating to Liberals having seats in the Diet discretionary power with regard to the extension of freedom of the press and platform, the increase of the Army and Navy, the reform of finance, the promotion of education, the encouragement of industry, and other subjects likely to be discussed in the Diet. These recommendations were unanimously adopted.

Referring to a passage in the Declaration of July 17th, in which attention was called to the necessity of curtailing expenditures as far as possible, Mr. Takahashi Anji asked whether the sentence should be interpreted in the sense that the same policy formerly followed in the matter of reducing official expenditure was to be continued. In reply to the question, Mr. Hayashi Yuzo answered that, superfluous items were to be curtailed, there was no intention of demanding any reduction of necessary expenditures. Mr. Takahashi further asked whether it was contemplated to demand reductions such as would necessitate a modification of the Official Organization. Nothing of the kind, replied Mr. Hayashi, was contemplated.

Mr. Okubo Tango having asked for information about recent meetings between Marquis Ito and Count Okuma, Mr. Hayashi answered as follows:—"Those meetings occurred just when communications were taking place between our Party and the Cabinet on the subject of coalition. Marquis Ito sent for me and told me that, although he had received an invitation to dinner from Count Okuma, it was only a matter of social courtesy and had no political meaning whatever. The Marquis further assured me that his meeting with Count Okuma would not in any way prejudice the question of coalition with our Party, then under negotiation. Subsequently, in order to make the thing still more certain, I went to Oiso on the 13th ultimo, and had an interview with the Premier, when I satisfied myself that there was no intention on his part of coming to an understanding with the Progressionists. Two days afterwards, on the 15th ult., a meeting of the Council was held, at which it was decided to issue the recent Manifesto."

Mr. Takahashi then suggested that it would be advisable for his Party to be prepared to oppose the Government, should the latter form an alliance with the Progressionists. Mr. Hayashi declared himself of the same way of thinking. After a few more measures had been disposed of, Count Itagaki called for three cheers for the Emperor, the Crown Prince, and the Liberal Party. The call was lustily responded to, and the meeting adjourned at 2 p.m.

CIRCUMSTANCES AND CASES.

Last July we gave publicity to the fact that a subscription had been started among the Japanese for the relief of the families of soldiers killed in the war with China. Such an act of charity is perfectly natural. There devolves upon every State an obligation to make some provision for the families of men killed in battle or in the active discharge of duty. But while that is true, it is equally true that many cases of distress must fall outside the pale of any reasonable system of relief. If the extremes of suffering be taken as a basis, the scale must evidently be too high: if the mean be taken, it must often happen that the succour rendered is quite inadequate. The plain function of private charity is to look for and relieve those cases that lie beyond the reach of ordinary State aid. With that view a subscription was started among the Japanese last June, and in July the lists were opened to foreigners. Doubtless our readers remember the reception given by local foreign newspapers to the appeal. It was denounced as undignified and monstrous. In most emphatic terms those newspapers declared that upon the Government and the Government alone rested the duty of providing for the bereaved families. They even descended to the miserable *grossièreté* of assigning to each of the half dozen foreigners that subscribed, motives entirely independent of any charitable impulse. Four months afterwards the pinnacle of a British man-of-war was upset when carrying back to their ship a number of blue-jackets from drill on shore. A subscription was quickly started in the Far East for the relief of the families of the deceased, and not only were subscriptions received from persons not of British nationality, but the Japanese were strongly censured for not subscribing!! It is scarcely possible to believe that such flagrant self-stultification could take place, but the facts are undeniable. For the amusement of our readers we print, side by side, the comments of the two evening journals of Yokohama with regard to the Japanese relief fund and the *Edgar* relief fund:—

As to the Japanese Relief Fund.

So far from charitable emotions being evoked by the appeal, the only proper sentiment which should be entertained, is that of surprise that a Government should be so apathetic or so unmindful of what is due to the survivors of those who have perished in the war, and of the reputation of the country abroad, that she should have allowed the paltry scheme to be launched. . . . The responsibility of doing what is requisite, rests with the Government alone, and it should at once recognise it, for it possesses ample funds to meet every individual emergency that the war has created amongst the survivors of those who perished by battle, by hardship, or by disease. As the case stands, it is but paltering with the evil, to rely on the charity of private persons to relieve families' distress.

We regard the well-meant, but mistaken design of the projectors of the scheme, to be decidedly mischievous, inasmuch as they have intruded between the manifest duty of the Government and the sufferers, and it may be thought, have relieved it, in large measure of its responsibility.

Another Journal on the Japanese Relief Fund.

An attempt is to be made to obtain subscriptions from the foreign residents on behalf of the families of those killed in the war. We cannot endorse the appeal. Those killed died in the service of the Japanese Government. . . . That this community should put its hands into its pockets to execute the duty devolving on the Japanese Government is a monstrous proposition. Let the distressed be relieved out of the indemnity.

The same Journal on the *Edgar* Relief Fund.

Foreigners in Japan may be said to be creditably distinguished by the spontaneous voluntary contributions which they make to assuage the poverty and misery of Japanese sufferers by calamities, on occasions that arise which seem to justify an exercise of philanthropy. For these exhibitions of sympathy with suffering, many thousands of dollars have been subscribed by foreigners to relieve cases of Japanese loss and distress, but it is remarked that there is no reciprocity on the part of the Japanese when cases occur which appeal for the exercise of a similar spirit of benevolence on their part. Take the case of the relations of the seamen lost by the sinking of the boat of the British man-of-war *Edgar*, for which a subscription is in the course of being raised for those who were dependent on them. If any persons have the curiosity to look over the list of the names of the contributors, as published in the newspapers, they will not find the name of one Japanese included.

The same Journal on the *Edgar* Fund.

The *Edgar* Fund, as I anticipated, has reached very handsome proportions. The vessel was specially detached from the Mediterranean squadron for service out here in the stormy times of last year, and as British residents in the Far East do not contribute to the navy the opportunity to show their sympathy with the seamen was one which I should have thought no Englishman would miss. The Government does not look after the wives and children; that duty devolves on the public. . . . Yet on glancing down the lists I note one or two abstentions. Considering how cheerfully Englishmen subscribe to Japanese charities I expected to see many Japanese names.

It would be difficult to carry inconsistency farther than these journals have pushed it. The Japanese must be vastly amused.

"CONQUEST AND EXPATRIATION."

Under the above heading, the *Kobe Chronicle* discusses the treatment that ought to be extended by Japan to the Chinese residents of Formosa. Strange to say, our contemporary accepts without comment the typographically mutilated version of the 5th Article of the Treaty as published in these columns. The last clause runs thus in the original:—"At the expiration of that period" (two years from the date of the exchange of ratifications), those of the inhabitants who should not have left such territories, shall, at the option of Japan, be deemed to be Japanese subjects." The italicized words, "at the option of Japan," were dropped by the printer from our reproduction of the Article in our issue of the 5th instant, but the error was pointed out and its significance explained in our third succeeding issue (Monday 9th instant). Yet in the *Kobe Chronicle* of the 14th instant, we find the article quoted in the erroneous form originally given to it by our printers. The *Japan Gazette* has steadily adhered to the false rendering ever since. We are not surprised at that. If it be possible to blunder, the *Japan Gazette* blunders, and when the blunder serves to make a bad case for Japan, its permanent adoption is secured. With the *Kobe Chronicle*, however, things are very different. We should have expected it to consult the original under any circumstances before taking the Article as an editorial text, and above all, when our own editorial to which the *Chronicle* replies, is obviously based upon a treaty stipulation different from that appearing at the time in our columns, our *Kobe* contemporary should have detected the discrepancy. If the Shimonoseki Treaty's 5th Article had simply provided, as the *Kobe Chronicle* alleges, that any Chinese remaining in Formosa at the end of two years "shall be deemed to be Japanese subjects," how could we possibly have interpreted the Article to mean "that persons failing to avail themselves of the liberty to sell, will not be entitled to claim any status other than such as the Japanese Government may choose to confer on them"? Our issue of the 9th, containing the correction, must have reached *Kobe* on the 10th; that is to say four days before the *Chronicle's* editorial appeared. We observe, too, that the *Kobe Herald* has fallen into the same error, and drawn the same false deduction. With regard to the *Kobe Chronicle's* comments, with the spirit of which we agree, though the general argument is vitiated by the mistake above alluded to, we need make only one observation. Our contemporary writes thus:—

The clause which we quoted" (i.e. the misquoted clause) "at the beginning of this article binds Japan to regard the Chinese who intend to remain under Japanese domination as Japanese subjects, with the rights and privileges appertaining thereto. Had any other idea been expressed when the Shimonoseki Treaty was made, it is very certain that it would have been protested against by the Chinese Plenipotentiary, who would have been supported in his protest by the general opinion of the civilized world.

The *Kobe Chronicle* believes, then, that the inhabitants of conquered territory have an inherent claim to be regarded as subjects of the conqueror, and to enjoy all the rights and privileges appertaining to such subjects. Against any other idea, our contemporary says, the Chinese Plenipotentiary would have protested, and the general opinion of the civilized world would have supported his protest. As a matter of fact no such idea was embodied in the Shimonoseki Treaty. On the contrary, it was explicitly left optional for Japan to regard the inhabitants of the ceded island as her subjects or not, according to her own convenience, and neither did the Chinese Plenipotentiary protest, nor did the civilized world make any comment. But where, in any dictum of international law or in any historical precedent, is the principle embodied that our contemporary lays down? Does any civilized nation recognise such a principle?

MR. KONO HIRONAKA AT KYOTO.

Explaining the coalition between the Cabinet and the Liberal party at the meeting of the Kwan-sai Liberals at Kyoto, Mr. Kono Hironaka, the leader *Yiyu-to* in the House of Representatives, spoke to the following effect:—

"The alliance between our party and the Government is the result of a coincidence of views on the principal national questions. Allusion may, however, be made to three particular reasons which contributed to the consummation of the alliance. As a result of the recent war with China, our foreign relations have entered upon a new epoch of great responsibility, and in order to fulfill these responsibilities in a satisfactory manner the country must be united and harmonious. It does not require any uncommon intelligence to see that nothing could be more disastrous to the interests, and more unbecoming to the dignity of the Empire, than that the people should be engrossed in petty party disputes and contentions among themselves. Let us suppose for a moment that we join our voice to that of the parties bent upon attacking the Government on the question of the Liaotung peninsula, would it in the least help us to regain any part of the territory we have renounced? To waste precious time and energy on such a question, and at such a juncture, would be totally inconsistent with any love of the country. That is one of the reasons that induced our Party to bury in oblivion all recollections of former differences and join hands with those in power. When we opened communications with the Government on this matter, we discovered that they were of the same way of thinking, and our coincidence of views led to the present alliance. The next reason that caused the alliance was the urgent necessity of carrying out various measures of national importance, such as the increase of the Army and the Navy, the development of industry and commerce, and the promotion of education. The successful carrying out of these measures demands union between the Government and the Diet. That was another reason why we have sacrificed personal considerations in order to cooperate with those in office. A third reason is our conviction that by taking this step we shall effectually promote the introduction of a system of responsible cabinets—a consummation which has ever been the cherished hope of the Liberal party. For the attainment of that object, we have suffered much, but the only result of our endeavours has hitherto been to strengthen the Government's resistance to the realization of our object. To continue the fruitless struggle at the present juncture would be not only to thwart the carrying out of various measures of paramount importance, but also to retard the attainment of our longcherished object. Under these circumstances, it was thought more wise and patriotic to join hands with our antagonists and work with them in frank and manly cooperation, for such a course is better calculated to serve the interests of the country and facilitate the attainment of our political aims. Such are the principal reasons which made us decide upon an alliance with the Government. We have nothing to be ashamed of in all this, for we have throughout been actuated by the purest of motives, namely, a sincere regard for the good of the country. We have only to pursue the course that commends itself to our disinterested judgment. We are confident of our victory in the coming session of the Diet. But should we be defeated, we should be ready to hand over the government of the country to our opponents, provided they faithfully represented the sentiments of the people. But that is exactly what they do not do, and, under the circumstances, the consequence of our defeat, which we do not apprehend, must be an appeal to the country. Should the verdict of a general election be unfavourable to our Party, the Government will not hesitate to resign, thereby inaugurating a system of responsible cabinets. In that event, while regretting our own defeat, we should have good reason to be proud of having realized the principal aim of our Party. These things I allude to only hypothetically; I need not assure you that our Party's posi-

tion is not so precarious. We are confident of success. We ought, however, to be prepared for the possible amalgamation of the parties opposed to us. Of course, we are not afraid; such a contingency does not appal us; on the contrary, the union of our opponents is just what we are most desirous to see accomplished. All the same, we must bear this possibility in our minds and be prepared to repel the united attacks of our adversaries. In defending ourselves against our political opponents, much depends upon the attitude of local organizations, and it is for that reason that I have dwelt upon these things."

CURRENT TOPICS.

The first conference of the Opposition parties took place at the Kaizaku-yen, Nihonbashi, on the 14th instant. The Progressionists and others made great efforts to induce the National Unionists to attend the conference. The former, it is said, declared themselves perfectly willing to come to a compromise with the latter on the question of ministerial responsibility in regard to the Liaotung and Korean affairs, but the National Unionists refused to entertain any proposal for a compromise, and the conference came off without their presence. This was a source of serious disappointment to the Opposition parties, for all hope of obtaining the support of the National Unionists on the question of Ministerial responsibility must now be given up. The Progressionist organs, however, try to revive the drooping spirit of their allies by circulating a rumour that a split is inevitable among the National Unionists. According to this story, some Kyushu members of the Party, especially those from Satsuma, are discontented with the Chosu section, who advocate the unwisdom of attacking the Government on the Korean and Liaotung questions. Mr. Kashiwada Moribumi is said to be the leader of the discontented section. He and his followers propose, so the story runs, to demand that their Party adopt an attitude of hostility to the Cabinet on the question of foreign policy, and in the event of their demands being rejected, to secede from the party.

This rumour is most emphatically denied by the National Unionist organ, the *Chuo Shimbun*, which declares it to be one of the grossest falsehoods manufactured by the notorious news agency, the *Naigai Tsushin*. A neutral paper, the *Tokyo Asahi*, believes that at one time there was some danger of dissension among the National Unionists, but that the crisis has been successfully averted.

The National Unionists are to hold a general meeting on the 22nd. The manifesto to be issued on that occasion is in course of compilation by Messrs. Sassa Tomofusa, Kashiwada Moribumi, Minai Giichi, and so forth. The document has not yet been finally drafted, but according to the information of the *Tokyo Shimbun*, the new Liberal organ, the line of policy contemplated by the National Unionists seems to be in all essential points the same as that of the Liberal Party.

THE LOAFER IN TOKYO.

The loafer seems to have definitely found his way to Tokyo. It is a new experience for the citizens of the Japanese capital. They have had their itinerant mendicants and their alms-asking perambulatory priests, but the gentleman that eats his meals wherever he can find them, never pays for anything, and roams about in ragged garments with an air of general proprietorship is a novelty. The police don't appear to know how to deal with these products of Western civilization. One of them is disporting himself in the neighbourhood of Kyobashi, to the great annoyance of the respectable citizens, but the guardians of the law profess themselves unable to make him "move on" permanently. So the *Chuo Shimbun* says at all events.

THE HORSE BREEDING PROBLEM.

A recent number of the *Kokumin-no-Tomo* contains a valuable contribution on this subject from Mr. Kaneko Kentaro, Vice-Minister of Agriculture and Commerce. The first point to be considered, says the writer, is whether horses for military purposes should be bred separately from those destined for the ordinary uses of life. There is no necessity for such a distinction. Riding horses of private gentlemen can be used as officers' chargers, and horses for drawing guns may be recruited from horses habitually harnessed to carts and waggons. As for commissariat horses, they are the easiest to obtain; there are plenty of suitable animals in the country. Hence there is no necessity whatever to make any distinction between horses destined for military and civil purposes. In Austria, the distinction is maintained, but in other countries, like France and Germany, such is not the case.

The next point discussed is the selection of sires for stud purpose. Some persons advocate the importation of approved foreign breeds, both sires and dams, so as entirely to supplant the native breed of horses. That plan is rejected by the Vice-Minister of Agriculture as unworthy of serious attention. No such experiment has ever been tried in any country in the world. The course best adopted to the needs of the country is that tried with such encouraging results in all other lands, namely, crossing the native breed with stallions imported from abroad. In that way have been produced nearly all the famous strains of horse in Europe and America. Imperfect as Japanese ponies are in many respects, it is impossible to believe that many centuries of existence in Japan have not produced in them qualities adapted to the peculiar climate and topographic conditions of the country—qualities that it should be the aim of breeders to develop and perpetuate. Mr. Kaneko thinks, therefore, that the first point to be kept in view by those concerned in the improvement of horses in this country should be to preserve and perfect the best native breeds. The next thing necessary is to cross the best Japanese breeds with some of the best foreign breeds, such for instance, as the Arabian or the English. These two processes should form the principal methods of improving horses in Japan. But simultaneously with the pursuance of the above programme, Mr. Kaneko deems it advisable to import sires and dams of some well known breeds, such as the Arabian, the English thorough-bred and so forth, with the object of ascertaining whether these breeds can be perpetuated in Japan in their original purity, and if not, to study in what manner their characteristics are modified.

The writer has something to say about the importation of breeding horses from abroad. In reply to his enquiry on the subject, a certain foreign expert once called his attention to the importance of entrusting the selection and purchase of sires to properly qualified Japanese. The Vice-Minister of Agriculture and Commerce concurs entirely with that view, for no one but Japanese can correctly ascertain what sort of horses are adopted to the requirements of Japan. As to the country from which the purchase should be made, some sires will have to be procured from Germany, England, and the United States, but the countries to which the writer particularly wishes to draw the attention of those interested in the improvement of horses, are Australia and New Zealand. It is from these lands that the military horses in India are now principally supplied. He justly observes that it would be at least worth while to try the Australian horses:

The selection of pastures is another topic that engages the writer's attention. Useful as his suggestions on this subject doubtless are to those practically engaged in the business, we do not think it necessary to reproduce them. He dwells further on the importance of keeping pedigrees of horses. Indeed he lays very great stress upon this point, seeing that a practice of such importance is seldom, or never, followed by breeders in Japan. The valuable essay concludes with one or two useful suggestions.

One is to the effect that, in making the annual purchases of military horses from private breeders, the Military Authorities should give precedence to the Government's breeding establishments, since otherwise there is danger of the supply of good sires becoming insufficient. Another piece of advice relates to the season for holding competitive horse exhibitions. At present they are usually held in April, a time of year unsuitable for reasons obvious to experts. The writer suggests that October would be better.

EDUCATIONAL ITEMS.

The establishment of a University in Kyoto has long been the expressed desire of a large section of the public. The wish is now to be gratified, for we learn that the Department of Education has decided upon carrying out the measure, the sum necessary for the purpose having been incorporated in the Budget for next fiscal year. The institution will take some years to develop. In the first year of its establishment, there will be colleges only of Jurisprudence, Engineering, and Medicine. Other Colleges will be added by degrees.

The Department of Education has decided upon a radical change in the system of hospitals attached to the College of Medicine in the Imperial University. The present system is to maintain the hospitals by the income derived from fees paid by patients. It appears that the patients, since they pay to be treated, are naturally averse to being used as subjects for clinical lectures. That, however, is the principal purpose for which hospitals are attached to the College. Moreover, under the present system, the patients being persons of some means, it seldom happens that, when death occurs, the relatives consent to the dissection of the bodies. Consequently, in order to obtain a sufficient supply of corpses for dissection, the College has been compelled to apply to the prisons for unclaimed corpses. Even in this way, the supply has yearly decreased, as may be seen from the following figures relating to the number of dead bodies dissected at the College:—

Year.	No. of dead bodies dissected.
1892	263
1893	161
1894	138

On the other hand, the number of students is expected to increase from next year at a rapid rate, principally in consequence of the increased numbers of cadets that will matriculate with a view to enter the Military medical service. Thus the number of students admitted to the College (about 30 hitherto), will next year increase to 60, and the following year to 150, and since the demand for bodies to dissect and for facilities for clinical study will increase proportionately, the hospitals are to be placed on a purely charitable system, patients of the poorest classes only being admitted. The maintenance of the hospitals, or hospital—as the two now maintained are to be amalgamated—will cost about 58,000 *yen*. At present the two hospitals stand, one in the College grounds at Hongo and the other at Shitaya. As the buildings are old and incomplete, they are to be pulled down, and new ones erected in the College grounds after the best scientific style. The total expense is estimated at 460,000 *yen*, a part of which has been included in the Budget to be submitted to the Diet next session.

THE SHANGHAI SPINNING COMPANY (JAPANESE).

The first general meeting of the Shanghai Spinning Company (Shanghai Boseki Kaisha), took place at the Bankers' Assembly House, Tokyo, on the 3rd instant. Mr. Nakamigawa Hikojiro, of the Mitsui Bank, was in the chair, and there were present above 280 persons. Mr. Asabuki Eiji undertook the task of explaining the various measures submitted for the approval of the assembly. The first subject of discussion was the constitution of the company, the draft of which was adopted without any change. The

next business related to the salaries of the Directors and Assessors. On this topic, too, the draft was approved in its entirety. The scale of salary adopted was 300 *yen* per annum for each of the ordinary Directors; 500 to 1,500 *yen* per annum for a special Director, upon whom will devolve the principal control of business at the head office in Tokyo; 3,000 to 5,000 *yen* per annum for each of the Directors and Assessors in Shanghai; and 150 *yen* per annum for an ordinary Assessor in Tokyo. The election of officers was then proceeded with. To avoid the trouble of voting, Mr. Imamura Seinosuke, a well-known banker, proposed the following names, and his proposal was adopted:

Mr. Nakamigawa Hikojiro	}Directors.
Mr. Masuda Takashi	
Mr. Komuro Sankichi	
Mr. Asabuki Eiji	
Mr. Uyeda Yasusaburo	
Mr. Suyenobu Michimasa	}Assessors.
Mr. Umakoshi Kyohei	
Mr. Hamaguchi Kichiyemon	

The assembly then approved the disbursement of some 2,500 *yen* by the promoters for floating the scheme. Leave was given for the purchase of a site for the factory in the English settlement at Shanghai at a price of about 30 *yen* per *tsubo*, the total area being 4,600 *tsubo*, and the aggregate cost, 140,000 *yen*. Several contracts entered into with foreign and Japanese machine-makers, were also endorsed. Mr. Naruse Ryuzo, late of the Osaka Commercial Academy, received the appointment of Chief Manager of the Company. He is one of the earliest graduates of the Tokyo Commercial College, and for some years discharged the duties of *Kanji* (Manager) and Professor in that institution, after which he proceeded to Europe to complete his studies, staying several years in Belgium. On his return, he was appointed President of the Osaka Commercial Academy. The Company may be congratulated on having obtained the services of a man of his information and business ability.

The largest shareholder of the company is Mr. Mitsui Takayasu, with 4,777 shares. He is followed at some distance by Mr. Komuro Sankichi, with 860. Among other principal shareholders, we may mention Messrs. Shibusawa Eiichi, Wakamigawa Hikojiro, Masuda Takashi, Fujita Denzaburo, Oye Taku, Toyokawa Ryohei, Watanabe Hiromoto, with whom are many persons well known in the field of Japanese commerce.

THE TOKYO CHAMBER of COMMERCE AND CHINESE COTTON.

A memorial has been presented to the Tokyo Chamber of Commerce over the signatures of four of its members, Messrs. Asabuki Eiji, Masuda Takashi, Wakamigawa Hikojiro, and Shibusawa Eiichi, on the subject of the importation of water-impregnated cotton by Chinese merchants. The memorialists suggest the advisability of drawing the attention of the Authorities to this subject, and requesting the issue of instructions to His Imperial Majesty's Consul-General at Shanghai, to open communications with the Chinese Taotai for the correction of the nefarious practice. The memorialists hear that the matter has been taken up by the Consuls of Holland, England, and the United States, and if instructions have not yet been issued to the Japanese Consul on the subject, it is high time that they should be. Of the total quantity of cotton exported from Shanghai during the year 1894, namely 930,350 piculs, more than one-half, or, to be exact, 517,835 piculs, came to Japan. In the opinion of the memorialists, from 13 to 15 per cent. of the weight represented moisture with which the cotton had been dishonestly saturated by the Chinese. Of course, in the long run, China has to suffer for this, but Chinese cotton being the principal supply to the Japanese mills, it is highly important for the sake of both countries that prompt steps should be taken to check the evil.

THE WAR INDEMNITY AND ITS EMPLOYMENT.

It is agreed on all sides that the greater part of the money received from China as war indemnity should be applied to increasing the country's armaments. But opinions differ as to the manner in which the remaining amount should be employed. Among the suggestions thus far made, it is proposed, for instance, that, after defraying Military and Naval expenditures, the residue should be devoted to purchasing foreign consols as a war fund, to extending the country's steamship service to foreign countries, to establishing an industrial bank, and so forth. The latest proposal comes from educational circles. It is to the effect that one-tenth of the indemnity, that is to say, 30,000,000 *yen* in round numbers, should be set apart for educational purposes. As to the exact nature of the objects to which the sum should be applied, there are two plans. One is to divide it in varying amounts among the primary schools of the Empire as foundation endowments. According to the census for the year 1893, there were 23,000 primary schools in the country, so that the sum distributed would be, on the average, a little less than 1,500 *yen* per school. The other plan is to devote the 30 million *yen* entirely to endowing one or two universities. Those in favour of the latter plan say that the sum is not sufficiently large for distribution among the primary schools with any hope of perceptibly beneficial results; while if used for endowing one or two Universities, it would do incalculable and permanent good to the country. It is reported that a large number of influential members of the Diet are disposed to press the claims of education for a share of the indemnity.

COUNT OKUMA ON FINANCIAL SUBJECTS.

The *Chugai Shogyo Shimbun* publishes an elaborate account of a conversation that its representative recently had with Count Okuma on various economical subjects. After dilating upon the history of trade prosperity and depression, enumerating the various causes usually at work to produce commercial stagnation, and alluding to the efficient manner in which the Bank of France, with its enormous specie reserve, regulates the money market in that country, the Count went on to speak of the economical condition of Japan. He had reason to be thoroughly satisfied with the recent economical development of Japan. In 1878, when he was Minister of Finance, the first domestic public loan was raised, namely, the Industrial Loan. In what a state of infancy the economics of the country then were, might be judged from the fact that, issuing the bonds (face value 100 *yen*) at only 80 *yen* with interest at the rate of 6 per cent. per annum, the Government had great difficulty in obtaining the required amount of subscriptions. The thing being new, there was a general hesitation to respond to the encouraging terms offered by the Government. Ultimately the Authorities had to assemble the principal capitalists and exhort them personally to subscribe to the loan. Even then the subscriptions hardly came up to the required sum. What a wonderful change had since come over the moneyed classes of the country! The Count alluded with satisfaction to the ease with which the recent War Loan had been floated. Then passing to the subject of interest on money, he regretted that the rate was still very high. At present the rate of interest charged by the Bank of Japan on loans was 2 *sen* per diem, in other words, approximately 7 per cent. per annum. There being now a general industrial mania, it might be supposed that the increased demand for capital would lead to a rise in the rate of interest. But Count Okuma said that such a result would be averted by the gradual transfer to Japan of the indemnity now lying in the Bank of England. It was true that a great part of the sum would be required for the purpose of increased armament, but still, in his opinion, the transfer of the remainder would

increase the bulk of the circulating media sufficiently to prevent any great appreciation of interest. There was of course danger in too much inflation, but the Count was confident that such a peril would be successfully avoided, since there were now competent men in the Treasury, in the Bank of Japan, and in the Specie Bank. He had no doubt that the decline of the rate of interest would go on steadily though slowly, until it reached about the level now ruling in London. Much of course would depend upon the sagacity and judgment of the men in positions to regulate the money market.

On another occasion, writes the same journal, Count Okuma spoke as follows with regard to the manner of employing the war indemnity paid by China:—"I hear that among business men some suggest that one-half of the money received from China should be used for military and naval purposes, and that the other half should be devoted to commercial and industrial purposes. But I must differ from that programme. In my opinion, no step should be taken that might tend to necessitate an excessive inflow of money into the country. On this subject, I do not feel any uneasiness because I have confidence in the ability of those charged with the direction of public finance. But how is the money to be used? The safest and wisest course, in my opinion, would be to buy foreign consols to the amount of, say, 100 million *yen*. But the consols of what country? It would be inadvisable to touch those of any European country on account of political reasons. I would advise the purchase of American consols. The money thus invested would form an emergency reserve. As to the rest of the indemnity, it should be devoted to the redemption of the temporary debts incurred in connection with the war, to the increase of the Army and the Navy, and to the establishment of an Industrial Bank. No large capital would be required for the last mentioned purpose; 10 million *yen* would suffice."

SUSPENSION OF THE "YORODZU CHOHO."

The *Yorodzu Choho* has been suspended, evidently on account of an article, written in English, discussing the Liaotung question. We have always been puzzled to understand the object of the *Yorodzu Choho's* English column. Presumably it is intended to bring within the ken of Western readers a conception of Japanese popular opinion on any particular subject. But, frankly speaking, we can not regard the writer of the *Yorodzu's* English articles as a representative of Japanese public opinion, and we should be very sorry to think that the sentiments he expresses have the endorsement of any considerable section of the nation. For example, in the article that has just evoked official condemnation, he advocates two things; first, that, at the time when European intervention between Japan and China seemed imminent, the statesmen of the former country should have proposed to divide Korea between Japan and Russia, accompanying the division by a defensive and offensive alliance; and secondly, that, failing the above scheme, an indemnity of a thousand million taels should have been exacted from China, Manchuria being held as a pledge of payment, and things being so arranged that the territory ultimately revert to Japan in lieu of hard cash. That is the kind of international chicanery advocated by the *Yorodzu Choho*. Plainly, if the fortunes of Japan were presided over by statesmen holding the views of our contemporary, this empire's name would stink in the nostrils of civilized nations, and the continuance of peace even for a day could not be assured to the Orient. If ever the interference of the censor were justified, it is to prevent the dissemination of such mischievous and misleading views. Nevertheless, we shall heartily rejoice when the suspension of newspapers in Japan can be dispensed with: in other words, when public opinion can be left to discriminate between the good and the bad without official guidance.

THE MARLBOROUGH-VANDERBILT WEDDING.

The Marlborough-Vanderbilt marriage seems to have attracted much more attention in America than the mere fact of an alliance between a great deal of money and very high rank would justify. The exceptionally interesting elements appear to be, first, that all pretence of mutual affection was dropped out of the affair, and, secondly, that it came as a kind of climax capping a series of similar though smaller events by which an immense sum of money has passed from the New World to the Old. The Duke himself, when admitting his engagement, is said to have been careful to add that it had been arranged by his friends and by those of the young lady. Thus it was a pure business affair: every element of romance was eliminated. Nothing remained of the pleasant fiction so sedulously preserved among Anglo-Saxons everywhere, that all marriages are love-matches. Moreover, for the first time statistics were consulted, and the public learned that within the space of a few years no less than a hundred millions of dollars had been carried from America to Europe as the price of titles for young ladies of the Great Republic. Striking elements were not wanting, therefore. Indeed this replenishing of noble British coffers by means of the dowries of American heiresses has now been elevated to the rank of an international question. On the English side it is prettily claimed that a nobility of wealth exists, and should be recognised just as certainly as a nobility of descent or of patented creation. The faculties by which great riches are acquired deserve social recognition no less than the faculties of statesmen, diplomats, and soldiers. A man possessing millions and purposing to bestow them on his daughter, has a right to look for a son-in-law in a rank above that of the plodding masses. Hence the union of American coin with British coronets possesses a kind of natural and logical sanction. That is the English view of the matter. But the American view most recently announced is that, instead of buying titles for their daughters, the millionaires of the States should be eligible for nobility themselves. "What is the remedy for this state of affairs?" asks an American journal. "Something less than \$100,000,000 has been carried to Europe within a comparatively few years by penniless lords who perhaps regarded the girls they had to accept with the millions as incumbrances. How are we to keep our girls and their money at home? Something must be done, or else we shall not be able to export enough corn, wheat, and cotton to prevent all our gold from going to Europe."

"No doubt Congress would have been petitioned long ago to grant titles of nobility if it could do so. Would it not be better to amend the Constitution by striking out the section prohibiting titles of nobility, than to allow our great heiresses to be dragged away to Europe? Isn't it worse to lose our rich girls and their cash than to risk the dangers to be apprehended from titles of nobility? We are sure the framers of the Constitution never thought of the probability of an American girl having \$10,000,000 with which to purchase a duke, or 15,000,000 with which to purchase a count. If they had they might have hesitated about adopting that clause of the Constitution which compels Money Bags and his wife to remain plain Mr. and Mrs. Can not the Colonial dames and sons and daughters of the Revolution point out some way to save our rich girls from sacrificing themselves for titles? Here is an opportunity for them to distinguish themselves and render their country a real service."

TREASURE CAPTURED IN THE WAR.

The ingots of gold and silver captured by the Japanese troops in the war, are now being coined at the Osaka Mint. Half a million *yen* have been already struck, and it is expected, according to the *Nichi Nichi Shimbun*, that as much more will be coined, making a million in all.

THE SPINNING INDUSTRY.

Spinning factories are rapidly increasing in Japan. We may mention a few of the projected companies. The Tōkwa Soseki Kaisha is the name of a company formed by a large number of capitalists in Osaka, to start a spinning factory in the American settlement at Shanghai, working 75,000 spindles, and having a capital of 3,000,000 *yen*. Application for a charter has already been made through the Osaka City Government, and as soon as it is granted, a general meeting of the shareholders will be held. The construction of the factory buildings will be commenced early next year. A site for the factory has already been bought, at the rate of about 14 *yen* per *tsubo*, the total area being some 12,000 *tsubo*.

Another projected company is the Kashu Boseki Kaisha, the principal promoters of which are capitalists of Osaka and a few from the province of Kawachi. The capital is to be 500,000 *yen*. Application for a charter was presented on the 14th instant. It is not stated where the factory is to be located.

It is reported that there prevails an idea among persons connected with the spinning industry that any further increase of mills is calculated to be injurious to the healthy growth of the business. According to investigations recently conducted by the United Guild (*Ren-go-kai*) of Spinners, the number of spindles, including those projected, now exceeds a million. The following statistics refer to the companies belong to the United Guild:—

	Number.	Spindles.
Factories at work	58	632,130
Spindles in course of increase in the above factories	—	251,344
Factories newly projected	6	101,083
Total	64	984,557

Besides the above, there are a number of companies, mostly newly organized, that have not joined the Guild; for instance, the Kyoto Boseki, the Hei-an Boseki, the Fushimi Boseki, the Bizen Boseki, the Nishinari Boseki, the Tokwa Baseki, and so forth. Taking these into account, the total number of spindles is put at 1,119,557.

THE MEDICAL PROFESSION IN JAPAN.

The *Fiji Shimpō* makes some interesting remarks on the present condition of the medical profession in Japan. It being understood that medical matters will be the subject of some debate in the coming session of the Diet, our contemporary finds the moment opportune to study the question. Some people boast of the country's progress in matters of medicine, but the *Fiji* advises them to moderate their pride, for the Japanese medical profession is still in a state of infancy. The number of physicians in January last was as follows:—

1. Old practitioners allowed to practise without examination	26,650
2. Graduates of the College of Medicine and practitioners licensed after examinations	12,984
Total	39,634

Among the old practitioners, some are competent physicians that have studied medicine after the Dutch system or under masters trained in that school, but the majority are followers of the old Chinese system. Even the medical men belonging to Class II. include some that were admitted to practise prior to the years 1884-1885. These are generally inferior in knowledge and skill to men whose licences bear later dates, for the standard of examination was very much lower in former years.

It is only fair to remark that some physicians of the old Chinese School have secretly studied the new system and made themselves tolerably conversant with the principles of modern medicine, though for the sake of appearance they still pretend to follow in everything the canons of their original creed. The late Dr. Asada Sōhaku, a celebrated leader of the old

school, was one of these secret converts to Western medicine. But ninety-nine out of every hundred are ignorant and worthless quacks. Besides making constant mistakes in the diagnosis and pathology of diseases, they spare no pains to pander to the conservative ideas of the provincials, and studiously excite the prejudice of the rustics against the Government's sanitary measures.

The evils are not confined to the old school. A majority of the so-called new physicians are said to be deficient in knowledge and experience. It is commonly complained against practitioners of this class that they are rough and careless in examining patients. A much more serious abuse prevalent among them is that they seldom use medicines of a costly nature. It is true that they are not entirely to blame for that, being as they are, hampered by the exceedingly tenuous nature of the gains they make. An ordinary private practitioner does not get any fee; his sole source of revenue is the sale of medicines to his patients. The price demanded for medicine is from 6 to 8 *sen* per diem, and it is the physician's chief concern to use the cheapest possible drugs.

Such being the condition of the medical profession, the *Yiji* engenders the advisability of altogether prohibiting practice by the physicians of the old school. If such a step be thought too severe, measures should be taken to collect these physicians at some convenient places, and instruct them in the principles of modern medicine. They should subsequently be examined, and only those that successfully pass the examination should be licensed to practise. Another measure of equal importance is the separation of medicine and pharmacy, at present combined by every Japanese physician. It is obviously impossible to carry out this measure in remote localities where properly qualified pharmacists do not exist. But in all the principal towns the step ought to be at once taken.

THE TELEPHONE SERVICE.

That the experiments conducted by experts despatched by the Communications Department to Nagoya, for connecting that place with Tokyo by telephone, were attended with satisfactory results, has already been stated in these columns. The experiments since carried on at Osaka and Kobe have been equally satisfactory. It is even asserted by the authorities that communications between Tokyo and Kobe were more distinct and clear than those between the different parts of the metropolis. These experiments were conducted by the use of the telegraphic wires during the small hours of the morning, when there was comparatively little danger of interfering with the transmission of telegraphic messages. The telegraphic lines between Tokyo and Kobe are of copper, and may thus be used for the purpose of telephone experiments. But beyond Kobe, copper and iron wires are stretched indiscriminately, and more troublesome preparations are therefore required for conducting such experiments. It is reported that experiments to the southward of Kobe will be resumed early next year, it being the Government's intention to extend the service ultimately to Nagasaki in the south and Hakodate in the north.

THE "KOKKAI."

The *Kokkai* has ceased to appear. Our readers are doubtless familiar with the name: time and again the *Kokkai's* editorials have been translated or referred to in these columns. Nothing could be simpler or more straightforward than the *Kokkai's* announcement of its own demise. It merely says that after five years of effort in the cause of the country, it finds its purpose unattainable, and nothing remains, therefore, but to cease publication. Expressed in vulgar language, that intimation signifies that the struggle against financial difficulties has proved too much for the proprietors. Formerly, the *Kokkai* used to be edited by Mr. Shiga, the head and front of the *Kokkai-ho-*

sonto, or elective conservative party. In these days, it was a journal of comparatively sober tone and much literary ability, having for its steadfastly pursued objects the stemming of the tide of foreign innovations, and the preservation of what was good in the customs of Japan. After some three years spent in the editorial chair of the *Kokkai*, Mr. Shiga transferred his attention to the *Nippon-jin*, which is now the organ of the elective conservatives. He was succeeded in the *Kokkai's* office by Mr. Suyehiro Shigeyasu, a well known Progressionist leader, and from that time the paper became ultra-Progressionist. With Mr. Suyehiro to edit it, there could be no question about the talent shown in its editorials, but it did not touch the spirit of the time, and failure has overtaken it. Of late it has been understood that the paper received much aid from the *Asahi Shimbun*, for though the politics of the two journals are radically different, some personal relationship seems to exist between their proprietors.

CONVENIENT QUOTATION.

We have observed, with some amusement but without any surprise, that whereas the opening letters of the series recently published by *The Times* from a special correspondent, were carefully re-produced in this Settlement, the process of reproduction ceased so soon as the letters assumed a tone favourable to Japan. That is a striking illustration of some of the comments contained in the suppressed letters. We reprint here a few paragraphs worthy of special notice:—

Whatever the precise circumstances which precipitate hostilities, a nation cannot properly be charged with provoking a war of wanton aggression when the enemy against whom it is waged has himself been for years past compassing schemes of unmistakable hostility. The Japanese were far too well informed of all that was going on in China not to be aware that as far back as 1882 the Celestial Empire had determined to seize the earliest opportunity of arresting the progress of Japan and definitely restoring, by force of arms, the supremacy which in theory it had always claimed over her. In a memorial presented in that year to the Throne by Li Hung-chang, it is expressly stated that such must be the cardinal object of China's policy. "Your Majesty," he says, "has graciously ordered me to undertake the responsibility of preparing the plan for the invasion of Japan," and if the Viceroy deprecated the immediate recourse to arms then contemplated at Peking, it was only because he had formed a more correct appreciation than his colleagues of the relative fighting strength of the two countries. "My humble opinion is, let us not lose sight of our plan of invading Japan, but let us not commit the mistake of doing this in a hurried manner. . . . In one of the ancient maxims it is said, 'Nothing is so dangerous as to expose one's scheme before it is ripe.' On this account I have in a former memorial recommended to your Majesty that we should be extremely cautious and take care to conceal our object, whilst neglecting nothing to raise our strength in the meantime." Finally, after discussing what might furnish "the best case for bringing about a rupture with Japan and coming to extremities," he repeats "that it is above all necessary to strengthen our country's defences and to organise a powerful navy, and the aggressive steps against Japan should not be undertaken too hastily." This was the policy which, in however blundering a fashion, China had never ceased to pursue; and in these circumstances Japanese statesmen cannot be blamed for having taken up in 1894, under conditions which they believed favourable to their country, the challenge thrown down to them in Korea by the high-handed proceedings of the Chinese. Had the influence of England at Peking been exercised to its fullest extent either by the late Government when the Korean complications assumed a more immediately threatening shape last year, or by its predecessors during the long incubation of China's hostile designs against Japan, the latter might have been saved the necessity of vindicating by force of arms her right to work out her national development free from Chinese obstruction, for that was really the question fought out on the battlefields of Korea and Manchuria. Up to the very outbreak of war there is every reason to believe that Japan would have been satisfied with any substantial concession implying a practical confirmation of the equality of Japan already formally recognised by China, es-

pecially if such a concession had been made under the pressure, and therefore, by implication, under the guarantee of England. But the fatal delusion that China was not only our natural ally, but an ally whose alliance was worth cultivating, had led us for years past to remain conveniently blind to the general trend of Chinese policy towards Japan, and Lord Rosebery's Government in this respect merely followed at the crucial moment in the footsteps of its predecessors.

What, however, weighed perhaps most strongly against Japan with European, and especially British, public opinion was the bitterness entertained towards her amongst the foreign communities of the Far East. It would not be fair to ascribe this bitterness solely to the jealousy engendered by trade competition, or to the even unconscious perception of the fact that a helpless country like China affords a more promising field for the undisturbed enterprise of European than an active and go-ahead country like Japan. It must be admitted that there is one very important point in which Japan does not bear favourable comparison with China. In both countries the native commercial classes are strenuous and intelligent, but whereas in China their relative probity, ability, and trustworthiness stands out conspicuous against the vices of the ruling classes, they comprise in Japan some of the least estimable elements in the country. Until the new era of Japanese history they were looked down upon by the old feudal aristocracy with a contempt far more aggressive than that displayed by the Chinese mandarins towards the corresponding classes in the Celestial Empire. Under these conditions, the Japanese merchants or traders, being a kind of social pariah, was not restrained by the same sense of self-respect which governs other classes of the community, and he acquired, too often justly, the reputation of being thoroughly unscrupulous and untrustworthy. When Japan was thrown open to foreign intercourse, the European merchants naturally sought to guard themselves against the bad faith of the native traders by measures which, however necessary at the time, could not fail to prove more and more galling to a hyper-sensitive people in proportion as the attitude of Japanese society itself towards the mercantile classes underwent a more complete transformation. Trade and commerce have long since ceased to be tabooed, and many of the highest and ablest and most honourable men in Japan are to-day directly associated with important banking, industrial, and trading enterprises. There are now not a few Japanese firms which, for absolute integrity and trustworthiness, can bear comparison with any of the European firms established in Japan. Nevertheless, the standard of mercantile morality, although it has been undeniably raised, is by no means as satisfactory as it should be. Only this summer, for instance, a guild of Japanese merchants combined to defeat the ends of Japanese justice by compelling an English firm, under threats of a general boycott, to partially waive recovery of a judgment pronounced in its favour by a Japanese Court of law in a really outrageous case of breach of contract. Such incidents naturally breed ill-feeling and distrust, and, though the remedy does not lie in reprisals and recriminations, it is not surprising that the European communities in Japan often allow their judgment to be overborne by prejudice. It is all the more to the credit of the late Government that, in the face of violent local opposition and of ignorance and indifference at home, they were the first to recognise by a generous revision of our treaties the right of Japan, in spite of many shortcomings, to be treated no longer either as a child or as an out-cast amongst the civilised nations of the world. Freely granted before the warlike achievements of Japan had strengthened her claim, this concession was a statesmanlike act, of which the satisfactory effect upon the relations of the two countries were only temporarily weakened by certain unpleasant incidents connected with the earlier stages of the war, and by the unabated virulence of the anti-Japanese feeling in a large section of the English Press of the Far East. They were subsequently confirmed and reinforced by our refusal to join with France, Russia, and Germany in their imperious intervention on behalf of China.

Her Majesty's first-class cruiser, *Blake*, completed her official machinery trials on the 6th inst. with a four hours' run under forced draught, in the presence of the engineer-in-chief of the Navy and a number of officials attached to Chatham dockyard and the Medway Fleet Reserve. The trial was attended with successful results, and at its conclusion the *Blake* returned to Chatham dockyard to be completed for passing into the A Division of the Medway Fleet Reserve as ready for further service.

OUR CIVILIZATION.

WHEN Viscount TORIO, some four years ago, penned his indictment of Western civilization from a moral point of view, his words attracted little attention among foreigners. Why should they indeed? To the average foreigner the Viscount was simply a politician with a "fad;" a conservative unwilling to accept any portions of Western civilization except such as should pass through a very fine sieve of Oriental traditions and sentiments. Yet Viscount TORIO'S essay showed remarkable insight. He saw clearly the immense shadow of egoism that mparts such a sombre aspect to the life of the West, and he appreciated, and would fain have preserved, the altruistic elements of Japanese ethics. That he fathomed the whole problem, we greatly doubt. It is so terribly perplexing; so confused by contradictions. If, on the one hand, we have a multitude of persons driven solely by the lash of selfishness, on the other, we find men and women whose unique idea is sacrifice. Need we say that among the latter we do not include heroic Christians; missionaries that expose themselves to martyrdom and accept lines of privation for the sake of their creed; or men that impoverish themselves by deeds of charity, and devote all their abilities and energy to accomplishing something that shall be worthy of the Nazarene's example? We do not include these persons, for the simple reason that they are Christians, and Christianity, pure Christianity as it flowed from the Messianic spring, stands sharply opposed to the egoism of modern Occidental civilization. Sociality is the soul of Christianity. Did a JESUS appear now upon earth, in Germany let us say, he would run imminent risk of being thrown into prison as a social democrat, and would certainly evoke the haughty anathemas of an EMPEROR whose dynasty, in its rapid rise to the seats of the mightiest, has nevertheless held the Testament of JESUS ostentatiously higher than its diadem. But outside the ranks of Christians for Christianity's sake, there is no lack of men and women who, by splendid obedience to a spirit of nobility that the Western world, with all its egoism, worships more fervently and appreciates more keenly than ever, furnish ideals worthy to be the bases of any ethical system. These persons are the perplexing factor. How much, if any, of their moral grandeur do they owe to the development of modern civilization, and in what fashion do they own it? Have the immoral excesses of the time driven them to heroic revolt? Are they simply types of the greatness which, after all, characterizes this age in every sphere? Or are they representatives of the finer elements of humanity thrown into strong relief by their incongruous environment? We do not know how to answer these ques-

tions. But we can see how even the fairest section of our species is being rapidly invaded by the egoistic blight. Among women at least it used to be possible to look confidently for beautiful types of refined altruism. But the woman's emancipation movement, though it seems to make little progress toward the nebulous aims that it is supposed to contemplate, has certainly produced marked effects in society. The modern young lady is rapidly asserting independence of time-honoured forms and *convenances*. Her parents or guardians occupy a constantly diminishing space in her life outside the domestic sphere. She plays for her own hand, shaking off restraints once effective, and entering the arena of competition with all the keen egoism that fills the commercial, industrial, and political atmosphere of the era. To many the spectacle suggests infinite pity and regret. They remember the old adage that the measure of a man's respect for a woman is the respect the woman feels for herself, and they wonder how many hearts must break, how many names be tarnished, before this new departure ceases to have the disturbing significance of novelty. But in truth it is all an enigma. That "something amiss" which is to be "unriddled by and by," seems to come more and more into the foreground. No wonder that men of the East, like Viscount TORIO, shrink from the terrible egoism of the civilization now offered to them by the West, and see something comparatively noble and worthy in their own old ethics, for even to Occidental eyes the cloud on the horizon grows yearly larger, and philosophers ask with anxiety whether it is to overspread the whole sky, or to be dispelled, if not by socialistic forces now repellant in their guise and shocking in their potentialities, then by a breath of renewed Messianic influence such as the Christian optimists confidently predict.

THE CHINESE IN FORMOSA.

THE ingenuity shown by some of the local foreign newspapers in manufacturing materials to malign the Japanese is surprising; very malevolent ingenuity, it is true, but still, as ingenuity, a faculty that evokes astonishment. Our recent suggestion about the Chinese in Formosa furnishes an example. There are some 2½ millions of these folks in the island. Many of them have settled there in comparatively recent years, and if they were now to leave Formosa and cross over to China proper, they would be simply returning to their native country. So long as Formosa formed a part of the Chinese empire, these people had no objection to remain there. But it is very conceivable that, after the island's cession to Japan, many of them, if not the greater part, might desire to get back to China. Provision was made for such a contingency in the

Shimonoseki Treaty. A period of two years was there allowed for the Chinese to determine whether they would remain in the ceded territories. And it was further provided that if they decided to remain, their permanent status should be determined by the Japanese Government at its own option. Concerning this arrangement the ingenious critics above alluded to inform us that "Japan and China contracted to commit a crime in the eyes of international law," and that Japan "believes the crime to be legalized because of the contract." What on earth was the crime? Does international law assert that inhabitants of conquered territory have a right to be placed on the same footing as subjects of the conqueror? If so, why does not Great Britain concede to the Hindus, Mohammedans, and other residents of India, all the privileges of British subjects? Why does she not extend the same privileges to the Zulus, the Maoris, the Hottentots and all the rest of the motley populations inhabiting her vast empire? And if neither Great Britain nor any other Western Power recognises such a principle, why should Japan and China be declared to have "committed a crime in the eyes of international law" because they do not recognise it? Passing from this ridiculous criticism of the Shimonoseki Treaty, we revert to the idea suggested in these columns a short time ago, premising that it was wholly our own idea. Our critics pretend to believe that it was the idea of the Japanese Government. That is their regular habit. Whenever they find in these columns anything capable, as they imagine, of being perverted to the discredit of the Japanese Government, they treat it as an official utterance. Whenever they find anything which, if official, would inconveniently expose their own wild assertions, they treat it as an utterance of the *Japan Mail* alone. Such dishonesty, if carried into the practice of every-day business, would soon bring a man to oakum picking and prison diet. But as a guiding principle of Yokohama journalism, it is very clever and very pretty. With respect to the Chinese in Formosa, however, the ingenuous device may be abandoned; for if any Japanese ever entertained the notion expounded by us, we have not the remotest knowledge of his existence. We wrote our own thoughts and our own thoughts only. At present the situation in Formosa, is this:—The Chinese residents must determine, before May 1897, whether to dispose of their property, leave Formosa and return to China; or to retain their property, remain in Formosa, and receive, from May 1897, whatever status the Japanese Government may decide to assign to them. Until they know what that status will be, they are not in a fair position to choose between the alternatives of remaining or departing, and every day that such knowledge is withheld from

them, embarrasses the situation by shortening the time allotted them for selling their property. Our suggestion is that they should be placed in possession of full information as quickly as possible. But what form should the information take? All experience has shown that Chinese settlers in a foreign country never work for the good of that country; never concern themselves about its interests; never coalesce with its people; never can be employed for its defence. Formosa, from the time of its inclusion in the Japanese dominions, became a foreign country in the eyes of the Chinese living there. They will be, for all time, a community apart, and their great initial numbers, as compared with any probable influx of Japanese colonists, will ultimately enable them to swarm over the whole island. Is that a prospect to be contentedly contemplated by the Japanese? Of course there is no question whatever of preserving good order. The *Japan Gazette*, with its wonted hysterical blundering, says:—"Japan has acquired a very valuable island, but is afraid of the people. Conquerors as a rule have no misgivings as to the people victory gives them dominion over. * * * The true conquering race must possess the faculty of maintaining order among any kinds of men whom the fortunes of war have entrusted to its care. But Japan peeps into the future and is afraid of her own destiny. She distrusts herself. The Chinese in Formosa will, if allowed to remain there, peaceably overcome the Japanese; prove in fact that they are the superior or race?" Is it not strange that such silliness should be seriously penned? The Americans, then, are not a conquering race, distrust themselves, and are afraid of their own destiny, inasmuch as they restrict Chinese immigration. The Britons in Australia are not a conquering race, distrust themselves, and are afraid of their own destiny, inasmuch as they exclude the Chinese. The Russians are not a conquering race, distrust themselves, and are afraid of their own destiny, inasmuch as they drive out the Jews. Bah! Writers of such babyish ineptitudes ought to be re-tied to their mothers' apron-strings. It is not to be supposed for a moment that Chinese remaining in Formosa after May, 1897, will acquire the full status of Japanese subjects. The mere fact of their necessary exemption from military service must discriminate against them. What, then, will be their status? In our opinion, the wisest plan would be to place them on the footing occupied by Chinese subjects in all other parts of Japan's dominions. And in the event of that resolution being taken, it ought to be announced quickly, for it might evidently influence the choice of the Chinese as to staying or remaining. At the same time, since it might induce a large exodus, and thereby depreciate the price of fixed property, to the hardship of would-

be emigrants, the Japanese Government should announce its willingness to buy up, at duly assessed prices, any lands not finding private purchasers. The *Japan Gazette* denounces such a project as a "proposed confiscation of the estates;" "a monstrous cruelty;" "an idea too appalling to contemplate," and so forth, terms charmingly applicable to purchasing a man's property from him at its market value. It is precisely what the people of the United States have been doing to the Indians for many years, but our eminently logical contemporary deems such methods quite applicable to the North American Indians, because "they were mere nomads, not civilized tillers of the soil." If they were mere nomads, then they could have no title to any lands whatever, and there could be no question of buying them out. Perhaps these critics that have denounced our suggestion with such a show of virtuous indignation and such volleys of wild words, would kindly explain what they expect Japan to do with the Chinese in Formosa. Is she to enrol them among her own subjects and confer on them all the constitutional rights attaching to that status? If she does, she will be the first nation that ever yet treated the alien inhabitants of conquered territory in that fashion. And if she is not required to do so, what limits is she to place upon the privileges enjoyed by them? Finally, need we take serious notice of the manifestly ridiculous assertion that because we suggested applying the Liaotung indemnity to official purchases of real property in Formosa, we estimated the total value of such property at thirty million taels, or $12\frac{1}{2}$ taels for each member of a population of $2\frac{1}{2}$ millions? The total population has to be divided by about five to find the number of families, and how many of such families own real property, or how many of them would fail to find private purchasers for their possessions. We have no clue to the Japanese Government's intentions, except that they are believed to be of an extremely magnanimous character, but, for our own part, we believe that unless the problem be solved in a drastic manner, it will involve great trouble hereafter.

THE GERMAN REPRESENTATIVE AND THE HYOGO AND OSAKA CHAMBER OF COMMERCE.

THE German Representative in Tokyo has had an unpleasant interchange of Communications with the Hyogo and Osaka Chamber of Commerce. In connection with the subject of insufficient Custom House accommodation at Kobe—a matter that has long caused much inconvenience to the foreign merchants of that place—the President of the Chamber, in obedience to a resolution passed by that body, addressed H.E. Baron VON GUTSCHMID, in his capacity of Doyen

of the Corps Diplomatique. Baron VON GUTSCHMID seems to have given full attention to the matter, and in the sequel of certain steps taken by him, he sent two letters to the German Consul in Kobe, at the same time directing the latter to inform the Chamber that these communications were confidential and not to be published. Up to this point everything had proceeded smoothly and in accordance with recognised precedent. But the President of the Chamber of Commerce now took a singular step. He returned the German Representative's letters, covering them by a communication to the German Consul in which he used the following language:—

I observe that this information is transmitted to me at the request of Mr. von Krencki upon condition that it is to be considered as confidential and not to be published.

After consultation with my committee, I have reluctantly come to the conclusion that it is out of my power, as Chairman of the Chamber, to receive any communication of the nature indicated, coupled with such conditions. Under the rules of the Chamber, our Meetings are open to the Press, and it is therefore clearly impossible for me to restrict the publication of any information that may be laid before the members at such meetings, even did I consider it desirable that a matter of such very general interest should be kept from the knowledge of the commercial public.

As I am unable therefore to comply with the conditions under which the above communications have been sent to me, I beg to return them, and trust later on to receive through your hand further information, such as I may be at liberty to make known to the members of the Chamber and others interested in this very important subject.—I am, &c., &c.

It must be confessed that the tone of this communication leaves a great deal to be desired. Not only does it lack all the expressions of courtesy usually considered essential in such documents, but there is a *de-haut-en-bas* ring about it that could scarcely fail to give offence. A Chamber of Commerce, after all, is simply a private association of merchants, acting in combination for their own convenience. So far as their proceedings are calculated to promote the general interests of trade, and so far as their representations relate to subjects falling fairly within the scope of treaty privileges, the former are entitled to sympathy and the latter to support. But a Chamber of Commerce is not vested with any competence to address itself, in its collective capacity, to the Foreign Corps Diplomatique. Every British subject among its members has a perfect right to prefer complaints to his own Consular or Diplomatic Authorities, every French citizen to his, and so forth. Englishmen, Frenchmen, Germans, and other nationals, however, possess no publicly recognised title to constitute themselves into an association *vis-à-vis* the Corps Diplomatique, and to address that body. That they should do so is, on the whole, a matter of mutual convenience, but assuredly any communications from a Chamber to the Corps Diplomatique ought not to be couched in language indicating the assumption of official status, and above all, should not be lacking in forms of courtesy suitable to the relations in which the corre-

A CORRECTION.

spondents stand toward each other. In the particular case under review, it appears to us that the natural course for the President of the Chamber to adopt would have been to tender thanks through the German Consul for the trouble taken by the German Minister, and to explain, with all due courtesy, that the condition of privacy attached to the Minister's communications placed the President in a somewhat perplexing position, inasmuch as all the proceedings of the Chamber were usually made public, and it would be difficult to make an exception with regard to a matter of such general interest as Customs accommodation. Under these circumstances, the President might have added that he should await a further intimation of the Minister's wishes through the German Consul. But instead of taking such a measure, the President at once returned the Minister's communications—an act in itself very far from polite—and, without the least expression of thanks for what had already been done by Baron VON GUTSCHMID, wrote as though he were giving expression to an indisputable right:—"I trust later on to receive though your hands further information, such as I may be at liberty to make known to the members of the Chamber." In short, he said in almost as many words:—"Re-write your despatches: they are not in a form suitable to the customs of this Chamber." Naturally the German Minister was considerably incensed by such treatment. His reply to the President of the Chamber was sharp, short, and decisive:—

The Minister had expected that the Hiogo and Osaka Chamber of Commerce would express to him its thanks for the serious attention which he had devoted to its representation. Instead of that the Chairman of that association, which is a mere private one and has no claim to be recognised as a public institution, has thought it fit to refuse in a letter which was far from polite a communication which Baron von Gutschmid had made to him under the condition that it must be considered as a confidential one. It was not consistent with his position as Minister Plenipotentiary and Doyen of the Diplomatic Corps to enter into discussions with the gentlemen of the Chamber of Commerce. It was sufficient to let them know once for all that according to established rules communications of Diplomatic Representatives are always of a confidential nature, and not intended for publication. Under these circumstances, in view of the pretensions of the Chamber of Commerce of Hiogo and Osaka, the Minister has to abstain from replying in future to representations of that association.

It is certainly to be regretted that the German Representative did not see his way to conveying his merited rebuke in terms less calculated to embitter the relations between the Chamber and the Corps Diplomatique. But there is no denying that the blame rests originally with the Chamber, whose President seems for the moment to have forgotten the prudence and tact that have gained for him a high reputation in Japan.

Messrs. Kudo Kokan, Ito Daihachi, Magaki Jocho, and others purpose constructing a railway between Kizukuri, Nishi-tsugaru District, and Kuroishi, Minami-tsugaru District, via Goshogawara, Kita-tsugaru District, Aomori Prefecture, at an outlay of yen 600,000.—*Chuo Shim-bun*.

WE observe that one of our evening contemporaries, in two consecutive issues, has published a statement that the Japanese Government has "had to recognise its liability for what appears in the *Japan Mail* by consenting to exercise its power of control over its conductor's pen." That is an unqualified falsehood. The Japanese Government could not possibly have recognised any such liability, since no such liability exists, and as for consenting "to exercise its power of control over the pen of the conductor of the *Mail*," no one in the world possesses any such power save the conductor himself. These deliberate falsehoods are wittingly published from time to time, evidently as a mere device of journalistic competition. There can be no doubt that the obvious dishonesty of their fabricators must defeat its own purposes in the minds of all fair-minded men. Were the *Japan Mail* an official organ, we should have no hesitation whatever in acknowledging the fact, since we hold that the Cabinet has even more need of a newspaper to explain the purpose of its measures and to dispel misconceptions about its administrative or international actions, than any political party has. But the *Japan Mail* is not such an organ, nor could any foreign journal be such an organ, we think, under present circumstances. We have often found ourselves in an attitude of direct opposition to the Japanese Government. For example, when the Imperial Court and the Cabinet united, a few years ago, to introduce foreign costume for ladies as well as dancing and other social customs incongruous with the national tendency of the Japanese, and, in our opinion, not conducive to their interests, we steadily maintained the inadvisability of such innovations, and events have proved the correctness of our judgment. It is amusing, too, to notice how frequently our local critics, the very writers by whom we are habitually charged with subserviency to Japanese views—it is amusing to note how frequently these same writers express naïve surprise at finding us adversely criticising acts, official or private, committed by the Japanese. That our sympathies have long been with the Japanese, we have never attempted to conceal, and we do not imagine that any one can now be found to deny that our judgment of their capabilities and prospects was sound. Any Japanese Cabinet, in which the guiding spirits are statesmen like Marquis ITO, Count INOUE, Count MUTSU, Marquis YAMAGATA, Count OKUMA, Count MATSUKATA, and others of the so-called *Meiji* Statesmen, will always have our support, because we believe that to these men Japan owes her remarkable progress and her present position, and because we believe that, under their direction, she

will always be led along the paths most conducive to her civilized interests. It is not the business of any English journal published in Japan to snarl perpetually at everything Japanese, to exhibit a profound prejudice against the people of the country and their rulers, and to spare no effort that may help to make Englishmen unpopular. The journal most conspicuous for its adherence to that miserable rôle pretends that its animosity is roused by the attacks of the *Japan Mail* upon the independent foreign press. Such a pretence is characteristic. For years past, not the smallest notice of that journal's writings has been taken in these columns, whereas scarcely a day has gone by without its publishing some article, note, or letter abusing and maligning the *Japan Mail*. The whole performance is contemptible, and if we stoop to notice it now, our object is simply to deny in the most unequivocal terms the falsehood that any power of control has been, or can ever be, exercised over this journal by anyone. More than one Foreign Representative has attempted to bring pressure to bear upon the *Japan Mail* by appeals to Japanese officialdom, but they have merely learned that no such means of bringing pressure was available, and that if they desired to obtain a hearing for their views, they must appeal to the editor personally.

THE PHILOSOPHY OF HUMAN PROGRESS.

IN the striking Proem to "Romola," GEORGE ELIOT imagines the spirit of a mediæval Florentine returning from the shades to hover over the city his body had inhabited four centuries before. Were such a man, an Englishman, let us suppose of the time of WILLIAM of OCCAM, indeed to return among us, he would doubtless be greatly astonished at our trains and our steamboats, our big guns and our dynamos, and all the other marvels of nineteenth century civilization; but if he were afflicted with the malady of thought, there is something that would astonish him a great deal more, and that is the modern conception of progress. It would take him long to understand, longer still perhaps to sympathise with, the manner in which we look forward to a sure if slow amelioration of the common lot of humanity by the practical application of scientific discoveries, on the one hand to the formation of character, and on the other to the diffusion of material comfort. Our forefathers, those of whom our imaginary visitor was one, in so far as they felt any active dissatisfaction with the average human lot of their time, contented themselves, some with regretful backward glances toward the imaginary golden age of a remote past, others with unfruitful aspirations toward the extra-mundane joys of a hypothetical future. Occupied with these chimæras, they concerned

themselves not at all about the questions that we now regard as the vital problems of existence; and Europe in the dark ages, while it employed itself eagerly about the nature of the Trinity and the destiny of the disembodied soul, exhibited towards such questions as the nature of the human mind, and the destiny of the actually existing human race, an impassivity that modern Europe has learned to stigmatize as Oriental.

With the Renaissance, inasmuch as it was a great rush forward of the whole of western Europe, it was inevitable that the theory of progress should begin in some degree to occupy men's minds; and among the Humanists of Germany we find, amid all the wild fervour of the Reformation, a group of thinkers devoted to the quiet consideration of man's real needs and of the best means of satisfying them. But for the most part the impulse of the Renaissance spent itself in other channels. Men's thoughts were filled, first with the religious revival, and then with the reaction that this revival evoked: later attention was occupied with political and industrial changes; and though the natural sciences continued to advance, there was no idea of an affiliation of all the sciences in the general interest of human progress. In the end of the last century, indeed, progress came to be a word often in men's mouths; but it represented rather the vague yearning of the poetical dreamer, or the crude scheming of the political enthusiast, than the steady striving of the scientific thinker: and when the nineteenth century opened, so disastrous had been the apparent results of the French Revolution, that progress was a word of evil connotation, and for decades no respectable member of society was willing to march under the banner on which it was inscribed. What has succeeded in rescuing the idea of progress from the mire? What power has revived, enlarged, and transfigured it, until it has become the leading thought of the age? The change has been mainly effected by the establishment of the doctrine of evolution, a doctrine that will for all time be associated with the name of DARWIN. With the publication of "The Origin of Species," there opened a new and glorious chapter in the book of the destiny of man.

In no sense of course was CHARLES DARWIN the founder of the theory of evolution. It had been dimly foreshadowed even by some of the philosophers of ancient Greece; it found expression during the last century in the works of ERASMUS; it was definitely formulated by LAMARCK, and by SCHOPENHAUER even the hypothesis of selection (*Auswahl*) for the general benefit was clearly indicated. To the genius and the industry of CHARLES DARWIN, however, the widespread acceptance of the idea of evolution was primarily due; and it is in con-

sequence of his work that, though there is far from being agreement among men of science as to the methods of evolution, no doubt is any longer possible of the fact. The theory of natural selection, the theory of DARWIN, of WALLACE, and of WEISMAN, is so well known that it is not necessary to offer any exposition of it here. Less familiar, however, to the general public is the Lamarckian theory, which preceded it and has to some extent supplanted it. This theory was to the effect that development proceeds in obedience to a conscious impulse from within. The individual organism, actuated by desires, makes efforts for their satisfaction. By the repetition of these efforts its structure becomes modified in such a manner that satisfaction is more readily attained. The modifications thus produced, slight in the single organism, become, through summation by successive inheritance, considerable in the species. Among the illustrations given by LAMARCK in support of this hypothesis, the best known is that of the growth of the neck of the giraffe. This animal has a taste for the young and tender leaves that grow on the tops of certain trees. By the continual desire to crop these leaves, says LAMARCK, the animal has at length succeeded in elongating its neck so as to reach them easily. The example has usually been regarded as a *reductio ad absurdum* of the Lamarckian hypothesis. "Who," it is said, "who by taking thought shall add a cubit to his stature?" The criticism is unsound, for the records of religious enthusiasm on the one hand, and the results of modern scientific enquiry on the other, the stigmata of ST. FRANCIS, the "miracles" worked at Lourdes, and the equally marvellous cures by "suggestion" in the consulting room of a Parisian professor, all alike bear witness to the potent influence of mental representations in producing changes in the physical organism.

Notwithstanding the criticism of WEISMAN and his school, Lamarckianism holds its ground side by side with Darwinism; and the inheritance of acquired modifications, these modifications being the result of conscious efforts on the part of the organism for the attainment of a definite aim, is considered by many more important even than natural selection as a factor in evolution.

It might be thought that the decision in this matter would be of a purely theoretical interest, but we shall endeavour to show that in this case, as in most others, practice is closely bound up with theory, and that the consequences of accepting the Lamarckian view are momentous for the welfare of the race. The first question that an abstract thinker sets himself to answer with regard to any theory, is, of course, not "Is it advantageous that men should believe it?" but "Is it true?" Let us grant for the purpose of the present argu-

ment that the Lamarckian theory is true, and we shall see that it becomes of infinitely more importance in the doctrine of human progress than the rival theory of natural selection. With regard to the lower animals, Lamarckianism is merely a suggestive hypothesis; but with regard to man, in whom alone among animals we find continuous and highly developed conceptual thought, it is a superlatively fruitful idea. Among other animals, the wish for immediate sensual gratification is the sole instigator of modifications: representation there is, more and more definite as we rise higher in the scale of the end to be attained; but it remains always nothing more than the representation of a definite material aim. In the mind of man for the first time we meet with an abstract ideal, for the attainment of which he strives with a reasoned, not as heretofore merely an instinctive, adaptation. Moreover, in the human species we find the members no longer isolated units, combined, so far as they are combined, merely by social instincts that at times compel the subordination of the individual to the common good; we find them consciously bound together in a social organism, and social progress becomes a rational ideal to be attained by conscious mutual effort. And by a species of mental contagion, the aspirations of the leaders of thought, of the men whose ideas foreshadow the social type of the future, influence the conception and animate the efforts of men in whom the idea of progress would never have spontaneously arisen. The logical outcome of the Lamarckian theory is thus unceasing conscious effort for the evolution of a higher type of social organisation; the logical outcome of the theory of natural selection is, with as much content as we can muster, to adopt the principle of *laissez-faire*, and to waste no energy in useless interference with the forces that, slowly and blindly working, lead to evolution. Put tersely, the conception of natural selection, on which especial stress was laid by DARWIN, and for which an exclusive importance has been claimed by many of DARWIN'S successors, leads us to regard the needs of the species as the coercive force in the progress of the individual. According to the school of LAMARCK, we must regard the aspirations of the individual as the directive force in the progress of the species:—

Alh, but a man's reach should exceed
his grasp,
Or what's a heaven for?

says BROWNING'S "Andrea Del Sarto." Viewed in the light of the Lamarckian conception of progress, these words, no longer representative of a vague and unfruitful yearning for a supra-mundane ideal, become instinct with a new and profound significance for the general welfare of our race.

DARWIN himself was mainly concerned with the general biological aspects of the

conception of evolution; he paid little attention to the narrower, though more vital question of human progress. HERBERT SPENCER, however, to some extent an anticipator of DARWIN, and the inventor of the phrases, "struggle for existence" and "survival of the fittest," was among the first to see the enormous importance of the light now thrown on the development of human character and the origin of human institutions. He above all others directed the attention of thinkers to the need for a scientific study of sociology. But great as his work was, it was marred throughout by a serious defect. Though he was not himself, like many of the later expounders of the doctrine of evolution, "more Darwinist than DARWIN," though he recognized in the abstract the wide importance in evolution of other factors than natural selection; yet, when he came to apply the doctrine of evolution to the scientific study of human society, he seemed to forget in fact what he continued to assert in theory, that any other principle was at work in human development than a blind interaction of natural forces. Conscious aspiration towards an ideal aim and conscious combination for the realization of this aim are to be effective, if effective at all, in an almost infinitely remote future. In human society, as at present constituted, the best the thinker can do is to sit apart and to watch the play of the blind forces of evolution, interfering only when he sees a possibility that the misdirected efforts of consciousness may lead to a modification in some degree of the pitilessness of natural selection, and that social combination, tempering the struggle for existence, may hinder the working of the evolutionary forces and bring about the survival of the unfit. The study of sociology leads in fact, according to SPENCER, to an apotheosis of *laissez-faire*. It is by their systematic neglect of one half, and that the more important of the theory of human progress, that we can explain the barren individualism of SPENCER and his school.

In contrast with the individualists we find a group of sociologists who run to the opposite pole, men who overestimate the capacity of the will in the modification of human character, and on the other hand under-estimate or ignore the importance of the principle of natural selection. These writers put before us an admirable finished scheme of the Socialist state, they cast it in the next century or even in some hitherto undiscovered continent of our own nineteenth century world. Here, in perfect harmony and content, all loving one another and all working for the common good, live these fictions of the poetic imagination, these Jekylls that have eliminated Hyde. Self-seeking and idleness have disappeared from the face of the earth. And how? By a simple fiat of the will. The mere representation

in idea of the qualities necessary for the maintenance of the Socialist state has sufficed to bring those qualities into being. This has not been the result of a long and arduous strife; it has come in a day, in an hour, by a species of mental *coup d'état*. With regard to the other aspect of the socialists' misreading of evolution, the manner in which they ignore the principle of natural selection, it is hardly necessary to speak, for enough has been made of it in current criticism of socialist schemes. In a socialist state, we are told, the incentive to effort would be removed, the struggle for existence would cease, and in consequence there would follow a degeneration of type. The charge is often exaggerated, but it has never been fully met; and the difficulty of supplying adequate incentives to effort, and the difficulty of ensuring sufficient competition to foster a healthy perpetuation of individual force of character and physique, remain the most serious objections to any schemes that have been put forward of a finished socialist state. But criticise these schemes as we may and must, the socialist gospel remains a gospel of enlightenment and hope, whilst the purely individualist gospel is a gospel of darkness and despair. The socialist points forward, saying, "Here is the path of progress; march boldly along." The individualist stands in the path with arms thrust out across, saying: "This way is no way; ye cannot find the way." Remote as may seem the possibility of the realisation of the socialist ideal, that ideal remains a potent means for the direction of corporate effort and the formation of individual character.

Of late years, however, not content with the individualist to sit down in inaction, nor willing with the socialist to try to run before he has fully learned how to walk, the scientific student of human progress has turned his attention in other directions. He recognized that if his aim was the elevation of human nature, the first step must be to gain a knowledge of human nature as it is, of man's tendencies towards good, and how to encourage them, of his tendencies towards evil, and how to repress them. Disregarding the error-fraught assumptions of religion and metaphysics, he set himself to establish on the firm ground of observation and experiment the sciences of human and comparative psychology, and he then proceeded to the application of the knowledge thus gained in the formation of a practical philosophy of human progress. History teaches us how, in the "dry light" of science, astrology grew into astronomy, alchemy into chemistry. A similar change is going on under our own eyes in the development of the newly constituted science of society. The workers are still in the outer court of the temple; the day of great generalizations has not yet arrived; indeed as often happens in such cases many of the best

workers, with their attention fixed on details, are hardly conscious of the wider end to be attained. But year by year, almost month by month, so rapid is the advance, the mystics and the doctrinaires are more utterly discredited; and groundless suppositions and vague half-truths give place to firm inductions and to valuable hypotheses on the high road to verification. Those of our readers that wish to study some of the most characteristic and valuable results of the anthropological work of the last few years, may do so in the writings of the generally acknowledged leader of the new school, the great Italian psychologist, CESARE LOMBROSO.

RAILWAY NEWS.

Among the numerous railways newly projected, mention may be made of a few of the principal. The leading moneyed men of Izumo and Hoki are organizing a company to construct a line from Yonago, via Matsuy, to Kizuki, a distance of about forty-five miles. A number of more or less well known merchants of Osaka have applied for a charter to lay a line from the Umeda Station to Kimen-san, via Hattori, Okamachi Koji, and Hirao, with two branches from Hirao. The total length of these latter lines is 19 miles, and the estimated capital 1,000,000 *yen*. The Kan-to Tetsudo Kaisha, which obtained a provisional charter on the 15th instant, has decided to extend its original line between Hakodate and Yukawa as far as Mori, an increase of 1,200,000 *yen* in the capital. The latest project is reported from Wakayama, in the province of Kii. The company is a small one, with a capital of only 150,000 *yen*.

Concerning the extension of railways in Japan during the past twenty-four years beginning with 1872, the *Fiji Shimpō* publishes the following figures:—

Year.	Government lines. Mile chain.	Private lines. Mile chain.	Total length. Mile chain.	Increase per year. Miles chains
1872...	18.00...	—	18.00.....	—
1873...	18.00...	—	18.00.....	—
1874...	38.27...	—	32.37.....	20.27
1875...	38.27...	—	32.27.....	—
1876...	65.31...	—	65.31.....	27.05
1877...	65.31...	—	65.31.....	—
1878...	65.31...	—	65.31.....	—
1879...	75.34...	—	75.34.....	10.03
1880...	97.21...	—	97.21.....	21.87
1881...	97.21...	—	97.21.....	—
1882...	131.36...	—	131.36.....	34.15
1883...	131.36...	38.00...	169.36...	38.00

1887...	285.18...	295.79...	581.17.....	158.41
1888...	443.11...	333.11...	776.22.....	195.05
1889...	550.59...	573.47...	1,124.26.....	348.04
1890...	550.59...	811.22...	1,362.01.....	237.75
1891...	550.59...	1,162.30...	1,713.09.....	351.08
1892...	550.59...	1,312.38...	1,863.17.....	150.08
1893...	550.59...	1,366.29...	1,924.08.....	60.91
1894...	550.59...	1,510.61...	2,068.40.....	144.32
1895...	593.52...	1,650.12...	2,243.64.....	175.24

The figures in the above table all refer to the end of the respective years, with the single exception of 1895, in the case of which the date referred to is the 30th November.

Eight Korean military officers entered the Seijo Gakko at Ichigaya, Tokyo, on the 19th inst. The school was inspected by the Korean Minister on the 16th inst.

Marquis Ito, the Premier, who is said to have resolved upon resigning immediately after the close of the next session of the Diet, intends to proceed to Russia with H.I.H. Prince Fushimi. The Premier had an interview with H.I.M. the Emperor on the 17th inst., when he is said to have replied to His Majesty that he will retain his post in the interim. It is also stated that the Marquis informed the Emperor about the coalition between the Cabinet and the *Fiyu-to*, and asked for Imperial sanction.

MARINE NEWS.

The Osaka Shosen Kaisha (Merchant Steamship Company) proposes to increase its capital of 2,500,000 *yen* to double of that amount. Mr. Tanaka Tashichiro, Vice-President of the Company, is now in Tokyo on business connected with the contemplated increase of capital. Two ships recently purchased by the company—namely, the *Maisuru* (formerly the *Continental*, constructed in England in 1890, tonnage 1,052 tons, speed 12 knots), and the *Suma* (built at Nagasaki this year, tonnage 1,505 tons, speed 10½ knots)—are to be used on the Okinawa, Korean, and Hokkaido lines. The company has two wooden vessels in course of construction.

There are two rival steamship companies in the Prefecture of Kochi, namely, the Doyo Shosen Kaisha and the Tosa Gun Yusen Kaisha. Negotiations that have for some time been going on between these companies for amalgamation, are said to have been brought to a satisfactory conclusion on the 13th instant. The amalgamation is to take place in January next, with the united capital of 1,000,000 *yen*. The company proposes to extend its steamship service, first, to Hokkaido and Formosa, and in course of time, to Korean and Chinese ports.

KOREAN NEWS.

December 14.

The letters just received by the leading Tokyo journals from their Söul correspondents throw little, if any, fresh light upon the real causes and the general political aspects of the disturbance of the 28th ult. Constant mention is made of rumours about the alleged implication of some foreigners and certain Korean refugees in foreign Legations; but these rumours having already been noticed in our columns, no further reference to them is necessary here. The letters, however, are pretty full and apparently tolerably trustworthy in their description of the details of the disturbance.

The present Palace Guards consist of two battalions, each divided into two equal parts composed respectively of the former *Kunrentai* troops, namely, those drilled under Japanese officers, and of the old Palace Guards. The *Kunrentai* section is quartered within the precincts of the Palace, the duty of guarding which is exclusively entrusted to these troops. The other half, consisting of the old Guards trained under American instructors, is assigned to the barracks formerly occupied by the Söul garrison in the vicinity of the Eastern Gate of the city. It was at the head of part of these latter troops that the leaders of the recent conspiracy advanced to the Palace.

The officer under whose command the men acted on that occasion was Li Dotetsu, who, until very lately had been commander of the garrison at Phyöng Yang. He seems to be a man of adventurous spirit. Last year, he was leader of a band of *Tonghaks* in Chung-chong-do. On one occasion he was hardly pressed by a Japanese force under Captain Ishimori, but somehow managed to escape. Afterwards, he offered, through a local functionary, to surrender to the Japanese officer on condition of being allowed to retrieve his past offence by new services. Captain Ishimori agreed to the proposal, and took the rebel leader under his charge. Li Dotetsu, being a man of courage and address, so far succeeded in winning the confidence of the Japanese officer, that, through the latter's recommendation, he received a commission in the Korean army. After the flight of Pak, the well known Minister of Home Affairs, Li Dotetsu, being suspected of "strong leaning to the Pak faction, was put on the retired list, and thenceforth devoted himself to brooding over the

misfortune of his fallen star. All correspondents are agreed in believing that, in this state of mind, he was easily prevailed upon to take an active part in the recent disturbance.

Whoever may have been his employers, Li Dotetsu appears to have been the principal agent in arranging the military part of the programme. He sounded the commander of the guards quartered in the Palace, and obtained a promise of assistance from within when the projected attack upon the Palace should be made. But this promise was a ruse on the part of the commander of the Palace Guards, who at once reported the matter to the Cabinet Ministers and took thorough measures to defeat the expected attack. Li Dotetsu, however, entertaining no suspicion of his friend's duplicity, busily made preparations for the intended attack, entirely unconscious of the fact that he was closely watched by the Government's detectives.

On the evening of the 27th ultimo, he went to the barracks of the Guards that had been formerly guardians of the Palace, and pretending to act under the special command of the King, ordered them to accompany him to the Palace. A few of the officers, who were in the secret, at once complied with his orders, but one of two protested against the irregularity of such a proceeding. These latter, however, were overruled by the majority, and had to follow the rest in the unsuccessful attempt. It is stated that these Guards had rifles but no ammunition. A few days previously one of the officers in the secret had succeeded in conveying a quantity of cartridges from the Palace, but these were of no use, as the arms carried by the old Guards were different from those in possession of the former *Kunrentai*. Confident in the promised support of his friend in the Palace, Li Dotetsu did not mind this serious difficulty. Arriving at the Palace gate at about 1.30 a.m. on the 28th ultimo, he was so rash as to climb the wall together with several other officers, thus easily falling prisoners into the hands of the Guards stationed inside the gate. Simultaneously with the arrest of these conspirators, the gate was flung open, and the troops without were vigorously charged and dispersed.

While on their way to the Palace, the conspirators sent a messenger to the Japanese Legation, with a letter informing the Minister of their projected attack, and imploring him not to order out the Japanese troops against them. At the same time, they posted placards in the Japanese settlement, assuring the Japanese soldiers and civilians that the disturbance had for its sole object to clear the name of the old Guards from the false accusation of treason, and advising them to keep quiet for the sake of the friendly relations between the two countries.

As to the suspected instigators of the disturbance, said to be hiding in foreign Legations, none of them had been apprehended at the date when the letters from which we are quoting left Söul, namely, on the 3rd instant. Among the principal suspects thus far arrested, we may mention An Keiju, ex-Minister of War, the astutest opportunist in the peninsula, who had hitherto managed to be always on the sunny side of politics; and In Chiko, the clever Vice-Minister of Foreign Affairs. The latter's father, In Yuretsu, is also under suspicion; he has fled to the country and constables have been sent to apprehend him. One or two Court Chamberlains are also under suspicion, but they do not seem to have been arrested.

December 19.

Recently we reproduced a report that Mr. In Chiko, the Korean Vice-Minister of Foreign Affairs, had been put under arrest. Letters since received from Söul allege that he is still at large. The *Fiji's* correspondent says that he and his father are staying at the house of Mr. Underwood. According to the *Nichi Nichi's* correspondent, the Vice-Minister of Foreign Affairs was not in any way connected with the disturbance of the 28th ultimo, but his father having been implicated in it he was naturally afraid of suspicion attaching to himself, and so thought it prudent to seek the protection of a

foreign friend. These circumstances being well known to the Cabinet, a letter was recently sent him at his hiding place, strongly inviting him to resume his official duties, as he was under no suspicion whatever. But he is said to be still hesitating to trust to the assurance of his superiors.

The names of the foreigners that happened to be in the Palace on the night of the recent disturbance are given by the *Fiji's* correspondent. They are General Dye, Colonel Nienstead, General Le Gendre, the Rev. Mr. Underwood, the Rev. Mr. Appenzeller, Mr. Rev. Epison (?), and Mr. Hulbert, editor of the *Korean Repository*. As to the last mentioned gentleman, the correspondent is not sure of his presence in the Palace, but rumour includes him among the number. "These persons," continues the same writer, "entered the Palace a few hours previously to the outbreak of the disturbance. Hearing the report of guns outside the Palace, they ran toward the inner apartments with pistols in their hands. The Guards, who had been prepared for this move on the part of the foreigners, intercepted their progress, and when the foreigners endeavoured to force a passage, the Guards used their bayonets against them. Thereupon General Le Gendre turned and ran to his apartments, while the rest were conducted to the guard-room, where they remained as prisoners. Feeling cold, they obtained braziers from the Guards, and in that way passed the night. Such is the substance of a report very widely circulated among the Koreans."

Before the occurrence on the 28th ultimo, the foreign residents were free to enter or leave the Palace at their pleasure. But thenceforth strict instructions are said to have been issued to the Guards not to admit any foreigner other than those officially qualified. The discipline and efficiency of the present Palace Guards are highly praised by the Japanese correspondents.

The Korean capital was again disturbed on the 6th instant by rumours of a projected attempt to rescue the prisoners that had been connected with the affair of the 28th ult., and to complete the *coup d'état* that miscarried on that occasion. The attempt, it is said, was discovered by the Government in the following manner:—Li Kan-yo, one of the principal conspirators staying in a certain foreign Legation, secretly sent a note to his wife apprising her of the projected enterprise, and charging her not to be alarmed by the disturbance that would inevitably be occasioned. His wife showed this note to her sister, who, in turn, sent it to her husband. But on the way the messenger lost the note, which finally fell into the hands of the police. Thus warned, the Cabinet at once took vigorous precautionary measures, and the danger was successfully averted.

The *Fiji's* correspondent learns that recently Russian marines in Söul made several trips to Ninsen, and, what is more singular, these trips were coincident with the disappearance from the Korean capital of certain Koreans suspected of complicity in the disturbance of the 28th ultimo. The same writer further learns that some Koreans recently left Ninsen on board a Russian war-ship, and that two of them landed at Chefoo and a third at Shanghai. As to the report that Li Han-shin was among these escaped suspects, the story is said to be untrue. The *Fiji's* correspondent is strongly inclined to believe that Li is still staying at the Russian Legation.

CHINESE NEWS.

December 14.

The progressive society recently formed in Peking, and the newspaper issued by it, have attracted much attention and been referred to more than once in these columns. It is now stated that the Viceroy of Nanking, Chang Chih-tung, has signified his approval of the organization of a similar society, and a number of literati in Shanghai have taken up the matter.

It is stated that General Tung Fuhsiang's army in Shensi numbers only fifteen thousand,

whereas the Mohammedans have a force of a hundred and fifty thousand.

We do not anywhere find an accurate statement of the number of German officers employed by the Viceroy of Nanking for drilling and organizing his army, but it would appear that in the city of Nanking more than fifty are residing.

There is terrible distress in Honan owing to inundations. Destitute men and women have been crowding to the cities, but are refused admittance. The suffering is expected to become still more acute in a few weeks, when the potatoes now forming the country-people's sole means of sustenance will be exhausted.

December 18.

The Protestant Missionaries in China have presented to the Tsung-li Yamên in Peking a memorial having for its object the closer association of missionaries and officials. Such a result, could it be achieved, would doubtless tend to prevent many of the misunderstandings that now arise. But there is little hope that the missionaries will succeed in establishing social relations hitherto beyond the reach of even the Corps Diplomatique in China. Nevertheless, something has certainly been accomplished, for the bearers of the memorial, the Revs. T. Richard and Dr. Wherry, introduced by the United States Representative, Colonel Denby, were received at the Tsung-li Yamên, to which august but invertebrate body of statesmen they seem to have now obtained free access. They have obtained from the Yamen a promise that the memorial shall be answered, and they have asked for an audience of the Emperor, but the latter request is not likely to lead to anything. The memorial suggests, among other things, that two Americans and two Englishmen should be attached to each great Board of Administration, the reason assigned for this choice of nationalities being that these are the only two States by which arbitration is admitted as an international principle.

A grand ball was given at the United States Legation in Peking on the 12th of November, and on the 27th of the same month private theatricals and dancing took place at the Russian Legation, the latter event being attended by several Chinese high officials.

The Chinese had to pay so high for the weapons and munitions of war supplied to them by Europe before and during the conflict with Japan, that they have now resolved to manufacture all these things for themselves. Prince Ching memorialized the Throne to the effect that the best and newest foreign appliances and processes can be employed at the Shanghai Arsenal, quick-firing guns, smokeless powder, and all such things being producible there. The memorialist specially recommended that the whole work be placed under the direction of Taotai Liu, who for many years directed the Shanghai Arsenal. Between the cup and the lip there is many a slip, in China. But it looks as if the Germans, and others hitherto engaged in furnishing war material to China, had overreached themselves.

It is confidently predicted that the days of Indian opium are numbered in China, the Szechuan drug being much cheaper and little inferior. There has been endless discussion about the effects of opium, but a foreigner, recently writing from the poppy district of Szechuan, avers that the ravages caused by the use of the drug are appalling, and that if things go on in the present groove, the population must quickly diminish.

According to Foochow advices to the *N.-C. Daily News*, the Viceroy Pien has selected the expectant Taotai Yen K'ai (a Manchu), to go to Singapore and other Southern ports where wealthy Chinese abound, in order to induce them to take up the management, on a commercial basis, of the Foochow Arsenal and dockyards.

The Viceroy Wang has despatched Messrs. Ku and Shih, the first named being assistant manager of the Taku government dockyard, to proceed to Port Arthur to take over that port from the Japanese.

H.E. Liu K'un-yi, who is now in Tientsin, is

reported to be soon leaving for Peking for an audience with the Emperor, and the likelihood is that His Excellency will return from southwards to take up his old post as Viceroy of the Liangkiang, in which case the Viceroy Chang will go back to Wuchang.

The Viceroy Wang Wen-shao, of Chihli, is reported to have received a telegram from Kansu announcing two victories by General Tung Fu-hsiang over the Mahomedan rebels, and the raising of the siege of Hochou by him. In consequence of this, the rebels in the prefectures of Ninghsia and Liangchou in the same province are reported to be discouraged and disbanding their forces.

General Liu, with twelve camps of Mingtze troops, who were recently employed beyond the Great Wall, have arrived at Tientsin from Taku, and will probably be sent on to Port Arthur.

It is again reported that as soon as he has completed the work on which he is now engaged, the Viceroy Liu Kun-yi will be reappointed to his old post at Nanking.

The Chinese are about to erect a cotton mill outside Soochow. The mill will contain about 15,000 spindles, it is said, the necessary machinery having been ordered by Messrs. Arnhold, Karberg & Co. from Dobson and Barlow, Rochdale.

December 19.

At Wenchow the attitude of officials and people toward the Christians seems to be distinctly hostile. A householder of Feng-lin, arrested two months ago for allowing Christian services to be held in his house, remains in prison, the Taotai refusing to release him unless guarantees are given that the "offence will not be repeated." Moreover, members of the China Inland Mission have been driven from two villages where they attempted to hold services.

The following Imperial Edict was published on the 6th of December in Peking:—

With reference to the memorial of the Prince and Ministers of the Ministry of War requesting us to appoint a high official to have the chief control over the building of railways in the country, it must be confessed that railways are indeed important considerations in connection with trade and commerce, and we have, therefore, decided that railways must be constructed towards that end. The other day we commanded our Ministry of War to consider measures with reference to the intended building of a railway line within the neighbourhood of Peking, and in obedience to our commands Hu Yü-fên, Provincial Judge of Kuangsi, was selected for this duty by the said Ministry of War. Their memorial based on Hu Yü-fên's report is now before us in which it is stated that commencing from Tientsin and following the western bank of the Grand Canal, and thence northwards *via* the Southern Hunting Parks up to Lukou Bridge (western suburbs of Peking) the distance between these two points is about 280 *li* (about 90 miles). The estimated cost for a railway between Tientsin and Lukou Bridge, therefore, will amount to something like two million four hundred odd thousand taels. We have also consulted the map of the proposed route, presented with the above report, and in answer to the prayer that a high official be appointed to superintend the construction of this railway, we would like to remark that it is always a matter of difficulty to inaugurate an entirely new departure and at the same time be thoroughly prepared for eventualities, while it is necessary that we should have perfect confidence in the man selected for this difficult task. But as Hu Yü-fên already on a former occasion presented his scheme in this connection and now has further had the experience of going personally along the proposed route, we will therefore appoint him to the chief and sole control of the building of the Tientsin-Lukou Bridge railway. The Board of Revenue and the Imperial High Commissioner and Superintendent of Trade for the Peiyang are therefore hereby commanded to use their joint efforts in providing the funds necessary to build the proposed line.

With regard to the trunk line proposed to be built from Lukou Bridge southwards to Hankow, the line must necessarily be a very long one and will require an enormous sum to complete, we will therefore give to the wealthy merchants of the various provinces the opportunity to issue shares for the formation of a railway company for the construction of this line, the condition being that they collect ten million taels and above for this purpose. It shall be entirely a mercantile undertaking and the government officials shall not inter-

fere with the profits or losses of the Company. We would exhort that one and all exert themselves to the utmost of their ability for the accomplishment of this work, and we promise that if this be done well that we will accord Imperial recognition and great rewards to the deserving ones. A special decree to all in Peking and the provinces.

The *North-China Daily News* says that Mr. Kinder is to be engineer-in-chief of the Tientsin-Pekin railway, and that it will be a double line.

THE CHINESE IN FORMOSA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Permit me to anticipate the congratulations which will be showered upon you by the rulers of the earth for your able solution, in your leader of the 5th inst., of what has hitherto been one of the chief difficulties in dealing with conquered peoples. Acting on your suggestion, Lord Salisbury may be expected to dispose of the Irish question during his present Ministry, while the French population of Alsace-Lorraine will be confined in the pale of a few treaty towns. And should the fortune of war ever bring about an occupation of this country by the armies of the Czar, and the latter ruler determine to retain his conquest, what a splendid field for Russian enterprise will be opened by a ukase on these lines.

And there is the further recommendation that in this, as in other points (Port Arthur, *e.g.*), the history of Asiatic civilization will be merely repeating itself.

Did not Nebuchadnezzar also the same?

Yours faithfully,

ASHIBIKI.

December 6th, 1895.

[Our correspondent finds this very pretty persiflage, we have no doubt. He forgets that the Irish are already subjects of Great Britain, whereas the Chinese in Formosa need never be made Japanese subjects unless Japan pleases, as is distinctly stipulated by the Shimonoseki Treaty. He forgets also that the French population of Alsace and Lorraine have already been made German subjects. He forgets, too, what the United States has for years been doing with the Indians: buying them out and setting them in reservations.—Ed. J.M.]

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Let me begin by thanking you for reminding me in your note to my letter of the 16th of a few facts that you thought I had forgotten. The intention was good, I confess; but I had not; I simply did not think of them in the connection, as not being to the point—the point being of course that the compulsory moving out of a conquered race bag and baggage was rather a thing of the past.

Further, that it had become a thing of the past, not by virtue of written laws and treaties, but because it was generally assumed by civilized people that even a member of a subject race had a right to the possession of his former home if he did not use that possession as a basis of operations against the conqueror of his country.

To take the case of Ireland. Now, assuming that it would be legally impossible to expatriate the native Irish owing to their being British subjects—a statement which I dispute, as I know of nothing in the British Constitution to prevent the British Parliament doing as it chooses,—yet there is no legal impediment to making their residence by Coercion Acts so hot that they would voluntarily expatriate themselves.

One impediment there is; the British nation would stand no such thing, and would make short work of any government that would propose it.

That the Japanese nation is moved by no such feelings of humanity is not to be wondered at; the isolation of years has left a lot of leeway to make up, and if they and their admirers were not so forward and anxious to claim for them the status of Europeans no one would be inclined to reproach them with it. But as these claims have been pressed successfully, and we foreign residents are to get the benefit of it, one looks askance at being consigned to the tender mercies of a civilization which sees no wrong in expatriating a population, and is inclined to be censorious.

The one modern instance you gave, the case of the American Indians, is hardly to the point. A decreasing nomadic population may fairly be required to make way for a growing industrial and agricultural one on reasonable terms. To turn out one set of farmers, fishers, and traders in favour of another is a very different matter.

And what a gain to civilization it would be to substitute Japanese for Chinese business methods!

Yours faithfully,

ASHIBIKI.

December 13th, 1895.

[What on earth have the Japanese to do with this matter? It is our suggestion. We have never heard an opinion expressed by a Japanese on the subject. "Ashibiki's" laments about the defective humanity of the Japanese people are wholly irrelevant. Certainly they showed no want of humanity toward the inhabitants of Manchuria or Shantung. We would further ask our correspondent what he means by talking of "expatriating" the Chinese in Formosa? In point of fact, their "expatriation" would commence when they ceased to be subjects of China and became naturalized Japanese. Their return to their native country after disposing of their fixed property in Formosa (a part of Japan's dominions) would be precisely the way to escape expatriation.—Ed. J.M.]

LITERARY GEMS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Here is another literary gem taken from the same local mine that furnished the jewel recently sent to you:—

One more artist, Mr. Weldon, who has been here for some time, will now shortly leave this country, after having illustrated in black and white and by painting scenes of Japan, which he has had on view at his residence, some pictures, which he lately invited a few friends to see.

Yours truly,

ADMIRATION.

Tokyo, 15th December.

YOKOHAMA SKATING CLUB.

The annual general meeting of the above took place in the Club Hotel on Friday afternoon, there being present Messrs. A. O. Averill, in the chair, W. W. Campbell, W. Sutter, A. H. Dare, and H. E. Campbell.

The accounts having been taken as read, various matters of interest to the members were discussed, in the course of which it was suggested by Mr. Dare that the surplus should be used in making things more comfortable to skaters.

The old committee was re-elected.

Mr. Campbell remarked on the remissness of members in leaving their skates and boots on his hands without any distinctive marks by which they could be recognised, and then sending for them, with the result that sometimes unpleasantness ensued. They seemed to expect the committee to be responsible for their own carelessness in not looking after their own property.

Mr. DARE animadverted on the practice of some boys during the past season having used the ice before the proper hour, to the great discomfort of the rest of the skaters who upon their arrival found the ice so cut up as to be almost useless. He suggested that they should be suspended for a week or so when caught in the act.

In the course of some further conversation it was suggested that a notice, which had formerly been put up, should be again posted, to the effect that the momban represented the committee and that consequently his orders should be obeyed.

After the usual votes of thanks, the meeting separated.

Below and the accounts:—

YOKOHAMA ENGINE AND IRON WORKS, LIMITED.

An extraordinary general meeting of the Shareholders in the Yokohama Engine and Iron Works, Limited, was held at Keil's Buildings on Wednesday afternoon for the purpose of considering a special resolution for an alteration in the Articles of Association. There were present Messrs. J. F. Lowder (in the chair), C. K. M. Martin, J. Johnston, J. Rickett, E. Berger, F. H. Bull, James Walter, C. Giusanni, J. A. Fraser, H. M. Arnould, F. Gillett, Jas. Dodds, S. D. Hepburn, and G. C. Charlesworth, Secretary.

The CHAIRMAN congratulated the meeting on the fact of their having a quorum. All had no

doubt read the notice convening the meeting, which was for the purpose of altering the Articles of Association. To elucidate matters he would read the proposed changes, which were as follow:—

- (a) The following Article shall be inserted after Article 10, and shall be called Article 10-A:—
"The Company may from time to time reduce its Capital."
(b) Article 10 to be altered to read as follows:—
"The Capital of the Company shall, subject to the provisions of Article 10-A and 11, consist of \$130,000 dollars, divided into 1,300 shares of \$100 each, fully paid up."
(c) That in Article 45, for the words "Twenty-one days' notice," shall be substituted the words "Seven days' notice."

Continuing, the CHAIRMAN said they had always found much difficulty in the provisions of Article 45 which provided for 21 days' notice of a meeting. He would suggest that they pass this rule, whatever opinion the meeting may have as to the others. Referring to the other alterations, the Chairman pointed out that the Company was now in possession of a large amount of cash. The Directors did not want to keep it on their hands—he would not say they did not know what to do with it—and thought it inadvisable to pay it out as a dividend, but believed that in the interests of shareholders it would be better to reduce the capital, which must be done by special resolution to be confirmed not less than 14 or more than 20 days subsequently. The company had now a bank balance of \$89,000, and had declared an interim dividend of 10 per cent., while the capital was \$130,000. He thought it advisable to reduce the capital by one half, but this would come after to-day's resolution. All they asked for was that the Directors be given power to act. He was not asking them to commit themselves to anything, but to allow of the necessary changes being made.

The CHAIRMAN proposed that the resolution be passed.

Mr. JOHNSTONE seconded, but the Chairman suggesting that it would be as well if some one not a Director should do so.

Mr. GIUSANNI then seconded the resolution, and it was passed unanimously.

The CHAIRMAN said that to-morrow the shareholders would receive a notice of a meeting on 10th January, no earlier date being possible, for the purpose of confirming this resolution.

The meeting then rose.

THE ASIATIC SOCIETY OF JAPAN.

The Annual meeting of the Asiatic Society was held at No. 17, Tsukiji, on Wednesday, December 11th at 4 p.m. The President, Rev. D. C. Greene, D.D., occupied the chair.

The minutes having been read and approved the Chairman called upon Mr. Clay MacCauley to read his paper on the Japanese Landscape, of which we give the following abstract:

After claiming that the scenery of Japan has a unity or individuality so much its own that one is justified in speaking of the "Japanese landscape," Mr. MacCauley entered upon an elaborate description of the subject of his paper, dividing his treatment of it into two parts, first, the *scientific data*, and second, the *artistic characterization*. Among the data furnished by science is first the geologic founding of Japan. Japan is part of the edge of the inner rim of the Great Pacific Basin, the largest depression in diameter and depth of the earth's crust. This depression is peculiar in being so sunken towards the west, that its edge, which eastward is the lofty range of mountains bordering the west coast of America, has become westward the succession of mountainous islands that extends from Aleutia southward into the Antarctic zone. The deepest waters of the world lie off this island chain. To the northern half of the Pacific Basin there is an outer rim lying inland in both America and Asia; in America the Rocky Mountain ranges, in Asia, the Eastern Siberian and China mountains. Between these outer and inner rims lie plateaus, elevated in America, as arid wastes, depressed in Asia as shallow seas extending from Kamchatka to Java and as low plains like the China Delta. This edge of the Pacific Basin is the great zone of fracture of the earth's crust. It is the line of greatest volcanic activity. Further, meteorologically, there is much that affects scenery in Japan. Japan's air being that of islands is moist. As islands, almost as a whole mountainous, Japan is a country of abundant rainfall. Owing to conditions, exhibited at length by the speaker, the rain-fall is very unequally distributed over the year, excessive in spring and autumn. Hence certain noticeable effects. Great erosion of the primæval volcanic masses forming the islands; modification of their

outlines; formation of low lying alluvial slopes and plains; production of numerous rivers, streams, lakes, waterfalls, and torrents; wide water channels filled only in flood times, nearly emptied during most of the year; then as a consequence of the discharge of waters saturated with organic matter into the ocean, presence of abundant marine life; this occasioning the fishing industry; and this producing most entertaining spectacular effects. Again, by reason of its climatic character, Japan is covered with luxuriant vegetation; this vegetation is an interspersed of growths native to regions of far north and south latitudes.

But man as well as nature has had much to do with giving Japan its unique landscape. By a specialized social and industrial career, and in conforming to peculiar political and religious institutions, the Japanese have made a distinct impress upon their physical surroundings. Their habitation has been almost wholly along their sea shores and upon their low-lying plains. They have been content to live for the most part upon the easily obtained simple food products of the sea and the bordering swamps—fish and rice. Consequent upon this concentration of the nation's labour, exceptionally prominent landscape effects. Then the monarchical and feudal civil system has produced notable physical results;—castles, villages of the serfs and their surrounding petty fiefs; the great high roads. Consequent upon special religious mood and needs, numerous shrines and temples and their evergreen settings of groves. Moreover, the landscape effects of both nature and man are distinguished by a continuity or unity of characterization throughout Japanese. Man's work is the outcome of one range of motive, for example, in architecture of castle, of temple, of home. In agriculture one economical system has disposed of the land after one plan. Nature and man have wrought out scenery essentially the same everywhere.

Passing to the characterization of the Japanese landscape from an artistic point of view, Mr. MacCauley spoke first of the remarkable *variety* or *diversity* disclosed in it. The same throughout in virtue of a common order of qualities, scenery here is varied everywhere with a diverse display of its common elements. Always diversified, never monopolized by no one or few objects and never a monotone of forms and associations. Next, Japanese scenery may be figured as for the most part *cheerful* and *serene*, in no way gloomy or violent. Fantastic and capricious often in outline and mass, and sometimes tending to arouse the emotion of sublimity, it nevertheless has the effect chiefly of brightness and tranquillity, of exhilaration and peace. This part of his characterization the speaker illustrated at considerable length and with much detail. A third distinctive feature spoken of, is the *picturesqueness* of Japan's scenery. It is a treasure land for artists. Its picture effects are inexhaustible. Illustrations of this characteristic were drawn from the effects of the religious life of the people, of the prosecution of their industries, of their agriculture and home life, their sea coast and inland environment and so on. But the Japanese landscape is to be characterized especially under the qualification, *beauty*,—beauty in its widest sense as expressing the sum of those qualities which please the eye,—variety, picturesqueness, grace and the like. There is nothing in the Japanese landscape as such that repels or does violence to the æsthetic sense. Many scenes were referred to to illustrate the beauty of this country. Comparison at length was made between the view at Taormina in Sicily, where mount Etna commands the picture and the prospect disclosed at Teshūji near Okitsu in which Mt. Fuji is seen at its best. Japan's lake scenery at Hikone, Hakone, Chuzenji, etc., were described, and the mountain panoramas at Minobu and near Nikko were depicted. The procession of flower and leaf life in Japan's year was reviewed at considerable length. The perennial verdure of the landscape, the effects of snowfalls, of the plum blossoms, cherries, and wild wistaria, and of the autumn foliage were brought to notice. Then a glance was given at the demonstration made in the art and literature of the Japanese people of their appreciation of the beauty of their country. It would be difficult, said the speaker, to use language embodying deeper rapture or expressing more joyous elation over national beauty than that having place in Japanese literature. Quotations from translations of ancient Japanese poetry illustrative of this statement brought the paper to a close.

The Chairman thanked Mr. MacCauley on behalf of the Society for his interesting paper.

The Society then proceeded to the business of the annual meeting.

The Corresponding Secretary read his annual report as follows:—

"During the present year there is little of importance to note in the annual report beyond the ordinary amount of work done by the Society. The recent war between Japan and China may have diverted interest from the past to the present events of this country, but the Society can congratulate itself on a very fair amount of progress in spite of hindrance.

"Few changes worthy of chronicle have marked the session. Death has deprived the Society of the services of Sir Thomas F. Wade, of Cambridge, Eng., and also of the life members, Rev. C. S. Malan and John O'Neil, Esq., both of England. Fourteen new names have been added to the list of members, and two former members whose connection with the Society had lapsed have renewed their membership. Three members have resigned.

"During the Session, which now corresponds to the Calendar year, there were five papers contributed to the Transactions besides the work of Mr. Chamberlain on the Luchuan Language in a supplementary volume. There were also two lectures given under the auspices of the Society, one in Yokohama in February and the other in Tokyo in June. The list of papers read, etc., will be found in the Appendix to the regular volume of this year.

"The finances of the Society are in a satisfactory state and unless unforeseen accidents occur, the Society has nothing to fear on this score in the future."

This report was adopted. The Treasurer then gave his report for the year.

Examined with vouchers and found correct.

VEEND DUEK,

W. B. MASON, Auditors.

The Society then proceeded to the election of officers for the coming year. The result of the balloting was as follows:—

President—Sir Ernest M. Satow K.C.M.G.; Vice-Presidents—Rev. D. C. Greene, D.D. and J. H. Longford, Esq.; Corresponding Secretary—Garrett Drovers, Esq.; Recording Secretaries—Garrett Drovers, Esq., and W. J. S. Shand, Esq.; Treasurer—J. McD. Gardiner, Esq.; Librarian—Rev. W. J. White; Councillors—Dr. E. Divers, B. H. Chamberlain, Esq., W. B. Mason, Esq., R. Masujima, Esq., Clay MacCauley, Esq., M. Michel Revon, J. H. Gubbins, Esq., Rev. T. S. Tyng, E. W. Clement, Esq., Rev. A. Lloyd.

Dr. Greene congratulated the Society in securing for President during the coming year one who had in former years contributed so much to the Society's welfare.

Sir Ernest Satow expressed his thanks to Dr. Greene and the members present for their good wishes in a few appropriate remarks, after which the meeting adjourned.

H.B.M. COURT FOR JAPAN.

Before J. CAREY HALL, Esq., Assistant Judge.
Friday, 13th December, 1895.

THE TRAGEDY ON THE "HANKOW." CHARGE OF MANSLAUGHTER.

Chun Pat, the cook of the British steamer *Hankow*, was brought up for his preliminary examination this morning on a charge that he, on the 6th inst., did feloniously assault, wound, and kill one Li Fong, by stabbing him with a knife.

This case arose out of a quarrel between prisoner and the deceased over the value of an American gold dollar, the result of a gambling debt, in the course of which a knife was used, prisoner receiving a cut on his leg and the deceased being killed.

The following evidence was led to-day

Lo Ah-Kun, sworn in Chinese style, said, through the interpretation of Mr. Kwong—I was awakened by the two men calling out for assistance. This was on Friday, the 6th inst., about a quarter to 2 o'clock. I was asleep at the time; went to bed at 1.30. Seeing both men struggling together, I got up but ran out of the room when I saw some blood. I did not see how the fight started, but was awakened by the noise. Heard a dispute relative to the exchange value of some money, between \$1.60 and \$1.80, before I went to sleep. The cook said the value of the money in dispute was \$1.60 and Li Fong said \$1.80, a difference of 20 cents. The boy seemed to me to be the loser, but when they gambled I cannot say. The dispute continued for about 10 or 20 minutes. After the dispute I fell asleep, so cannot say whether either left the room in the interval. As soon as I got out of my bunk I ran out as I saw blood on the floor and was afraid. Both men were shouting out at the same time for assistance. I did not notice whether there was a knife in the room or not. A man named Wong Meng was in the room when I got up, but I did not see him while the two men were disputing. The man was sitting down on the bunk, on the lowest bunk. He was in the room when I ran out. I was in the middle bunk on the near side to the door and Wong Meng on the opposite side of the room on the lower bunk. The scuffle occurred in the corner of the passage-way—I only saw them lying on the floor grasping each other. Neither was on top. I did not notice who had his arm above the other. I did not step over them as there was sufficient space for me to get out. I ran on deck. While I was getting out of the room the second officer entered. He was the first to enter the room; I did not see the big donkey-man at all.

The case was here adjourned till two o'clock, prisoner being remanded.

On resuming in the afternoon,

Witness, recalled, said—I have never seen this knife, now produced, before, and don't know to whom it belongs. I did not see the knife while I was not escaping from the room. I afterwards saw Li Fong lying on the hatchway, but did not go to ascertain whether he was dead or alive. I did not see the wound he received. The last I saw of him was when he was lying on the hatch.

Accused had no questions to ask the witness: he did not see witness escaping from the room while grasping the knife together with Li Fong.

Wong Meng, sworn, said—I was mess-room boy on the *Hankow*. On Friday, the 6th inst., I heard Li Fong and the cook quarrelling shortly after 1.30 p.m. while I was discharging my duties in the mess-room. I went into the room where they were disputing and saw them both sitting and facing each other. I then left, but hearing the dispute break out afresh again went into the room. Li Fong demanded from the cook 20 cents for difference in exchange, and in answer the cook said to the deceased the exchange value had been fixed during the time they gambled at \$1.60, and that should deceased find the exchange in Yokohama to be \$1.40 would he make up the difference? The boy then said, "If you don't give me back the 20 cents I will cut you with an axe," whereupon the cook left the room to go ashore. He, however, soon returned and informed me in the presence of deceased that the weather was too rough, and boat hire dear, so he had decided to wait. During the cook's absence I remonstrated with Li Fong about quarrelling over such a trifling amount. As soon as the cook returned Li Fong again demanded 20 cents, both being seated at the time. He again said to the cook "If you don't give me the money I will kill you." The cook then said, "If you want to fight, come out on deck." Meanwhile, the cook got up from his seat. As soon as the cook rose Li Fong stabbed him in the leg. The cook was standing and Li Fong sitting. The cook immediately grappled and both rolled on the floor, both shouting at the same time for assistance. Blood flowed, and the chief and second officers came in, but I don't remember who came in first. The donkey-man also came. As soon as the Europeans came I left and attended to my work in the mess-room. Lo Ah Kum was lying in his bunk. He was in the middle bunk, on the starboard side of the vessel. I was sitting on the lower bunk opposite, but when the men grappled I jumped to the middle of the room; they were near the passage way. I saw this knife for the first time when the struggle took place. The knife looks the same. I am sure the boy was the first to use the knife. I don't know where he got the knife. He produced it suddenly, from whence I cannot say. The boy jumped up as soon as he inflicted the wound on the cook's leg. He held the knife in his right hand and cut the cook on the right leg just about the heel. He produced the knife from where he was sitting. The knife

must have been on the bunk, but it is not the kind of knife that would usually be used by the boys. I don't know to whom it belongs. I have never seen the knife before, and don't know if it is the cook's knife. I did not see the cook cut the boy as they grappled and fell on the floor, but both called out for assistance. The boy was stabbed to death—I think by the cook. Have seen the blood and the wound; I cannot account for his wound.

Accused had no questions to ask, witness had spoken the truth regarding the circumstances of the case.

Accused, in answer to the usual charge, said he wished to make a short statement.

Accused—During my first acquaintance with the deceased we were very friendly. When we were about leaving Hongkong he asked me for a loan to support his family, so I lent him my diamond ring for him to pawn, which he promised to redeem and return me on his voyage back. After that we were very close friends. On the steamer leaving Tacoma we all had some American dollars and at our leisure we used to gamble with these dollars, the exchange value of which we had fixed at \$1.60 per gold dollar. When I won I took the dollar at \$1.60, and when I lost I paid them the same rate. On the steamer's arrival in Yokohama, Li Fong demanded of me 20 cents on every dollar he had lost; he had lost more than ten or twenty dollars of which I was the gainer. In answer I said I don't know how much I have won or lost, but all the money won from you has been lost to some one else. Li Fong pressed me for the difference. I intended to go ashore, but it being too rough I returned to the room again, where deceased again asked me for the difference in exchange. I repeated what I had previously said. He then said "Unless you pay up I will kill you." He then pressed me to fight, when I answered this was not the place to do so, we had better go on deck. I was about leaving the room when he stabbed me in the leg. I did not know he had a knife, but as soon as I was stabbed I turned around and tried to snatch the knife from him, in doing which I cut one of my fingers. As soon as I got hold of the knife Li Fong got up from his seat, and in the struggle—both having hold of the knife—we fell to the floor, Li Fong being underneath. If I had moved the knife I would have stabbed the other man, and if the other man had moved it, I would have been stabbed. Both were rolling on the floor, so I didn't know whether the point of the knife was directed to his body or to mine. Just then the officers came and separated us and dragged me out of the room. I don't know where the knife came from or to whom it belongs.

The accused was committed for trial.

(IN ADMIRALTY.)

Before R. A. MOWAT Esq., Judge; Nautical Assessors: Capt. TOCAVE, S.S. *Verona*, and Capt. MOTYER, S.S. *Anjer Head*.

TUESDAY, 17TH DECEMBER, 1895.

THE "ISIS"—"WILLIAM H. MACY" COLLISION.
DAMAGES \$80,000.

This was an action to recover damages for loss sustained in a collision on October 15th last in Uraga Channel between the British steamer *Isis* of 1,518 tons, Walker, Master, and the American ship *W. H. Macy*, Amesbury, Master.

Messrs. A. B. Walford and Geo. H. Scidmore appeared for the plaintiffs, and Mr. J. F. Lowder represented the defendants.

Mr. Scidmore, in opening his case, said this was a cause of damages instituted by the owners of the American ship *William H. Macy* against the owners of the British steamer *Isis*, Walker, Master. Proceedings were instituted on the 21st November, and a warrant for the arrest of the steamer *Isis* was issued on the 23rd November. He asked that the Marshal of the Court report the arrest of the vessel.

His Honour did not think this necessary, as Counsel was present. It would be best to read the pleadings in the case.

Mr. Scidmore then read the pleadings as follow:—

The Petition of the plaintiffs shows as follows:—

1.—The plaintiffs are the owners of the American sailing ship *William H. Macy* of 2,092.28 tons register, which at the time of the matters hereinafter stated was approaching Yokohama in the course of a voyage from New York to Yokohama and Hiogo with a crew of 25 hands and a general cargo.

2.—Shortly after midnight in the morning of the 15th day of October, 1895, the *William H. Macy* was about 5 miles S. E. & S. from Tsurugizaki Lighthouse, Kanagawa Ken, sailing close hauled on the starboard tack, heading about N. W. and going at a speed of about 5 knots an hour. She had red and green side lights properly fixed and burning brightly and a good lookout was being kept

on board her. The wind was baffling from about N.N.E. and the weather was clear.

3.—In these circumstances those on board the *William H. Macy* saw the masthead light and the red side light of a steamship which afterwards proved to be the *Isis* approaching her on the starboard bow and about 2 miles off. The *William H. Macy* kept her course, but the *Isis* showing her red light came on with undiminished speed and in attempting to cross the bows of the *William H. Macy* came into collision with her and did her great damage.

4.—Immediately after the collision the *Isis* was asked to stand by the *William H. Macy* and afterwards several blue lights were burned on board the *William H. Macy* as a signal to the *Isis* that assistance was required, but the *Isis* did not stay by the *William H. Macy* and did not render or offer any assistance to the *William H. Macy*, though she might have stayed by and assisted her without any danger.

5.—A good look out was not kept on board the *Isis* previous to the collision.

6.—The *Isis* did not keep out of the way of the *William H. Macy*.

7.—The *Isis* did not slacken her speed or stop or reverse her engines prior to the collision.

8.—Those on board the *Isis* disobeyed Articles 17 and 18 of the Regulations for preventing collisions at sea.

9.—The said collision and the damages and losses consequent thereon were caused by some or all of the matters and things stated in the 5th, 6th, 7th, and 8th paragraphs hereof or otherwise by the negligence of the defendants or of those on board the *Isis*, and no blame is attributable to the *William H. Macy* or to any one on board of her.

The plaintiffs therefore pray:

1. Judgment against the defendants the owners of the *Isis* for the damage occasioned to the plaintiff by reason of the collision, and the condemnation of the said steamship *Isis* or her bail therein and in costs.

2. That an account may be taken of such damages with the assistance of merchants.

3. Such further and other relief as the nature of the case may require.

AMBROSE B. WALFORD,

Counsel for the Plaintiffs.

The plaintiffs bring into Court the sum of \$1,000 as security for the defendants costs.

The Answer of the above-named defendants to the petition of the plaintiffs sheweth as follows:—

1.—In answer to the said petition, the defendants admit that on the morning of the 15th day of October, 1895, the American Ship *William H. Macy* and the British Steamship *Isis* came into collision in the Sea of Sagami, but they say that the collision took place under the circumstances hereinafter related, and they deny all the allegations of the petition so far as they are at variance with the statements hereinafter set forth.

2.—On the morning of the 15th October, 1895, the British Steamship *Isis*, of 2,505 tons gross, was not far from the Tsurugisaki Lighthouse, which bore N.W. by N. She was awaiting daylight, before proceeding to her destination at the port of Yokohama, with her mast-head, side, and stern lights all in proper position and burning brightly; a good lookout was being kept on board; her speed was about 3 knots; and her course was S.S.W.

3.—Under these circumstances, shortly after midnight, a green light, which afterwards proved to be the starboard side light of the *William H. Macy*, was suddenly discovered by those on board the *Isis*, about 5 to 6 points on her port bow, distant about 500 to 600 yards, and bearing swiftly down upon her.

4.—Thereupon the helm of the *Isis* was at once put hard aport, and her engines at full speed ahead; and those on board the *William H. Macy* were hailed twice in rapid succession to starboard her helm; but they neglected to do so, or to adopt any other manœuvre for preventing a collision, and the *William H. Macy* coming on with great and undiminished speed, struck the *Isis* with her stern on the port side amidships, cutting the *Isis* down to below the water's edge and thereby caused her to spring a leak, and inflicted upon her very serious damage.

5.—Immediately after the collision, the Master of the *Isis* enquired the name of the other vessel from those on board her; but failing to receive any answer, he asked whether she was badly damaged, and got the reply "No; I'm all right." Thereupon he said that he feared his own ship was sinking, and asked those on board the other vessel to stand by him; to which he received the reply "All right;" and he then heard the order given on board the other ship to clear away the life boat.

6.—In answer to paragraph 4 of the petition the defendants say that no request to stand by the *William H. Macy* was heard by those on board the *Isis*, and that the burning of blue lights was not understood by them to mean that assistance was required; but that nevertheless the *Isis* stood by the *William H. Macy* from immediately after the collision until nearly 9 o'clock in the morning for the purpose of rendering such assistance as might be in her power, should she be called upon to do so; but that though, during the period aforesaid, the two vessels were at times within hailing distance, no assistance was asked for by those on board the *William H. Macy* and those on board the *Isis* had no intimation, or reason to believe that the *William H. Macy* stood in need of assistance.

7.—In further answer to paragraph 4 of the petition, the defendants say that by reason of the damage sustained by the *Isis*, in consequence of the collision, she was, during the whole of the time she was standing by the *William H. Macy* as aforesaid, in great and imminent danger of sinking and that there was hardly sufficient accommodation for her officers and crew in the only two boats that were left available to her by reason of the collision.

8.—No blame is attributable to those on board the *Isis* for the collision; but those on board the *William H. Macy* are solely to blame therefore.

9.—A good lookout was not kept by those on board the *William H. Macy*.

10.—The starboard light of the *William H. Macy* was either not exhibited, or was not of such a character as to be visible, or was obscured or obstructed, or was in such a position as to be invisible, or for some other reason was not discovered, to those on board the *Isis* until the two vessels were within 500 or 600 yards of one another.

11.—After discovery of the starboard light of the *William*

H. Macy as aforesaid the *Isis* was prevented from keeping out of the way of the *William H. Macy* by the action of those on board the latter vessel; and the collision and the damage and losses consequent thereon was caused by the neglect, default and mismanagement of those on board *William H. Macy*, in not keeping clear of the *Isis*, and in not avoiding a collision, as they easily might and ought to have done by the exercise of ordinary, reasonable, and proper care and precaution. Nothing could have been done by those on board the *Isis* to avoid or counteract the effect of the aforesaid neglect, default, and mismanagement of those on board the *William H. Macy*.

12.—Those on board the *William H. Macy* disobeyed Articles 6 and 23 of the Regulations for preventing Collision at Sea.

13.—The defendants have sustained loss and damage by reason of the collision amounting to \$150,000. For which the plaintiffs are liable.

(Signed)

J. F. LOWDER,

Counsel for the Defendants.

His Honour said that, in view of the statements in defendants' Answer in paragraphs 5, 6, and 7, was it proposed to persist in the plaintiffs' statements in paragraph 4—that the *Isis* did not stand by them?

Mr. Scidmore—Yes, your Honour.

His Honour—Do you persist in insisting on it. It would prolong the inquiry and does not amount to anything.

Mr. Scidmore then proceeded to read the preliminary acts.

His Honour understood there was very little discrepancy except as to the strength of the tide.

Mr. Scidmore acknowledged that this was so: in the tide and condition of the atmosphere. The rules he contended the *Isis* violated were Nos. 17 and 18:—

Art. 17.—If two ships, one of which is a sailing ship and the other a steamship, are proceeding in such directions as to involve risk of collision, the steamship shall keep out of the way of the sailing ship.

Art. 18.—Every steamship when approaching another ship, so as to involve risk of collision, shall slacken her speed, or stop or reverse if necessary.

The next rule to which he referred was Rule 22:—

Art. 22.—Where, by the above rules, one of two ships is to keep out of the way, the other shall keep her course.

Continuing, Mr. Scidmore said that under Paragraph 4 of the Merchant Shipping Act of 1893—

His Honour pointed out this was no longer in force.

Mr. Walford remarked that the section in question was Section 422 of 1894, which reads—"Colliding vessels must stand by and give name and other particulars, or in the absence of proof to the contrary, he is deemed to be in fault."

Mr. Scidmore pointed out that was substantially the conditions contained in the former Act. In the answer to the petition, defendants say plaintiffs disobeyed Section 6 and 23 of the Merchant Shipping Act:—

Art. 6.—A sailing ship under way or being towed shall carry the same lights as are provided by Article 3 for a steamship under way, with the exception of the white light, which she shall never carry.

Art. 23.—In obeying and construing these rules due regard shall be had to all dangers of navigation and to any special circumstances which may render a departure from the above rules necessary in order to avoid immediate danger.

Mr. Scidmore remarked there was some discrepancy as to the time and positions, but this was immaterial, as being due no doubt to the different sorts of time kept on each vessel. As to the other points at issue, evidence would be called.

His Honour remarked that he would like the case completed, if possible, within three days; the usual course to be followed in the proceedings.

Jabez Alexander Amesbury, Master Mariner, sworn, said—I am in command of the American ship *W. H. Macy*. Have been Master for 23 years and in command of the ship for 8½ years. She left on June 12, 1895, from New York for Yokohama and Hiogo. On the 14th October last we were beating up towards the outer Lighthouse. Took on pilot about 5 p.m. We tacked, sometimes every hour or so, according to the wind. The weather was clear and we were carrying all necessary sail. Nothing happened until shortly after midnight. We were steering N.W. ½ N. the wind was N.E. by N. and wind baffling and on starboard tack. We were off Sagami about 5 miles. The vessel was steering by the wind, carrying three topgallant sails. We were going about 5 miles per hour. We saw the next light above, Kanonsaki. The weather was clear, and stars were shining, with clouds. We were light, drawing 20 feet of water. I was on deck aft by the wheel-house. A few minutes after 12, a light on the starboard bow was sighted, and, seeing a head light, knew it was a steamer. We kept on, supposing she would keep on her course.

When we found she would not change, I called attention to it. She was 1½ to 2 miles off when I saw her. About 15 minutes afterwards I apprehended a collision, and gave orders to ring the forward bell and shout to the steamer, but gave no orders to alter my helm, as I thought it would be confusing. The tide was flood, and struck us on the lee bow. I don't know force of the tide. Had I starboarded my helm when the vessels were close together it would have made little difference, but might have increased the speed a little. Had I ported it might have made a few feet difference in the striking point. I saw the hull of the steamer five minutes before the collision. The collision took place at 12.20. I asked the quartermaster to look at the clock in the wheel house. As soon as we struck I looked over. She had swung back, her stern at our fore rigging. The vessels when colliding were a little forward of right angles, almost square, but not quite; the *Isis'* port beam and our port stem. The steamer was a point off right angles. Heard no shouts from the *Isis*, and saw no change in her direction. Did not hear anyone on the *Isis* hail to starboard our helm. I could see the *Isis'* lights. I asked them to stand by us, but got no reply; heard nothing from them although we asked twice. The two vessels were together at that time. Previous to the collision did not hear anything from the *Isis* about change of course. There was nothing intervening between the two ships before the collision. The bell was rung 4 or 5 minutes before the collision, and was kept ringing until the two ships came into collision. The men on the fore-castle also shouted. This continued till the time of collision. Did not hear any one on the *Isis* asks if we were all right, and no one on our ship replied. She gradually drew off to the starboard, and then gradually disappeared. She did not ask for our name or offer to stand by. We backed our main yard to stop her and to ascertain damage, and found bobstays all damaged and all head-gear. Then sounded and manned the pumps. I saw the water was gaining, so decided to beach her on Tateyama Bay. We remained there eight days. I saw the *Isis* next day, the 15th at 1 p.m. She was near the Quarantine station coming up the bay. My lights were in good condition and were placed in the upper channel of the fore part of the upper rigging. I was carrying the two side lights: ordinary ship's lamps. I have them still. At midnight it was reported that the lights were burning brightly. It was when we sighted the steamer. Every half hour the lookout reports—"All's well, lights are burning brightly." They were burning brightly 5 to 10 minutes after. I burn 150° test kerosene oil; there was nothing to obstruct the lights straight ahead or 8 points abeam. The lights were examined by myself, the pilot, and the carpenter. They were burning brightly. There was 10 feet of water in the hold when she was beached. One gang of men was pumping all the time. The water gained on the pumps about 2 feet an hour.

Cross-examined—I remained on deck all the time after the collision—all hands were on deck. She touched the beach at 5.15. Did not see the lights of the *Isis* 15 minutes after the collision. Her lights were not reported. We saw the lights of one steamer outward bound: her lights were visible. The *Isis'* lights were abaft the beam for 15 minutes after the collision. She did not approach us after the collision to within hailing distance. I signalled blue lights and flash lights to get assistance. I saw the other ship about one o'clock. The lights were burnt for assistance.

Mr. Lowder—Do you consider blue lights and flash lights the proper signals for a ship in distress?—Yes. The lights for a pilot are a flash light or a blue light. I had no rockets on board. Don't know I am liable to punishment for not carrying them. Only carry them when I have passengers on board. I supposed it was required by law. I carried no rockets because it is not customary in American ships. The other vessels did not come to our assistance. We showed lights for half an hour after the collision. The first light was exposed at about 1 o'clock. I know the use of a flare-up light, but not the burning of a barrel. Don't know it is signal of distress. The *Isis* did not come close enough for them to hail us nor did they wave a white light to us. The *Isis* could have stayed by us and assisted us without danger to herself. I have ascertained that since, as she steamed with her own steam and was not leaking much. I do not consider it a very serious accusation against a ship-master to say he could have helped and did not. I consider it a serious matter for him to have rendered no help. I never knew her to be making water. The statement that she could have helped us is based on the fact of her steaming up herself. I did not ascertain the facts of the case before instruct-

ing Counsel. I did not know where she was carrying her boats. My boats were not damaged. I had four, with 26 crew all told. Boats were quite sufficient. I signalled for him to tow my ship; did not think that life was in any danger. I knew we would sink, but we had land right under the lee. The pilot knew where we were, so did I. Was on the starboard tack about $\frac{1}{2}$ of an hour. Previous to that we were on the port tack. It was 3 or 4 minutes before the collision that I thought one imminent. If she was altering her course I could have seen it about three minutes before the collision. I did not perceive that she had altered her helm. Three or four minutes before the collision I rang the bell and ordered the men to shout. The *Isis* should then have gone full speed astern, and we would have crossed her bow in safety. From the fact of our striking her amidships she must have increased her speed. If she had gone astern 3 minutes before the collision we might have cleared. I considered a collision imminent 3 minutes before it took place. If I had backed my main yard previous to the collision it would be confusing under the circumstances of the case. I had one watch on deck all the time, and both watches when we wanted to tack ship. If I had starboarded my helm she would have increased her speed a little, but I would have been obliged to shiver the after sails, a manoeuvre which takes time. If we had let the cross-jack run square she would have gone off a bit, but it would not have avoided the collision. If he had signalled us, then we might have been able to clear. I could see that the steamer was doing nothing but kept on her course. We were waiting for her to show her green light. It was not our business to do anything, as it would be confusing, for had we backed and he starboarded a collision would surely have occurred. Had he hailed us we should have heard him even with our ringing and shouting. Had he shouted we would have heard him. There was nothing to prevent us hearing a hail immediately after the collision; there was no confusion, everything was very quiet. My lights were filled in a galvanized iron receiver, and were screened by the side of the vessel. They were forward of the widest part of the ship. I carry no other screen but this.

The Captain then pointed out the position of the lights on a model which had been produced.

His Honour remarked that the Assessors would go on board and view the position themselves, and Counsel could, of course, go on board and see for themselves.

The case was adjourned till 1.30 p.m.

On resuming in the afternoon, the first witness called was the pilot,

James Cooke, sworn, said—I reside at Matsuo, which is one mile from Tsurigisaki. Have been a pilot for 25 years. Have been in command of sailing ships. I boarded the *W. H. Macy* at Sunosaki at 5 p.m. on the 14th. I was to pilot her to Yokohama. Was on deck at midnight. The weather was clear, and both Kannonzaki and Sagami lights were visible; wind N.N.E. and baffling; and tide flood, running N.E., up channel and contrary to the wind. The *W. H. Macy* was heading N.W. to N.W. $\frac{1}{2}$ N. She was sailing on the wind on the starboard tack. Her course would vary from $\frac{1}{2}$ a point to a point to keep her full. She was going 5 miles an hour. We were $5\frac{1}{2}$ miles off from Sagami light. Heard eight bells struck. Heard of a light 10 minutes after midnight, a red light on the starboard. I saw the light, red light with bright masthead light. The *Macey's* lights were burning bright. It was reported at 12 and again shortly before the collision. The light was seen two miles off, the time between sighting the light and the collision being 15 minutes. Could see Sagami light 5 miles off, and Kannonzaki 11 miles. The *Isis* was on the starboard bow 5 to 6 points bearing N.N.E. There was no change in the bearings of the two ships. From the time of sighting lights and the collision 15 to 18 minutes elapsed. Nothing was done on the *Macy* in the interim, no change was made in her course. We shouted to attract the steamer's attention before the collision. Heard the order to inspect lights—saw lights after the collision and they were burning brightly. They were not touched between the two times. She carried ordinary ships sidelights. (Light produced.) This one is like the one burning that night. There was nothing between the two ships that would obscure the light. Could see the hull of the *Isis* half a mile off before the collision, even if she had no lights. We were able to see the land on both sides of the bay. The ship was 10 to 15 feet higher out of water than the steamer. All sails were set excepting the mainsail. After the collision no conversation took place between the two ships. Heard nothing from the *Isis* before the collision. Saw no change of her course, or desire on her part for us to change our course. Had we starboarded our helm it would have had

no effect, as she could not pay off in time; had we luffed it would have been useless. We hailed her to stand by, but I heard nothing from her. We burnt blue lights and flare lights. I then headed her for Tateyama Bay. The *Isis* headed up channel. About 15 minutes after the collision saw her sidelights about a mile off. The *W. H. Macy* made 2 feet an hour of water faster than the pumps. We were not asked by the *Isis* for assistance, nor for the name of our ship. We did not call out our name. I did not hear any one address those on the *Isis* except Captain Amesbury, who called out "Remain by the ship till we see what damage is done" or words to that effect. Heard him say so twice.

Cross-examined—The Captain was on the poop deck when he said this, and I was alongside of him. The other ship was within hailing distance—from 100 to 200 yards. I think a voice would have carried 600 feet that night; just before the collision, too, as there was no change in the weather. Both the Captain and myself gave orders to the quartermaster to keep her course before the collision,—about 10 to 15 minutes before, and also repeated afterwards 5 minutes before the collision. I repeated the order myself, not the Captain, but he was standing by me. He didn't countermand it. At that time I did not apprehend a collision, as I thought the steamer would alter her course. I apprehended a collision about 3 minutes before it actually took place. I commanded a ship about 27 years ago. I am an American. I did not hold a Master's certificate then.

Re-examined—At that time Master's certificates were not really required.

George Wilson, sworn, said—I am a seaman on the *W. H. Macy*, and was on watch on the night of the collision. Took watch at 8 bells and took the wheel, orders full and by, compass N.W. $\frac{1}{2}$ N. It was a fine starry night, and I had a clock near me. I heard a light on the starboard bow reported at 12.5. I just kept my course and was not instructed to alter it any way. I could see the steamer off the starboard bow. It was 12.20 when we struck. I was able to see the hull from 12.10 to the time we struck independent of her lights. After collision I heard the Captain calling out to the steamer, but heard no reply. He asked the steamer to remain by us. I looked at the clock at the time of the collision. Heard no hail whatever from the *Isis* to starboard before the collision.

John Williams, second mate, sworn, said—I went on duty at 12 o'clock the night of the collision. I was attending to the pilot's orders. After 8 bells I heard a light reported, and then sent a man to see the sidelights, and he reported them burning brightly. I inspected the lights 10 minutes after the collision. I first inspected the stem and then the sidelights.

Mr. Lowder said he would admit the lights were burning to expedite matters.

Witness—Previous to the collision we rang the bell, but heard no hail from the *Isis*. After the collision I heard no conversation between the ships. Was on the poop until 3 minutes before the collision, when I went forward, and got as far as the mainmast when I was knocked down by the force of the collision. Could see the hull of the *Isis* $\frac{1}{2}$ a mile off. There was nothing to obscure the light. We unbuckled the fore-stays as we were making short tacks so as to get everything clear. It could not have got in the way of the sidelight.

To the Assessors—If the bickets had been taught they would not have obscured the light.

Cross-examined—The fore tack would not have obscured the light, as it was inside the ship and a good distance away from the light. After the collision I went to the fore-castle head. I do not hold a Master's certificate. I do not think I could command a ship now without a master's certificate—about 30 years ago I think I could have done so.

Mr. Scidmore remarked the man was not an expert, but that if Mr. Lowder wished to know, he could say it was not necessary in America, as the owners manned and officered a ship at their own risk.

Salve Meling, the carpenter, sworn, said—I was on board the night of the collision, and had charge of the lights that night. We used water white oil, 150 degrees test. The lamp produced belongs to the ship. Have been ship's carpenter 18 years. My duties covered looking after the lights. Have been on a British steamer, but the boatswain looked to the trimming and I took it in. This is a first class ship's light. Since the collision and since the vessel was in port we tested the light. The mate and I lighted the lamps and went $\frac{1}{4}$ of a mile beyond the outer lightship and we could see the light distinctly. We went in a circle after we had gone straight ahead. I was able to see it straight ahead and abeam. There were the city lights behind her. We used the same oil as is in the lamp now. We did not light the lamp at Tateyama as we used the riding light. We made the test after

we came into port—it was a clear night similar to the one on which the collision occurred. I examined the lights before the collision—also after the collision. I trim the lamps every morning at sea; did so on the morning before the collision.

Cross-examined—I examined the lights of my own accord. The bell was ringing and the men were shouting at the time. I was only standing by to 'bout ship. It is the custom for the carpenter to go to sleep at night, when the watch look after the lamps.

Olaf Olsen, a seaman, sworn, said—I was on the lookout on the fore-castle, and went on duty at 8 bells. Looked at the sidelights as soon as I came on the fore-castle head. The weather was fine. About 5 minutes after I saw steamer on the starboard bow,—3 or 4 points. Her red and masthead lights were visible. It was 5 minutes after 8 bells and 15 minutes before the collision. I heard an order to ring the bell, and was going to do so when I saw another man doing so. I called out to the steamer when she was 200 or 300 yards off. I heard no one on the *Macy* say we were all right.

Cross-examined—I signed the entry shown me, but can't remember the date of signing. There are 12 signatures on the log. I cannot read it, but it was read out to me in the cabin by the Captain and then we signed it. The whole entry was read to me. I remember seeing only one steamer after the collision, and not several as stated in the log.

In answer to His Honour, Mr. Scidmore said he had the whole ship's crew as witnesses as to the time between the sighting of the steamer and the collision, but his material witness was the first officer who was now absent on board, being in charge of the vessel.

The Captain, recalled by Mr. Lowder—The entry in the ship's log was made by me at 8 o'clock the same morning, soon after we arrived at Tateyama. I read it out to the men and saw them signing it. They made no objection.

His Honour—They never do. It would have surprised you had any one objected?

Witness—I would qualify the "several" vessels signalled, as entered in the log, by saying two, one abait the stern and another one going out. I wrote the word "several" in the impulse of the moment, my attention has never been brought to it before.

Mr. Scidmore had 20 more witness to call, but intimated that the only material one would be the first mate.

The Court then adjourned till 10 a.m. to-morrow, to sit from 10 to 12 and from 1 to 3 o'clock. His Honour remarked that he would go with the Assessors to examine the position of the ship's sidelights at 9 o'clock to-morrow morning.

WEDNESDAY, DECEMBER 18TH, 1895.

This case again came up for hearing, when further evidence was taken on both sides.

Upon resuming this morning, his Honour, the Judge, and the Assessors, having paid a visit to the *William H. Macy* to examine the position of the side lights, the first mate was called.

Fred. Scott Meady, sworn, said—I was on board the *W. H. Macy* on the night of the collision, and examined the green side light. After the arrival of the ship in Yokohama I tested the side lights.

His Honour intimated that the Assessors and himself had examined the side lights, which they had found to be excellent, and which could be seen 3 miles off as stated in the preliminary acts. The light was a first class one.

Mr. Scidmore said in that case it would be unnecessary for him to pursue the examination on that point.

His Honour remarked that the Assessors had examined the lights and had expressed the opinion that the ship was exceptionally well found.

Mr. Scidmore said his questions had only been put to make things plain.

Witness—The conditions of the atmosphere was the same as on the night of the collision. The light was visible about 2 $\frac{1}{2}$ miles and could be seen 2 points abait the beam.

Cross-examined—There was no sail set when I made the examination. There are no screens on the ship, the ship's side acting as a screen.

By the Court—I was not on deck at the time of the collision. I went below at 12 o'clock. The vessel was on the starboard tack for about $\frac{1}{4}$ of an hour.

The Captain, recalled by the Court, said—The whole of the starboard and a part of the port watch was on deck at the time of the collision. We tacked so often that some thought it was not worth while to turn in—some had, however, turned in.

This closed the case for the plaintiffs, and Mr. Lowder, without addressing the Court, proceeded immediately to call his witnesses.

Thomas Walker, Captain of the *Isis*, sworn, said

—I have been at sea 23 years, and in command 13 years. Have had experience of steamers and sailing vessels both large and small. We were from Middlesboro' to Yokohama. About 6 o'clock I gave orders not to carry too high steam as I intended to ease down to daylight. I did so because it was difficult to pick up the light near the fort. Have been in port 11 times. I telegraphed to slow at 6.40, speed 3 knots or a little over. That rate was kept up until 2 minutes before the collision. Between six and the collision the ship was turned round twice, and her head was put S.S.W. true. The ship was in thorough control all the time. Left bridge at 11.56, and went on again 2 minutes before the collision occurred. Good look-out kept, saw various fishermen's lights and the light-houses. The second officer and myself were keeping watch. The lookout man had glasses, and always used them as they are his own property. My men are a good lot, the officers as well. Never had to find fault with any one. A green light on a vessel should have been visible full range. At 12.15 heard a light reported. Was in the chart room doorway, two feet from the bridge ladder. Went up immediately and saw a green light bearing down upon us 2 points across the beam. The chief officer gave the order hard aport, go astern, and I gave the order full speed ahead, and hailed the other ship to starboard, which would have made them run parallel or almost. She was about 500 to 600 yards off when I first saw her. If she had done this there would have been no collision. No notice was taken of our hail and she struck us at an angle of 85 from aft.

Mr. Walford at this point made an application for the withdrawal of witnesses from the Court.

Mr. Lowder said it was now too late; he himself had not done so.

His Honour pointed out that such an application must be made at the commencement of the proceedings, and cited the rules to that effect. Mr. Walford should have made the application at the outset, and having had the option and not doing so he had waived his right. He was rather surprised no such application had been made by Counsel, as the witnesses for both sides could have been kept out without distinction, but now it was too late.

Witness—She was 300 ft. distant when I hailed her to starboard. She could have cleared had she done so even then. This would have put her before the wind and increased her speed. We were on the port helm and were bearing away. She had gone off 2½ points before the collision occurred. He could have backed his main yard before that and stopped her way. A sailing ship is easier stopped than a steamer. He could have put her helm down and gone by the wind, which would have stopped her way. It would have stopped her way. After colliding she grazed along our side and hung for a short time on our port quarter. One life boat and one pinnacle were smashed, which left us with one life boat and one jolly boat. They were lowered to the water's edge before 3 minutes. My crew numbered 24 all told. These boats would have just been sufficient to take the men on a night like that of the collision. I hailed her when we were alongside just from the bridge and then from the poop. She was only 20 feet distant when I hailed her the second time. I asked for the name of the ship, and got no reply. The second time I asked if she was badly damaged and heard from her, "No, I'm all right." I asked him to stand by as I thought my ship was sinking and heard the reply "All right." I then heard the order "Clear away the life boat," and nothing more. All night we were in the vicinity of the collision. We lost sight of her at 2.45 a.m. I passed astern at 2 o'clock while she was showing blue lights, at 2.45 it began to rain. I stayed till daylight and went to Tateyama to find him, but the weather being thick and rain and wind increasing, and as the plates were opening out more, she was in a critical condition. The condition of the ship was reported by the carpenter every half hour and the engineer when he found out defects. She was cut under the water's edge which caused disorder in the engine room. All the donkey connections were broken and only the main pump in order, so that if that went amiss the ship would have sunk. Had I sent one of the boats away it would have jeopardised the lives of the crew. At daylight next morning the second mate said I was too persevering, and at 8 o'clock the engineer pointed out to me the danger of staying so long. I waited to render assistance and ascertain her name. I made an entry in the official log which was signed by me and the chief officer on the day of the collision. This was read. She never asked for any assistance while in sight, but burnt several blue lights and white flash lights once or twice. This was from one to two o'clock and some time after. I only replied once by waving a white light which

the carpenter had. I thought from the lights exhibited he required a pilot. At one time the engineer asked "What does she want?" and I replied "He wants a pilot." He did not seem to be satisfied, and thought they were signals of distress, when I showed him the log, and pointed out the use of signals. After the collision we hailed once.

Cross-examined—His stern was to our port side. We were going 3½ knots at the time of the collision. Had we reversed it wouldn't have stopped her way, as it was under two minutes. It would take four minutes to have got sternway on her. We were dodging the daylight—this I do not consider dangerous. It is not dangerous for me to dodge about the fairway; it was not a fairway, it was the open sea in my opinion.

To His Honour—The channel is from 10 to 11 miles wide. The statement in the answer about our lights is correct. I carry the stern light only when I am near land, but not in the open sea. I do not consider carrying the stern light an infringement of the regulations. I calculated her speed from points of land. Without influence of wind or tide she would go 3 knots, but if wind was against her she would only go one knot. She was making 38 revolutions which indicated 3 to 3½ knots. The tide was a little over one knot, and was flood. Her way would not have been stopped within two minutes,—it would have taken almost a minute to put her from full speed ahead to full speed astern. Heard the bell of the *Macy*, but did not see her hull and lights at the same time. Could not say who replied to my hail. My cargo was general, and some slight claims are now pending: some transshipment cargo was partly damaged by salt water. There was some water in the hold. After the collision I went in a N.E. direction and then went S.S.E. again, going about 3 knots. After passing her stern I turned back and kept her in view. As her head gear was gone, I considered she could not beat up. Staying by a ship I understand to mean to keep close by her, but not to keep within hailing distance as it would be dangerous, as a second collision might occur. I kept moving about the whole morning and arrived in Yokohama at 1 p.m. I took the time 12.15 from my own clock in the chart room. At 12 o'clock I changed the watch.

Re-examined—The bell commenced to ring shortly before the collision, and after I had got on the bridge.

Henry Nelson, second officer, sworn, said—I have been at sea about 10 years, and have served mostly in sailing ships. Remember the night of the collision, was on watch from 8 to 12. The captain left the bridge about 2 minutes before 8 bells. A light was reported on the port bow by the lookout, Smith. It was a fisherman's light. Smith is a good man, so also is Olsen. I consider the men good and active, no "duffers" among them. Have had no occasion to find fault with them while on board ship. I was keeping watch with the Captain and both of us had glasses. He ordered me to look out for fishermen and not to be afraid to use the telegraph, and to knock if he was required. From the bridge I can see all round the horizon. The height of the eye on the bridge is about 30 feet. I was relieved by the chief officer to whom I gave all particulars, also reporting a green light ahead—Jokoshima light. I then went into the wheel house, wrote out the log and then filled my pipe, took a look at the clock and then went on deck. As soon as I came up I heard "There's a green light," and almost simultaneously a light on the port bow and then hard aport. I stood there and saw a bright green light 5 or 6 points on our port bow. It was a good light and burning brightly. I stood still and watched the collision. We were paying off rapidly at the time. Before the collision the Captain hailed the other ship. He was 300 feet away. He called out to her to starboard her helm twice. I heard voices hollering out, but could not tell what they were saying, also a bell ringing. Had she starboarded she would have gone clear. After the collision I was ordered to clear away the life-boats and to sound the well. I was on the starboard side, and then went to port and found all the davits gone and boats smashed up. The Captain called out, "Are you all right; are you badly damaged?" I was just at the corner of the engine-room going from the port to the starboard side. The boats were in the water in about 3 minutes: I put life belts in the boats; the men ripped up the covers, etc. The ship's stern was against our quarter. I heard no request from her for us to stand by. I stayed on deck till about 3 o'clock. I noticed blue lights being burnt, but no white lights, heard no guns, and saw no rockets. Asked the Captain as to the meaning of the lights, and he said "Asking for a pilot." Strict discipline was kept at the time of the collision; it is always kept on board our ship.

His Honour thought it waste of time to continue this line of evidence, as it served no purpose,

things might be said or imagined to be said or heard in the excitement of the moment.

Cross-examined—The first light reported was a bright white light on the starboard bow. No green or red light was reported to me before 12 o'clock. She goes 8 or 8½ knots when full speed ahead.

The case was then adjourned till 1.30 p.m.

On resuming in the afternoon, the examination of witnesses was continued. The first called was

Robert Clelland, first officer, sworn, said—I have been at sea about 16 years and have a master's certificate. I remember the night of the collision. I relieved the 2nd officer on the bridge. The captain was at the chart room door. Our course was S.S.W., and I was told to keep a good look out for lights—a fisherman's light on the starboard bow. The green light was a shore light.* Had the *Macy's* light been within 3 miles of us we should have seen her, but I only saw her about 2 minutes before the collision, when I saw her lights 5 to 6 points on her port bow about 500 to 600 yards distant. I saw her a little before the lookout man reported her. It was not more than 2 minutes. If we had starboarded our helm we must have collided, but I gave the order to put the helm hard aport. This was the most feasible thing to be done. The Captain just then came up and ordered full speed ahead—the two orders being almost simultaneous. Heard him call out to the other ship to starboard her helm. She was 100 yards off. Had she starboarded we would have cleared. After the collision orders were given to get out the boats, which was speedily executed. I heard our Captain hailing the other ship, but could not hear what he said; but heard from the other ship "all right" but could not say what it referred to. I was on the after part of the bridge and the Captain was on the poop, about 100 feet distant. We were about 30 feet distant from each other and she was just clearing from our stern. Heard nothing about "standing by," but heard the order on the other ship to clear away the life boat.

Cross-examined—When I mentioned two minutes as the elapsed time, it was what I judged it to be. I entered it in the ship's log. (The entry was read by Mr. Walford.) I got the times mentioned from the wheel house clock; it is different from the chart room clock, but don't remember which was the faster of the two. There was only one collision, but she rebounded and struck us a second time, for which we have a dent in the bulwarks. The entry was made just after the collision: it was written up after our arrival in Yokohama at 1.35 p.m. The *Isis* at full speed ahead goes at 8 knots. I have a very vague idea of her speed at the time of the collision. I considered the most feasible thing was to put her helm down and go full speed ahead, not to stop and go full speed astern. I had not time to starboard my helm, which would have been the proper thing, so I ported and went full speed ahead. She takes one minute to stop. I don't know who called out "all right," but it was not on our ship. I don't know who spoke, but the voice came from aft, and as all our men were forward, consequently it could not have been our men. I heard the bell of the *Macy* after I saw the lights.

To the Court—Four men were on watch, myself, the lookout, the man at the wheel, and the man about the deck.

To the Associates—Our boats were swung in-board.

Joseph Livingstone, chief engineer, sworn, said—I was in the engine room till 12 o'clock on the night of the collision. From 6 to 6.15 was told to ease the fires ready for slowing down. At 6.40 I was ordered to do so, the revolutions being reduced from 66 to 38. This went on till 12 o'clock. While in my cabin I heard the telegraph ring roughly, so I looked out of my room and seeing the telegraph full speed ahead, I shouted "Danks, give it to her." Immediately afterwards I felt a terrific shock. Shortly after, we were ordered to stop her. We were told to look out for ourselves, and I ordered the third to come up.

Cross-examined—At 64 to 66 revolutions she would be going about 8 knots, that is with everything in her favour. With 38 revolutions she would go less than half speed.

To the Court—From the ringing of the bell to the collision was only 1½ minutes.

James Danks, third engineer, sworn, said—I relieved the chief on the night of the collision. Was told to keep low fires and full head of steam in case it was required. We were making 30 revolutions. At 12.13 got orders to go full speed ahead. I heard the chief engineer shout down some order. After that I got an order from the deck to stop, about 2 minutes after the collision. The next order was to go astern; this was another

2 minutes afterwards. I was then told to go slow ahead at about 12 25.

To the Court—If I were standing handy, it would take a few seconds to go full speed ahead. I was at slow. If I got an order to go full speed ahead it would have taken a few seconds for me to do so. It would take more time to reverse and go full speed astern. It would take about half a minute.

George Smith, A.B., sworn, said—I remember the night of the collision, and was on watch from 11 to 12, at which time I was relieved by Olsen. I made several reports while on deck. I had glasses of my own which I generally use when I expect to see many lights.

Cross-examined—While conversing with Olsen, did not make use of the expression "Sleepy head." This is the first time I have heard it. I told him there was a bright white light ahead.

Mr. Lowder called attention to the coincidence in the names of the two lookout men on the *W. H. Macy* and *Isis*, both, strange to say, being named Olaf Olsen.

His Honour remarked that fourteen years ago when presiding in a similar case here, and having the Captain of the *Verona* as an Assessor, he suggested the use of a short-hand reporter, which had now been done.

Olaf Olsen, A.B., sworn, said—I have been at sea 20 years. Was on the *Isis*, and went on duty at 12 o'clock, relieving Smith. There was a bright light ahead, which I lost sight of afterwards. I know no one on board called "Sleepy head." He did not call me sleepy head, nor did I call him that. I soon after saw a light on star-board bow, which I reported to Clelland and the chief officer. I saw a green light on the port bow, 3 or 4 points off, and quite near, which I reported. It was a light green light and burning brightly. It proved to be the light of the *Macy*. If the light was properly burning 10 minutes before I should certainly have seen it. I heard Captain Walker hail the other ship before the collision.

Cross-examined—I could see our own lights from the fore-castle head. The red light is much easier to see, but it is not difficult to see a green light—I don't find it so.

Johann Johansen, A.B. sworn, said—I was at the wheel from 10 to 12 on the night of the collision.

Karl Westerland, A.B., sworn, said—I have been at sea 9 years. Remember the collision. I was at the wheel, and went on at 12, relieving Johansen, course S.S.W. The second mate was on deck when I took the wheel. He was relieved by the chief mate shortly afterwards. About 1½ minutes before the collision I got the order hard a port. After the collision heard the Captain hail the other ship, but heard no reply.

Cross-examined—There was no clock near me. To the Court—I calculated the time approximately.

Mr. Lowder—It must be purely guess work.

Andrew Foulds, carpenter, sworn, said—I remember the night of the collision and came on deck about 12.15. Was awakened by some one calling down the ventilator. Thought it was a man overboard, but got on deck in time to see a sailing vessel strike us amidships on the port side. Every half hour after the collision I reported to the Captain. While talking to the Captain I saw a blue light. Had a lamp in my hand, and when I pointed out the signal, the Captain took it from me and waved it.

To the Court—I jumped out of my bunk just as I was.

Westerland, recalled—I saw the ship strike us. It was about 2 minutes before the collision when I saw the light, and received my orders at the same time.

Mr. Lowder said he tendered the boatswain, two able seamen, and the steward for the cross-examination.

This closed the case for the defendants, and the Court then adjourned till 1.30 p.m. on Friday to hear the addresses of Counsel.

WHITE.

- 1—R to K sq.
2—P to K 4, mate

2—B to Kt 3, mate

2—Q to B 6, mate

2—Kt takes Kt, mate

2—R takes P, mate

2—K to K B 6, mate

2—Q takes B, mate.

BLACK.

1—Kt takes P

1—P to B 6

1—B moves

1—Kt to B 2

1—P to K 4

1—Kt (K 5) moves

1—P takes P

Correct answers received from Digamma, W.H.S., Krug, J.D., Shogi, and E. J. King.

W.D.C.—Your Key-move of P to Q 7 will not do; it is a pity that you are "bowled out" over this little two-mover when you were so successful with No. 206. Correct answer to 206 was received from E. J. King after we went to press last week.

PROBLEM No. 209.

By E. B. SCHWANN.

BLACK.

WHITE.

White to play and mate in two moves.

Y.C.C. CHAMPIONSHIP.

The second round has come to a standstill. Wollheim has won his heat against McIlwraith; and Griffin, after placing one game to his credit against Mendelson, has retired to bed with a bad attack of the gout; Tennant, looking on from the peaceful shelter of his "bye."

SYDNEY CHESS CLUB.

Since Thursday was appointed special club night, several very pleasant chess meetings have taken place at the new club. Recently the married and single members declared war against each other, much to the discomfiture of the benedicts. The scores appear below:—

MARRIED.	SINGLE.	
1. W. Crane, Jun. (Captain).....	v. E. N. Wallace (Captain).....	1 1/2
2. G. B. Hall	v. P. M. Scott.....	1
3. P. B. Walker	v. G. W. Britton	1
4. C. Linden.....	v. W. Ridley	1
5. F. J. Wallis.....	v. J. S. Angus	1 1/2
6. S. Macdonnell.....	v. C. Mackenzie.....	1
7. A. C. Godhard.....	v. Langkopl.....	1
8. J. F. Paige	v. A. J. Turner	1 1/2
9. A. W. Green	v. E. H. Walker.....	1 1/2
10. W. P. Bradley.....	v. D. O'Connor	1
11. S. Rennie.....	v. W. Johnston	1
12. W. Briggs	v. Potter	1 1/2
13. Sewell	v. Power	1 1/2
14. Allen	v. Creagh.....	0
15. Hardaker	v. Goldrich	0
16. J. C. Dunn	v. Allport.....	0
		4 1/2
		11 1/2

The following interesting game was played at board 5 in the above match:—

GAME No. 404.

WHITE.

- C. Linden.
1—K Kt to B 3
2—P to K 4 (a)

BLACK.

- W. Ridley.
1—P to Q 4
2—P takes P

- 3—Kt to Kt 5
4—Q Kt to B 3
5—B to B 4
6—Q to K 2
7—Kt takes P at K 4
8—Kt takes B
9—Q takes Kt
10—Castles
11—P to Q B 3 (b)
12—P to Q R 4 (c)
13—Q to R 4
14—P to Q 4
15—P to B 4
16—Q to B 2
17—P to Q Kt 4
18—B to K 2
19—Q to B 3
20—B to Q 3
21—B takes P
22—Q takes Kt
23—R to B 3
24—P to Kt 5? (f)
25—R to Q 3
3—B to B 4
4—K Kt to B 3
5—P to K 3
6—B to B 4
7—B takes Kt
8—Kt takes Kt
9—P to Q B 3
10—Kt to Q 2
11—Q to B 2
12—Kt to B 3
13—P to K R 3
14—B to Q 3
15—Castles Q R
16—P to K Kt 4! (d)
17—P to K R 4
18—Kt to K 5
19—P to K B 4
20—Kt takes P
21—P takes B
22—P takes P
23—Q to Kt 3! (e)
24—B to K 4!
25—R takes P! & wins.

(a) If this sacrifice is new—and we do not remember seeing it before—we must christen it the "Linden gambit." The opening is not without merit.

(b) Not 11—P to Q 4, because of 11—Kt to B 3.

(c) Too early; the natural 12—P to Q 4 is best.

(d) Right. Clearly the capture of the P would subject White to a bad time.

(e) Focussing on the weak spot.

(f) Fatal; his best reply was 24—P to R 5.

GAME AT BOARD 6. TEAM MATCH.

GAME No. 405.

IRREGULAR OPENING.

WHITE.

- J. J. Glynn.
1—P to Q 4
2—P to K 4
3—P to K B 3 (b)
4—P takes K P
5—Q takes Q
6—P takes P (c)
7—B to Q B 4
8—B takes B
9—B to Kt 5 ch.
10—Kt to Q B 3
11—Kt to B 3
12—B to R 4
13—B to Kt 3
14—Kt to Q sq. (d)
15—B to B 2
16—Kt to K 3
17—Kt to B 4
18—K takes B
19—K to K 3
20—P to K Kt 4 (e)
21—Kt to Q 6
22—P to K R 3
23—K takes R
24—K to Kt 3
25—Q R to Q sq. ch.
26—K R to B sq.
27—P to Kt 3
28—P to B 3

BLACK.

- C. Delohery.
1—P to K 4
2—P to Q 4 (a)
3—P to Q B 3
4—P takes P
5—K takes Q
6—B to Q B 4
7—B to K 3?
8—P takes B
9—K to B 2
10—Kt to Q 2
11—P to K R 3
12—P to K Kt 4
13—B to K 6
14—B to Kt 3
15—Kt to K 2
16—Kt to Kt 3
17—B takes B ch.
18—K R to K B sq.
19—P to B 4
20—P to Kt 4
21—K to B 3
22—R takes Kt ch. (f)
23—K Kt takes P ch.
24—K takes Kt
25—K to B 3
26—R to K sq.
27—P to R 3
28—R to K 2

Rest of game not taken, but Black won by superior end play.

- (a) Better is P takes P.
(b) White should now take the K P.
(c) The text move gains a P, but because of the doubly isolated P's we prefer P to K B 4.
(d) K to K 3 was the right move.
(e) P to Q R 4 was necessary to prevent P to Kt 4.
(f) Well played; the two Kt's will overmatch the R in this position.

GAME No. 406.

EVANS GAMBIT DECLINED.

WHITE.

- Pollock.
1—P to K 4
2—Kt to K B 3
3—B to B 4
4—P to Q Kt 4
5—P to B 3
6—P to Q R 4
7—P to Q R 5
8—P to Kt 5
9—B takes P
10—P to R 6
11—P to Q 3
12—P takes P
13—Kt to R 3
14—Castles
15—P takes P
16—Q to K sq.
17—B to K Kt 5
18—Kt to B 2
19—R takes B
20—Kt to K 3
21—R takes R
22—Q takes Kt
23—R to R sq.

BLACK.

- Lasker.
1—P to K 4
2—Kt to Q B 3
3—B to B 4
4—B to Kt 3
5—P to Q 3
6—P to Q R 3
7—B to R 2
8—P takes P
9—Kt to B 3
10—Castles
11—Kt to K 2
12—B takes P
13—P to Q 4
14—Kt to Kt 3
15—Kt takes P
16—Q to B 3
17—Q to B 4
18—Kt takes Q B P
19—B takes Kt
20—Q takes B
21—R takes R
22—Kt to B 5
23—Kt to K 7 ch.

Black wins.

END-GAME No. 29.

A BALMAIN BRILLIANT.

A fine ending, won by Mr. R. Hirst on the 24th ultimo:—

BLACK—(MR. H.).

WHITE—(MR. R. HIRST).

White continued:—

- 1—Q takes Kt!!
2—Kt takes K B P!
3—B takes R
4—R to Kt 7!
5—R takes R and mates in two.

- 1—P takes Q
2—Q to Q sq.
3—Kt to K 2
4—R takes B

Under the heading of "Chess in the Army" the *St. James's Budget* has the following:—We are informed that, "by order from head-quarters," the subject of chess is to be taken up at Aldershot. We do not know the precise nature of the order, but in all probability it will refer only to the formation of a chess club in connection with the officers' mess. We have already previously drawn attention to the benefits which we think would result from the practice of chess in the army. There can be no question that chess is a species of mimic warfare or battle, conducted by strategy, which must be of particular value as a recreative form of mental training; and the lower down the ranks chess is played the more valuable its influence. The enforced analytical research, the thoughtfulness, judgment, and sobriety which the practice of the game would impose on Tommy Atkins, unknown to himself, would no doubt influence his character for good.

REPORTS.

The British steamer *Asloun*, Captain Murray, reports:—Had heavy list to port on account of cargo shifting in heavy weather. Left Honolulu the 28th November; steamed slow thence westward to make coal last.

The Japanese steamer *Kobe Maru*, Captain Haswell, reports:—Left Kobe the 17th December at 5 p.m. Arrived at Yokohama the 18th December at 8 p.m. Had fine weather throughout the passage.

The British steamer *Devonhurst*, Captain J. D. Reese, reports:—Left Hongkong the 6th December. Arrived at Yokohama the 19th December. Had strong N.W. gales and heavy squalls, with terrific high seas. Lost three boats, carried away several davits, also had second cabin stove in. Ship badly hove down on account of cargo shifting.

The American steamer *City of Rio de Janeiro*, Captain W. J. Russell, reports:—Left San Francisco the 30th November at 3.56 p.m. Arrived at Yokohama the 20th December at 1.10 p.m. Passage, 19 days, 3 hours, 46 minutes.

LATEST COMMERCIAL.

IMPORTS.

The market has not recovered from the fluctuations of exchange, Yarns and Shirtings being especially dull, although, at this time of year, Grey Cloth should meet with a fair demand. A little doing in Velvets at better prices, other Fancies neglected. Woollens, nothing doing beyond a few pieces of Italian Cloth, although the wintry weather should encourage a demand for blankets.

COTTON PIECE GOODS.

	PER PIECE.
Grey Shirtings—8 1/2 yds, 36 inches	\$2.30 to 2.90
Grey Shirtings—9 1/2 yds, 45 inches	2.75 to 3.30

Pig Iron, No. 3	1.60 to 1.65

KEROSENE.

No change, holders strong, stocks reduced, arrivals few with a prospect of an upward market.

	Nom.
American	\$2.50
Russian	2.50
Langkat	2.30

SUGAR.

White and Brown—Some reaction from the recent state of affairs. As usual the high values

current here have induced supplies; and buyers reap the benefit in a lower market at once. We shall probably see a further fall. Refined—Market quiet, dealers having filled their requirements both for the present and near future.

	PER PICUL.
Brown Takao	—
Brown Manila	\$4.75 to 5.15
Brown Daitong (New)	4.15 to 4.20
Brown Canton	4.10 to 4.70
White Java and Penang	6.80 to 7.00
White Refined	6.30 to 9.50

EXPORTS.

RAW SILK.

Prices have advanced for good Silk, especially, Joshu Re-reels of favourite chop. Medium and Common grades remain as before. The principal business done has been in Filatures and Re-reels, and the bulk of shipments made has been for the U.S. market. Stock here remains heavy, being fully 18,000 piculs, and with the end of the year approaching sellers ought to be current.

QUOTATIONS.—(NEW SILK.)

Filatures—Extra 9 11, 10 12 deniers	\$920 to 930
Filatures—Extra 13 15, 14 16 deniers	920 to 930
Filatures—No. 1, 10 13 deniers	870 to 880

Kakadas—No. 2	760 to 770
Kakadas—No. 3	740 to 750

WASTE SILK.

Dealers have at last reduced quotations but without much result, for buyers will not operate at present. Dealers have only themselves to thank for the present position; had they made these concessions two months ago, they could have done a large business and had money in pocket instead of now being hampered with a large stock.

QUOTATIONS.—(NEW WASTE.)

Noshi—Filature, Best	\$120 to 125
Noshi—Filature, Good	110 to 115
Noshi—Oshu, Best	115 to 120

BISSET & CO.'S SHARE REPORT.

Yokohama, December 16th, 1895.

The following were the closing quotations of the undermentioned stocks on Saturday, the 14th inst., at 5 p.m., wired to us from Hongkong: H. & S. Banks 181 per cent. premium, China Fires \$87, H. & W. Docks 147 per cent. premium, H. & K. Wharfs \$48.50, H. C. & M. Steamboats \$36.25, and Indo-Chinas \$57. There were then buyers at those rates. Sales of Lands at \$68.50 and of China Traders at \$73 have taken place on the same day. The following were shares that were on offer: Douglasses at \$57, Punjoms \$5.75, Raubs \$4, Balmorals \$2.75, Nationals \$28, Straits \$25, and Unions \$200. It will be noted that the tone of the market is much firmer; many of the best stocks being wanted, and that, though no material changes in old rates has to be noted, save in Steamboats and Wharfs, an inclination for a rise is perceptible.

December 17th.

Latest mail advices from China bear dates of the 6th and 11th instant, but their contents are uninteresting, and only slight changes have to be noted. Business is reported as very dull, but some people are of opinion that a rise in H. & S. Bank shares would help to strengthen the market. A rise is to-day reported, by wire, from Hongkong, and H. & S. Banks, which, on Saturday were quoted at 181 per cent. with buyers, as the closing quotation, are now in demand at 183 per cent. premium. As reported yesterday, we are under the impression that the tone of the market is much firmer, and if the rise in Banks, reported to-day, would tend to help the market, higher rates may be looked for.

In sympathy with the very favourable news of the crushing of the Punjom Mines in November—the crushings amounted to 1,000 tons of ore which yielded 500 ounces of gold—shares rose from \$5 to \$6.50, but shares are now weaker, and \$5.75 was the wired quotation on the 14th instant.

Locally, the market is firm, with buyers of Club Hotels at \$60, Oriental Hotel Founders' at \$140, Japan Breweries at \$135, Bretts at \$3, and Debentures of all kinds at quotations. Other stocks remain nominal as per last quotations, with neither buyers nor sellers.

December 18th, 1895.

A wire from Hongkong gives the following quotations:—Buyers of H. C. & M. Steamboats at \$36.50 and of Indo-Chinas at \$58, which is a rise from \$36.25 and \$57, respectively, the closing quotations on Saturday. H. C. & M. Steamboats have been placed locally from Hongkong for forward delivery 28th February at \$37.75.

Local stocks are still enquired for, and offers of Grand Hotels, Club Hotels, Oriental Hotels, both Founders' and Ordinary, Japan Breweries and Bretts are wanted. Japan Brewery Debentures are wanted at \$107.

December 19th, 1895.

Mail advices bearing dates of the 8th, 10th, and 11th instant, report little or no change in the share market and quotations more or less nominal. Business is reported as very dull, but from the quotations wired on the 14th instant, we must assume that rates are now much firmer, with a tendency for a rise. No material rise, however, can be looked for until after the settlements and at the beginning of the new year.

H. & K. Wharves are stronger, owing to renewed rumours of the construction of a railway between Kowloon and Canton, but opinions differ as to its realization, inasmuch as some people do not think the scheme will come off until negotiations regarding the Hankow-Kowloon line have been satisfactorily settled.

Dairy Farms have risen to \$10. The Company's Balance Sheet shows a credit Balance of about \$19,000 on the 30th ultimo; the Company will pay a dividend of \$1 per share, equal to 10 per cent.

No change to report in local stocks, and offers of nearly all stocks are wanted. H. C. & M. Steamboats are offering locally at \$37.

December 20th.

INDO-CHINAS have been placed locally from Hongkong for delivery in March at \$61; the last cash quotation was \$58. There is nothing fresh to report in China stocks. Local stocks of all kinds are wanted at last quotations. \$140 is offered for JAPAN BREWERY shares and \$107 for Debentures.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health
for all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribu-
aries in Abyssinia," says—"I ordered the dragoman Mahomet
to inform the Fakir that I was a Doctor, and I had the best
medicines at the service of the sick, with advice gratis. In a
short time I had many applicants, to whom I served out a
quantity of Holloway's Pills. These are most useful to an ex-
plorer, as, possessing unmistakable purgative properties, they
create an undeniable effect upon the patient, which satisfies
them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations
of all kinds. It acts miraculously in healing ulcerations, curing
skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels
in China, published in 1871, says—"I had with me a quantity of
Holloway's Ointment. I gave some to the people, and nothing
could exceed their gratitude; and, in consequence, milk, fowls
butter, and horse feed poured in upon us, until at last a tea-
spoonful of Ointment was worth a fowl and any quantity of peas-
and the demand became so great that I was obliged to lock up
the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the
World. May 1st, 1890.

THE PROCEEDINGS

OF THE
IMPERIAL JAPANESE DIET

IN BOOK FORM.

THE "Proceedings" include EPITOMISED
DEBATES, Translations of the Bills dis-
cussed, Budgets, Speeches of the Ministers of
State in full, Questions put and the answers of
the Government, and the Legislative Work of

YOKOHAMA: SATURDAY, DEC. 28TH, 1895.

SUMMARY OF NEWS.

H.I.H. PRINCE ARISUGAWA returned to Tokyo on the 25th inst. from Etajima.

MR. Mitsuhashi, late Chief Administrator at Yingkow, returned to Tokyo on the 25th inst.

COMMANDER TOGO has been promoted to the rank of Captain, and Lieutenant Iwai to that of Commander.

THE British cruiser *Edgar* left Yokohama on the 24th inst., to search for the British steamer *Bonnington*.

H.I.H. THE CROWN PRINCE, who has been staying at Hayama for some time, will shortly remove to Numazu.

THE Temporary Epidemic Inspection Bureau established in the Home Department is to be closed on December 31st.

A DESTRUCTIVE fire broke out on Awashima, Niigata Prefecture, on the 7th inst., and nearly

all the houses on that island, numbering over 150, were burnt.

MARSHAL MARQUIS YAMAGATA and Marshal Marquis Oyama were received in audience by the Emperor on the 21st inst.

COUNTESS MUTSU returned to Tokyo from Oiso on the 22nd inst. It is stated that Count Mutsu will shortly return to the capital.

MARQUIS ITO, the Premier, who lately returned from Oiso, paid visits to various Foreign Representatives on the 20th inst.

AN entertainment was given on the 24th inst., at the Yokosuka Admiralty Station, to the officers of the U.S. cruiser *Olympia*.

H.I.M. THE EMPEROR AND EMPRESS have granted *yen* 800 towards the relief of the sufferers in the recent big fire at Shiba, Tokyo.

MARQUIS ITO, the Premier, and Marshal Marquis Oyama, Minister of War, were received in audience by H.I.M. Emperor on the 23rd inst.

MR. JOHN MATHEWS JAMES, a British subject, received the decoration of the Second-Class of the Order of the Rising Sun on the 13th inst.

H.I.M. THE EMPEROR has announced his intention of attending a review of troops which takes place on the Aoyama Parade Ground on January 8th.

A MARINE Court of Inquiry was opened yesterday before H.B.M.'s Consul, sitting with Assessors, into the *Isis-Macy* collision. The Court was adjourned till to-day.

IT is stated that the Japanese Government has presented *yen* 10,000 to Mr. Denison, a foreign adviser in the Department of Foreign Affairs, in recognition of services rendered by him during the late war.

MARQUIS SAIGO, Minister of the Navy, who was absent from Tokyo for some days attending the graduation ceremony at the Naval College at Etajima, Hiroshima Prefecture, returned to the capital on the 25th inst.

VICE-ADMIRAL ARICHI, formerly Commander-in-Chief of the Standing Squadron, was placed on the Reserve List on the 19th instant. The change is said to be connected with the recent search and detention of the British steamer *Thales* by the *Yayeyama Kan*.

THE *Kaigai Kyoiku-kai*, organized by Japanese Christians, has decided to establish a school in Seoul for the purpose of educating Korean youths. The institution is to be opened in January next, and Mr. Kojima Kesajiro leaves Tokyo on the 23rd inst. for the Korean capital.

THE residents of Nagoya are contemplating the organization of a silk spinning company with a capital of *yen* 1,000,000, and a similar scheme has been mooted by Okayama residents. The promoters in both towns, however, purpose amalgamating the two projects and establishing one large firm with a capital of *yen* 2,000,000.

FIRE broke out in an out-house in the compound of H.I.H. Prince Kuni on the 24th inst., but the flames were fortunately confined to the building where they originated. Another fire occurred at Odawaracho, Tsukiji, Tokyo, the following day, destroying nine houses; seven others were damaged.

Six Korean fishermen were cast up on the shore of Yoshida-mura, Mino-gun, Shimane Prefecture, on the 12th inst. The Japanese fishermen of the locality gave them food and clothing, and afterwards reported the matter to the

Masuda Police Office, which promptly dispatched constables to give aid to the unfortunate Koreans. It is stated that they were exposed to the elements in a small boat for six days.

REUTER telegraphs:—A message from President Cleveland to the U.S. Congress, sent in view of Great Britain's refusal to accept arbitration as to the Venezuela frontier, recommends that Congress should appoint a Commission to determine the true frontier, and states that it is the duty of America to resist by every means in her power any attempt by Great Britain to take possession of any territory which that Commission adjudges to Venezuela. President Cleveland concluded his message by stating that he keenly realises the gravity of the possible consequences of this proposal. His message met with hearty applause from Congress. Mr. Jno. Worrell Carrington, C.M.G., Attorney-General of British Guiana, has been appointed Chief Justice of Hongkong. The House of Representatives has passed a bill authorising President Cleveland to appoint a Venezuelan Commission and granting a sum of one hundred thousand dollars to meet expenses. A Bill has been presented to the Senate granting a credit of one hundred million dollars for an increased armament of a million rifles, a thousand field guns, and five thousand fort guns. This has been referred to the Military Committee. The U.S. Senate, on a motion brought forward by Senator Morgan and supported by Senator Sherman, has decided to refer the Venezuela Commission to the Committee on Foreign Affairs. Both Senators supported President Cleveland, but deprecated any hasty action. The Canadian Press applauds Lord Salisbury's action, and urges the Canadian Government to look to its defences. The United States Senate has passed a resolution ordering the Finance Committee to enquire into the expediency of the opening of mints to free coinage. A semi-panic occurred in New York on the 21st inst., causing an estimated loss of a thousand millions of dollars. The cause of the panic is ascribed to President Cleveland's warlike Venezuelan policy. The New York market has recovered, closing strong on the 22nd December, and the tone in America is calmer and friendlier. President Cleveland's political and financial discredit is increasing, but the American markets are improving though still sensitive.

THE Import trade is not active, and until the holidays are over there is not much business likely to be done. There is some talk of orders booked for Yarns and Shirtings to be executed later on, but such transactions are usually small in volume. There are only light sales of Metals, though there has been some deliveries on account of old contracts—a clearing up to begin afresh with the New Year. Next to nothing done in Kerosene, buyers and sellers being wide apart. The Sugar market is quiet, and buyers are apparently well supplied. There is little or nothing doing in the Silk trade, and no movement can be expected until after the holidays are over. There is plenty of stock to go on with when buyers are in the mood, though arrivals will not be extensive again until the spring reelings commence to come in. The Waste Silk business is much as last reported, and there will probably be no disposition to operate on an extended scale for some little time. The Tea trade is quiet and unchanged, and there will be but little more business done this season. The financial trouble in the States is possibly accountable to some extent for the restricted business in Exports, but matters may mend with the inauguration of the coming year. Exchange fluctuated slightly early in the week, but there has been no change in rates for the last few days.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The probable situation in the session to be opened to-day has occupied much space in the columns of the vernacular press throughout the week. During the past few days, the drooping spirit of the Opposition journals has been suddenly revived by a declaration of the National Unionists that they are resolved upon censuring the Cabinet's procedure in the Liaotung and Korean questions, though they will not sacrifice to this subject any important measures relating to increase of armament and encouragement of industry. So far as can be judged from present indications, it must be admitted that the Opposition has fair hope of success if the question of foreign policy can be deferred till all other measures have been disposed of. But even in that case, it is quite possible that diversity of opinion as to the form of censure to be passed upon the Ministry may prevent effective co-operation between the different parties. The regular Opposition sections will no doubt insist on the Address to the Throne praying for the dismissal of the Cabinet. But this extreme and unconstitutional course will certainly be opposed by a large number of those now accounted partisans of the Opposition. The only measure that will receive the approval of a majority in the House will be either a Representation to the Government or a mere resolution, and such a step, even though unanimously approved by the House, is not likely to be seriously regarded by the Cabinet. The Opposition politicians know that well, and are consequently moving heaven and earth to commit their partisans to the extreme course of a direct appeal to the Throne. They have just decided to introduce such a motion at the very beginning of the session, though aware that at such a time success can not be hoped for. It would seem that their purpose does not extend beyond sounding the views of the different parties, and, if possible, extracting an early pledge from them—especially from the National Unionists—of adhesion to the motion at a later stage of the proceedings. The Progressionist organs are strongly urging the opponents of the Cabinet to open the attack at the earliest possible opportunity. As a fair sample of their writings on this topic, we may briefly notice an article in the *Mainichi Shimbun*.

The *Mainichi* now confesses the true motives by which itself and the other Opposition journals were actuated when they raised such an outcry immediately after the conclusion of the Shimono-seki Treaty for the convocation of an extraordinary session of the Diet. Their ostensible reason was that the question of increasing the Army and Navy required immediate attention. It was, however, pointed out at the time in these columns, and believed by all independent observers, that the true purpose of the Opposition parties was to make skilful anti-Government use of the excited state of public feeling at that epoch. This interpretation was vehemently denied by the Opposition organs at the time, but the *Mainichi* now throws off the mask, and confesses that "the object of the Opposition in demanding the convocation of an extraordinary session, was to dispose of the urgent question of Ministerial responsibility as soon as possible, so that all available time and energy might afterwards be completely devoted to other measures of national importance." The Cabinet's refusal to adopt the proposed step is of course ascribed to apprehensions about the security of its own position, and the Ministers of State are denounced for having not only declined to call together an extraordinary session but even delayed the opening of the ordinary session far beyond the usual time. Then, passing on to the subject of the introduction of "the responsibility question" at the commencement of the session, the Progressionist organ labours to refute the charge that in pursuing such a policy the Opposition parties are sacrificing the interests of the country to their selfish aims. Those that think thus, says the *Mainichi*, show themselves incapable of judging the proportions of things.

So long as the foundations of domestic government remain unstable, it is of no avail to increase the number of war vessels and fighting men. In order to reap benefit from increased armaments, our contemporary thinks it absolutely necessary that "the administration of the country should be placed on a sure footing," or, in other words, that the present Government should make room for another in touch with the Opposition. The Progressionist organ is far from confident that the proposed attack upon the Cabinet at the commencement of the session will be attended with success. On the contrary, it speaks very doubtfully about the issue. But fears of failure, it declares, should never deter the Opposition politicians from discharging their duty to the country. "The Government has pursued a strong policy toward the Opposition. When we opened lecture meetings, it tied our tongues. When we tried to discuss the responsibility question in newspapers, our pens were placed under restraint. We have thus been forcibly prohibited from expressing our opinions. It is only in the Diet that we have freedom to give utterance to our ideas and feelings on this most important subject. Though we fail to secure a majority in the House of Representatives, we shall be heard by the nation. And if the nation refuses to hear us now, it will have to hear us sooner or later."

In its issue of the same day, the *Nichi Nichi* printed an article that reads almost as a direct reply to the above. Referring to the demand for an extraordinary session, our contemporary observes that the object of the Opposition was simply to find an early opportunity for attacking the Government's foreign policy. The Government did not see fit to comply with the demand, because it was impossible to complete the various important measures in time to submit them in an extraordinary session. Then, proceeding to discuss the situation in the present session, our contemporary naturally refers to the attitude of the National Unionists, for it is well known that they have the balance of power in their hands. Judging from the Manifesto that they recently published, it appears that they are still inclined to pursue an independent policy. "But since they have declared their determination to give precedence to the various measures of national importance, and to postpone the so-called responsibility question, there is no doubt that the Army and Naval Bills and other important projects will be passed by the Diet. If only these measures be passed, it may justly be considered that the object of the session has been attained. As to the question of Ministerial responsibility, its discussion does not lie within the proper limits of the Diet's functions. The members of the Diet are of course free to express their opinions on the subject. But the Ministers of State are in no way bound to take the slightest notice of what the Diet may be pleased to say. Nothing could be more gratifying to the Ministers than that the military and civil measures proposed by them should be carried out with the consent of the Diet." In short, the *Nichi Nichi* tells the Opposition politicians that, if they approve the Armament and Industrial measures, they are perfectly free to take any course they please about other matters, for whatever they may do, they will be impotent to disturb the position of the Cabinet. That an overwhelming majority of the Diet, indeed almost all parties, are agreed about passing the above mentioned Bills, is, in our contemporary's opinion, a significant commentary upon the state of public feeling.

If the *Nichi Nichi* expresses official views in the above quoted article, it may be taken for granted that the present session of the Diet, though doubtless stormy enough, will not lead to a dissolution. Such, at all events, appears to be the opinion prevalent in well informed circles, though some persons are very confident that dissolution will prove inevitable. The *Fiji* seems to belong to the latter class. Like every other journal, it has no doubt whatever that all the Bills of practical

importance will be almost unanimously voted by the Diet. On the other hand, it is equally confident that stormy scenes will take place about the question of the Government's foreign policy. Our contemporary has hitherto been uniformly against all wanton opposition to the Cabinet. But no harm can be done, it thinks, if the Opposition open their attack upon the Cabinet after voting all necessary measures. It is but natural that, on questions like the retrocession of Liaotung and the Korean problem, opinions should differ. Since the Opposition is dissatisfied with the policy pursued by the Government toward these problems, the *Fiji* fails to see anything improper in the proposed attack on those in power. So far from censuring the Opposition politicians, our contemporary thinks that their conduct is highly commendable from their own point of view. Moreover, it shows there is vitality in the sections composing the Opposition. Should these politicians fail to secure a majority of votes, so much the better for the Government. But should the Opposition programme be successful, what ought the Cabinet to do? In former sessions, the Cabinet had no recognized partisans in the Diet. It pursued the so-called policy of abstention from party politics, and had, therefore, some excuse for disregarding the declared views of the Diet. But the situation is now entirely changed. The Ministers have a body of definite supporters in the Lower House, and consequently, in the *Fiji's* opinion, they are bound to follow the practice observed under like circumstances in countries where a true representative system of Government is in operation. In case of the passage of a measure censuring the Cabinet's foreign policy, the Ministry should appeal to the country, and abide by the verdict of the people.

The other principal questions discussed during the week have been the settlement of Formosa, the Korean question, the agitation against the Mayor of Tokyo, and so forth.

EDITORIAL NOTES.

RUSSIA'S FINANCIAL SCHEMING.

A CORRESPONDENT of the *Hannoverscher Courier*, writing from St. Petersburg, says, that upon the request of the Czar, the Russian Minister of Finance, M. von Witte, has for the time being withdrawn his resignation. The cause of his having asked to be relieved from his present post is the result of the Russian guarantee of the recent Chinese loan, which instead of giving Russia the desired predominance in China has created ill-feeling in Berlin and has been the means of a *rapprochement* between England and Japan. Moreover, Herr von Witte was not very fortunate in operating this new loan. The Paris *haute finance* in advancing the loan made two conditions. The payment was not to take place before next spring, and the inconvertibility of certain older loans, was to be officially proclaimed. The Minister of Finance chiefly objected to the second condition, as he had intended to use this transfer as a cloak for his new loan. Then von Witte tried his luck in Germany, whereupon the French group broke off the negotiations because they had reason to fear that the taking up of a loan in Germany would cause the French capitalists to dispose of their Russian shares. Meanwhile, the negotiations in Berlin took such a course that the Minister of Finance expected, for once, to get along without France, and could, therefore, remain at his post.

In the *Novoe Vremya*, of St. Petersburg, we find an article of a different tenor, from which we reproduce the following:—The fact we previously pointed out, that Russia must hereafter necessarily occupy an important commercial and industrial position in China, has given much uneasiness to the German press. The Germans are not willing to believe that Russia can inaugurate economical measures in China. They had never thought that we could pursue in the East political and economical objects at the same time. One must admit that, when the

Germans judged the future by the past, they had every reason to be surprised at the change. Until now we have, in fact, allowed every chance to slip by where political influence could have been utilized for economic purposes. For this reason, perhaps, it seemed natural that after securing our political interests we left it to Eastern West-Europe to secure economically every benefit. Already the Russo-Chinese loan seemed mysterious to the Germans, and made them feel uneasy, and when we showed that we were in earnest and determined to defend Russo-Chinese interests, the German press became very nervous. They at once made enquiry, and found that five-eighths of the capital was French and three-eighths Russian, but that in the Bank Council, consisting of eight persons, the proportions were reversed, as they consisted of five Russians and only three Frenchmen. Shanghai has been selected as the place for locating the Bank, and consequently the German East-Asiatic Bank is in danger of a competitor in China. This is not the worst, for it need not imply a reduction in the income of this Bank. The misfortune lies in the fact that Russia has come to understand the tremendous advantage and importance of establishing a Bank in a land which is on the eve of an entire reconstruction of its whole system. This in itself seems like an attack on the Germans while posing as monopolists of civilisation. If the Germans are so much concerned, as they say and write, in extending or promoting civilisation over the whole earth they should joyfully welcome every one who comes to assist them in this noble object. When other people come to China to do this work the Germans should be delighted and say: "Now lettest thou thy servant depart in peace," and bear their civilizing cross into other regions, say to Africa, to Cameroons.

THE SINKING OF THE "KOEI."

THE *Nichi Nichi Shimbun* states that a telegraphic message has been received by the Government to the effect that the Japanese man-of-war *Koei*, formerly the *Kwang-ping* of the Chinese Navy, struck a large rock located some 10 miles south-east of Tsang Island, of the Pescadores, on the 21st inst., and badly damaged her bottom. The vessel foundered. A number of non-combatants including the Surgeon, Paymaster, Engineers, and some men under the charge of the above were rescued, but the officers and about sixty men are missing. According to the official list compiled on November 10th, the total number of men belonging to the *Koei* was 160. She was commanded by Commander Fujita Koyemon, the name of the other officers being Lieutenant G. Nagai, Chief Torpedo Officer; Chief Engineer K. Shimizu, Surgeons K. Okamoto and Y. Wada, and Paymaster C. Kasamatsu.

GREAT BANK-NOTE FORGERIES.

THE Batavia correspondent of the *Singapore Free Press*, writing on November 26, says:—Forged Java Bank notes have been in circulation in Java for some considerable time and all the Dutch papers have very pointedly stated that they have been made in Singapore. It therefore caused some surprise in Sourabaya when it became known on Monday last that the Police had arrested a large number of forgers in a small lane in the heart of Sourabaya. The chief of the forgers is said to be Kwee Khe Soe, who has been assisted by several other Chinamen and a native etcher named Pa-aminoh. The printer is also a Chinaman. When the Police came on the scene work was in full swing. The amount circulated by forged notes is not yet known, but that it must reach a very considerable figure is proved by the high game the gang have been playing in other directions, as also by the fact that most of the notes are for f. 1,000. Forged acceptances amounting to about f. 600,000 have been discounted. Tan Kim Tjiang f. 300,000, Ong Tjong Han f. 150,000, and Nash & Co., f. 135,000 are the principal victims of this special department of the forgers. These acceptances were forged as having been verified by the notary Jhe van der Does de Bye, it being the custom in Java for this procedure to be followed with such

documents. It was through a lawyer, Mr. Gericke, that the forgeries were discovered and the police acted. It is strongly suspected that some of the principal Chinese residents of Sourabaya will be implicated. Local law here only recognises the fault of the holder of a forged note and no amount of book proof will assist in bringing the real criminals to justice. So the catching of this gang in their trap is a piece of good fortune.

SHIPPING TROUBLE.

DETAILS of the recent trouble connected with the steamer *Sharpsno*, of which Messrs. Sennett & Co. are the agents, show that the So Kaisoten, a Japanese shipping office at Kobe, obtained official permission to open steamship communication to Formosa. They entered into an agreement with the foreign firm to charter a steamer for yen 7,300, under condition to pay yen 4,000 when the steamer left Kobe, and the remaining yen 3,300 when she left Nagasaki; the date of departure from Kobe for Formosa being arranged for November 20th. Up to the day of departure only 300 tons of freight were shipped, besides 90 passengers, and her departure was postponed. The consignors and passengers requested the shipping office to despatch the steamer, but without success, the proprietor of the Japanese shipping office having concealed himself. The foreign firm then arranged to dispatch the vessel, and a Japanese named Atsuta Ko was appointed her acting master. She left Kobe on the 8th instant. She stayed three days at Nagahama, and five days at Shimonoseki, but no freight was received there, only about 10 passengers coming aboard at Shimonoseki. At Nagasaki freight to the amount of 210 tons was to be received, with 39 passengers, but while they were being embarked the Kobe firm telegraphed to its Nagasaki agency on the 18th inst., ordering the latter to send all the passengers on shore, and to detain the cargo until the agreement was fulfilled by the Japanese shipping office, and also to send the steamer to Shanghai. The master of the ship disappeared on receipt of the message. The passengers were greatly excited with this treatment, and they at once held a conference at the Uyenoya, Nagasaki, at which it was agreed to institute legal proceeding against the Japanese firm. They also made a demand upon the Nagasaki agency for the recovery of their passage money.

GOVERNMENT DELEGATES.

THE following gentlemen have been appointed Government Delegates in the Imperial Diet:—Baron Suyematsu, Chief of the Legislative Bureau; Mr. Hara, Vice-Minister of Foreign Affairs; Mr. Fujii, Chief of the Trade Bureau in the Foreign Department; Mr. Matsuoka, Vice-Minister of Home Affairs; Mr. Egi, Chief of the Bureau for the Management of Prefectures, and Mr. Tsuzuki, Chief of the Public Works Bureau in the Home Department, Mr. Furuichi Koi, Mr. Kitagaki, Governor of Hokkaido, Baron Tajiri, Vice-Minister of Finance; Mr. Matsuo, Chief of the Accountants' Bureau; Mr. Megata, Chief of the Revenue Bureau; Mr. Sone, Chief of the National Debts Bureau; Mr. Sakaya, an Accountant, and Mr. Soyeda, a Secretary of the Finance Department; Major-General Baron Kodama, Vice-Minister of War; Baron Noda, Controller General; Major-General Terauchi, acting Chief of the First Bureau in the General Staff Office; Colonel Takenouchi, a sectional chief in the War Department; Rear-Admiral Baron Ito, Vice-Minister of the Navy; Paymaster-General Kawaguchi, of the Naval Department; Mr. Kiyoura, Vice-Minister of Justice; Mr. Yokota, Chief of the Civil and Criminal Bureau in the Judicial Department; Mr. Makino, Vice-Minister of Education; Mr. Koba, Chief of the Bureau for General School Affairs, and Mr. Nagai, a secretary of the Educational Department; Mr. Kaneko, Vice-Minister of Agriculture and Commerce; Mr. Fujita, Chief of the Agricultural Bureau, and Mr. Takahashi, Chief of the Forest Bureau in the Agricultural and Commercial Department;

Baron Suzuki, Vice-Minister of Communications; Mr. Matsumoto, Chief of the Railway Bureau; Mr. Den, Chief of the Correspondence Bureau; Mr. Sato, Chief of the Mercantile Marine Bureau, and Mr. Nakabashi, a secretary of the Communications Department.

THE "LILLIAN J. ROBBINS."

THE British ship *Lillian J. Robbins*, which arrived at Saigon dismasted, as already reported, was, it seems, towed in by the steamer *Machew*. According to the *Progrès Commercial de Saigon*, the *Machew* fell in with her in lat. 14.05 N. and long. 110.05 E. and towed her to Cape St. James, where she arrived on the 24th November. The *Lillian J. Robbins* had lost all her three masts in a typhoon on the 2nd November, and until the 21st, when the *Machew* found her, she had seen no other vessel.

M. DE SPEYER.

M. DE SPEYER, the newly appointed Russian Minister to Korea, who has been staying in Tokyo for some time, left the capital on the 21st inst. for Yokohama, whence he left for Korea by the Russian cruiser *Admiral Nakhimoff* at 3 p.m. the same day. M. Hitrovo, Bishop Nicolai, Lieut.-General Viscount Kawakami, Countess Kuroda, and several others assembled at Shimbashi to see him off. The *Admiral Nakhimoff* will arrive at Ninsen on the 25th inst.

CHRISTMAS.

THE advent of Christmas was heralded by the usual Midnight Mass on Christmas Eve, while special choral services we held in Christ Church and Union Church. There was a football match in the afternoon in which a number of youths played, otherwise there was nothing special of note, the day being exceptionally mild and pleasant.

BOILER BURST.

THE boiler of the *Kayo Maru*, which left Sakai, Hakushu, for Hyogo, on the 6th inst., exploded while off Kagaura, Unshu. One fireman was killed, and four engineers were badly scalded, two of whom afterward died.

THE TOKYO LOCAL ASSEMBLY.

The Urban Department of the Tokyo Local Assembly has been dissolved by the Minister of Home Affairs, evidently on account of a Representation passed by that body, urging the dismissal of Governor Miura. We may note that the Local Assemblies of Tokyo, Osaka, and Kyoto are divided into two Departments, the Urban and the Suburban. It had been supposed that the example, set by the Urban Department of the Tokyo Local Assembly, would be followed by the Suburban Department, but happily the expectation has proved incorrect.

A "SOSHI" AT THE HOUSE OF REPRESENTATIVES.

A person resembling a *Soshi* presented himself at the House of Representatives on the 25th instant. He was over fifty years of age, and possessed the recognised characteristics of his class, long unkempt hair, a seriously cultivated mustache, and a peculiar name, Suto Keijiro. He inquired for Mr. Ozaki Yukio, a prominent member of the Progressionist Party, but the policemen on duty thought his appearance so suspicious that they arrested and searched him, when a short sword was found concealed on his person. He was moreover under the influence of *sake*, and altogether seemed a fit subject for detention. He proved to be a fencing master from Shizuoka Prefecture.

THE CIVIL CODE.

According to the *Nichi Nichi Shimbun*, the revision of the Civil Code has been completed with the single exception of the Chapter on Persons; and it is further stated that the revised portion will be introduced in the coming session of the Diet.

CURRENT TOPICS.

It is reported that on the occasion of the coronation of the Russian Emperor in Moscow next March, Japan will be represented by H.I.H. Prince Fushimi, who returned to the capital a few days ago from Formosa, where he commanded a Brigade of the Second Division. Rumour also has it that His Imperial Highness will be accompanied by no less a personage than Marquis Ito. Those, however, that believe in this story do not attach any political significance to the fact that the Premier will proceed to Russia. They are inclined to suppose that if Marquis Ito accompanies the mission, it will not have any diplomatic significance, but be due entirely to his desire to be released from the duties of his responsible position, it being understood that, after the coronation is concluded, the Imperial mission will spend several months in other countries of Europe. Marquis Ito's supposed journey is thus regarded simply in the light of a holiday trip. But after all, the story lacks confirmation. That a brilliant mission will be sent to Russia, may be taken for granted, but we may safely state that nothing has as yet been decided upon as to the personnel of the mission.

Marquis Ito, being understood to have definitely consented to remain in office, is the object of various malicious criticisms on the part of the Opposition press. His intended resignation, and his absence from the capital, are supposed by these critics to have been one of the Premier's usual artifices to remind the public of his own importance and of the profound confidence placed in him by his Imperial master. But the general belief in the journalistic circle of Tokyo seems to be that the Marquis has consented to defer his resignation only until the conclusion of the coming session of the Diet.

Estimates of the distribution of parties in the approaching Diet necessarily vary according to the prejudices of each paper. But even the most sanguine of the Opposition journals finds it impossible to make it appear that the allied parties have any chance of success. The following is the latest forecast, published by the *Nippon*, which is now entirely in sympathy with the Progressionists:—

OPPOSITION.	
Progressionists	53
Constitutional Reformists.....	40
Ote Club	22
Chugoku Shimpoto	5
Financial Reformists.....	5
Independents	16
Total.....	141
MINISTERIALISTS.	
Liberals	109
Independents	18
Total.....	127
National Unionists	32

Thus, even on the basis of the most favourable calculations, the Opposition forces fall short of one half of the House. It being tolerably certain that the National Unionists will vote, on all important questions, with the Liberals, we find that, even according to the above statistics, which are far from fair, the Ministerialists have a majority of about 20.

The *Tokyo Shimbun* states that Mr. Ban Naonosuke, a well known Financial Reformist, has seceded from his Party, in consequence of a difference of views on the subject of Cabinet responsibility about the Liaotung and Korean affairs. Unlike Messrs Taguchi, Sudo, and others of that Party, Mr. Ban considers it unwise to press such a question to the length of obstructing the passage of other measures of supreme importance. It is believed, says the same journal, that others in the allied camp are of the same way of thinking as Mr. Ban.

The second conference of the Opposition parties was held on the 24th instant, there being present Messrs. Shimada Saburo, Ozaki Yukio, Minoura Katsundo, Taguchi Ukichi, Ohigashi Gitsutsu, Nakamura Yaroku, Haseba Junko, Inukai Ki, and a few others. It was decided that a general meeting of the Opposi-

tion members of the Lower House should be convened on the 26th, to draw up an Address to the Throne on the subject of the Cabinet's responsibility about the Liaotung and Korean affairs, and that the Address should be introduced at the commencement of the session. Not that the Opposition leaders have any expectation of such a motion's passing the House of Representatives. They know very well that the only hope for their anti-Cabinet proposition lies in deferring its introduction till the close of the session. But by bringing it forward for discussion at an early stage of the proceedings, they probably hope to use it as a means of sounding the views of members that have not yet declared themselves one way or the other.

The above proposal to take the earliest opportunity of attacking the Cabinet did not obtain universal approval. When the delegates of the Constitutional Reformists, after attending the conference on the 24th inst., submitted their report to their Party, an animated discussion took place. One section was in favour of approving the proposed measure, while another strongly opposed it. Among those opposed to the project were Messrs. Kusumoto Masataka, Kawashima Jun, Gamo Sen, and eight others. They declared themselves determined, however antagonistic they were to those in power on the subject of foreign policy, never to join any movement that might jeopardise the consummation of the various important measures now urgently called for. They went so far as to state that, should they be required to vote in the sense proposed, they would not hesitate to sever their connection with the Party for ever. It was ultimately decided that the members of the Party should be free to vote independently on this matter. Mr. Haseba Junko is said to have advocated most enthusiastically the policy of opening the campaign against the Cabinet at the earliest possible opportunity.

The expulsion of Messrs. Takizawa Suke-saburo, Kobayashi Seichiro, and Suzuki Jisaburo from the Liberal Party, has attracted considerable attention. These men have no seats in the Diet, and their social standing is not sufficiently high to attract attention on their own account. The incident derives the prominence given to it from the alleged connection of the three politicians with Count Goto. According to the Liberal organ, the *Tokyo Shimbun*, one of the three, Suzuki, went, a month ago, to the Prefecture of Niigata, under instructions of Count Goto, to foment dissension among the Liberals of that locality by circulating various misleading rumours about the alliance between the Liberal Party and the Cabinet. On his return to the capital about a fortnight ago, he continued to scheme against his Party in concert with two other Liberals, namely Takizawa and Kobayashi, as well as with the immediate followers of Count Goto, as, for example, Messrs. Yamakawa Zentaro, Mori Ryusuke, Koyama Hisanosuke, and so forth. Their plan was to organize among the lower ranks of the Liberal Party a combination of malcontents. Of late these schemers used to hold secret conferences in Count Goto's private residence at Shibaura and other places. But their movements were watched by the Liberal Party, and they were struck off the roll of the Party on the 24th instant.

At the meeting on the 24th inst., the Liberals appointed Messrs. Kono Hironaka and Hayashi Yuzo as Leaders of the Party in the House of Representatives.

The grand conference of the National Unionists that took place on the 22nd inst., has revealed a state of affairs anything but reassuring from a Ministerial point of view. It is no longer to be denied that a small but powerful section of the Party is strongly inclined to join the Opposition in the projected attack on the Cabinet with reference to foreign policy. All rumours to that effect had previously been denied by the organ of the Party, but the discussion that took place at the meeting on the 22nd made it clear that the authority of Viscount Shinagawa is hardly sufficient to suppress the discontent entertained by a portion of his followers on account of his pro-Ministerial policy. The Manifesto,

which was voted only after private negotiations during a recess, leaves the Party little room to hesitate should the Opposition decide to defer the projected attack upon the Government until after the Armament and Industrial Bills have been disposed of. Such procedure on the part of the Opposition is very probable, for it is exactly what the Progressionists and others have proposed more than once. Thus, so far as can be judged from the present state of affairs, it is probable that the National Unionists will be found side by side with the Opposition on the question of foreign policy. But there is uncertainty as to how far the National Unionists are prepared to coöperate with the Opposition in censuring the Government. It is doubtful whether they will endorse any sweeping condemnation of the Cabinet's foreign policy. According to some well informed observers, the likelihood is that, when this question comes up for deliberation in the Diet, there will be a split in the Party, a minority seceding and thus adding another small coterie to the Progressionists. Under these circumstances, the Opposition journals are in high spirits.

Supposing that about a dozen, or one-third, of the National Unionists join the Opposition, the House of Representatives will be divided into two nearly equal camps. For according to the latest computation, the parties, independently of the National Unionists are disposed as follow:—

MINISTERIALISTS.	
Liberals	106
Yayoi Club	2
Kishu Members	5
Yamaguchi Members.....	5
Other Ministerialists.....	10
Total.....	128
OPPOSITION.	
Progressionists	53
Constitutional Reformists.....	40
Chugoku Progressionists	5
Financial Reformists.....	4
Ote Club	22
Independents	14
Total.....	138

The above calculations are obviously too favourable to the Opposition, for at least one half of the Independents are still an uncertain element. But should the Opposition introduce a mild form of censure calculated to satisfy the majority of the National Unionists, the situation would be hopeless for the Ministerialists. On the other hand, an expression of mild censure would probably fail to serve the purpose of the Opposition, namely, to drive out the Cabinet.

THE MAYOR AND CITIZENS OF TOKYO.

It is reported that there is a project among a section of the Tokyo citizens to carry the present agitation against Governor Miura, who is at the same time Mayor of the city, to such an extremity as to refuse the payment of taxes imposed on the authority of the Mayor. This project owes its origin to the members of the dissolved Municipal Council. We should think that it has not the slightest chance of being approved by the sober portion of the citizens.

The recent dissolution of the District Assembly (*Ku-kai*) of Asakusa, on account of its having passed a vote of want of confidence in the Mayor, has evoked some criticism. This is the first time that a *Ku-kai* has been dissolved. The law contains no special provision on the subject, and certain critics ask on what authority the extraordinary step was taken by the Minister of State for Home Affairs. An explanation has been offered by reference to the 133rd article of the Organization of Municipalities, wherein it is provided that "the Minister of State for Home Affairs shall be responsible for carrying out the present law," and that "he shall have power to issue all orders and instructions necessary for the purpose." But that explanation does not satisfy the critics, who continue to censure the Home Minister for his summary procedure in respect of the Asakusa District Assembly.

THE AMATEUR THEATRICALS IN TOKYO.

The second consecutive performance of amateur theatricals in Tokyo took place last evening in the Imperial Hotel. The house on both evenings was filled to overflowing. Nothing could have been more punctual than the rising of the curtain on each evening, and as everything worked perfectly smoothly, the second piece came to an end exactly at the contemplated time—a quarter past eleven o'clock. Thus there would have been ample interval for Yokohama visitors to catch the 11.30 train, especially as it had been arranged that the train should be held for a few minutes if necessary. But there appears to have been some doubt about these dispositions, and the consequence was that the Yokohama portion of the audience took their departure at ten minutes past eleven, thus missing the final episodes of the performance.

The stage, planned by Mr. Conder and erected under his supervision, showed remarkable taste, and was certainly the prettiest thing of the kind hitherto seen in Tokyo. We may say the same of the scenes and all the stage property. Liberal contributions of furniture from private houses, aided by the skilful employment of Miss Lowther's artistic talent and by some clever decoration from Mr. Parlett's brush, produced spectacular effects of a most charming character. The drop curtain, of handsome brocade, had been lent by the Imperial Household Department, and, in short, every detail of the arrangements had been most carefully thought out.

Felix Dale's farce, "He's a Lunatic," was chosen for first representation. It is a cleverly conceived and excellently written piece. The plot is simple: *Mrs. Arabella Hanwood* (Miss Lowther) is a pretty widow, weary of the stereotyped addresses of lovers and longing for a sensation. *Mr. March Hare* (Mr. Conder) is a young artist who loves her from a distance, and learning her peculiar mood, feigns lunacy to give her the desired sensation. Making his way into her house one evening, he surprises a burglar, *Ruggles* (Mr. Tuke), and conceiving that the man may prove a useful ally, hides him in a cupboard. Just as this is effected, he sees *Mrs. Hanwood's* maid *Hatter* (Miss F. Denning) coming, and contrives to win her alliance also. By and by, *Sir Guy Trotter, K.C.B.* (Mr. Parlett), a prosy old person, one of *Mrs. Hanwood's* admirers and abhorrences, comes to visit her. *March Hare* manages to enter with him, and there ensues a most amusing scene, in which the *soi-disant* lunatic engages in all kinds of quaint antics, making *Sir Guy* his perpetual butt. *Sir Guy* flies to fetch the police, and in the interval *March Hare* and *Hatter* devise a scheme, the issue of which is that *Sir Guy* is carried off as the lunatic, and *March Hare* is left in continued possession of the premises, where, having locked himself in with *Mrs. Hanwood*, he passes from madness to sanity, and carries her heart by storm.

The principal roles in this farce, those of *Mrs. Hanwood* and *March Hare*, were capitally rendered. Miss Lowther has evidently a genius for acting. Her elocution is excellent; her voice fine, with a wide range of modulations; and her by-play entirely free from any shade of artificiality. Moreover, she always avoids the besetting sin of amateurs—playing to the sides or back of the stage instead of to the audience. We have seen in this part of the world few ladies of comparable histrionic skill. Mr. Conder's personification of *March Hare* was thoroughly good. A drawing-room lunatic must necessarily be a difficult character to sustain, especially when the evidences of madness are not intended to be so marked as to betray themselves at once, and when sudden transitions have to be made from mental disorder to particularly sane contrivance. In all these phases Mr. Conder showed much versatility, and the general verdict on his acting was entirely applause. It would have been hard, too, to conceive a better foil to the jocular lunatic's strange antics than was *Sir Guy Trotter*, who from starched stateliness pass-

ed to stuttering wrath and then to treble-voiced terror with quite realistic skill. *Ruggles*, the housebreaker, was done to the life by Mr. Tuke; his get-up was perfect and he managed to assume a voice sufficient in itself to suggest the lowest of callings. As for *Hatter* (Miss Denning), not only was she the daintiest, freshest little waiting maid conceivable, but she also contrived to invest with interest a rôle comparatively insignificant. Her terror at the discovery of *March Hare* lying on a sofa in her mistress' room at 9 p.m.; her transition to admiration for his looks, and her timidly carried out temptation to win a pair of gloves, were all very pretty bits of acting. It is not often that one sees a piece put upon the stage so well, or characters sustained with such spirit in every part.

"Kind to a Fault" has great merits of conception, but is by no means a brilliantly written comedy, and some of the situations are embarrassed by a fault that every playwright should seek above all things to avoid, namely, dialogues conducted by only two or three actors independently of the other persons on the stage. Nothing could be more opposed to realism than to see four or five people awaiting their turn to speak while two or three others are carrying on a conversation that suspends the main action of the piece. The principal part, that of a young man who has just inherited a big fortune, and whose impulses of unreasoning kindness lead him to perform acts constantly productive of mischief, was taken by Mr. Tuke. His conception of the rôle was that of an extremely languid *fin-du-siècle* youth, whereas we should imagine that William Brough intended *Golds-worthy* to be an impetuous, breezy person, throwing himself into everything with giddy fervour. However, Mr. Tuke's idea was so well sustained that no incongruity obtruded itself. *Drewitt*, a middle-aged solicitor, subject to fits of unreasoning jealousy and rapid repentance, was played by Mr. Conder, who managed to make up so skilfully and change his voice so well that no one could have recognised the *March Hare* of the preceding farce. His acting throughout was of a high order, and in some of the situations he showed real force. As for the talent of *Mrs. Drewitt* (Baronne d'Anethan) it is too well known to need any fresh eulogy. The part presents great difficulties, but none made itself apparent, which is perhaps the best evidence of high art. Madame la Baronne manages her voice admirably, and is equally effective in light and in serious phases. *Mrs. Droppers*, who has already proved herself capable of sustaining a leading rôle, made the most that could possibly be made out of the comparatively insignificant part of *Jenny*, *Mrs. Drewitt's* maid, and the same may be said of Miss Tuck, as *Fessie*, who acted the romantic, plaintive young lady most prettily. Parker, *Drewitt's* servant, as represented by Mr. Carew, was decidedly one of the hits of the whole performance. His acting showed unflagging strength, and he repeatedly threw the house into convulsions of laughter. *Mr. Alderman Bluck* (Mr. Macauley), an irate, pompous old person, with a peruke that could never have been desecrated by a hat, won the hearts of the audience by thoroughly realistic bluster and self-sufficiency; and Miss von Fallot, who accepted a part uncongenial to a young lady, converted herself, as *Mrs. Cumberley*, into a veritable frump of a London land-lady and showed perfect perception of the character. M. Viengué (*Honiton*), adhered to his usually quiet, passionless style, scarcely suited to the stirring adventures of *Arthur Honiton*, and Mr. Trevithick as a railway detective, found a congenial part and rendered it faithfully.

During the acts and before the rising of the curtain, Miss Mair, Mrs. Pownall, and Miss Divers played on the piano.

We can not close this brief notice without expressing the great admiration evoked by the labour of Baronne d'Anethan and Messrs. Conder and Tuke in all the preliminary stages of the affair. Their patience, tact, and fertility of resource were beyond praise.

MR. OZAKI YUKIO ON ARMAMENT AND DIPLOMACY.

Mr. Ozaki Yukio, the well known Progressionist member of the House of Representatives, contributes an interesting article on the above subject to the current number of the *Tai-yo*. The degree of armament proper to a country, he says, is governed by three considerations, namely, its position, its history, and the principle of its foreign policy. After explaining, in his brief and direct manner, why such small countries as Belgium, Switzerland, Portugal, Greece, and so forth are compelled to maintain proportionately large armaments, while countries like England and the United States of America are enabled to dispense with large armies, Mr. Ozaki remarks that Japan, being far removed from the great Powers or the World, occupies a position of comparative security. The United States of America is nearer than Japan to the European Powers, but the trans-Pacific Republic makes peace its national policy, and being disposed to regard justice and righteousness as the bases of its foreign policy, can not be easily tempted into a foreign war. It is true that Russian territory is nearer to these shores, but Russia in Asia is not yet sufficiently strong to menace the safety of Japan. As to the historical relationship of Japan with other nations, her long seclusion from the rest of the world kept her free from complications engendering international hatreds and antipathies. With China, indeed she was recently at war, and there may at present exist some unpleasant feeling between the two countries. But the writer is confident that under proper management these feelings will never develop into anything like the intense hatred that unhappily divides the Germans and the French. Since the interference of the allied Powers in the question of the Liaotung Peninsula, a strong antipathy to Russia has taken possession of the minds of the Japanese people. But when the foreign affairs of the country are placed in the hands of a capable statesman, Mr. Ozaki thinks that it will not be very difficult to induce the Court of St. Petersburg to remodel its foreign policy, in which case the relations between the two Empires will once more be as friendly as ever. Thus from historical as well as geographical reasons, Japan is remarkably fitted to pursue a peaceful policy. With regard to the principle that should control the Empire's foreign policy, Mr. Ozaki states that, from the reasons already cited, Japan is comparatively free to shape her foreign policy as she pleases. No single European Power is in a position to cope with her in this part of the world, and consequently, although the Powers are not at liberty singly to choose their attitude toward her, she herself has perfect freedom to adopt whatever attitude she likes toward any of them. If she thinks it wise or necessary to undertake the duty of disseminating enlightenment on the continent of Asia, she may pursue an aggressive policy. But if she thinks it better to remain at home and attend to her own internal development, then she is perfectly at liberty to follow a peaceful and defensive policy. Such choice of action is not left to some European countries. France, for instance, cannot give up her race with Germany in the matter of armament without imminent danger to her very existence. What, then, should be the end or principle of Japan's foreign policy? Japan's mission, says Mr. Ozaki, lies in maintaining peace in the Orient, and in the discharge of that mission, her aim must be to oppose with all her might the encroachment of European Powers upon the Far East, for their encroachment is incompatible with peace in these regions. In view of such a programme, to what degree should her armament be carried? Under ordinary circumstances, a country should be satisfied were it prepared to meet the most powerful of its possible enemies. But in Japan's present circumstances, Mr. Ozaki thinks it necessary for her to be prepared to encounter a combination of any two of the Western Powers. Were her diplomats more experienced, it might be safe to be satisfied with a lower limit of military equipment. But Japanese

diplomacy being still in its infancy, Mr. Ozaki thinks that its defects should be made good by a proportionably larger armament. Fortunately, owing to her favourable geographical position, it is comparatively easy for Japan to be provided with fighting capacities sufficient to cope with a combination of any two strong Powers. Thus equipped, she ought in spite of her infancy in diplomacy, to be able to carry out her policy.

THE LIBERAL LECTURE MEETING.

In marked contrast to the Progressionist meeting of a few days ago, the lecture meeting of the Liberal Party, held in the Kinki-kan, Kanda, Tokyo, on the 19th instant, came off very quietly. The speakers, as might have been expected, confined themselves to attacking the Progressionist Party. None of the leading Liberal members, as Messrs. Kono Hironaka, Matsuda Masahisa, Hayashi Yuzo, Hoshi Toru, and so forth, appeared on the platform. One of the speakers, Mr. Okuno Ichijiro, expressly stated that, in dealing with men of the Progressionist type, it was not necessary to trouble the leaders of his Party, "common soldiers like himself" being sufficient for the purpose. A brief notice of one or two speeches will suffice to convey an idea of the general nature of the topics discussed. Mr. Nakano Torajiro, speaking of the present condition of the Progressionists, attacked them vigorously, saying that they were desperate because the coalition between the Liberal Party and the Cabinet had deprived them of all hope of getting into office. They had been openly holding high language, though all the while secretly imploring the countenance of those in power. But their scheme of clandestine convention had been defeated by the manly and open-minded conduct of the Liberals. Another speaker, Mr. Komuro alluded to the criticisms very frequently heard, that the Liberals have surrendered unconditionally. He said that, when there was entire accord on general principles, it was not necessary to exact any conditions; to do so would, under the circumstances, have been unbecoming to a great party like the *Yiyu-to*, which had always been distinguished for sincerity and candour. "We are not," he said, "at all inclined to follow the example of the Progressionist leader Count Okuma, who, on entering the Cabinet in 1888, presented some conditions in writing, but who, when laughed at by Marquis Ito, was ashamed of himself and committed the paper to the flames." In this manner one speaker after another went on with the same task, defending the Liberal coalition with the Cabinet and attacking the Progressionists.

RUSSIA AND CHINA.

The Tokyo papers publish the following telegram:—

Pekin, December 18th, 5 p.m.

The Peking Government has signed a convention with Russia, by which the port of Kiao-chow, in the Shan-tung Peninsula, is leased to Russia as a naval station during winter. We do not possess much information about Kiao-chow, except that it is a spacious bay on the southern side of the Shan-tung Peninsula. Neither can we learn that any official confirmation of the above report has been received. It may be considered that a certain sinister significance attaches to the presence of a Russian Squadron on one side of a Chinese peninsula while a Japanese force occupies a fortified harbour on the other, especially in view of the fact that Japan's occupation is temporary, being dependent upon the complete payment of the war indemnity, and that the supposed object of Russia is to extrude the Japanese from all positions on Chinese soil. Russia has succeeded in thrusting Japan out of Liaotung and Manchuria, and it looks as if she intended to make sure of pushing her out of Weihaiwei also, when the stipulations of the Shimonoseki Treaty are fulfilled. We do not allege that such inferences are unquestionable, but assuredly they suggest themselves readily and forcibly. Russia is gradually acquiring in the Far East a position that cannot be viewed with complacency either by Great Britain or by Japan.

A NEW ENGLISH PERIODICAL IN JAPAN.

The proprietors of the well-known periodical, the *Kokumin-no-Tomo*, contemplate the issue of a monthly magazine in English. There are at present three English publications edited by Japanese journalists. The first in the *Yorodsu Choho*, which inserts one or two English columns in its daily issue. The editor, and apparently the writer, of these columns is Mr. Muramatsu, a gentleman possessing considerable knowledge of the English language, but by no means so conversant with it as to justify the course he adopts, namely, the publication of his own writings unrevised. It results that syntactical errors and defects of construction impart an air of immaturity to the articles and notes appearing in the *Yorodsu Choho*, and the singularly illogical violence of their anti-Government tone together with the callowness of the views expounded, deprive the journal of any creditable feature. Of a very different type are the English columns of the *Taiyo*, a monthly magazine the foreign portion of which is edited by Professor Kanda Naibu. A man of ripe scholarship, mature judgment, and moderate views, Professor Kanda succeeds in making the *Taiyo* a repository of thoughts and facts well worthy of foreign attention. Heaven and earth do not stand more widely apart than the sober, critical, careful writings of Professor Kanda and the ill-balanced, superficial, slipshod work of Mr. Muramatsu. Even Professor Kanda's pen, however, is not fully equal to the task he requires it to perform—that of writing English without English revision. Doubtless he himself knows that even in the Occident, where the structure of the various languages differs comparatively so little, not one man in a million can confidently essay to write a journalistic or magazine thesis in a tongue other than his own. But Professor Kanda, it must be frankly confessed, attains so closely to the necessary standard that his linguistic defects never seriously mar the effect of his writing. Any one conversant with the subject will understand the very high compliment implied in that admission. Here is an example of Professor Kanda's style, extracted from a retrospect of 1894, that appeared in the *Taiyo* of January 5th:—

We have just passed through a most eventful year of this eventful era. Casting a retrospective glance beyond the all-engrossing subject of the War, we see the agitation of the question of strict enforcement of the treaties causing small ripples on the political sea. More of a weapon of the Opposition than a reflection of national sentiment, it caused a mere surface ruffle, losing itself in the mighty ground-swell in which the mass of this people moves in profound union toward power and light. These momentary hitches in the wheel of progress are but signs of life, unavoidable to a national career and, we might say, as necessary to its healthy growth as the living waves are to keep the mighty ocean from stagnation. We are not surprised to meet with these apparent retrogressions. Even if they were less superficial they would not give cause for any serious solicitude. A nation in its path of progress must advance like a traveller climbing a steep mountain side. It would be unreasonable to expect the latter to direct his course straight from the foot to the top. He must turn now to the right now to the left, and only by this tedious plodding journey may he gain the summit, whence he may survey and wonder by what tortuous path he has attained his goal.

The new addition to this field of literature is to take the form of a thirty-page monthly magazine, issued simultaneously with the *Kokumin-no-Tomo*, under the editorship of Mr. Fukai Eizo, a graduate of the Doshisha. Two men of well known ability as writers of English have promised, we understand, to revise the pages of the magazine, and several Japanese of note will contribute to its columns. The leading idea of the scheme is to place before foreign readers, as far as possible, a mirror of Japanese public thought, but as the circulation of the magazine among the Japanese is a point of importance, contributions from foreign writers will also occupy a portion of the space. Altogether, the enterprise promises well, and we wish it every success. We understand that the first number will appear in February.

THE CONSTITUTIONAL REFORMISTS.

The Constitutional Reformists, the third largest political party in Japan, held their grand meeting on the 20th instant. There were present Messrs. Kusumoto Masataka, Kawashima Jun, Ohigashi Gitsutsu, Kudo Kokan, Haseba Junko, Suzuki Shigeto, and thirty-two other members of the Party. Mr. Suzuki was in the chair. The following manifesto was voted unanimously:—

The ninth session of the Diet being about to be opened, we deem the present a fitting opportunity to declare our policy and briefly explain our views as to the measures that seem to be of urgent importance.

The war with China has brought about a great change in the position of Japan among the countries of the world. The approaching session of the Diet will, consequently, attract much attention from foreign nations, and demand a correspondingly increased self-respect and circumspection on the part of the Diet, the Government, and the people.

Our country now occupies an important position in the Far East, and is a great factor in the maintenance of peace in the world. Under these circumstances, international points of view should never be lost sight of in considering the questions of the national defence, civil administration, commerce, and industry.

The increased importance of the diplomatic aspects of all questions demands a correspondingly higher degree of capacity on the part of those charged with the general direction of foreign affairs. Men that have, in the past, repeatedly shown themselves incapable of taking advantage of good opportunities, and have thereby committed the country to erroneous courses of action, must be regarded as equally unfit for responsible positions in the future. It is, therefore, our intention to correct this evil in conformity with the fundamental principles of Constitutional Government.

In our opinion, the retrocession of Liaotung was a great stain on the honour of the country. Still more disgraceful has been the Government's conduct about the recent *Sōul émeute*. Judging from the present state of affairs, the future of the Korean question causes grave anxiety and misgivings. It is our purpose to revert to, and persevere in, the original policy announced in the Declaration of War.

The measures that have become necessary in consequence of the war admit of no delay. With regard to those measures, we propose to pursue a positive line of policy. It is our intention to put in order the public finances; to reform the system of taxation; to increase the national armaments within limits consistent with the resources of the country; to improve and extend the various machinery of communication and transportation, such as railways, telegraphs, steamship services, and so forth; and to encourage the increase of all kinds of industry. It is also our aim to renovate the administrative machinery; to strengthen official discipline; to extend the liberty of the people, and guard their rights. Thus our object is to lay a foundation for building up the wealth and strength of the country, and to contribute to the perfection of the constitutional system.

To sum up, a self-assertive foreign policy and a system of responsible Cabinets are the two great political purposes of our Party, while the wealth and strength of the country are the two cardinal points kept in view by us in considering all practical measures. The time is past for mere speculative discussion; constructive statesmanship is what is wanted. We announce these our views and offer them for the consideration of persons that are in sympathy with us.

THE KOREAN CASE AT HIROSHIMA.

The constitution of the Court Martial to try the military prisoners in the Korean case has been completed. Major-General Baron Oshima, of the Fifth Division, is President, the members being Colonels Nishiyama Sakeyoshi and Takeda Shusan, and Lieutenant-Colonels Baba Masao and Yamanouchi Sadanori.

As to the Civil prisoners, their preliminary examinations are expected to be finished in a few days. Several of them have been released on bail. It is reported that bail will be accepted for the majority of the remainder also.

THE CASTING VOTE IN THE DIET.

That extremely uncertain element of Japanese politics, the National Unionist Party, seems determined to bide the rail until the very last moment. It has been understood, up to the present, that the Party is divided between two opinions, some maintaining the necessity of clearing up the Government's responsibility for its so-called errors in Korea and Liaotung, others contending that nothing of the kind is required. According to the *Tokyo Asahi* newspaper, a decision was reached on the 21st instant which amounts to a compromise between these two opinions. It is to the effect that although the Cabinet ought to be called to account for its errors of foreign policy, no obstacle ought to be placed for that reason in the way of measures for increasing the national armaments or carrying out other important projects. The *Asahi* says that the above view will be embodied in the Party's manifesto now in course of preparation. If that version of the National Unionists' attitude be correct, we may interpret it to mean that they are prepared to defer their attack upon the Cabinet until after the principal Government Bills laid before the Diet next session shall have been passed. If, subsequently to that consummation, the Unionists join the Opposition to pass a vote of censure upon the Government, we shall presumably see a dissolution of the Diet and an appeal to the country. But for our own part, we doubt whether the National Unionists will at any time be induced to proceed to such an extremity. They must be very well aware that in the event of an appeal to the constituencies, the Liberals, if to their present popularity were added the immense prestige of direct connection with the Government, would gain enormously at the polls. In fact, the whole Opposition must foresee that result and must find their position correspondingly desperate.

CAPTAIN J. M. JAMES:

Captain J. M. James has received the very high honour of being decorated with the Second Class of the Order of the Rising Sun. An Order of such rank is not conferred in Japan unless the candidate's name is submitted to the Sovereign in connection with some special act of distinguished service. We are not in a position to state explicitly what service Captain James performed, but no doubt can be entertained that he well deserves the high honour paid to him, and we join our congratulations to those of his numerous friends.

In connection with this subject we take the opportunity of correcting our recent statement that the only holders of First-Class Orders among the past and present employés of the Japanese Government were Monsieur G. Boissonade de Fontarabie and Mr. H. W. Denison. A third name must be added to the distinguished list, that of Colonel Meckel, a German officer formerly in the service of the War Department. We believe that the circumstances under which Colonel Meckel received the honour were very exceptional. He had left Japan long before the war with China broke out, but the value of his services was so strikingly illustrated as the war progressed that the Emperor of Japan wrote an autographic letter to the Emperor of Germany, extolling what Colonel Meckel had done, and enclosing the insignia of the First Class of the Sacred Treasure for presentation to the able officer.

THE NEW YEAR LEVÉE.

The *Official Gazette* announces that all foreigners holding Japanese Orders from the Sixth Class upwards will be allowed to attend the Imperial New Year Levée. With the exception of the employés of the various Departments, whose names are already recorded, any foreigner desiring to attend under this rule, is required to send his card and a statement of the Order he possesses, to the Imperial Chamberlain's Bureau by the 27th instant.

THE OPENING OF THE DIET.

The Emperor has issued a Rescript ordering that the official opening of the Diet shall take place on the 28th inst. The usual invitations have been issued for that day, and the persons invited are required to attend at the House of Peers by 10 a.m., wearing full dress (evening dress for non-officials) as well as any orders they possess.

THE IMPERIAL DIET.

The two Houses of the Diet assembled on the 25th instant, and proceeded to take the usual measures of organization, namely, the division of the members into sections and the election of heads of sections (*buchō*) and managers (*riji*). The result of these proceedings was reported to the Cabinet by Vice-President Marquis Kuroda on behalf of the Peers, and President Kusumoto on behalf of the Representatives. The Houses will not meet for the transaction of regular business until the 29th instant, when, after receiving the Budget and possibly some other Bills, they will rise for the New Year's recess.

THE TOKYO CHAMBER OF COMMERCE.

The Tokyo Chamber of Commerce held an extraordinary meeting on the 23rd inst. There were present Messrs. Shibusawa (President), Oku, Ginbayashi, Ota, Kato, Oye, Masuda, Sonoda, Sekine, and so forth. After some reports had been read by the clerk, the President submitted to the meeting the resignation of Mr. Fukunaga Gihachi, which was at once approved. The next business was a communication from the London Chamber of Commerce relating to the reduction of telegraphic charges between England and the Far East. It was decided that the investigation should be entrusted to the Committee appointed some time ago to report on the revision of the Post and Telegraph Regulations. The third subject for discussion, namely, the report of the Committee charged with the investigation of the direct trade with foreign countries, was reserved for a future meeting. The next question related to the advisability of memorializing the Ministers of Finance, and of Agriculture and Commerce, and petitioning the Houses of the Diet, for a reduction of the tax on Exchanges and Bourses. Draft memorials and petitions were approved with some minor modifications. Then followed the consideration of a report to be made to the authorities with reference to the effects produced upon commerce and industry by the late war. The report was approved. The very meagre accounts of the proceedings published in the metropolitan papers do not contain any allusion whatever to the nature of the report on this important question. Afterwards the Chamber examined memorials for presentation to the Ministers of Foreign Affairs and of Agriculture and Commerce on the subject of dishonest practices resorted to by Chinese exporters of cotton. The documents were approved with slight alterations of language. This completed the measures originally intended for submission to the meeting. Before rising, however, the Chamber's attention was called to a subject that has of late been exciting discussion in business circles; namely, the diversity of interpretations placed by different Departments of State on the provisions of the Commercial Code relating to an increase of capital by an already existing joint stock company. It was decided to memorialize the Minister President of State, requesting him to unify the interpretation.

THE EVACUATION OF LIAOTUNG.

According to the *Tokyo Asahi Shimbun*, all the Japanese troops stationed in different parts of Manchuria were collected at Talienwan on the 20th instant. The last transport conveying the returning soldiers is expected to enter Ujina about the 29th instant.

AT THE OPTION OF JAPAN.

Our correspondent "X." declares himself perplexed as to the meaning of the words "at the option of Japan" that appear in the 5th Article of the Shimonoseki Treaty. Our readers doubtless remember that these words qualify the last clause of the article—the clause providing for the status of any Chinese remaining in Formosa after the expiration of two years. We cannot see any difficulty in interpreting the words. After inserting an explicit reservation as to Chinese residents that might desire to dispose of their real property and leave the island within the prescribed period of two years, it was only natural and in accordance with the precedent of modern conventions, to insert also some provision relating to Chinese that might wish to remain permanently. What provision, then, should be inserted? Were such Chinese to be conventionally guaranteed naturalization as Japanese subjects with all the privileges belonging to that status, or were they to receive a modified form of naturalization? It is only reasonable to conclude that the Japanese Government at the time of signing the Shimonoseki Treaty was not in a position to answer these questions definitely, and therefore reserved to itself a right of option with regard to them. When we remember that there are still some portions of the Japanese empire the inhabitants of which, though of Japanese origin, are still discriminated against in matters of civil and political privileges, we have no reason to be surprised if the exact status of aliens in newly-acquired territory calls for much reflection. Our correspondent writes as though he failed to distinguish clearly between persons subject to Japanese jurisdiction and actual subjects of Japan. We shall all be subject to Japanese jurisdiction when the revised treaties go into operation, but we shall not be Japanese subjects. So, too, the Chinese in Formosa, though at present subject to Japan's sway, cannot yet be called subjects of Japan inasmuch as they possess by treaty the right to remove themselves from her jurisdiction within two years. So far as we can gather, it is the intention of the Japanese Government to treat the Chinese in Formosa with the utmost consideration. No philanthropist need be at all uneasy on that subject. But the details of the programme demand much reflection and preliminary examination. For our own part, we think that the best policy would be to facilitate the exodus of the Chinese in every possible manner, one step toward that result being an offer, on the part of the Japanese Government, to buy up any real property the owners of which are unable to find private purchasers within the prescribed interval.

THE SPINNING INDUSTRY.

It is reported that spinning companies are realizing extraordinarily large profits. After putting aside a considerable sum as a reserve fund, it is expected that the Hirano and Settsu Spinning Companies will be able to declare a dividend of 25 per cent. per annum. The dividends anticipated in the case of some other companies are 20 per cent. for the Osaka and Miye Boseki, and 15 per cent. for the Tokyo Boseki. The principal causes of this increase in profits are a steady rise in the market prices of the products of the mills, a fall in the rate of interest on money, and cheapness of fuel and labour. As to the last mentioned item, however, it must be observed that scarcity of labour is causing some loss and much anxiety to the companies. It is stated that, in some mills, a considerable number of spindles are lying idle in consequence of want of hands. The present scarcity of hands is principally owing to a return of prosperity throughout the country: the people are reluctant to send their girls to factories. Under such circumstances, wages cannot but rise, and that tendency is already observable. It is expected that there will be a considerable rise early next year.

THE BANKING BUSINESS.

According to the *Chugai Shogyo Shimpō*, there has been a decrease of profits in banking business during the latter half of the present year as compared with the corresponding period of last year, though the nominal bulk of transactions shows a considerable increase. The following table gives amounts of advances, discounts, and deposits in the banks of Tokyo and Yokohama that are members of the Banking League:—

ADVANCES AND DISCOUNTS.			
	Nov., 1895. yen.	Nov., 1894. yen.	
Advances	49,738,491	52,212,166	
Overdrafts	8,101,713	6,249,294	
Discounts	15,638,100	11,325,424	
Total	73,478,304	69,786,884	
DEPOSITS.			
	Nov., 1895. yen.	Nov., 1894. yen.	
Deposits of Public Money	1,500,688	1,589,803	
Fixed Deposits	12,745,066	10,038,260	
Current Deposits	22,946,528	19,755,110	
Miscellaneous Deposits	8,425,955	12,028,532	
Total	45,618,237	43,411,705	

Thus there has been an increase of 3,691,420 yen in advances and discounts and 2,206,532 yen in deposits. On the other hand, there has been a marked fall in the rate of interest. During the latter half of last year, the ruling rates were from 2 sen 6 rin to over 3 sen per diem per 100 yen; but they have since fallen to 2 sen and 1 sen 8 rin. The rates of interest on deposits have remained stationary. According to our contemporary's computation, the decrease in the profits of the banks will be from 10 to 15 per cent. But it has to be remembered that the profits during the second half of last year were exceptionally large, and that, consequently, notwithstanding the above mentioned decrease, the banks will be able to declare a pretty high dividend for the current period.

THE RISE OF PRICES.

There has lately been an extraordinary rise of prices, and the tendency is continuing. The appreciation has been most remarkable in articles of luxury, the rate of increase being from 30 to 40 per cent. in the case of some commodities, such as silk and cotton goods. The *Fiji Shimpō* publishes a table showing the average rates of appreciation in the cases of twenty-two articles, as compared with the prices ruling in 1893. The list includes rice, barley, salt, saké, sugar, fuel, timber, silk and cotton fabrics, metal wares, and so forth. The following is the table:—

	Average rise for 22 Arts. Per cent.	Rise in the price of Rice. Per cent.
First halves of 1893 and 1895 ..	23.9	20.4
Latter halves of 1893 and 1895..	14.5	18.7
First half of 1893 and Nov., 1895	24.2	32.4
Latter half of 1893 and Nov., 1895	14.9	19.8

As to the increase in the cost of living, the *Fiji* thinks it safe to put it, on the average, at 20 per cent.

The rise of prices has been accompanied by a similar rise in wages. The *Chugai Shogyo Shimpō* publishes the following comparative table showing the average wages during the latter halves of this year and of last:—

	Latter half of 1895. Sen.	Latter half of 1894. Sen.
Common coolies	33	27
Carriers	33—35	30
Bricklayers	55—60	45—50
Masons	65—70	60—65
Carpenters	50—55	45
Roofers	60	50
Tilers	55	45—50
Paper-hangers	50—55	40—45
Wall-plasterers	65—70	50—60
Mat-weavers	50—55	50

All the figures in this latter table, as well as those in the former, been in some cases principally owing to scarcity of hands caused by an exodus of labourers and artisans to Formosa and Weihaiwei.

THE VOLUME OF CURRENCY.

The following table shows the volume of Government paper money and the bank notes in circulation at the end of the months of October and November:—

	End of November. Yen.	End of October. Yen.
Government Paper money of and above 1 yen	8,570,192.500	8,706,623.500
Do. of and below 50 sen	2,655,311.750	2,655,311.750
Total	11,225,504.250	11,361,935.250
Bank notes	20,728,708.000	20,728,708.000
Notes of banks now defunct	68,078.000	68,758.000
Total	20,796,786.000	20,797,466.000
Grand Total	32,022,290.250	32,159,401.250

The volume of convertible notes in circulation during the last week of November was 150,248,586 yen. Adding this sum to the above figures, the total volume of currency at the end of last month is represented by 180,786,072 yen.

THE PROGRESSIONISTS.

The Progressionists held a meeting in the Kinki-kan, Kanda, Tokyo, on the 14th instant. The morning hours were devoted to informal consultations about the condition of the Party's affairs in the various localities. The formal conference commenced at 2 p.m., the chair being taken by Mr. Maruo Bunroku, the oldest person present. The meeting consisted of Messrs. Shimada Saburo, P.M., Ozaki Yukio, M.P., Minoura Katsundo, M.P., Tsunoda Shimpei, M.P., Sudo Rikuzo, M.P., and about two hundred and fifty other members of the Party, representing nearly all the Cities and Prefectures. After the financial statement for the past year had been read and approved, a draft Manifesto was submitted for deliberation by the assembly. A question raised by Mr. Uruma Tamio, on the subject of the employment of the war indemnity, having been answered by Mr. Ozaki, the Manifesto was passed without a dissentient voice. That document we published yesterday. The next business was to consider representations made to the headquarters of the Party by the local associations of Shizuoka, Kanagawa, and Hyogo. These representations related to the Party's policy in the coming session of the Diet. They were nearly uniform in character, the principal points raised being the importance of compelling the Cabinet to resign on account of the Liaotung and Korean questions, and of providing for the increase of the Army and the Navy, the local association of Kanagawa going so far as to suggest that the War indemnity received from China should be used solely to pay for increased armaments and extension of steamship lines to foreign parts, the encouragement of industry and education, and so forth. It was decided that these representations be taken into consideration by a Committee charged with the duty of investigating various questions of current politics. Mr. Asaka next reported on the conduct of the Party during the session convened at Hiroshima. The last business was to elect members of the Party Council. It was decided that the task of election be entrusted to the election Committees of the different localities. The conference concluded with cheers for Their Majesties the Emperor and Empress, for the Army and the Navy, and for the *Kaishin-to*. Afterwards the party sat down to dinner, in the course of which several speeches were delivered.

YOKOHAMA GIRLS' HIGH SCHOOL.

The Christmas breaking up of Mrs. Cahusac's High School for Girls took place on Saturday last in the school room of the institution, which had been tastefully draped with evergreens and flags. A large number of ladies and gentlemen, the parents and relatives of the children, had been invited to witness the exercises, which consisted of recitations, singing, and pianoforte

playing, the grand finale being two wax works exhibitions, and they no doubt derived great pleasure from the proceedings. It would be invidious for us to praise any particular number on the programme, considering the difference in the ages of Mrs. Cahusac's pupils, but the results show that great pains had been taken with them, and the praise bestowed upon each and all must have been very pleasing to those concerned in the school. The full programme, which we give below, show the variety of subjects taken up:—

1—Duet.....	Our Girls.....	Paul Jones.
2—Recitation	Miss K. Hall, Miss N. Orloff.	
3—Piano Solo.....	Introductory.....	
4—Part Song	Miss Ethel Fraser.	
5—Recitation.....	The Song of the Brook	Brocca.
6—Duet.....	Miss Nina Orloff.	
7—Action Song.....	Stilly Night.....	Volkslied.
8—Recitation.....	Senior Class.	
9—Piano Solo.....	The Angel's Story.....	A. A. Proctor.
10—Recitation.....	Miss Nora Griffin.	
11—Duet.....	Ecosse.....	Schumann.
12—French Recitation	Miss Cassie Cook, Master Henry Cook.	
13—Song	Our Morning Porridge.....	
14—Recitation.....	Junior Class.	
15—Piano Solo.....	The Camel.....	Anon.
16—Recitation.....	Miss Vera Irwine.	
17—Piano Solo.....	Heimveh.....	Jungmann.
18—Recitation.....	Miss Netty McCance.	
19—Duet.....	I'm such a dear little girl.....	
20—Piano Solo.....	Miss Edna Funcke.	
21—Duet.....	Miss N. Orloff, Miss N. McCance.	F. T. Baker.
22—French Recitation	Le Petit Savoyard.....	Guinard.
23—Song	Miss N. Griffin, Miss K. Hall, Miss E. Fraser.	
24—Recitation.....	Enfants, n'y touchez pas.....	Clapissou.
25—Piano Solo.....	Miss Nina Orloff.	
26—Recitation.....	The Walking Bell	Goethe.
27—Piano Solo.....	Master Charley Wallace.	
28—Recitation.....	Duet—Vera-Irvine and Trixie Sharp.	
29—Piano Solo.....	Der Hussarenritt.....	Spindler.
30—Recitation.....	Miss Nina Orloff.	
31—Piano Solo.....	The Earl King	Goethe.
32—Recitation.....	Miss Cassie Cook, Miss Mabel Wallace, Miss Trixie Sharp.	
33—Piano Solo.....	March Turque	Beethoven.
34—Recitation.....	Miss Cassie Cook.	
35—Duet.....	Little Drops of Water.....	
36—Piano Solo.....	Miss Josephine Cleveland.	
37—Recitation.....	Overture	Caliph of Bagdad.
38—Piano Solo.....	Miss N. Orloff, Miss N. McCance.	
39—Recitation.....	Melodie	
40—Piano Solo.....	Miss Trixie Sharp.	
41—Duet.....	The Fire Fly	Jungmann.
42—Piano Solo.....	Master Harry Cook, Miss Nina Orloff.	
43—Recitation.....	Valse.....	Chopin.
44—Piano Solo.....	Master Harry Cook.	
WAX-WORKS.—GROUP 1.		
1.—The King was in his Counting House counting out his money —	Charlie Wallace.	
2.—The Queen was in the Parlour eating bread and honey.—	Florence Wales.	
3.—The Maid was in the Garden hanging out the clothes.—	Edna Funcke.	
4.—Curly Locks.—	Pauline Cleveland.	
5.—Little Bo-Peep.—	Vera Irwine.	
6.—Little Red Riding Hood.—	Josephine Cleveland.	
GROUP 2.		
1.—Ride a Cock Horse —	Gerald Irwine.	
2.—The Fine Lady on a White Horse.—	Cassie Cook.	
3.—The Queen of Hearts.—	Ethel Fraser.	
4.—The Old Woman Sweeping Cobwebs out of the sky.—	Mabel Wallace.	
5.—The Old Woman who lived in a Shoe.—	Trixie Sharp.	
6.—Cinderella.—	Hilda Watson.	
The Pretty Maids all in a Row.—		
Nina Orloff, Netty McCance, A. Strome, K. Hall, E. Hall.		
Showwoman, Miss Mabel Moulton.		

At the conclusion, the senior girls presented Mrs. Cahusac with a handsome basket of flowers and a box of pretty silver spoons.

THE INEQUALITY OF PECUNIARY REWARDS AMONG LITERARY AND PROFESSIONAL MEN.

It transpired in the course of a famous trial in Melbourne not long ago that a jockey, who was the plaintiff in the case before the court, had been for three years making an income of nearly £3,500 a year, and the said jockey was still a minor. This sum of money happened to tally with the salary paid to the Chief Justice of Victoria, and the circumstance naturally led certain persons to pass remarks on that peculiar characteristic of modern society which makes it ever ready to pay more for amusement than for instruction or even for justice. We say more; for in the case under consideration no one would pretend that light weight, skill in riding, and knowledge of racing, could be placed in any impartial estimate, on an equality with the high culture, the keen mental discipline, and the great erudition of the Chief Justice as money-deserving qualities in a highly civilized community. Statistics prove conclusively that in the age in which we live men are willing to pay more for their pleasures than for ordinary professional and literary services rendered to them. Not long ago a return was laid before the English House of Commons

giving a list of all the pensions granted since 1855, to persons who, in the realms of art, science, and literature had "rendered distinguished public service." Owen, the English Cuvier, Huxley, and Alfred Russell Wallace head the list with a pension of £300 each. Poetry seems to command a lower rate than Science. Tennyson was the proud possessor of a pension of £200. "Festus" Bailey and Eliza Cook received the reward of £100 a year each from a grateful nation, and Gerald Massey was valued at £70 a year. The caprice of human taste may be further illustrated by citing the following facts. The publisher gave Goldsmith £60 for the entire copyright of his "Vicar of Wakefield." Today collectors are paying £90 for a single copy of the Salisbury edition of 1766, just as they are giving £32 for a single number of the original pale-green "Pickwick," sold at 1s. each when first issued. Great Britain spends £25,000 per annum on the Civil List pensions given in reward of distinguished services. It spends £2,000,000 per annum on football and £4,500,000 on fox-hunting, while the duty alone on the tobacco it smokes reaches £10,000,000. Pretty ankles, gracefulness of form and carriage, high class vocal chords, command higher prices than the genius of Darwin or Huxley.

Interesting statistics bearing on the inequality of professional and literary pecuniary rewards appeared in the *Forum* some time ago. We give the following epitome. Macaulay's History is computed to have yielded £150,000 and the Waverley Novels the still larger sum of £200,000. But these are very exceptional cases. Of the two hundred and fifty or three hundred people that make some kind of a living by novel writing, two or three make £3,000 a year, a dozen make £2,000, but the great bulk of novelists barely earn the wages of agricultural labourers. Educational works pay better in England than works of fiction, there being less competition. The man fortunate enough to get his Latin grammar into the public schools may smile at want. A hack writer has to burn the midnight oil to earn £160 a year, but a leader writer on *The Times* receives £5 a column, and the editor of a great London daily who has also some proprietary interest in his own journal will draw £5,000 a year. The same inequality exists in other spheres. A leading barrister with a roaring practice will make his £20,000 a year, but the rank and file of the bar do not earn an average income of £240 a year. A medical specialist like the late Sir Andrew Clarke has his coffers filled by a perennial stream of gold, but the average doctor barely scrapes together £240 a year by incessant toil and exposure in all weathers. The head master of a great public school like Eton or Harrow will receive an income of £6,000 or £8,000. Even Winchester, Rugby, and the Charterhouse pay their heads from £2,000 to £4,000 per annum, and their assistant masters from £300 to £800. But the average master in a small school only gets £100 a year. In the religious world the same principle holds good. The Archbishop of Canterbury has £15,000 and the Bishop of London £10,000 per annum. About a dozen Non-conformist ministers, the *Forum* reckons, receive £1,000 a year; but the mass of ministers in all denominations are poorly paid. In 1880 there were 2,587 benefices with incomes under £200, but in 1894 the number had increased to 4,174, or nearly one third of the total number of benefices in England and Wales. There are no less than 1,379 benefices, with an average income of less than £65 per annum. The average income of the rank and file of Non-conformist ministers is stated to be £90 per annum.

All this goes to prove that in modern society the great prizes are only to be won by men of extraordinary talent and that mediocrity in all professions fares badly. The prizes are splendid; the general average is paltry. There is much to be said for and against this system. From a socialistic and humanitarian point of view it is considered diametrically wrong; but from a utilitarian point of view there is no little to be

urged in its favour. It stimulates ambition. Thousands strive in vain to win the great prizes, but the world nevertheless benefits by their efforts. Were there less competition there would be less industry, less hard study, less mental discipline. Hence, judged by results, the present system is perhaps superior to any that could be invented. Nevertheless, one cannot but feel regret that, as the world grows older, life in England among the educated classes should be attended with ever increasing hardships. The incomes made by men of average ability in these days are too small to allow in many cases of their retiring from business even when borne down by the infirmities of age. Even supposing that they have been able to save a few thousand pounds, the rate of interest on capital is so low that they find it impossible to keep a family on the small sum realised by their investments. When the regular methods of making money yield on the average such poor results, we can hardly be surprised at the increase of speculation, at the widespread desire to gain by a lucky throw of the dice, as it were, treasures that, situated as things now are, years of toil can never bring. The plain cause of the pressure is the excess of the supply of professional men over existing demands. All the callings of life in the old country are too crowded. A vacant clerkship worth £60 a year is eagerly sought after by hundreds of applicants. To whatever profession one turns there appears the same scramble for places that yield a bare means of subsistence. Yet notwithstanding this, the number of young men who prefer privation and untold hardship at home to trying their luck in other lands is always large. Hence, since the only outlet for the superfluous supply of educated talent is used by a limited few, we can see no immediate prospect of any change in the situation.

THE NAVY LEAGUE.

Admiral Sir R. Vesey Hamilton's open letter suggesting the formation of a Naval League, has been published in all Great Britain's Colonies, and since it is not to be questioned that British subjects residing in Japan are just as much interested in this matter as British subjects anywhere else, we re-produce the document, with an expression of strong hope that it may lead to the formation of a branch of the League in the foreign settlements of Japan also:—

SIR,—Few arguments should be needed, though many can be urged, to recommend to your readers the objects of the League whose papers I enclose. The League has been formed in the capital of the British Empire, as the natural result of a growing realisation that the destinies of the whole British people, to whom that great heritage belongs, depend upon the maintenance by them of sea power—of command of the sea.

Since the works of Captain Mahan, of Sir J. Colomb, and of other writers, have demonstrated the vital bearing of naval supremacy upon the history of our race, and the manner in which "the expansion of England," has been at all times contingent upon the observance of that condition, and that too, the great national service rendered by the Press in directing public attention to the same subject, no thinking men have denied that as by sea power our past has been determined, so by the silent influence of this same controlling factor on the life of Greater Britain, our present is being moulded, and our future will be shaped.

When the peace which followed upon Waterloo closed at last the century of strife with France, in which we had wrestled with her for the Empire that depended upon dominion of the seas, the oceans and the shores of all the globe were open to us, because out of that struggle we had emerged supreme, and because the fighting force of our navy, like the tonnage of our mercantile marine, was greater than that of all other nations combined. Hence came that access to the markets of the world which, when the application of brains to industry increased production, afforded custom for our goods, and so enabled the population of the United Kingdom to grow at once in prosperity and in numerical strength; and hence came also acquisition or the development of those wide territories, beyond the seas that encircle England, which the still expanding British people now inhabit and possess.

One glance back through the history of the last hundred and fifty years will suffice to reveal the manner in which the whole present environment of our English-speaking world has been the product of this power of the sea. But for sea power, rendering possible the victory of Wolfe in 1759, the whole of Canada and of the United States might have passed not to the children of England, but to those of France; but for sea power, South Africa, to day, might be either Dutch or French; but for sea power, the continent under the Southern Cross, where the English language is now spoken, with scarcely the intermixture of any other tongue, might have been entirely or in great part the appanage of foreigners, some of whose governments would never otherwise have left untouched so vast and rich a section of the land surface of the globe.

Now, Sir (the Navy League asks), are you British people of Greater Britain willing to watch, unmoved, that steady advance of the navies of other States, in ships, in guns, in number of men, towards equality with ourselves; and, with that advance, to witness the constant growth of danger to your joint heritage and your place in the world? If the interests of Canada, or of Australasia, or of South Africa be assailed, or their just rights challenged by foreign nations, are you prepared tamely to submit? But against such outrages, and for the inviolability of your commerce throughout all seas, what guarantee have you, or can you have, but the Navy of the Empire, and if that be inadequate to the work which it has to perform, do you not lean upon a broken reed? If so, then it is time for you to be up and doing, for naval preparedness cannot be attained in a week, or in a month, or in a single year, nor can deficiencies be made good when war has once begun, but then with such material and organisation as may exist, the tremendous issue will have to be decided, and if the game go against us the entire fabric of our Empire, and with that the prosperity of all classes of our people, will vanish like a palace in a dream.

The Navy League has been created to arouse, before it is too late, a perception of these facts amongst all men of our race who have minds broad enough to apprehend their import, and hearts subject to the impulses of British blood. To quicken the recognition that command of the sea is the deep fundamental necessity of the whole British people, and—through that awakening—to make its attainment the first care of every British statesman, so that each colonial cabinet should have this desire ever before it, and ceaselessly press it upon the Government at home—this is the purpose of the League, and to achieve these ends it now seeks to form, in every centre of British population, branches whose members shall advocate constantly by speech and pen this, the common cause of all.

Such advocacy would be assuredly no slight or transient thing, but as its objects affect the destinies of the entire Empire, so their attainment needs the energy and the intelligence of every British branch of our race. "I am well aware," said Lord Palmerston, in words as applicable now to the whole British dominion as to the small islands which constitute its kernel, "that it is almost as difficult to persuade the people of this country to provide themselves with the means of defence as it would be for them to defend themselves without those means, and that although our internal condition may still be the envy of surrounding nations, yet we have neither."

"Hearts resolved nor hands prepared"

The blessings we enjoy to guard."

To wipe away the reproach, and in doing so to keep our empire and the British people in their proper place—the forefront of the world—to strengthen the hand of the Cabinet of the United Kingdom (to whatever political party that Cabinet may belong), in demanding from Parliament the means necessary at once to our prosperity and our existence—this, again, is the endeavour in which, now, we seek your aid.

The League, then, asks, through your columns, for no mere academic acquiescence in its aims. It calls for the active, strenuous help of every man who sees in that great cause a great and binding duty. Eight local subscribers suffice to constitute the nucleus of a branch and in the papers sent to every member the details of the League's methods are clearly shown. Amongst your readers, who are those who will render aid?

I have the honour to be, on behalf of the Executive Committee, your obedient servant,

R. VESLEY HAMILTON,
Admiral.

13, Victoria Street, London, S.W.,
9th July, 1895.

COTTON MILLS IN CHINA.

THE Japanese appear to be resolved to open a cotton mill in Shanghai. Presumably they have considered the financial aspects of the enterprise with all care, but it surprises us to observe that neither in their prospectus nor in the published projects of foreign companies organized for a similar purpose, does any statement appear as to the method of procuring raw cotton. Yet that is the one vital question. Were it not for the apparent economy to be effected by obtaining Chinese cotton *in loco*, there would be no special inducement to devote large sums of money to the establishment of spinning factories in Shanghai. The mills in Japan already find themselves nearly able to offer their products in the Chinese markets at rates that would compete successfully with Bombay yarns. Slight assistance from the Government, such, for example, as the abolition of the import duty on raw cotton, would probably turn the scale in favour of the Japanese manufacture, and as such a concession is tolerably certain to be made very soon, there must be some independent consideration militating in favour of opening mills in China. The consideration assigned is that an ample supply of raw cotton can be obtained at the doors of the mills. Can it? Here it is; precisely, that we discover a difficulty not publicly noticed by any of the projectors of factories. Under existing treaties and conventions, Chinese products, sent from the interior to a treaty port for the purpose of being exported, have to pay two taxes: first, the transport tax called *likin*; secondly, the export duty. In former times, the *likin* used to be a very heavy impost, and the serious obstacle that it constituted to the development of trade was frequently complained of. By the Chefoo Convention of 1876, however, it was agreed that, in the case of goods *bonâ fide* intended for shipment to a foreign country, all charges hitherto payable on such goods *en route* from the place of production to the place of shipment, should be commuted for a single payment amounting to one half of the export duty. The article embodying this arrangement runs as follows:—

Native produce carried from an inland centre to a port of shipment, *bonâ fide* intended for shipment to a foreign port, may be, by treaty, certified by the British subject interested, and exempted, by payment of the half duty, from any charges demanded upon it *en route*. If produce be not the property of a British subject, or is being carried to a port not for exportation, it is not entitled to the exemption that would be secured it by the exhibition of a transit duty certificate.

It might fairly be contended that, under this article, cotton from the interior of China to Shanghai to be there manufactured into yarn, can claim exemption from all charges *en route* in consideration of the commuted payment of half the export duty, provided always that the yarn is *bonâ fide* intended for export. But if the yarn be not intended for export; if, on the contrary, it be intended for sale in China, as all yarn manu-

factured at the projected mills must be, what payments will be levied on it before it reaches the place of manufacture? Evidently it will then fall within the category of ordinary Chinese produce passing from one place within the empire to another, in search of a market, and will be liable to be taxed at every *likin* station *en route*. We cannot say with precision what such taxes would aggregate. On the West River there are said to be about 100 *likin* stations in a distance of 900 miles, and a recent traveller in Kiangsi found 5 within a reach of 70 miles on a small stream. A rough idea of what *likin* means may, however, be gathered from a conventional stipulation—already concluded though not yet in force—that produce which, having been carried to a port of shipment for the purpose of export, has consequently been exempted from any inland charge other than the commuted tax of one half of the export duty, may be relieved from the necessity of export and be sold locally on payment of a further tax of five times the commuted *likin*. In other words, supposing that an article intended for shipment abroad be liable to export duty amounting to 5 per cent. *ad valorem*, then, its total liability in respect of export and *likin* would be $7\frac{1}{2}$ per cent.; whereas, if it be not shipped abroad but offered for sale at the port of shipment or elsewhere within China, it must pay an impost of 15 per centum. Observe how this applies to the case of raw cotton. It pays at present a specific export duty representing about 3 per cent. *ad valorem*. Hence, it can be carried from the interior and shipped to Japan by paying a total impost of $4\frac{1}{2}$ per cent. But if, instead of being carried to Japan or some other foreign country, it be intended for manufacture into yarn at a Shanghai mill, and then for sale in the markets of China, obviously the Chinese Authorities may require it to pay an inland tax of 9 per cent. at least. That, indeed, is too favourable a statement of the case. The fact is that such cotton, not being certifiable by its foreign purchaser—supposing it to have been purchased by a foreigner at the place of production—would be liable to be taxed at every *likin* station passed *en route* for Shanghai, and by the time it reached the mill, it would probably have been mulcted to the tune of 20 or 30 per cent. Possibly there may be an idea that the Chinese Government will make an exception in favour of raw cotton; that, having granted permission for factories to be established at the open ports, it will extend its complaisance to the raw material required for manufacture. Such a hope appears to us quite chimerical. Assuredly it is entirely opposed to the practice invariably adopted by the Chinese Authorities. They take no thought whatever to foster trade—trade in foreign hands above all—but regard it

simply as a means of procuring revenue. Moreover, the Chinese themselves are engaging in the cotton-spinning business, and there will naturally be a disposition to discriminate against the foreigner. It seems to us, therefore, that whereas mill-owners in Japan can now procure raw cotton from China by paying to the latter a total tax of $4\frac{1}{2}$ per cent. *ad valorem*, they will find themselves obliged to pay an impost of 20 or 30 per cent. on the same cotton if they establish mills in China to spin it. Of course the question may be included in the negotiations now taking place between Earl Li and Baron HAYASHI. But is there any reasonable expectation of that? We should think not, in view of the exceedingly unsatisfactory recognition accorded to Japan's cosmopolitan liberality in framing the Shimonoseki Treaty. It was certainly against the interests of her own manufacturers that she should have stipulated for the privilege of carrying on industrial enterprises in China, and it would be still more opposed to their interests that she should extend her altruism to the supply of raw material for those enterprises. Japanese capitalists ought to investigate this point before they sink large sums of money in Shanghai mills. Otherwise they may find themselves ruinously handicapped when they come to purchase cotton for their work.

THE OPPOSITION IN THE LOWER HOUSE.

JUDGING from the comments of the vernacular press, there is still some doubt as to the period of the Diet's session that the Opposition will choose for introducing their Address to the THRONE on the subject of the Government's foreign policy; in other words, their motion of want of confidence. We find it strange, for our own part, that any uncertainty should exist on such a subject. It would be obviously absurd that a number of members, having openly declared their want of confidence in the Cabinet's administration of the empire's foreign affairs, and having pledged themselves to petition the THRONE for the dismissal of the Ministry, should by way of preliminary, vote in favour of measure after measure introduced by that very Cabinet and those very Ministers. Hitherto the Progressionists and their allies have not been guilty of any such ridiculous inconsistency. They have steadily opposed all important Bills emanating from a Cabinet in which they professed to have no confidence. They must adhere to that course in the present session also. If they attempt to postpone their vote of censure until after they have approved all the Cabinet's proposals for the increment of the Army and Navy, the extension of navigation, and the development of industrial enterprise, they will incur the contempt of the nation as

mere political schemers, lacking the courage of their opinions. Nor can we perceive what power of choice they possess in such a matter. The disposal of the business of the session is practically in the hands of the Ministers of the CROWN. With them rests the right of selection as to which of the two Houses shall be the first recipient of an official bill, and at what time in the course of the session it shall be introduced. Thus things can easily be arranged so that if the leaders of the Opposition attempt to defer their anti-Cabinet Address to the THRONE until after all measures of national importance have been passed, they may never find any such opportunity: either bills that have passed the Lower House will be still awaiting decision in the Upper, or bills sent down from the Peers will be still be under discussion by the Representatives. The Government, perhaps, would not think it worth while to resort to such tactics, but that they are in a position to do so admits of no doubt. Hence, from every point of view, the hands of the Opposition seem to be forced. They must deliver their attack at the commencement of the Session. In that event, however, they must anticipate several defections from their ranks, as well as the antagonism of the National Unionists, so that their chances of obtaining a majority are slender indeed.

SEARCH FOR THE ORIGIN OF THE JAPANESE.

BY J. KUMPEI-MATSUMOTO, M.A.

THE solution of the question as to the origin of a people that appeared upon foreign soil in a prehistoric age, offers great difficulties. Physical conformation alone cannot solve the problem, for climatic conditions, geographical aspects and admixture with different races, exercise in the course of time a largely modifying influence. On the other hand, neither language nor social life alone can sufficiently decide the question, for, as history shows many conquerors abandoned their own languages, customs, and mode of living and adopted those of the people with whom they were associated. We are justified in assuming a common starting point only when several of these indications point to the same origin.

The search for the origin of the Japanese race strongly suggests the case of the North American people, who are composed of various race elements—English, French, German, Spanish, Irish, Italian, Dutch, Russian, Hungarian, Jews, Indians, Africans, etc. Yet no one can doubt that these North Americans, as a whole, reveal remarkable characteristics of the Anglo-Saxon race at every point, in spite of so vast an amalgamation of races. It is not difficult to trace the reason, for in that country Anglo-Saxon elements pre-

dominate, and in their mould all the other heterogeneous elements are blended. The same principles are presented if we carefully observe the Japanese nation. The Japanese race contains, no doubt, different race elements, but on tracing the history of 3,000 years of the race, one can not fail to see that the dominant spirit is represented by the people called the Yhamato race.

There are two historical and traditional writings still preserved by us. They form the sole means by which we know the condition of our Japanese ancestors. One of them is the "Kojiki," or "Book of Ancient Traditions," which was compiled between A.D. 711 and 712. It treats of the creation of the heaven and earth, and of all the events of the mythological age, and gives the history of the MIKADOS from the year 1 (660 B.C.) down to the year 1,288 of the Japanese era. The other book, called the "Nihongi," was compiled in A.D. 720. It also contains the Japanese mythology and brings down the annals of the MIKADOS to A.D. 699.

According to these two oldest traditional manuscripts, we learn that the original Japanese race, who styled themselves the Yamato, were descendants of the first human pair, called IZANAGI and IZANAMI. This first man and woman were created by GOD, and lived some time in Takamagahara (or the High Heavens Plain). By a floating bridge from heaven they descended to an island indicated by GOD, where they created the whole of Yhamato. By this we understand that the original ancestors of the Yhamato race came from some other portion of the globe; that is to say, the Yhamato were colonizing people or immigrants. Again, we see in these old writings, that when the Yhamato race settled on the Island of Japan (Oyashima) in a prehistoric age they found some half-dozen aborigines belonging to a different race, who had occupied the islands previously. The names of these aborigines, as they appear in the "Kojiki," are the "Aragami" (rage demon), "Tsuchi-gumo" (pit-dweller), "Aogusa-hito" (blue-grass man), "Emishi" (barbarian), etc. These different aborigines or original inhabitants, seem to have been a very inferior race, for they were vanquished by the invaders (the Yhamato) just as easily as the Indians of America have been vanquished by the Europeans.

Thus the conquering Yhamato subjugated the central part of Japan and established the kingdom of Yhamato, having the MIKADO at the head of the government, whose descendants still continue to rule the Empire of Japan. All vanquished aborigines were killed in battle or became slaves, paying tribute. For a long time laws and traditions prohibited their inter-marriage with the conquering race. For centuries the distinction between the Yhamato, the conquerors, and the abori-

gines, the conquered, as in the case of the Saxons and Normans in Britain, was kept up, but in the course of time fusion of blood took place and admixture of races continues up to the present time. Tet the fusion of these different races is not completed even now.

Foreign visitors to Japan have not infrequently been surprised by the fact that Japanese society exhibits a surprisingly large variety of both feature and complexion. Closely observing, we see three fundamental Japanese types, which can easily be recognized in the different parts of Japan.

One of these is marked by a darker skin, more compact figure and a powerful development of bone and limb. The short, flat face displays, under a low almost straight brow, large eyes, prominent cheekbones and a depressed, flat nose. The large mouth is generally somewhat open; the gestures clumsy. This type exhibits prominently a Mongolian countenance, is more commonly found in the north and northwest than in the south or middle, and belongs principally to the country population attached to the soil. Although a portion of its representatives are found in the highest circles of society, I agree with Professor REIN in his remark that it may be safely concluded that this type of Japanese is represented by the Aino race, who were called "Emishi," or barbarians, in ancient days.

The second common type found among the Japanese is marked by a generally slight growth of beard, limited to the chin, and a markedly dark colour of the skin. Its representatives are rather smaller than those of the Aino type in stature. The people that represent this type are more commonly found in the southwest and along the coast of the Pacific Ocean. There is little doubt that their features are inherited from their forefathers, who came from the Malayan Archipelago, Philippine Islands and South China, taking advantage of the Kuroshiwo current which washes the south-western coast of Japan, sweeping from the Indian Ocean.

There is another striking type visible among the Japanese, especially among the old aristocracy, and more commonly seen in the provinces surrounding Yamato, where the ancient Yamato race is said to have first settled. They have a clear, slightly yellowish-white complexion, more symmetry in all parts of the body, and a fine, slightly reddish mustache, the hair being neither so black nor so thick as that of the Aino type; nor so sparse as that of the Malay type. It is a notable feature of this type that it exhibits a prognathous, oval countenance and a high brow. Large and slightly almond-shaped eyes, veiled by large lids, are placed at a more or less oblique angle to the nose and are overhung by lofty eyebrows. The cheekbones are not noticeably prominent, nor is the mouth. The nose is delicate and

slightly aquiline. Altogether the features are noble, and are found in the higher, or ruling, classes of society.

This type is supposed to represent the remotest ancestors of the Yhamato race; hence it is called the Yhamato type. Japanese spirit, valour, hauteur, courage, skill, knowledge, beauty, and almost all prominent elements in the political, military, and intellectual world are associated with this type. It still indeed the leading type of Japanese. Professor REIN states of this type of people: "Not infrequently the symmetry and regularity of features are so great and so different from the prevailing Mongolian type that we imagine ourselves in the presence of well-formed Europeans."

These strongly contrasting types among the Japanese people are not only visible to travellers in the different parts of the country, but are also fairly shown in art, painting, and in the drama. Thus again we understand that the present Japanese race is compounded of different and various race elements, and that the dominant elements and characteristics stamped upon the nation are those of the Yhamato race.

Then the question naturally arises, who are the Yhamato race? That is what I desire to consider. So long as the origin of the Yhamato race is not known, the problem of the Japanese race will never be solved. Many writers have tried to discover the origin of the Japanese race. Some have advocated the Aino theory. Their argument is based upon the fact that some resemblance exists between the language and modes of life of the lower classes of Japanese and those of the Aino races. But it must be remembered that a great many differences also exist, ethnographical, philological, and traditional, as well as in manners and modes of living. The present Japanese people, as I have already said, contain Aino elements; consequently they have many points in common with the Aino, but it is quite clear that the forefathers of the Yamato race were not the Aino.

Another argument is advanced by DOENITZ, who insists that the origin of the Japanese is Malayan. His argument is founded on the fact that the construction of Japanese houses bears a strong resemblance to the pile-dwelling of the Malays. This fact alone by no means satisfactorily proves that the Yhamato race is Malayan, since the construction of a dwelling-house is governed by local considerations. As a matter of fact, people, perfect strangers to each other, have adopted the same mode of building houses, from climatic or physical necessities. Another strong piece of evidence tells against this argument. The Japanese language (*Yhamato-kotoba*) has no relationship with the Malayan, either in structure or in vocabulary. The Japanese is polysyllabic and places the verb at the end of the sentence, while in the Malay family of languages, as in the

Chinese, the verb must precede the object that governs. Again, in Japanese the adjective does not follow the substantive.

The most common notion of the origin of the Japanese race is that it is Chinese. This current opinion has been set forth by the most superficial of writers, who have never examined the question deeply. If we study carefully the Japanese people, we can not fail to find that the Japanese and the Chinese are radically different in many points. We perceive a great many Chinese influences upon Japanese life, but these are mere matters of fashion, and have never become really characteristic. The Japanese borrow the use of ideographs from the Chinese, but the language of the former is entirely different from that of the latter, as much as English differs from Japanese. According to the statement of KÆMPFER, the pronunciation of the Japanese language is smooth and distinct, while that of the Chinese is nothing but a confused noise of many consonants pronounced with a sort of sing-song accent. The Japanese language is wonderfully rich in vowels; almost every syllable has a vowel, but the Chinese language lacks them altogether. The construction of the Chinese is very like the Malay, and is radically opposed to the Japanese. In point of physical conformation, the Japanese, what we call the Yhamato type, are greatly different from the Chinese. MCFARLAND writes: "The Japanese (here he means the Yhamato type) bear a strong resemblance to the European family. Many of the upper classes, or members of the old families, are tall, exceedingly handsome in figure and countenance and are far more like Europeans than Asiatic Chinese."

Difference of national character again suggest a different origin. As many writers, such as MCFARLAND, KÆMPFER, etc., have stated, the Chinese are peaceful, timid, much given to a sedate way of life, cunning, suspicious, greedy, and addicted to fraud and usury, while the Japanese are quick and volatile, daring, fond of an active, exciting life, frank, liberal, and open-handed, having many of the virtues of nomadic tribes. Again, we perceive a most important difference between the Chinese and Japanese in the point of political heritage. In the political organization, the theocratical régime of the government and the strict hereditary system of ruler that have been continued during three thousand years under the unbroken dynasty of the MIKADOS, are features not to be traced in the history of China. Moreover, the wide differences of religious thought and modes of living between the two nations indicate different sources and origin.

The above three current opinions fail to prove the origin of the so-called Yhamato race. Professor REIN wisely rejects these common notions and sets forth his new speculation that the

Yhamato race, the original race of Japan, is a member of the great Altaic family of people that has disappeared from its primitive home. The forefathers of the Japanese people found their way through the continent of Asia, across Korea, Tsushima, Iki, and Oki to Southern Japan, of which they gradually took possession, from the Loochoo Islands as far, perhaps, as the latitude of the Hakone Mountains, while the Mongolians settled on the neighbouring continent.

The most interesting and striking opinion concerning the origin of the Japanese race is that of KÆMPFER (1651-1761). He was a native of Lemgou, in Westphalia, and travelled over a great part of the world in his youth. Not satisfied with his extensive journey, he then entered the service of the Dutch East India Company as a surgeon, sailed from Ormuz to Batavia, and thence, *via* Siam, to Japan, where he arrived in September, 1690. He remained in Japan about three years. During his sojourn here he devoted his time to a work which for the first time gave the world fairly accurate information concerning the history, geography, religion, manners, customs, and national productions of this island empire. His work was soon translated into English, Latin, Dutch, and French. In this remarkable book, the "History of Japan," he mentions that the Japanese ancestors came from the high plain of Mesopotamia to the shores of the Caspian Sea, where they found a large and fertile country extending itself far eastward, offering abundance of pasture for their flocks and cattle and means of leisurely pursuing their journey. He supposes that they then proceeded through the valleys of the Yenesi, Silinga, and parallel rivers until they came to the lake of Orgueen, where the cold northern climate did not invite a long stay. From that lake rises a large river of the same name, the valley of which would bring them to the eastern coast of Asia into the peninsula of Korea, where the Amoor loses itself in the Japan Sea. Once in Korea, the passage over to Japan was neither long nor dangerous, especially as there are many little islands at almost regular distances between the main and large islands that constitute the Japanese Empire.

Modern Japanese scholars have zealously investigated the origin of their ancestors, and their final conclusion seems to coincide with the opinion of KÆMPFER. In my opinion, the original race of Japanese calling themselves the Yhamato, who established the kingdom of Yhamato, seem to have been emigrants from the ancient Hittites, the once warlike and conquering tribe supposed to have lived in Central Syria and the plains of Mesopotamia. Their capital, according to ancient records, is said to have been Hamath, as the Bible calls it, or Yhamato, a fact that indicates why the Japanese ancestors called the m-

selves the Yhamato or Hamath race, and named their capital and kingdom Yhamato. It also conforms with the tradition that they came from Korea, and explains why they maintained customs and manners characteristics and traditions of nomadic tribes. I cannot here enter into details contributing to prove that the Yhamato race were Hittite immigrants. I must content myself with furnishing indications and hints that point their common origin and justify one in assuming that they belonged to the same stock.

About the Hittites nothing is clearly known. But a number of inscriptions and monuments recently discovered among the ruins of Hamath and in the plains of Asia Minor, where the Hittites are said to have once lived, have been interpreted by zealous modern scholars and throw light upon the ancient darkness. So far as the discovery of the Hittite inscriptions are concerned, we can trace a striking similarity between the ancient Japanese language "Yhamato kotoba" and the Hittite, not only in vocabulary but also in grammatical forms. Furthermore, the writing of the inscriptions attributed to the Hittites bears a remarkable likeness to the ancient Japanese letters called the "Kamijomiji," or "letters of the ancient age." Indeed, many of them exactly coincide. Some of the mythological stories connected with the Shinto religion, which was the faith of the ancient Japanese or Yhamato race, almost exactly correspond with the accounts in the Old Testament, the Hebrew tradition, such as the story of Creation, and of ADAM, EVE, &c. For a long time I thought it strange that these Hebrew traditions should have found their way into Japan. But the key appears to be that the traditions of the Hebrews, as told in Genesis in the Bible, were probably current not only among the Hebrew tribes, but also among all the tribes that lived in the neighbouring plains of Mesopotamia, and were thus brought from their primitive home by the Hittites, who are supposed to have had the same traditions as the Hebrews.

In addition to all this, we perceive a great many remarkable analogies between the Japanese traditions, customs, manners, and modes of living and those of the people of Asia Minor and Syria, and of the ancient Hebrews as described in the Bible. All these sources of information and evidence, taken together, seem to warrant the conjecture that the Japanese ancestors, who laid the foundation of the MIKADO'S Empire and whose dominant influence still prevails, were Hittites.

The Marquis de Nayves was sentenced yesterday by the Police Court at St. Amand to six months' imprisonment and to pay a fine of 200f. for the cruel treatment of his wife and children. As this charge was made before the accusation of murder of which he was acquitted, and as he had already been kept in confinement for fifteen months, the Marquis will be immediately released.

THE WAR AND THE TRANSPORT SERVICE.

(BY A JAPANESE).

THE extravagant assertion made by the correspondent of *Le Temps* that the Japanese owed a large part of their victories to strangers, and that were it not for foreign help this country could never have achieved the victories at Phöng-yang, Chinchow, Port Arthur, so forth, but would have died of cold and hunger in Manchuria, Liaotung, and Shangtung, —this assertion was refuted, a few weeks ago, in the columns of the *Japan Mail*, where it was shown that the employment of foreign captains on board Japanese transports was merely accidental, and not absolutely necessary, and that the competence of Japanese seamanship was significantly proved by the admirable achievements of the Imperial Navy, in which everything was done without the aid of a single foreigner. Subsequent inquiries have not only confirmed, but also considerably strengthened, that contention. In fact, the *Japan Mail* unwittingly fell into the error of exaggerating the services rendered by foreigners during the war, for it appears on investigation that Japanese captains, not foreign, commanded the majority of the transports. The foreign captains, mostly English, that took charge of some of the transports were almost exclusively confined to the employés of the Nippon Yusen Kaisha; and their number totalled only twenty-seven. The company offered for transport service fifty-seven of its steamers, and though, according to tonnage, these constituted about six parts of the whole fleet employed for purposes of transport, numerically they were less than one half of the total, the aggregate number of transports having amounted to 134 at one time. That was in March last. Moreover, the Japan Mail S.S. Co. was never under any absolute necessity to rely upon its foreign employés to command the steamers chartered by the Government. There was even talk, it would seem, of dispensing with foreigners altogether in these ships. Such a step would have been quite feasible, for a number of Japanese masters remained in charge of the Company's steamers engaged in the ordinary coasting trade, and every deficiency might have been supplied from other quarters. In justice to the Directors of the Company, it must be admitted that they took a most liberal view of the matter, and rejected the above narrow-minded suggestion, declaring that so long as the duties were faithfully discharged, they should regard their Japanese and foreign employés in precisely the same light. In obedience to that spirit they gave to their foreign employés a free choice as to taking command of transports, promising at the same time that additional remuneration should be given to those doing so. The greater part of the employés did not hesitate to under-

take the risky task, and thus it fell out that a portion of the transports were commanded by foreigners. Nothing is further from our purpose than to minimize the part played by foreigners during the war. They proved most zealous and faithful servants, acting as though the success of their own country's arms was at stake. The Directors were thoroughly sensible of and fully appreciated their services, and so did the general public. Our intention is simply to state the facts as they stand, and to undeceive such mistaken observers as the correspondent of *Le Temps*, who labour under the misconception that a majority, if not the whole, of the transports were commanded by foreign captains. The fact that the transports, by far the largest number of them commanded by Japanese captains and navigating waters as yet very defectively surveyed and notorious for tempestuous weather, were kept at sea during a period of over a year without any marked casualty, has deservedly elicited the warm commendation of impartial outsiders, and need not be dwelt upon here. We may add that the list of Japanese captains of the first class, that is to say, men qualified to command steamers of above 500 tons burden, now contains 219 names. Thus it will be understood that no special difficulty could have presented itself in finding competent Japanese masters for 134 transports.

This opportunity may be taken to say a few words on the condition of Japanese shipping, especially in connection with the war. Undoubtedly the war has given a marked impetus to the development of maritime transport business. Prior to June, 1894, the total shipping of Japan was 419 steamers, representing 181,819 tons, and 212 sailing vessels of 53,553 tons, irrespective of junks. At the end of June last, that is, exactly one year after the commencement of the war, the steamers had increased to 503, with a displacement of over 310,000 tons. On the other hand, the number of sailing vessels had diminished to 180. The number of steamers requisitioned for Government use aggregated, as above stated, as many as 134 at one time, representing 227,054 tons. In other words, computed by tonnage, the war absorbed more than seven-tenths of the whole fleet of Japanese steamers. Thus it became absolutely necessary for the Nippon Yusen Kaisha and other ship-owners to charter foreign vessels, even at rates of freight more than double the ordinary charges. Otherwise the urgent demands of shippers of goods could not have been satisfied. The foreign steamers chartered in that way totalled at one time as many as 33, representing 75,000 tons. By recourse to such measures the requirements of the ordinary carrying traffic were satisfied. It must not be supposed, however, that this buying and chartering of foreign steamer, created any margin for military transport

capacities. On the contrary, the capacities of the shipping service were strained to the utmost limit, and had the war continued a little longer a very difficult problem would have had to be faced. For though the war had diverted to military uses only seven parts of the total steam tonnage, the vessels thus drawn from the cabotage included nearly the whole of those available for the purpose, there remaining only a small fleet of steamers averaging some 500 tons burden. It is said that had the war lasted there would have been imperative necessity to requisition at least thirty more steamers. Where to get them would have been the difficulty. The situation was emphatically critical. These things, however, belong to the past. The Formosan trouble being now over, one transport after another will be released from military service, and a grave question arises what to do with the extra steamers that the country has acquired. Statistics for the seven years ending in 1894 show that the average rate of progress in the Japanese shipping business is about 12 per cent. per annum. But the progress in consequence of the war was as much as 67 per cent. In other words, the war has thrown upon the country's hands steam tonnage 55 per cent. in excess of the normal demand. To show the facts in a more detailed form, we subjoin two tables, one showing the increase of tonnage as a result of the war, and the other the normal increase in time of peace:—

Grade of Steamer.	At the end of June, 1895.	At the end of May, 1894.	Relative Increase.
	Number.	Number.	Percentage.
Under 200 tons	255 24,304.67	227 21,620.40	28 2,684.27
200—500 tons	100 33,031.34	92 30,180.00	8 2,851.34
500—1,000 tons	40 26,864.57	37 24,608.00	3 2,256.57
1,000—2,000 tons	53 77,835.46	43 60,688.45	10 17,147.01
2,000—3,000 tons	41 102,753.00	14 34,032.72	27 68,720.28
Above 3,000 tons	14 49,833.53	3 9,629.30	11 40,204.23
Totals	503 314,623.53	416 181,659.62	87 132,963.91

Grade of Steamer.	At the end of Dec. 1893.	At the end of Dec. 1885.	Annual Increase.
	Number.	Number.	Percentage.
Under 200 tons	220 21,020.00	136 13,281.00	84 7,739.00
200—500 tons	88 28,684.45	42 13,566.00	46 15,118.45
500—1,000 tons	36 24,032.85	10 13,660.00	26 10,372.85
1,000—2,000 tons	43 61,975.43	20 28,143.00	23 33,832.43
2,000—3,000 tons	11 27,184.94	20 23,648.00	1 3,536.94
Above 3,000 tons	2 6,588.05	0 0	2 6,588.05
Totals	400 169,485.72	227 92,398.00	173 77,087.72

These two tables indicate very marked points of contrast. From the first it appears that the greater part of the increased tonnage in connection with the war consists of steamers above 2,000 tons. Precisely the opposite state of affairs is shown in the second table, where the chief increment is in vessels under 500 tons. It appears plain that the class of vessels needed for purposes of marine transport during times of peace are comparatively small steamers. Such a fact might, indeed, have been anticipated, for, with the exception of a few special services undertaken by the Yusen Kaisha to the continent of Asia, the carrying trade of Japan may be considered to be exclusively confined within territorial waters. The annexation of Formosa and the resulting necessity of keeping up regular communication between that island and Japan proper will keep in active employment a few of the 40 steamers of over 2,000 tons

newly purchased. But where to find employment for the rest? Apparently some regular services abroad will have to be inaugurated. But here we are brought face to face with grave obstacles. In the first place, all the regular main lines are already occupied by foreign steamship companies of long standing and established credit. In the second, among the 40 new steamers only 15 are of modern style, the rest being old-fashioned vessels built more than two decades ago. Moreover, the war has incidentally strengthened the foreign companies to a great extent by enabling them to dispose of their old steamers at good prices to Japan, and to purchase or build, in their stead, steamers of improved style. All these considerations are sufficiently deterrent in their bearing on the idea of expanding Japan's maritime enterprise abroad. But one special consideration of paramount importance strongly urges the country to push abroad boldly in spite of all difficulties. The war has taught this lesson, namely, that if Japan desires to preserve the status acquired by her arms, it is imperatively necessary for her to maintain in time of peace ships sufficient to serve as transports in case of emergency. This general consideration is strengthened by the nation's special consciousness that another and far more disastrous foreign war may break out in the near future. Granted then that Japan must embark in the perilous business of foreign marine service, is there any company sufficiently qualified for the task? There is one, and one only. We need scarcely say that it is the Yusen Kaisha. That company played the chief part in the transport service during the war. Its Directors comprehend the situation thoroughly. Happily the Company seems resolved to undertake the bold task, so far as we gather from information contained in the vernacular papers. At present three ocean routes offer, namely, the European, the American, and the Australasian. All are beset with grave difficulties, but whether the Company is determined to undertake them all or to confine itself at first to one or two, appears still undecided.

CHINA NEWS.

Monday, December 23rd.

The Anti-Foot-Binding Society in China seems to be making some progress. Its associates in Chungking have held social meetings which the ladies of the city have gladly attended. There can no longer be any doubt that the women of China are opposed to the custom of binding. Several have already agreed to give it up, and none oppose the movement for abolishing it, though there is a general opinion that nothing can be achieved hastily.

The farmers of Kiangsi get two crops from the land every year in ordinary seasons, but this year, owing to drought, the second crop failed entirely, and the first yielded only 30 per cent. of the average. Already there is much suffering, and terrible distress is anticipated later on. In the south-west of the province, fierce fights take place for the possession of little streams of water. Scores of lives have been lost in these

conflicts, and it is related that the victors cut off the heads of their fallen foes and hang them up in the villages.

According to investigations recently made in the interior of China, there is little value in the immunity from *likin* conventionally secured to foreign goods in transit. No fixed fee, indeed, is levied at the *likin* stations, but a merchant cannot get his goods passed without handing over substantial samples of them to the local officials.

In spite of the strong efforts made to secure the execution of justice in the case of the Kucheng outrages, and in spite of the apparent success of those efforts, as evidenced by a number of capital punishments, there is no doubt that a large number of men implicated more or less directly in the brutal massacre, remain scot free. Investigations conducted *in loco* by the Foreign Commission of Enquiry resulted in the preparation of a list of 105 names of persons conclusively shown to have taken part in the tragedy. Of these, eleven only have been punished by sentences of imprisonment. The rest have never been apprehended. The list here referred to was compiled from the testimony of witnesses who, though fully cognizant of the facts to which they testified, could not, for various reasons, appear before the Chinese officials. It is in fact a list supplementary to that drawn up by the officials. It was formally sent to the Taotai of Foochow, who promised to despatch deputies to search for the 94 unpunished persons. The promise was given at the end of October, but remains apparently as far from fulfilment as ever.

The sum total of the punishments meted out by the Chinese Government in connection with the Szechuan anti-missionary riots is that six of the rioters were decapitated; seventeen sentenced to banishment, the *cangue*, or the bamboo, and nine local magistrates, expectant Taotais, acting prefects, and so forth have been removed from office or otherwise penalized. Considering that no foreign lives were lost in the riots, the above is not an unsatisfactory record.

General E, the Tartar of whom so much was heard during the war in Manchuria last year, has received a reprimand from the throne. The gallant officer's offence is of a peculiar character: false modesty. He presented a memorial declaring that his incapability, mediocrity, and other defects disqualified him to accept the post of Tartar-General of Foochow. The Emperor practically says to him, "Go to, thou bashful fellow."

Thursday, December 26th.

The Commission appointed by the United States Government to inquire into the Szechuan outrages, was reported, when last heard from, to be making steady progress toward its goal, Chengtu. The journey was estimated to last 73 days. During the first few weeks the commissioners rode on horse-back; then they used mule-litters, and subsequently sedan chairs. One account says that they have met with great civility and helpfulness from all Chinese officials *en route*, but another alleges that they have had to endure studied neglect and insults.

The Mohammedan rebellion in Shensi remains unquelled. General Sung, who commanded the whole of the Chinese forces in Manchuria during the campaign against Japan, has been ordered to proceed at once with his army of twenty thousand men to reinforce General Tung of Kashgar, who is said to be unable to cope with the rebels.

The people of Hunan have emphasized their anti-foreign sentiment by issuing a proclamation for the purpose of preventing any sales of land to French missionaries or Japanese, who are supposed to be about to visit the province. The proclamation emanates from the seven colleges of literature in Changsha. It threatens condign punishment for any persons selling land to foreigners, and promises a reward of ten strings of cash to any one giving information of an intended or completed sale, the reward to be increased by one half of the price paid for the land in the event of an actual sale, the other half going to the public funds. That such a proclamation should be suffered to circu-

late, in open defiance of the treaties, shows the temper of officialdom in Hunan.

The gun-boat *Feiyang*, just added to what remains of the Peiyang squadron, has just arrived at Foochow from Stettin, where she was built. She is described as follows:—

She has rather a pretentious appearance with two masts and four funnels in line, but a fine model and is splendidly constructed of steel throughout. She is as near as possible in size, speed, and armament, the same as the Japanese *Tatsuta Kan* built in 1894 at Elswick, being 250ft. long, 28ft. 6in. beam, 13ft. draught, 850 tons displacement, 5,200 horse-power, 21 knots under forced draught. Two 10.5 cm. and six 4.7 cm. Krupp long-range quick-firing guns and four 37 mm. Hotchkiss cannon, also three torpedo tubes. The engines get steam from eight water-tube boilers with closed stokehold, and both engines and boilers have ample coal protection and steel armoured decks. The accommodation is very good. She has a complete installation of electric light and a very powerful projector above the bridge, and a small and very well-furnished conning tower, with steam steering gear; and there are steam appliances for everything throughout the ship.

Pekin is said to be full of foreigners of all nationalities who have gone there to bid for some of the work—railways, ships, arsenals, dockyards, loans, and so forth—that China is supposed to be about to undertake in her era of awakening. But as yet no one has succeeded in obtaining an order.

It is alleged that owing to dissensions between the two official parties in Peking—the Emperor's party, headed by Weng Tung-ho, and the Empress' party, headed by Li Hung-chang—there is no chance whatever either of railway building or of reform. The Emperor has just dismissed from office in perpetuity two high officials charged with using language calculated to estrange His Majesty and the Empress Dowager.

The sum (130 million taels) required to pay off the second half of the Japanese indemnity together with the thirty million taels lent by Russia for the re-purchase of Liaotung, is being negotiated by the German Asiatic and Hongkong and Shanghai Banks through their respective Legations.

CORRESPONDENCE.

THE OKAYAMA ORPHAN ASYLUM.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—So many inquiries have come to me the past fall from friends of Mr. Ishii and his "large small" family, concerning the present condition and purpose of the institution, that I beg leave to make a brief statement through your columns.

After very severe trials in the summer, culminating in the alarming illness of Mr. Ishii, the death from cholera of four children and from quick consumption of Mrs. Ishii, the loss through fear of contagion of many valuable orders for work especially in the printing department, the institution slowly rallied, aided thereto by such a generous response to Mr. Ishii's statement of their embarrassed situation that \$1,500, came in to them within a single month. Every department now has steady work, and all the children do what they can in the line of self support.

Mr. Ishii was led to feel, while facing death, that in non-private enterprises of this nature which possess so few resources of their own and have to carry so many weak and small children, it is wrong to decline offered aid. He now emphasises the true trinity of dependence, the Heavenly Father, self and benevolent friends, even as he believes fully in the three-fold education, that of head, heart and hand.

This reliance upon God, the personal labour of the inmates, and gifts of the benevolent, read as follows in their new declaration of principles:—
'Tempu no mei-to to innai kakuji no rōdō to tenka yūshika no gien kimpin ni yotte iji kwakucho su.'

Then follows a statement, some of whose points may be translated thus:—

1.—Children of any nationality between the ages of six and twelve, who are really in needy circumstances, will be received in any number at any time. Persons acquainted with destitute children are invited to send them to the Okayama Orphanage.

2.—Children whom for any reason their friends desire to entrust to the care of the Asylum, will be received on condition of three yen per month being paid for their food and education until they become self supporting workers.

3.—The Asylum intends to publish in January, both in English and Japanese, a Report for the past year, and hopes to issue next year a regular monthly magazine. This also in both languages.

4.—The new aim of the institution embraces the idea of individual self-support, and to carry this into effect an account has been opened with each worker, and also a savings bank account for each member of the institution who is earning money.

All savings beyond bare living expenses will thus accrue to the benefit of the individual, and the institution will depend on charity for its support of the younger children, the erection of new buildings and the purchase of improved machinery.

At present the children are employed as follows, and all the industries are doing good work: Printing 23, straw braiding (*Bakko Sanada*) 28, Matches 65, Cloth weaving 59, Carpentering 7, Farming 57. The spirit of the institution never was better, there are no children on the sick list, and all are enthused with a remarkable feeling of loyalty to the high aims of this most unique Asylum in all the East.

The imperative needs of the institution are (1) winter clothing for one-third of the children; (2) another new work shop, \$300; (3) a dormitory for the girls, \$300; (4) a new sixteen page printing press with type &c., \$308; (5) occasional gifts, small or large, for the support of the younger children.

It is a genuine pleasure at any time to commend such a noble enterprise to the continued interest of the public. It is an especial privilege to do so at this time when men's thoughts turn naturally to deeds of charity, and generous acts are the order of the day. Let the orphans be remembered as Christmas draws near.

If any care to contribute through me, I will guarantee that the proper acknowledgments are made and the money is put to its intended use.

Yours very truly, J. H. PETTEE.

Okayama, December 18th, 1895.

THE SHIMONOSEKI TREATY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It seems to me that the English version of the 5th Article of the Shimonoseki Treaty is loosely constructed. "The inhabitants of the territories ceded to Japan who wish to take up their residence outside the ceded districts shall be at liberty to sell their real property and retire. For that purpose a period of two years from the exchange of the ratification of the present act, shall be granted. At the expiration of the period those of the inhabitants who shall not have left such territories shall, at the option of Japan, be Japanese subjects."

The subject matter is of the gravest importance to the Japanese people and should not be lightly or hastily considered. The welfare of two and one half millions of the inhabitants of Formosa, though they have the misfortune to be Chinese subjects and citizens, is not a trifling affair.

What is the intent of the reservation. "At the option of Japan." Surely, all the inhabitants of Formosa, other than the subjects and citizens of the Powers having extraterritorial stipulations in their several treaties with Japan, are, at the present time, Japanese subjects. Those who were there upon the cession of the territory to Japan and subsequent to Japanese occupancy, became *de facto* Japanese subjects, subject to Japanese law, wherever it was extended—citizens they were of China, but subjects of Japan. Japan could not wait for the period of two years before determining the question of her sovereignty over the Chinese resident in Formosa.

That some significance was attached to the reservation is apparent. The real significance is not comprehensible to one having only the English text to guide him. Possibly the reservation was made to give time for the consideration of the question of conferring citizenship upon such as might elect to remain after the period of two years had passed.

That Japan should find it necessary to depopulate Formosa, evicting the Chinese, I cannot think possible. There is elbow room for many millions more than now populate Formosa. The floating population might be dealt with according to the dictates of good policy, but those having vested interests, and who may elect to remain in their homes, should be considered desirable inhabitants of the island, and if the industrial and agricultural development of the island is considered of advantage to the general prosperity of the Empire, they should be left undisturbed in their possessions, and, under salutary laws gradually merged into fully equipped Japanese citizens as well as subjects.

The United States of America, when it acquired California by conquest, granted citizenship to all such Spanish residents as elected to remain in the

territory and all vested property rights were held inviolable. One example of national justice and magnanimity.

Yours truly,

X.

Yokohama, December 20th, 1895.

THE LATE FESTIVAL AT KUDAN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—May I ask for space in your Journal to call attention to the extreme courtesy and politeness of the Japanese Military Officials at the late festival held at Kudan in Tokyo?

On the 19th inst., I happened to be on the grounds looking at the various sights, when my attention was drawn to the immense concourse of people watching the wrestling matches then going on. With a desire of witnessing a few, but considering it impossible in such a crowd to do so, I casually addressed a guard, one of several placed, it seemed to me, to keep the people from entering on to the stands or into the space where the sports were held. To my great delight and intense surprise I was most politely conducted to one of the best positions on a raised platform, and more than this, was, by the instructions of a military officer, supplied with a chair, so that I obtained a most perfect view of the performances.

Such kindness shown to a foreigner, quite alone, without any introduction or giving any name, is I think worthy of record as showing the politeness and good feeling of the victorious soldiers of Japan to aliens, and is an event I believe which would not be experienced in any other country or from any other soldiers in the world. I may mention further that all the stands and the places in the pit around where the wrestling took place were occupied by soldiers and officers alone, others witnessing the events being, as far as I could see, forced to stand outside. Enclosing my card.

I remain, yours respectfully, STRANGER.

Tokyo, 20th December, 1895.

THE "EDGAR" FUND.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have much pleasure in forwarding you for publication the accompanying List of Subscriptions in aid of the *Edgar* Relief Fund. If any of your readers will point out any errors or omissions the same shall be remedied.

The hurried departure of H.M.S. *Edgar* has made it difficult for Captain Henderson to make a more suitable acknowledgment of the subscriptions; but he has asked me to publish through your medium and that of the other papers of this Settlement the following letter:—

H.M.S. *Edgar*, Dec. 24th, 1895.

DEAR MR. BONAR—

The *Edgar* is suddenly leaving in search of the steamship *Bonington*, and I have no time or means at my disposal to thank the Residents of Yokohama and Tokyo, and others, who have so handsomely and generously subscribed to the Fund in aid of the dependant relations of those lost in the disaster to our Pinnacle. Except by requesting you to make it known through the medium of the papers, and to convey to them the gratitude of the Officers and Ship's Company for their exceedingly generous subscription of two thousand eight hundred and fifty dollars and fifty cents, which you have informed me is the amount collected. I wish also particularly to thank the ladies who have been good enough to collect subscriptions.

Sincerely yours, (Signed) W. H. HENDERSON.

It would have been preferable to make an alphabetical list of the subscribers, but the system adopted was the most expeditious, there being so little time for the publication of the list.

I am, Sir, yours, etc.,

HENRY A. C. BONAR.

YOKOHAMA SAILING CLUB.

The annual general meeting of the Yokohama Sailing Club was held in Keil's Buildings on Friday evening. There were present Messrs. J. F. Lowder, in the Chair, J. O. Averill, A. Weston, E. Beart, J. Birmingham, L. Sallabelle, L. Murarour, F. L. Elliott, J. B. Gibbs, R. Boyes, T. Abbey and G. H. Scidmore, Hon. Secretary.

The CHAIRMAN intimated that the meeting was for the purpose of receiving the Report and Statement of Accounts for the past year. He, himself, had not yet time to read them, but they were very full and certainly very interesting. There might be others who like himself, had not yet read them; if it was desired he would ask the Secretary to read them, but perhaps they might be taken as read.

Mr. BEART proposed that they be taken as read. There being no discussion, the Report and Accounts were passed, on the proposition of Mr. Birmingham seconded by Mr. Beart. They are as follows:—

SEASON OF 1895.

The Yokohama Sailing Club, being formed for the purpose of sailing and sailing races, the annual report of its Committee consists mainly of records and results of racing; but in submitting their report for the season of 1895, the ninth year of the Club's existence, your Committee can record not only a successful racing season, but can congratulate the members, that, as heretofore, when troubles have arisen, our Club has overcome the difficulties of the situation; and shown a strength as an organization which promises well for its permanence and prosperity.

During the season thirty-two regular races and a sendos' race were sailed.

Prizes were freely presented and the interest in the sport is general and generous.

The thanks of the Club are due to the following named individuals, firms, and institutions, for prize contributions:—

His Excellency the United States Minister.	Kobe Residents.
Her Britannic Majesty's Chargé d'Affaires.	Mr. G. M. Laffin.
Mr. T. Abbey.	Mr. R. Lane.
Messrs. Abenheim.	Mr. J. F. Lowder.
"The Japan Advertiser."	Mr. John McLean.
Mr. C. S. Averill.	Mr. E. I. Marshall.
Mr. J. O. Averill.	Mr. C. K. M. Martin.
Mr. V. Blad.	Captain J. Martin.
Mr. V. Boeck.	Mr. B. Martinielli.
Mr. R. Boyes.	Mr. Alan Owston.
Mr. H. Baehr.	Mr. C. S. Pope.
Mr. W. W. Campbell.	Mr. L. Sallabelle.
Colonel J. A. Cockerill.	Mr. C. H. Scidmore.
The French Residents.	Mr. L. Stornehrink.
"The Japan Gazette."	The Swiss Residents.
The German Residents.	The Steamship Agents.
Mr. J. B. Gibbs, Jr.	Mr. E. V. Thorn.
Mr. H. M. Gillig.	Mr. J. Tornoe.
The Grand Hotel.	Mr. W. Tucker.
Mr. H. Goldman.	Mr. O. Voigt.
The Italian Residents.	Captain L. E. Walls.
Messrs. Kelly & Walsh.	Captain A. Weston.
Mr. F. Komp.	Mr. Yamada (of "Bisan Sha.")

Thanks are due to the local press for continued courtesy in announcements of races and other important Club business.

The amount distributed by the Club in cash prizes, is over seven hundred dollars; and when the value of the presented Cups is added the prize list will show a total well over a thousand dollars.

Several new yachts were built for the season's racing, and alterations made in existing craft, all tending to bring our fleet to a higher standard of racing efficiency; while frequent races and good competition are making our yachtsmen very creditable performers in starting and handling their craft in racing.

A slight glance at the individual yachts will preface the tabulated results of the season's races.

Mary, which only sailed one race last season, has proved herself easily first of our larger yachts; and, in both light and heavy winds, is too much for anything in our fleet. She won the 39 Rater Record Prize with 17 points out of a possible 20.

Maid Marion, with ballast all on keel and a new suit of Laphorne sails, has gained second place, and shows herself still a wonderfully fast craft, although outclassed by the more modern *Mary*.

Tori, a new vessel this season, is a fine, able yacht. Some alterations and experiments seem necessary to ascertain her best form; but she has given *Maid Marion* close and exciting races.

Spray with a larger sail spread than last year, is improved as an all round performer; and the racing between her, *Maid Marion*, and *Tori* has been very interesting. *Spray* still continues formidable in strong breezes, and again this season secures the prize for the fastest speed on corrected time.

Neptune, with several alterations to hull and sail plan, is a more manageable craft, and sails well off the wind in good breezes.

Wanderer has discarded the yawl for the cutter rig, but has raced very little.

Golden Hind, a fine cruising craft, has been added to our fleet; but has not as yet sailed in any race.

Sea Gull, altered from sloop to full cutter rig, was greatly improved and had things her own way with anything near her size. She defeated *Daimyo* in six out of their nine meetings, leaving the port before the season was finished.

Daimyo, with sails and spars reduced, has not shown her old form in light weather; but in strong winds

still sails well. She takes the 26 Rater Record Prize and Champion Pennant, having sailed in that class during the season.

Box of Curios did not prove equal to *Sea Gull* or *Daimyo*, even with the liberal handicaps allowed her.

Ronin picked up a handicap or two and satisfies her owners' desire for a cruiser.

Albatross, the ancient and many named *Mosquito*, one of the original fleet of the Sailing Club, has been refitted; and, in the hands of her present owner, seems able to win prizes still.

Else, late *Colombia* née *Madcap*, has raced a few times; but is still rather out of trim and carries her sail poorly.

Dan only started once or twice and made no showing.

The B Division opened the season with every prospect of a close and interesting struggle; but the sale of *Daisy* and the withdrawal of *Nandeska* left *Sans Nom* in possession of the honours among the 17 Raters.

Sans Nom, a new craft of light construction, fin keel and modern shape, gave such evidence, even in her first races when not in good trim, of speed under the conditions suited to her, that we think, as long as the water is smooth, she would prove too much for either *Daisy* or *Nandeska*. In lumpy weather she is rather overpowered and was beaten on one occasion by the 16 Raters. *Sans Nom* takes the 17 Rater Record Prize and Champion Pennant.

Daisy was sold away from this port, early in the season. She started in four races and was withdrawn with honors even between her and *Sans Nom*.

Nandeska withdrew after her fourth race, having been beaten by *Sans Nom* in three out of the four meetings.

Isabelle raced intermittently during the season and carried off the Consolation Prize.

Petrel started the season brilliantly and succeeds in carrying off the 16 Rater Record Prize. Towards the close *Vega* seemed to be the better of the two.

Vega late *Vixen*, raced throughout the season and made a very close thing with *Petrel*, losing the Record Prize, but winning the 16 Rater Champion Pennant.

White Violet raced with varying success, at times showing good speed, and again being behind her class.

Sayonara and other canoes have raced now and then; but have scored but one first: that of *Sayonara* on May 25th.

It is noticeable that, although this year's races have not been sailed in such good breezes as last, still the average speed, made by Record Prize winners is, with one exception, better than last year, pointing to the conclusion that our yachts are improving in speed.

Our rules have worked well, and but few changes seem needed.

Appended is the Treasurer's Report.

Examined with the vouchers and found correct.

T. ABBEY.

Yokohama, Japan, December 16th, 1895.

The next business was the election of a committee, the ballot resulting as follows:—Messrs. Alan Owston, James Martin, W. R. H. Carew, R. Boyes, and E. Beart.

While the balloting was going on, Mr. Scidmore remarked that none of the old Committee desired to serve. He expressed their thanks for the honour that had been done them, and that they would, in every way in their power, assist the new committee. They wanted new blood, and he suggested that an entirely new committee be elected.

Mr. BEART thanked the members for having elected him, but declined the honour done him, consequently it would be necessary to put up another name.

This closed the ordinary general meeting, and the members then resolved themselves into an extraordinary meeting, but there being only fourteen present, twenty being necessary to form a quorum, the meeting could not be held.

Before separating, Mr. BEART proposed a hearty

vote of thanks to the retiring Committee, especially to the Honorary Secretary. In his resignation they had lost a first class man. No one had done more than Mr. Scidmore for the club. He had had to put up with all sorts of worries and complaints and had come through them all in a kind way which had smoothed over many difficulties. He proposed a hearty vote of thanks to the retiring Secretary. He knew the difficulties of his position, having served in a similar one himself, and it would be a very long time before they would be able to get any one as good.

Mr. SCIDMORE thanked Mr. Beart for his kind remarks, which he said were not deserved. He might have done better, but thanked the meeting for their kind appreciation of his efforts.

After the usual vote to the Chair, the meeting separated.

H.B.M. COURT FOR JAPAN.

(IN ADMIRALTY.)

Before R. A. MOWAT Esq., Judge; Nautical Assessors: Capt. TOCQUE, S.S. *Verona*, and Capt. MOTYER, S.S. *Anjer Head*.

FRIDAY, 20TH DECEMBER, 1895.

THE "ISIS"—"WILLIAM H. MACY" COLLISION.
DAMAGES \$80,000.

This was an action to recover damages for loss sustained in a collision on October 15th last in Uraga Channel between the British steamer *Isis* of 1,518 tons, Walker, Master, and the American ship *W. H. Macy*, Amesbury, Master.

Messrs. A. B. Walford and Geo. H. Scidmore appeared for the plaintiffs, and Mr. J. F. Lowder represented the defendants.

This case came on again on Friday for the purpose of hearing the arguments of Counsel.

Diagrams of the positions of the respective vessels were put in by both sides by request of the Court. These having been submitted,

The Captain of the *Isis* was asked by the Court to explain a discrepancy in his plan. This showed his position when he first sighted the *Macy*, but did not show the courses of the vessels on their approach to each other, so that the Assessors could not on the diagram bring the vessels to the point of collision.

Mr. Lowder here handed in a diagram from which he had been working, but which, however, was not drawn to scale.

His Honour remarked that judging from this the *Macy* was 3½ points off instead of six.

Capt. Thomas Walker, of the *Isis*, was then recalled by the Court, and in answer to questions, said—The length of my ship is 285 feet over all. Her propeller is a right-handed one, with left handed screw. When going astern on midship helm, her head would cant to port. It is difficult to say which way her head would cant on a starboard or port helm. I had the tide a little on my starboard bow, and setting N.E. My course was S.S.W.

His Honour said he had asked this question specifically, as the transcript had it S.W.

Witness remarked that this discrepancy had also occurred in the newspaper reports, also as to the time.

Continuing, he said—I could see the land plainly on the starboard side, but not on the port, which was farther away. We were going through the water at a little over 3 knots per hour, so that whatever force the tide had, it would have to be deducted. Thirty-eight revolutions would give us a little over 3 knots. I calculated the speed of the vessel from the cross-bearings from the land. She was going 3 knots through the water, and I saw by the cross-bearings that she would be going about a knot less. The time noted in the official log is 12.18; this time was taken from the clock in the chart-room. The other times were taken from the wheel house clock, according to the entries. There were 3 minutes difference between the two clocks.

Mr. Scidmore remarked that the position of the *Isis* was two miles North, and the distance travelled by the *Macy* in 15 minutes, 1½ miles. The *Isis* was steaming a S.W. course.

His Honour saw that, viewing each of the diagrams separately, they converged to a point of collision between the two vessels. It seemed that Counsel had made the course of the *Macy*, and then put the *Isis* in such a position as to cause a collision.

Mr. Walford said that a reference to the preliminary acts would show how collision would be brought about: it would show how the speeds were arrived at. The Captain of the *Isis* had said the tide against him was 1½ knots, consequently he must add this to his speed.

His Honour thought this was altogether inconsistent with the evidence.

Mr. Walford, in continuing his argument on this point, contended that this should not be allowed to contradict his preliminary acts. While the speed of the *Macy* was only estimated at 5 knots, it might be 4½ knots.

Captain Amesbury was then recalled by the Court. He said—My vessel, between perpendiculars, is 254 feet, over all she would measure 265 feet. When I said it would embarrass the steamer if we backed our yard, I meant that he would not have understood what we were doing, consequently she would not have known what to do.

His Honour—He would know that the effect of backing your main yard would stop your way?—Yes, sir.

His Honour—Then I don't see how it would be embarrassing to him?—It would not be the right thing to do.

His Honour—It would mean that you were stopped?—Yes, but it would have taken some time. If he had seen us backing, he would not have understood the manœuvre, and would not have known what to do.

His Honour—I should have thought it would have been of assistance to him. He would have known what you were doing, and it would have given him more scope?—It would have been directly contrary to all rules.

To Mr. Scidmore—My lights were in the upper channel, forward of the fore-rigging.

His Honour said the Assessors had found them so.

Salve Meling, the carpenter, recalled, said—I had laid down after work on the night of the collision. It was about nine o'clock I think. I came on deck fully five minutes before the collision. I was half asleep when I heard the mate's voice, and thinking we were to 'bout ship I went aft to the cross-jack braces where I was to help. My attention was turned to the *Isis* by hearing the second mate remark, "What is she going to do; is she going to cross our bows?" The pilot then said, "Ring the bell, ring the bell." I then went forward and looked at the lights, which I found were burning brightly. I then saw the whole outline of the steamer on our bow, about 2 points off. I had not seen our lights since nine o'clock. The *Isis* was a quarter of a mile off when I first saw her. I saw she had all her lights burning.

Mr. Lowder, in addressing the Court, said that it was evident great attention and great care had been given by the Court and the Assessors to the questions at issue, which had tended to shorten the proceedings. So far as purely nautical matters were concerned, he would not discuss them. He did not consider himself competent to do so, but from the remarks let drop by the Assessors he had seen that they were thoroughly competent. He would first refer to the lights on the *Isis* and then to those of the *Macy*. In the preliminary acts, the *Macy* people say the *Isis* lights were visible to them, and if they could see them 3 miles off their own lights could have been visible at that distance if properly fixed. The speed would be about 8 knots, taking the speed of both vessels combined, 22 minutes before the collision, and the lights should have been visible to the *Isis*. There were six men on deck at the time, and if the light had been visible they should have seen it. Four of these had come forward as witnesses—the master, the chief and second mates, and the lookout. They were all keeping a good lookout, and had reported all the lights they saw. The only deduction that could therefore be drawn was that they were not keeping a good look out for any lights that might be in sight, or that for some reason the green light was not seen by them until two minutes before the collision. The question then arose, was there any reason why the light was obstructed from their view? The *Macy* carried a first-class light, which should have been seen 3 miles off; but it was not screened. They were no doubt acquainted with the Order in Council and Board of Trade Regulations which provided that they must have a screen 3 feet long; and their only having the lights placed on the side of the ship must be considered an infringement of the rules. The rules for the prevention of collisions at sea were the same in the United States as they were in England. If their culpability in this is proved then she is in the wrong, but if it appears that this had had nothing to do with the collision it is otherwise. But if once shown that she has not been culpable the burden of proof is shifted to the others, and they are presumptively wrong in law. Counsel here cited the case of the *Fanny B. Carver* and the *Duke of Buccleugh*.

His Honour pointed out that the Assessors saw that the want of screens could not have conducted to the collision. It was a converse case.

Mr. Lowder said it was his duty to point this

out. He could not account for her light not having been seen.

His Honour said the object of the rule was to prevent the light being seen across the other bow. The absence of a screen could not prevent it.

Mr. Lowder remarked he was not an expert, but it was his duty to mention it. If the Court was of opinion this would make no difference, he would drop this point of his argument. Counsel then went on to discuss the duties of a steamer and a sailing ship. It was suggested by his learned friend that the *Isis* ought to have starboarded her helm, so as to go astern of the ship rather than port. How this would have resulted the Associates could judge better than himself. What was done was the best under the circumstances—that was to port the helm and go full speed ahead. He was condemned by the other side because he had not taken the other step. In support of his contention he cited the *City of Antwerp* case. His Honour would have to find that she ought to have starboarded and then gone astern, and that if this was done the collision would not have occurred. When the lights of the ship were seen it was only two minutes before the collision, and the vessels were then 500 or 600 yards apart, and a collision was inevitable.

His Honour—What do you say your speed is?

Mr. Lowder said he was basing his argument on the combined speed of both vessels, which was 8 knots an hour. They were apparently going at the rate of 6,086 feet in 7½ minutes, therefore in two minutes they would be 1,620 feet apart, and that within that time the steamer could not have been stopped. Had she starboarded she would have run into the *Macy*, consequently the best and only thing to do was to port her helm and go full speed ahead. The steamer was to keep out of the ship's way in any way she chose, and this was to port and go full speed ahead. It would be unnecessary to cite his authorities, the Court having been given them, but he would refer to the cases of the *Benares* and *Zadoc* (read.) The latter case was very much in point; the officer in charge had to act in an emergency, and his action was approved. Counsel then went on to discuss the action of the sailing vessel, and what she should have done. In regard to the proper interpretation of the regulations, Counsel cited the case of the *Beryl*, in which it was shown that Rule 23 overrides everything. Once the sailing vessel saw the steamer was about to cross her bows, it was obviously her duty to take some measures, which she did not. Several other authorities were here cited by Counsel, which, however, were not read, except the case of the *Sunnyside*, as it referred to an American ship. He cited it to show the rules were the same in the U.S. as in a British Court. Briefly, a sailing ship seeing a steamer not doing anything was not justified in doing nothing. In the *Zadoc* case she was found against because she had no men to man the braces in case a sudden manœuvre was contemplated. The *Macy* was undoubtedly right in keeping her course, but at a certain stage she ought to have done something. She ought to have acted when she saw the steamer was not doing what it ought to do. According to the preliminary acts, she rang the bell and shouted when she considered a collision imminent—the bell was rung 5 minutes before the collision. He had 5 minutes in which to act, and he did nothing but shout and ring the bell. He says that if the *Macy* had stopped it would have been embarrassing to the steamer, but had she stopped the *Isis* would have seen it. But even if her course was kept it does not mean that the same speed was to be kept up. She says the *Isis* was visible to her all the time; if so, she saw that a collision was imminent and ought to have gone out of the way, but for some reason did not do so, consequently she did not do her best to avoid a collision. Counsel then feelingly referred to the cruel charge that had been preferred against the Master of the *Isis* for not having stood by.

Mr. Walford here rose and said that the Master of the *Macy*, after having heard the evidence, desired to withdraw it, as it was made without knowledge of the fact of his having done so.

Mr. Lowder contended a mere withdrawal of such a serious charge was inadequate, some apology was needed. If it had been a question of seamanship that had been called in question it could have been allowed to stand, but where a charge of want of humanity was made, it was a serious matter, and a simple withdrawal of the charge could not meet the case. He would not accept it. During his 20 years' experience in the Court, only one such case had come to his knowledge and for which the captain had been punished. The captain of the *Macy's* assertion that he thought, from having seen the *Isis* next day, that she had not stood by was not based on fact, he ought to have seen it. He could not accept

the statement of his learned friend that the lights were not seen. If there was a deliberate attempt to run the *Isis* down they could not have taken better steps to do so. They did nothing whatever. The striking of gongs might have contented a lot of Chinamen, but for a ship captain to content himself with the ringing of bells and shouting, he could not think possible.

Mr. Walford prefaced his address to the Court by expressing his regret that his learned friend had not taken the evidence as given in regard to the matter of standing by. It was a mistake that they had not seen the lights subsequent to the collision. He very much regretted the charge that had been made. Counsel then referred to the case of the *Glamorganshire* and *Clarissa B. Carver*, where although the former was so badly damaged that she had to be beached, the same charge had been made, upon which he commented. He regretted it very much.

Mr. Lowder here mentioned the authorities to be cited, which he placed before the Court.

Mr. Walford then entered into a confutation of the points raised by plaintiffs' Counsel. He remarked that there was one case cited which, happening as far back as 1864, could have no application to this case. He could not do better than follow the course pursued by plaintiffs, first, as to the lights. These were burning properly, were properly placed and in good order, but they deny seeing the light. Probably they were looking for fishing boats' lights and did not see it. Referring to the question of positive as against negative evidence, Counsel remarked that if the first were not taken then they could be committed for perjury, but if the other were taken, perhaps it was not seen and was a mistake. The officer perhaps overlooked the green light. If he said he had been looking at that particular light then there would be a conflict of evidence; but if not, then there was no conflict. If the light was not seen, then the *Isis* was to blame for not seeing the light and for the consequent collision. As to the diagram prepared by Mr. Scidmore, the *Isis* was given a S.W. course in consequence of the incorrect report. He held the defendants to their preliminary acts, which said their vessel was going 3 knots, but the presumption is she was going 2 knots against the tide. She was travelling at the rate of 400 yards in 4 minutes. Whatever the distance the *Isis* was when she saw the *Macy* she came within the provisions of the two regulations for preventing collisions at sea, viz., Arts. 17 and 18. As his friend had said, she did neither, as she had only a short time to consider. After combatting Mr. Lowder's reading of the judgment of the Master of the Rolls, Counsel remarked that in the *Benares* case an accident was inevitable and could not be avoided. Another point was the wrongful act of the other ship. It was not necessary to say that it was a matter of discretion for the master of the *Isis*. The Court would have to find that if he had stopped he would have avoided the collision, and this was borne out in his own evidence when asked as to how long it would take to stop and reverse, when he said that he could have stopped her in 4 minutes. The chief officer said she could be stopped in one and a half minute. He thought she could be stopped in less than 3 or 4 times her own length. Defendant had to show that the departure from the regulations were necessary, not that he thought so. He had not set this up, but even if he had he could not prove it. Counsel here cited the case of the *Khedive*, wherein it was stated that had the Master acted within the rules the effect of the collision would have been worse, but his having departed from them, he was found to be in the wrong. Referring to the lookout on the *Isis*, Counsel said that if she had brought about a collision by a bad lookout then she must be in the wrong. In the evidence it was stated that the *Macy* was called out to starboard her helm, which she did not do, but even had she done so it would have made no difference, as in one minute she would not have felt her helm at all. The *Macy* was not obliged to do anything: the worst thing would have been for her to stop, as it would have made it impossible for the *Isis* to starboard and pass her stern. Her main yard could not have been backed within five minutes. The strong point in the *Macy's* case was that in all the cases cited there was only one case in which a sailing vessel was held to be in the wrong—the *Zadoc* case, and this was an exceptional case. It was in a dense fog and the sailing vessel was going at an improper speed; she heard the whistle of a steamer which she knew could not see her, but nevertheless kept up her speed and ran into the steamship, consequently she was held to blame. The *Tasmania* case was between two steamers. He could meet the American case cited by his learned friend by a later one.

His Honour—Your contention is that a sailing vessel, if she keep her course, is absolutely right.

Mr. Walford—Yes. However obvious a collision may be, he must keep his course until the steamship can do nothing and then it is too late for him to do anything. It is not the duty of a sailing vessel or steamship to attempt to diminish the blow by infringing the rule. In this connection Counsel quoted the *Highgate*.

His Honour, quoting from a report of the *Glamorganshire* and *Clarissa B. Carver* case, remarked that it was laid down she was to do nothing until a collision was inevitable. This was a cruel position to put on a sailing vessel's master. He mustn't act too soon, at the same time he must not carry on till too late!

Mr. Walford did not think this was correct. He must never do it at all.

His Honour understood Mr. Walford's contention to be that the sailing vessel must stand on and do nothing. Did he mean to say that, if the yard could have been backed and the sailing vessel stopped, she would still be justified in keeping her course?

Mr. Walford understood it to be so. He then quoted the case of the *Fenny S. Barker* to controvert the *Sunnyside* case, after which he quoted the cases of the *Warrior*, *America* and *Syria*, and the *Highgate*, and in conclusion quoted Marsden in which it was stated; "It is sometimes contended on the part of a ship that has failed to comply with the Regulations and is herself in fault, that the other ship is guilty of contributory negligence for not having departed from the Regulations. Such a contention will never succeed." And he trusted it would not succeed in this case.

The Court then rose, judgment being reserved.

CONSULAR TRADE REPORT FOR HIOGO AND OSAKA.

(CONCLUDED.)

FIRMS AND FACTORIES IN JAPAN.—The following statistics of the date of origin and the number of firms and companies in Japan, and of the nature of their business, have appeared in the *Official Gazette*. The total number at the end of 1892 was 4,635; of these 3,258 were joint-stock companies; 2,257 were otherwise organised, while the exact business of 20 cannot be traced. Classified according to amount of capital there were:—2,918 with less than \$10,000, 1,164 with more than \$10,000 and under \$50,000, 227 with between \$50,000 and \$100,000, 286 with more than \$100,000, 40, the amount of whose capital is not ascertainable. Among these there are 2,767 industrial firms and factories, of which 493 employ steam power, 247 water power, and 247 both steam and water power, while the remaining 1,780 are driven by manual labour only.

As regards the nature of their business they are divided as follows:—429 banks or firms dealing with monetary matters, 1,415 manufactories of clothing and articles for personal wear, 333 have to do with minerals, 315 with transportation, 249 with domestic furniture, 217 with agriculture, 217 with food-stuffs, 214 with articles of daily consumption, 164 with public works and architecture, 144 with marine industries, 142 with articles of luxury, 132 with printing, 122 with technology, 166 with sericulture, 101 with metal tactics, 35 with insurance, 28 with tools and machinery, 212 deal in miscellaneous articles.

A MARINE SALVAGE COMPANY.—Mention should be made of a joint-stock company established quite recently. It started originally with a capital of \$150,000, the chief object being to float sunken ships; as the company, however, intend to extend the scope of their operations to the splitting of submarine rocks and other works in connection with the construction of harbours and piers, it is proposed to double the capital. The company enjoys, it is said, considerable public confidence, and several members of the House of Peers are among its supporters; the diving department is under the superintendence of a noted diver.

The first work contemplated is the floating of several Chinese men-of-war sunk by the Japanese fleet during the present war.

One of the many advantages enjoyed by the Japanese materially aiding the rapid and economical development of their industries is that foreign patents are not protected. When machine patented elsewhere is purchased it is not infrequently imitated, and an article equally good for all for practical purposes is turned out at less than half the cost. It is not improbable that when, under revised treaties, the patent laws become applicable to foreigners, there will be little or nothing to claim protection for.

COAL.—During the second half of 1894 the coal

market of Japan was, owing to various reasons, in a most unusual state. The activity in domestic industries, and the increase in the export of coal, owing to the fall in silver, brought about a great rise in the price of coal. This was much accentuated by the Korean and Chinese complications. Much inconvenience was at one time caused to the owners of factories by the scarcity of coal, in consequence of the number of steamers chartered as military transports.

The supply of Kiushiu coal was, in fact, at one time virtually suspended in the Tokyo and Yokohama districts, because nearly all the ships had been engaged by the Government, and the market was consequently completely in the hands of the Tankosha, a company owning coal mines in the Hokkaido.

The market soon, however, showed unusual activity, and supplies came forth freely as soon as outside tonnage had been obtained for the purpose of carrying coal.

The consumption of Japan coal is steadily increasing in Bombay, and is, it is said, running Cardiff coal very hard in the matter of prices.

Of the numerous coal mines in the whole country there are only 49 which can produce annually over 10,000 tons of coal; the total production of coal from these mines in 1891 amounted to 2,275,617 tons, or 74 per cent. of the whole production of the country in the same year, and in 1892 their out-put amounted to 2,509,055 tons or 79 per cent. of the whole production in that year.

In the following table the collieries having the capacity of producing annually 30,000 tons of coal are tabulated:—

Collieries.	Provinces.	Production. 1892. Tons.	1893. Tons.
Miike	Chikugo	593,259	481,191
Takashima	Hizen	100,717	181,904
Horonai	Ishikari	144,038	134,689
Nakanoshima	Hizen	138,960	160,849
Namazuta	Chikuzen	87,169	125,624
Otsuji	Chikuzen	74,930	72,972
Sorachi	Ishikari	61,528	107,731
Altaike	Buzen	58,810	56,351
Arate	Chikuzen	57,292	51,601
Daijo	Chikuzen and Buzen	56,092	48,285
Shinniwa	Chikuzen	48,643	125,474
Minezi	Buzen	46,800	59,950
Shakano	Chikuzen	45,148	45,073
Ikushunbetsu	Ishikari	43,726	50,416
Dainoura	Chikuzen	36,096	50,472
Katsuno	Chikuzen	35,408	43,431
Ariho	Nagato	33,672	—
Takao	Chikuzen	30,393	38,684
Hashima	Hizen	30,201	51,213
Hoshii (Hokoku) ..	—	12,827	50,393
Sasanotaira	Iwaki	—	34,264

NOTE.—The total sum should be 2,275,617 tons. The difference of this, compared with the total number of the table, has been caused by the rough reduction of different weights in tons.

STEEL AND IRON INDUSTRIES.—A capitalist has recently purchased the Senninzan iron mine in the Akita district of Nippon, the main island of Japan, and intends starting works very shortly. The owner's view is that as there is no reasonable expectation of any perceptible improvement in exchange for some years to come, and as iron can be produced in the country at from \$15 to \$20 per ton, the cost of imported pig-iron being about \$32, the enterprise ought to be profitable both to suppliers and consumers. Another iron mine in a different part of the country was also purchased a short time ago, and sanguine hopes are entertained of ultimate success. In this connection it may be here mentioned that a committee appointed to inquire into the iron industry have reported that there is an abundance of good ore suitable for the manufacture of pig iron and steel. During the early part of last year experiments were made, with what is said to be an entirely new process for the manufacture of steel, in the naval yard at Yokosuka, near Yokohama, by which a quantity of excellent metal was turned out.

SUGAR.—The attention of the mercantile classes has been much directed to the question of sugar. In 1872 the amount imported was 56,000,000 lbs., valued at \$1,750,000; 10 years later the amount was 107,000,000 lbs., representing a value of \$4,500,000; in 1893 some 253,000,000 lbs. were imported, as against 93,000,000 lbs. produced in the country. The consumption of sugar is generally regarded as a trustworthy test of national prosperity, and though the Japanese doubtless take the same view they are alarmed at the idea of paying some \$10,000,000, annually for that luxury. Japan, however, is perfectly able to increase the area of its sugar-cane plantations, and there are sundry signs proving that it will not permit the present state of things to continue.

SILK.—According to a return issued by the Department of Agriculture and Commerce the total production in Japan of raw silk has increased

considerably during the last few years. The following table gives the amounts produced and exported, together with the value of the latter:—

Year.	Production. Lbs.	Export. Lbs.	Value.
1889.....	7,153,051 ...	5,502,321 ...	\$26,616,542
1890.....	7,027,267 ...	2,813,753 ...	13,859,339
1891.....	9,078,517 ...	7,100,197 ...	29,356,339
1892.....	9,134,067 ...	7,209,141 ...	36,299,744
1893.....	9,279,617 ...	4,949,617 ...	28,167,744
1894.....	—	12,677,971 ...	42,663,662

The following prefectures are the principal producing centres:—Nagano, Fukushima, Yamaguchi, Tokyo, Gifu, Saitama, and Yamagata. In raw silk Nagano stands first; in silk waste, Gumma; and in floss silk, Shiga.

The total production in Japan of silk-worm egg cards for 1893 was 3,000,000, Nagano being the principal producing district.

There are few trades in Japan in which such extraordinary strides have been made as in the manufacture of silk piece-goods, nine-tenths of which come from Fukui prefecture, situated on the west coast. The number of looms employed in the Fukui district in 1890 was 2,200, employing 2,907 hands; in 1894 there were 12,519 looms and 11,835 operatives, who are nearly all girls, receiving pay at the rate of \$3 per piece, of which they can make from four to eleven per month, the general average being five to six pieces. They usually work twelve hours per day, and on rare occasions as many as fourteen. The operatives as a rule become very expert after six months' training.

The total amount of various kinds of silk piece-goods exported from Japan has increased in an extraordinary way during the latest few years.

IMITATION LEATHER WALL PAPER.—An interesting account of the manufacture of an exceedingly durable and beautiful kind of wall paper made in Japan is taken from one of the local foreign journals. This paper is much appreciated in England and America, and is being exported in increasing quantities.

MATCHES.—The manufacture of matches in Japan commenced in 1877, and in the following year a small export business was done to China. This trade has suffered many vicissitudes, and a number of people, who did not understand the business, having rushed into it, heavy losses were incurred and the matches fell into disrepute. Down to 1888 business was in a very depressed condition, when strenuous efforts were made by the leading manufacturers, all goods for export being examined by an expert. After this the trade increased in volume, but it is now suffering from over-production and slackness of business in Hongkong and Shanghai, owing to the plague and the war.

The total export of matches from Japan in 1884 amounted to 9,713 gross, valued at \$2,792, of which Kobe exported 7,918 gross. In 1894 the quantity exported from Japan was 13,843,022 gross, of which 13,379,860 gross were from Hiogo.

Apart from the war, this trade has been injuriously affected by the erection of three match factories in Shanghai, which supply a district where the demand was formerly great and constant. Nine-tenths of the matches exported from this district have hitherto gone to China.

INSURANCE.—The growing popularity of fire insurance in Japan is well illustrated by the following returns of the Meiji Fire Insurance Company:—

Date.	Policies Issued.	Premia.
March 31, 1893	\$ 3,205,119	52,108
March 31, 1894	11,449,720	168,594
Increase	8,244,601	116,416

There are three great companies—the *Meiji*, the *Teikoku* (Imperial), and the *Nippon*, the policies issued by the first amounting to \$8,000,000, and those of the two others to \$6,500,000 each. In addition to these there are many small companies, some of which deserve to be given a wide berth by prudent people.

Quite a new departure in insurance has been devised in Kioto. The dogs of that city, as in many other places, are harassed by their inveterate foes the dog-killers. Some shrewd persons have therefore conceived the idea of starting a dog insurance company, which professes to insure the loss or death of a dog by payment of a small monthly premium. Death from natural causes is, however, not insured; it must be death at the hands of dog-killers.

OSAKA INDUSTRIES.—A most extensive trade in hats and caps is carried on in this country, and the places where these articles are made is legion. Glass-blowing was first introduced under Government supervision, by foreigners employed in the Public Works Department, some twenty odd years ago, and for a long time it was carried on at a dead loss. Steady perseverance, however, led to success. There are several soap factories in Osaka, and constant experiments and close imitations of foreign brands have led to such im-

provement in the turn-out that the demand for the imported articles has declined very considerably. A lucrative export trade has been carried on in Osaka in isinglass made on the spot.

There are two clock factories in Osaka, and now watches are also going to be made by a new association called the Osaka Clock and Watch Company. A rapeseed oil factory was established in Osaka in 1890, and promises to be very successful in the near future. There are three flannel factories in Japan where woollen cloths are made—one at Senji, near Tokyo, owned by the Army Department; another at Oji, a suburb of Tokyo, run by a private company; and a third in Osaka, owned by the Osaka Woollen Thread Company. Flannel is made at the last named place only, the wool used being imported from Australia. The factory contains 250 sets of weaving machines, with 2,050 spindles, imported from England and Germany. The home demand for Tooth Brushes, made at a tooth brush factory in Osaka, is steadily increasing and there is every promise of its being very large in near future. Foreign-made towels were largely imported until a very few years ago, when several factories started in Osaka. Not only is there at present a great demand for the native-made article, but it is also exported in considerable quantities. Artificial flower making is an important industry in Japan, and there are numerous factories in Osaka. A large and increasing export trade is done from Osaka in Lanterns manufactured principally in that city and in Gifu. Glass head blinds are in great demand, principally for America and England, and, to a limited extent, for France and China. Tortoise-shell, imported by Chinese in Nagasaki, has for about 200 years been used in a variety of ways, notably in making valuable ladies' hairpins and combs.

TOBACCO.—Until recently the native article only was in demand, but now large quantities of foreign cigarettes, and even cigars, are consumed. There are about forty tobacco factories in Osaka only.

Paper Underclothing is an interesting industry started some time ago. The articles consist of a loose jacket and drawers made of a specially prepared kind of tough paper, said to be admirably suited as a substitute in cold weather for ordinary underclothing. The cost is exceedingly low. Great progress has been made in printing, and as no foreign type with Japanese characters has ever been imported, there are now several type foundries in Tokyo and Osaka. There are about 200 printing works in Osaka, and they are kept fully employed. The result of official investigation shows that at the end of December last there were, in Osaka, 2,584 factories, of which 187 were worked by steam; these establishments employ 15,074 male and 19,632 female operatives. A constant source of complaint is the inequality of the goods produced in factories and other places. This is mainly attributable to absence of unremitting and intelligent supervision of operatives, and the want of some system of fines for careless, inferior work. It has been recently stated that several influential persons contemplate establishing an Electro-Motor Company in Osaka to be worked by water-power. The experts employed have, after investigations extending over several months, pointed out three available sources of power, and they estimate that if 15,000-horse power can be developed, the profit of the company will exceed 10 per cent. It is stated that the gross horse-power in the various Osaka factories is about 25,000, and that electrical power would be cheaper by 30 per cent., than steam, resulting in a retrenchment in expenses of not less than \$1,000,000, to say nothing of incidental benefits, sanitary considerations, and other advantages.

Some new and important schemes are also talked of in Osaka. One is a sugar refinery, with a capital of \$2,000,000, the other a company for the export of shirtings to Korea, having for object the monopoly of the entire import trade in shirtings, amounting annually to \$3,000,000, hitherto carried on exclusively by Chinese traders. It is also said that the erection of steel works is contemplated. The creation of an influential company for the purpose of manufacturing railway material, carriages, trucks, and general rolling stock has likewise been mooted. The carpet and rug industry at Sakai, a small town situated at a very short distance from Osaka, is making rapid progress, and gives occupation to 16,249 operatives.

RAILWAYS IN JAPAN.

During the earlier half of 1894 the scheme for the establishment of a great railway company, with a capital of \$100,000,000 began to assume a definite form, and a prospectus was issued by three of the leading men in business circles, which led to a meeting of some forty prominent financiers and business men, who resolved to submit an application to the Government with regard to the purchase of the railway lines now owned by Go-

vernment, and entrusted the management of necessary proceedings to a committee of ten.

One of the Tokyo journals, which professed to express the opinions of authorities on this subject, has stated that the originators of this great scheme estimate the cost of lines, which the Government had already decided on constructing, at about \$65,000,000 while they hope to obtain the lines at present running for the sum \$35,000,000. The idea, it is alleged, is to purchase those existing lines for that amount, which would give a return of about 8 per cent., with every prospect of increasing this to 10 per cent. in another four or five years.

As a matter of fact, the amount proposed to be invested actually represents a sum twice as large, and it would seem unreasonable to expect to obtain such a profitable concern for the original cost of construction.

Several of the leading journals denounced the project, principally for three reasons. First, it was argued that military as well as economic considerations render it advisable to place the principal trunk lines under Government control; secondly, the estimated price of the Government lines is less than one-half of what it ought to be; and thirdly, all the papers called attention to the dangers, political and financial, attending the creation of such a large private company. In a country like Japan, where the general standard of wealth is as yet low, the consequence would be particularly serious.

It stands to reason that the recent events of paramount interest to Japan have for the present precluded all serious consideration of the scheme; even in a modified form.

A scheme for a through Asiatic railway was the subject of an address delivered at a recent meeting of the Japan Economic Society. The lecturer, Mr. Taguchi, a Member of the Diet, was in favour of a southern line from Peking to Constantinople, as being the way by which from ancient times communication had been kept up between China and Hindustan: it was the route taken by the founder of the Wön Dynasty when invading the west, and Marco Polo came by it to China. The inquiries instituted into the geography of the various districts led him to the conclusion that a railway is practicable in that part of Asia.

Starting from Peking, the line would enter Honan province *via* Tientsin, Hoken, and Kwangping; from there it would go south as far as Kai-fung, and then crossing the Yellow River, near the latter city, it would go west, passing through Ching Chow, Honan, and other places along the bank of the river, as far as the pass of Tung Chow. Here the land begins to rise, the pass itself being 4,000 feet above sea level. The pass being crossed, the land is again level until Sin-gan is reached, after which a height of about 8,000 feet is attained, passing the town of Yumak-hien, a small desert is traversed, when a thriving place called Khamil is reached. Here the so-called In-Tien-shan route begins. Turfan, Karashar, Aksu, Marashar, and Kashgar, are passed, and Tien-shan is then reached. Kashgar appears to be 5,000 or 6,000 feet above sea-level, and from there the land continues to rise, until at Terak Pass, a height of 12,500 feet is attained. This is the highest point along the whole route; but on the authority of a Japanese railway engineer, the slope does not exceed 1 in 100. Os and Polga are next reached, after which comes Kokand, in the Russian possessions. The work will not be difficult after the Tienchan range is once reached. The route further goes through Samarkand, Bokhara, Merv, Meshed, Teheran, Bagdad, Tsukandaran, Adana, Kamiah, Bansa, and Tsmid, which is connected by rail with Constantinople. The total length of the line would be 7,650 miles, and the cost is estimated at \$765,000,000. The lecturer urged the prosecution of more accurate inquiries, and the construction of the railway.

EFFECT OF THE WAR, AND AFTER.

The trade of this country with China, the gross annual value of which amounts to \$25,000,000, has been virtually stopped by the present war, and its consequences, direct and indirect, on the economy of Japan is of course considerable.

The principal articles imported from China are sugar, raw cotton, beans, rice, hemp, &c., while the exports are yarn, marine products, matches, coal, &c.

Sugar is an important item, and in 1893 the amount imported exceeded \$3,000,000; beans and cotton are also abundantly imported, but such is not the case with rice. Cotton was imported in 1893 to the extent of \$8,500,000, and the stoppage of this supply must be affecting the spinning industry to an alarming extent; in fact, the spinners are most unfavourably placed, for, while they are precluded from getting the raw material, they also lose the China market for their goods.

The match manufacturers are also suffering, for not only is their principal market closed, but the

disturbed state of the money market presses heavily on them. There has been a heavy fall in the value of sundry securities, and the reduced dividends paid by various leading institutions in the country.

Epitomising the returns, we find that out of 88 national banks 35 paid less dividend for the second half-year than for the first, one paying no dividend at all; out of 54 private banks 14 paid no dividend for the second half of the year; out of 17 spinning mills 3 paid less dividend and 3 paid none for the second half-year; out of 30 rice exchanges more than half paid no dividend for the second half-year.

Another of the effects promptly felt at the commencement of the war was an extraordinary rise in freights, owing to nearly all the available steamers being taken off the various lines and chartered by the Government as transports; after a short delay a number of foreign steamers were, however, engaged by Japanese shipping companies, and a return to the former condition of things was in a great measure effected.

The *Commercial News*, a Japanese journal, says that no business has been recently subjected to such varying fortunes as the shipping business of Japan. During the winter of 1893 and the spring of 1894 the demand for ships was unusually great, causing a gradual rise in freights, owing to increased export of coal to Hongkong, Shanghai, and Singapore. After this the outbreak of the war created, as already stated, an extraordinary rise in freights, owing to the requisitioning by the Government of a large number of steamers. This having continued for several months, a reaction set in, and freights fell in consequence of the large number of foreign vessels purchased and chartered.

JAPANESE SEAMEN.—In connection with the subject of shipping it is interesting to note that a Society for the Protection and Training of Seamen has existed in Japan since 1880, organised by some very prominent and wealthy men. The object was to improve the conduct and status of seamen, to encourage them in the attainment of scientific and practical knowledge, to act as a medium between them and their employers, and to extend to them and their surviving relatives protection and assistance when required. The funds of the society were originally raised by donations, and among the subscribers were the crews of the Russian Oriental squadron, who appreciating the importance of the enterprise, contributed a sum of \$1,000. The first office was established at Yokohama, and boarding house was opened at Shinagawa, a suburb of Tokyo; subsequently branch offices were started at Kobe, Hakodate, and Nagasaki. Later on a naval school was founded at Yokohama by the President of the Mitsubishi Steamship Company (now amalgamated into the Japan Mail Steamship Company) for the education of seamen and engineers; this school was subsequently transferred to the control of the Government, and continues to turn out numbers of capable men. The society was thus of the greatest benefit, without seeking notoriety, but at the outbreak of the present war its usefulness became conspicuous.

During thirteen years of its existence the society has educated 832 officers, has procured situations for 98,016 sailors, of whom 2,041 were trained under its care, has afforded assistance to 1,720 distressed and disabled seamen, in addition to relief granted to the relatives of those who have died, as well as other acts of charity.

After the war is over the Japanese intend going ahead, and every thing seems to portend that they will carry out this intention successfully. What will for a time tell immensely in their favour is the silver currency of the country and the question of wages. Considered in connection with the greatest industry of the country, it is merely necessary to state that a bale of cotton yarn was early in 1894 turned out at an average of \$72; towards the end of the year the price advanced to \$81.50c., owing to a rise in the price of cotton. The highest average of wages paid per day in the mills was, for male operatives, \$0.267, and for female hands, \$0.1822.

For a considerable time past there has been exceptional activity in the direction of improvements in the system and methods hitherto existing in commerce, industries, and agriculture. High Government officials, members of the Diet, and private individuals of standing and experience have been constantly lecturing on a vast diversity of subjects, with the object of stimulating the energies of all concerned. All sorts of guilds and associations are being formed to promote the material welfare of the nation, and innumerable sub-committees are to be at once sent all over the country to urge the views of the head-centres in the producing districts.

The foremost staple of Japan's exports, silk, re-

quired, said the Vice-Minister of State for Agriculture and Commerce, thorough improvement to secure the extension of its sale. Japan silk is considered by American and French weavers to be too brittle to be used as welt, and can only be used as warp, which is not quite satisfactory. It is not suited for large American and European factories, owing to the diverse kinds of cocoons used, these being collected from almost every district of Japan, and even from the coast of China. It is, therefore, of the greatest importance that a radical reform should be effective in this industry.

In industrial, commercial, and agricultural circles one of the most prominent men at present is Mr. Mayeda, formerly in the Department of Agriculture and Commerce. He is absolutely indefatigable. He has endeavoured to improve the quality of Japanese tea; he has placed the tea growers under one central guild, and this important industry is now on the high road to increased success. He next collected the colliery owners of Kiushiu and organised them. He then started the Five and Two Staples Associations, established the Match Guild, and recently turned his attention to the development of agriculture. By way of explanation it is well to state here that the members of the Five and Two Staples Associations are those who deal in woven goods, porcelain, lacquered ware, metal ware, paper and paper ware, curios, and matting.

The *Kokumin*, a Japanese journal published in Tokyo, and having an extensive circulation, went into ecstasy a short time ago about the rare progress of Japan, as shown in the increase of the trade of the country during 1894 over that of the previous year. It said that China might be compared to Turkey, Korea to Egypt, and that Japan is Great Britain, minus England's symptoms of decrepitude and corruption; in those three Oriental countries thus considered there lie, hidden from ordinary observers, great designs, large plans, and vast germs of fortune. If there be but a shadow of truth in all this, the future of the Japanese merchant will indeed be a happy one, and the prosperity of Japan great; it may, however, be laid down with absolute certainty that foreigners will participate in that success to an exceedingly limited extent, if at all.

Up to the present the foreign merchant in Japan has taken all the risk, with a prospect of moderate profit or of a commission, which is decreasing year by year; the Japanese, on the other hand, have always come in for the lion's share of the advantages derived. For a long time past the desire to do away with the foreign merchant has been distinctly on the increase, one of the main features of the "strong foreign policy," vigorously advocated by a considerable section of the Japanese, being the boycotting of the foreign middlemen. Sentiment and sound practical business principles are two very different things.

The authorities are evidently fully aware of the importance of maintaining and encouraging commerce and industries after the war, and for that purpose the Department of Agriculture and Commerce is now endeavouring to collect all possible information and statistics bearing on those matters in connection with the war in China. It is also stated that investigations have for some time past been carried on by agents in foreign parts as to the condition of commerce in countries affected by the great war in the United States in 1861-65, and the Franco-Prussian war of 1870.

TRADE WITH INDIA.—Japan has taken another stride by appointing, for the first time, a Consul to represent her in Bombay, to give further impetus to the trade which has recently sprung up between the two countries. In the course of an interview with the representative of an Indian newspaper the Consul stated that the Consulate had been established in accordance with the desire expressed by the Japanese merchants who are dealing with Bombay, particularly in respect of its cotton. He pointed out that there are large exports of coal, copper, paper, &c., from Japan, and that the Japanese not only desired to find a market for their goods, but also wished to import in return such articles of merchandise as could be obtained cheaper there than in other markets.

FINANCIAL QUESTIONS.—The question of the financial future is necessarily attracting great attention in commercial circles. The Government have already obtained authority to raise a war fund of \$150,000,000; then, too, the money that will be required after the close of the war for purposes of defence, of administration, and for various industrial and commercial enterprises will be immense. The general opinion seems to be that the territorial acquisition resulting from the war will not be self-supporting, for a considerable time at least.

Meanwhile, there are ominous signs of a tight-

ening money market, which cannot fail to have a disastrous effect on trade.

Considerable portions of this report and of the returns have been taken from the report of the Hiogo and Osaka Chamber of Commerce, and from articles which have appeared in various Japanese newspapers and foreign journals published in this country.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, December 22nd.

The United States Senate has passed a resolution ordering the Finance Committee to enquire into the expediency of the opening of mints to free coinage.

London, December 23.

A semi-panic occurred in New York on the 21st inst., causing an estimated loss of a thousand millions of dollars. The cause of the panic is ascribed to President Cleveland's warlike Venezuelan policy.

The New York stock market has recovered, closing strong on the 22nd December, and the tone in America is calmer and friendlier.

London, December 26.

President Cleveland's political and financial discredit are increasing, but the American markets are improving though still sensitive.

CHESS BY CORRESPONDENCE.

Of the two games by correspondence between Warrnambool and Ballarat, which were begun some months ago, one has been won by Warrnambool, and the other is still in progress. In the completed game 17 of the moves on the White side, and 16 of the moves on the Black side, were identical with those of a celebrated consultation game between Morphy, Greenaway, and G. Walker against Lowenthal, Mongredien, and Medley. At the 17th move, however, Black (Ballarat) varied, with the result that Warrnambool had the opportunity of winning by an exceptionally fine combination. The score of the game is as follows:—

GAME No. 410.

KING'S BISHOP'S GAMBIT.

- | WHITE. | BLACK. |
|--------------------|-------------------|
| Warrnambool. | Ballarat. |
| 1—P to K 4 | 1—P to K 4 |
| 2—P to K B 4 | 2—P takes P |
| 3—K B to Q B 4 | 3—P to Q 4 |
| 4—K B takes P | 4—K Kt to B 3 (a) |
| 5—K Kt to B 3 | 5—K Kt takes B |
| 6—P takes Kt | 6—Q takes P |
| 7—Q Kt to B 3 | 7—Q to K R 4 (b) |
| 8—P to Q 4 | 8—K B to Q 3 |
| 9—Q to K 2 ch. | 9—K to Q sq. (c) |
| 10—Castles | 10—P to K Kt 4 |
| 11—Q to Q Kt 5 (d) | 11—P to K B 4 |

- | | |
|-------------------------|----------------------|
| 12—Q to Q 5 (e) | 12—Kt to Q B 3 |
| 13—K Kt to K 5 (f) | 13—K R to K B sq. |
| 14—B to Q 2 (g) | 14—Kt to K 2 |
| 15—Q to Q B 4 | 15—K R to K B 3 |
| 16—Q R to K sq. | 16—P to Q B 3 |
| 17—Q Kt to Q R 4 | 17—K to B 2 (h) |
| 18—Q Kt to B 5 | 18—Q to K sq. |
| 19—Q to Kt 3 (i) | 19—Q to K Kt sq. (j) |
| 20—Q Kt to R 6 ch. | 20—K to Q sq. |
| 21—K Kt takes Q B P ch. | |

And Ballarat resigns (k).

NOTES.

- a At this point Zukertort preferred to check with the Queen.
 b Much better than 7..... Q to K 3 ch. because White's reply would have been 8 K to B 2.
 c This is Black's best move.
 d This is Morphy without a doubt.
 e Another Morphy coup.
 f Finely followed up.
 g Staunton proposes 14 Kt takes Kt ch, P takes Kt; 15 Q takes P, P to B 6; 16 P to K Kt 3, P to Kt 5, and gives an elaborate analysis (for which see Wormald's edition of the *Laws and Practice of Chess*, pp. 348, 349) to prove that White can now win by taking the Rook. Mr. Stanley, however, the Warrnambool captain, is certain that Black would win by 15..... Q R to Q Kt sq. instead of 15..... P to B 6, followed by..... B to Kt 2.
 h In the consultation game, which has been already referred to, the continuation was 17..... B to Q 2; 18 Q Kt to Q B 5, Q B to Q B sq; 19 K R to K B 3, P to K Kt 5; 20 K R to Q Kt 1, P to Q Kt 3, at which point the game was abandoned, owing to the lateness of the hour, as a draw. Staunton (see *Wormald*, p. 348) says that the position is "slightly in favour of Black." But Mr. Stanley informs us that he has subjected the position at the adjournment to an exhaustive analysis, and has satisfied himself that, so far from White's position being inferior, White must win. He gives 21 K Kt to Q 3 as White's winning move. It may be presumed that Black discarded 17..... B to Q 2 because in reply to 18 Q Kt to Q B 5 the Queen's Bishop is compelled to retreat to his square. If 17..... B to K 3, then 18 K Kt takes Q B P ch, Kt takes K Kt; 19 R takes B, &c.
 i The winning move. It places the Queen on a still more commanding square, prevents the Black King from moving to Q Kt sq., and prepares for the advance of the Q B P.
 j It is natural enough to try and exchange the Queens. Moreover, White threatens 20 Q Kt to Q R 6 ch, K to Q sq. (forced); 21 B to Q R 5 ch, and mating in three moves. Black's best move was 19..... P to Q R 4, but, in any case, White had an irresistible attack.
 k Because if 21..... P takes Kt; 22 B to Q R 5 ch, K moves; 23 Q R takes Kt ch, and the black queen is lost.

INTERESTING GAME AT ODDS.

In the following game, for which we are indebted to the *Newcastle Weekly Chronicle Supplement*, the Rev. E. E. Cunningham, of Muchwenlock, exchanges his Queen for a Rook—thus playing with three Rooks as opposed to Queen and two Rooks. This form of odds is said to be an invention of Mr. Cunningham, and as the *Chronicle Supplement* remarks, the interesting feature about it is this:—"Does it amount to less or more than giving a Rook?"

GAME No. 411.

Remove White's Queen, and place a third White Rook on Queen's square.

- | WHITE. | BLACK. |

And Black resigns.

NOTES.

- a Scarcely advisable, considering the peculiar character of the odds. Better was 1..... P to K 4, 1..... P to K 3, or 1..... P to Q Kt 3.
 b 9..... P to K 3, and if 10 Kt to Kt 5, 10..... B to Q 3 would have prevented the heavy loss which Black now sustains.
 c Why open this file for the adverse Rook No. 3?
 d 18..... B to K 6 would have been better.
 e Very well played. White regains his piece with an improved position.
 f Conclusive. After this move Black has no defence.

GAME NO. 412.

REPORTS.

The British steamer *Gaelic*, Captain Pearne, reports:—Left San Francisco the 10th December at 4.30 p.m.; to the 24th had variable winds and moderate weather; thence to Cape King, strong south-west and westerly winds; thence to port light north winds and cloudy. Arrived at Yokohama the 27th December, at 3.11 p.m. Passage, 16 days, 5 hours, 13 minutes.

The German steamer *Hohenollern*, Captain P. Wetlin, reports:—Left Hongkong the 21st December at 7 p.m.; experienced through the Formosa Channel N.E. gale with high sea; thence to Van Diemen Strait very strong E. and S.E. winds, high sea, and S.E. swell; thence to port very strong N.W. and N. winds, rough sea.

LATEST COMMERCIAL.

IMPORTS.

No business of any consequence. Buyers are probably thinking of stock-taking and getting their accounts closed for the *Omisoka*. There are probably some sales booked which will be entered in the list at beginning of January.

BISSET & COMPANY'S SHARE REPORT.

Yokohama, December 21st, 1895.

A wire to-day from Hongkong quotes:—Sales of Hongkong Lands at \$69; Buyers of H. C. & M. Steamboats at \$37, Douglasses at \$52.50 and H. & K. Wharfs at \$49. Watsons are weaker, having sellers at \$12. H. C. & M. Steamboats have been placed to Hongkong from a local holder at \$37.

Local stocks of all kinds unchanged as last reported.

23rd December.

Advices bearing dates of the 4th and 6th inst. from our Singapore Agents give the following quotations:—Raubs keep steady at \$4.10 and seem inclined to move up a little; Jebebus are wanted at \$2.75, but there are no sellers under \$3; and Punjoms are quoted \$5, with no business done.

Local stocks are all in demand; \$142.50 will be paid for Grand Hotels and the same price for Breweries. A lot of Oriental Hotel Ordinary shares might be had subject to a firm offer of over \$115 being made. Two shares, one Ordinary and the other Founders, in the same Company might be secured at \$300. All other stocks are unchanged and offers of shares are wanted. Iron Works might be placed on a firm offer of shares being made.

BALANCE SHEETS of Assurance, Banking, Manufacturing Shipping, Trading, and Trust Companies, are fearlessly and impartially criticised in "MONEY."

August 3, 1895.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1890.
